Passenger models included in the 1946 totals numbered 77,742 and had a retail value of \$102,325,496. The number of passenger car sales was exceeded in all years from 1935 to 1941, and it was the comparatively high volume of truck and bus sales made in 1946 which raised total volume for last year to the near-peak level. There were 42,302 trucks and buses sold for \$73,003,509 in 1946.

Average purchase price of new motor vehicles was considerably higher in 1946 than in any previous year for which a measurement has been made, reaching \$1,548 for passenger cars and \$1,726 for commercial vehicles. In pre-war years, the average selling price of passenger cars had fluctuated within the \$1,000 to \$1,100 range. There was a tendency for the average purchase price to move in an upward direction throughout the years 1932 to 1940, but the sharpest rise occurred in 1941 when the average reached \$1,302. Increases were more gradual in 1942 and 1943. No average selling prices of motor cars are available for 1944 and 1945, but in 1946 the figure had moved up to \$1,548.

With the reappearance of new vehicles on the retail market, operations of finance companies in the motor vehicle field expanded considerably in 1946. Nevertheless, the number of

new vehicles financed in 1946 did not approach pre-war volume as closely as did the sales of new vehicles. This condition is largely a reflection of a much higher proportion of cash purchases in 1946 than formerly. These figures do not, however, include transactions in which purchases are facilitated by direct personal loans made by banks, insurance companies or by sources other than automobile finance companies.

There were 22,866 new vehicles financed by finance companies to the extent of \$27,978,992 in 1946. Of these, 11,082 were new passenger models having a financed value of \$10,589,544 and 11,784 were trucks and buses which were financed for \$17,389,448. These results represent a sharp upturn from the drastically reduced volume of new vehicle financing in the preceding four years, but totals for 1946 remain considerably lower than in all years of the period from 1934 to 1941.

The average amount of financing per new vehicle was quite high in 1946, standing at \$1,224. Reference to earlier years reveals that the average has in some instances been less than half of this figure. Even in the five years immediately prior to the war the average ranged roughly between \$700 and \$750, although it had already amounted to \$850 by 1941.

The number of used vehicles financed increased only slightly in 1946 over 1945 and remained far below pre-war levels. This situation will continue, no doubt, until such time as production of new vehicles approaches demand and permits freer trading in used vehicles than is possible at present. Used vehicles financed totalled 30,527 units with an amount of financing of \$13,607,573. The greater part, or 22,415 units, were passenger cars which were financed for \$7,478,674.

Prices, Retail and Wholesale, in Canada, August, 1947

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

A FURTHER gain of 0.7 points to 136.6 (1935-39=100) occurred in the cost-of-living index series between July 2 and August 1, 1947. Among group changes, clothing moved 2.3 points higher to 145.5 due to increases in men's clothing followed by footwear, women's wear and piece goods. Fuel and light was 1.3 points higher at 118.6 reflecting strength in coal and coke while homefurnishings and services advanced 1.2 points to 143.7 supported mainly by higher quotations for cleaning supplies and furniture. The rise in foods of 0.8 to 160.6 reflected fractionally higher prices for a number of items including eggs, lamb and carrots. The two remaining groups were unchanged: Rentals at 117.8 and miscellaneous items at 117.2.

Cost of Living in Eight Cities

Cost-of-living indexes for eight regional cities, on the base August 1939=100, were higher between July 2 and August 1, 1947, with the exception of Toronto, which registered a decline of 0.1 to 135.0. At this centre seasonal recessions for fresh vegetables in the food series were more than sufficient to overbalance higher group indexes for clothing, homefurnishings and services, fuel and lighting and miscellaneous items. City index increases were led by a gain of 2.5 points to 135.1 for the Halifax series followed by advances of 1.4 points each to 134.9 for Saint John and 134.0 for Edmonton. Vancouver at 135.6 and Winnipeg 132.0 were each 0.5 points higher while Montreal rose 0.4 to 138.9 and Saskatoon 0.2 to 138.6. The unusually wide dispersion in city index changes in August reflected in large measure sharp seasonal fluctuations in vegetable prices, notably potatoes. At most centres higher prices were recorded for clothing, homefurnishings and services and certain miscellaneous items.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada, at the date under review.

The prices of the staple food items included in the table are all used in the calculation of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores. As the movement of chain store prices agrees closely with the movement of independent store prices it was considered that the extra work and cost involved in compiling and printing a separate table for chain store prices were not warranted, although chain store prices are used in the calculation of the index.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada; where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a \$4 spread centred around each city average.

Table III is designed to show the variation in the retail price of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

TABLE I.—INDEX NUMBERS OF THE COST OF LIVING IN CANADA
Prices as at the Beginning of each Month

	Adjusted to base 100-0 for August 1939	On base of average prices in 1935-39 as 100							Retail Prices Index (Commodities only)†

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is included in Table I.

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between \$600 and \$2,800 in 1938. The average expenditure was \$1,413.90 divided as follows: food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.59; clothing (11.7 per cent), \$165.80; home-furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not directly represented in the index brought the total family living expenditure to \$1,453.80.

The control of prices under an Order in Council of November 1, 1941, P.C. 8527 became effective on December 1, 1941 (L.G., 1941, page 1371). The order provided that no person should sell any goods or supply services at prices higher than during the period September 15 to October 11, 1941, except under the regulations of the Wartime Prices and Trade Board. The activities of the Board in the operation of the price control policy are summarized from time to time in the *LABOUR GAZETTE* under the title *Price Control in Canada*.

Wholesale Prices, July, 1947

The general index of wholesale prices advanced 1.3 points to 129.1 between June and July, 1947. Six of the eight major groups were higher led by a gain of 4.2 points to 131.1 in the non-ferrous metals series. In this group firmer quotations for copper, aluminum sheet, lead ingots and lead pipe outweighed an easier tone for silver. Wood, wood products and paper moved up 2.2 points to 165.0 supported by higher prices for cedar shingles, wood pulp, maple lumber and wrapping paper while vegetable products advanced 1.7 to 113.5 when strength in potatoes, Ontario winter wheat, lemons and raisins overbalanced weakness in raw rubber, oranges, bananas and rosin. Higher prices for coal tar, window glass, fuel oil, sand, gravel and crushed stone were responsible for a gain of 1.4 to 114.4 for non-metallic minerals while textile products rose 1.1 to 132.2 due to strength in rayon fabrics, woollen cloth, sisal rope and linen thread prices and iron products 0.2 to 135.0 following a gain in sheet steel quotations. Two series worked lower, animal products receding 0.2 to 129.4 mainly due to weakness in livestock quotations while chemical products were off 0.1 to 110.8 reflecting declines in copper sulphate and quinine sulphate which outweighed strength in anhydrous ammonia and caustic soda.

There was a further gain in the index for Canadian farm product prices at wholesale from 119.2 in June to 120.1 in July. Higher field product prices were responsible, an index for this series moving up 2.5 to 106.6 due to strength in potatoes, Ontario winter wheat and hay. Animal products on the other hand dropped 1.7 points to 142.7 reflecting lower livestock prices which outweighed minor advances in hides and eggs.

Old Age and Blind Pensioners in Canada

Financial and Statistical Summary as at Quarter ended June 30, 1947

IN the accompanying tables, which have been prepared by the Department of National Health and Welfare, information is given concerning the Old Age Pensions Act and the amendment to that Act for the payment of pensions to blind persons.

Old Age Pensions

The Act provides for the establishment of a Dominion-Provincial pensions system to be effective in such provinces as might enact and give effect to special legislation for this purpose. All the provinces are now participating. Under the Old Age Pensions Act a pension is payable to any British subject of 70 years or over who is not in receipt of an income of as much as \$425* a year and who has resided in Canada for the 20 years, and in the province in which the application is made for the five years immediately preceding the date of the proposed commencement of pension. The Act also provides that an applicant must not have assigned or transferred property for the purpose of qualifying for a pension. Indians, as defined by the Indian Act, are not eligible to receive old age pensions.

The maximum amount of pension payable under the Act is \$300* yearly. In cases where pensioners have a private income the amount of their old age pension is subject to reduction by the amount that their private income exceeds \$125* a year.

Under the provisions of the Act as it was first passed, the Department of Labour of Canada (then the administering Department) paid quarterly to each province one-half of the net sum paid by the provincial pension authority during the preceding three months. At the 1931 session of the Dominion Parliament, however, the Act was amended, the amount of the Dominion contribution being increased from fifty to seventy-five per cent of the net sum.

The administration of the Old Age Pensions Act was by Order in Council dated March 1, 1935, transferred to the Department of Finance from April 1, 1935. By a second Order in Council, P.C. 5942, dated September 7, 1945, the administration was transferred from the Department of Finance to the Depart-

ment of National Health and Welfare from September 1, 1945.

Pensions for the Blind

An amendment to the Old Age Pensions Act, assented to on March 31, 1937 (L.G., May, 1937, p. 503) provides for the payment of pensions to blind persons who have attained the age of 40 years and have fulfilled other conditions set forth in the Act. Such persons must be so incapacitated by blindness as to be unable to perform any work for which eyesight is essential, and must not be in receipt of a pension or allowance in respect of blindness under the Pension Act or the War Veterans' Allowance Act.

The maximum pension payable to a blind person, whether married or unmarried, is \$300* per annum. If, however, a blind person marries another blind person after March 31, 1937, the maximum pension is reduced to \$150*. If a pensioner is unmarried the maximum pension is reduced by the amount of his income from earnings or other sources in excess of \$200* a year. If a pensioner is married to a person not receiving a pension in respect of blindness, his income is deemed to be the total income of himself and his spouse (including any old age pension payable to the spouse) less the sum of \$225*, and the maximum pension is reduced by the amount by which his income, so calculated, exceeds \$400*. If a pensioner is married to a person receiving a pension in respect of blindness, his income is deemed to be one-half the total income of himself and his spouse (excluding the pension in respect of blindness payable to his spouse) and the maximum pension is reduced by the amount by which his income, so calculated, exceeds \$200*.

Under agreements negotiated between the Dominion and the provinces, the Dominion contributes 75 per cent of the cost of pensions to blind persons, the provinces assuming the remainder of the cost of such pensions.

The accompanying tabular statistics indicate the extent of operations under this amendment to the Old Age Pensions Act.

* Amended by Orders in Council P.C. 6367, August 10, 1943, P.C. 3376 and P.C. 3377, May 29, 1944, passed under the authority of the War Measures Act.

OLD AGE PENSIONS

industry be consulted by the employers concerning any proposed group movement of D.P.'s. This is very important, particularly where there is in effect a collective bargaining agreement.

Under the group movement plan 725 woodworkers had arrived in Canada at July 31, 1947. During August and September 1,468 D.P.'s arrived in Canada for this type of employment.

The limiting factor in group movements of D.P.'s at the present time is the extreme shortage of ocean transport. However, arrangements have been made to provide transportation for a minimum of 5,000 D.P.'s during the three-month period of October to December. Teams are now engaged in Germany and Austria in the selection of woodworkers, domestic workers, heavy labourers (particularly for the steel mills), and craftsmen for the clothing industry, pending the availability of shipping.

Exclusive of the program for recruiting displaced persons, Canada has already admitted 4,500 Polish veterans who volunteered to come to this country to work in agriculture.

In addition, approximately 1,500 Dutch immigrants have come to Canada to work in agriculture. These were admitted under a section of the existing regulations which permits the entry of farm labourers with assured farming employment. These people sailed from Holland on ships provided by the Government of the Netherlands.

From the British Isles have come a total of 5,630 persons in the months of May and June.

The woodworkers who have already arrived are being housed in woods camps which are inspected to insure that living conditions are satisfactory. Under agreement between the Government and the employers they are receiving the going wages and are employed under the same general conditions as regular Canadian woodsmen.

Consolidation of Wartime Labour Relations Regulations

The Department of Labour has prepared and issued a consolidation of P.C. 1003 and its effective amendments to date.

The consolidation will make for convenience and clarity in view of the number of amendments which have been made in the Regulations since February 17, 1944, the date of promulgation, and particularly in view of amendments made under P.C. 302 of January 30, 1947, which, in one regard, restricted the application of the legislation to matters within Federal jurisdiction.

Combines Investigation Commission and price decontrol

As price controls have been removed inquiries have been made by the Combines Investigation Commission in connection with changes in prices of certain commodities to find out whether such changes had occurred under conditions of active competition. Such inquiries have resulted from information submitted by consumers or representatives of labour organizations as well as from information secured by the Commission in its examination of trade conditions. Detailed investigations have been made where there have been indications of price agreement, marked uniformity of prices or of price increases, or apparently unwarranted price increases. In certain cases inquiries have been made in anticipation of decontrol where there seemed to be a possibility that private price-fixing agreements might replace government price control.

A number of inquiries have been made in connection with recent increases in the price of bread and flour in different areas. Other inquiries have been undertaken in regard to increases in prices of other decontrolled commodities. In some cases the conditions complained about had been corrected by the time of the investigation while in some others there was a change in policy as soon as examination was made of the local situation.

(A summary of the present status of price controls appears elsewhere in this issue, on page 1545).

Dominion- provincial old age pensions agreements

New agreements under the Old Age Pensions Act as amended at the recent session of Parliament have been signed with all the provinces, according to an announcement by the Hon. Paul Martin, Minister of National Health and Welfare issued on September 12.

By proclamation of the Governor-General-in-Council dated September 9, the changes in the Act were effective from May 1. All provinces in their new agreements were thus enabled to take advantage of the benefits authorized by the legislation from that date.

The amended Act obligates the Federal Government to pay 75 per cent of the net cost of pensions up to a maximum of \$30 per month per pensioner and leaves the provinces free to pay additional amounts over that rate.

During the past few years six provinces—British Columbia, Alberta, Saskatchewan, Manitoba, Ontario and Nova Scotia—have been paying supplemental allowances in addition to the basic pension. The allowances varied as between provinces, the highest being \$10 per month.

¹ Base 1926=100. ² Base, June, 1941=100. ³ Base, 1935-1939=100. ⁴ Revised for the years 1935 to present and available in the *Monthly Review of Business Statistics* for May, 1947. ⁵ Figures are for four-week periods.

* Factory shipments.

An unmarried old age pensioner may now have an outside income, including pension, of \$600 per year instead of the former maximum of \$425, and a married pensioner is allowed \$1,080 a year, including pension, in place of \$850.

These provisions are expected to add approximately 60,000 additional old age pensioners to the lists at a cost to the federal treasury of about \$20,000,000 per year. Total cost to Ottawa for pensions for the aged and for civilian blind under the new legislation is expected to be \$68,000,000 per year.

For civilian blind pensioners the eligible age for pension has been cut from 40 to 21 years. Permissible outside income of blind pensioners has been increased. For a single blind pensioner the maximum amount he may receive, including pension, has been increased from \$500 to \$720 a year. The maximum income, including pension, which a married blind pensioner may receive has been increased from \$925 to \$1,200 where the spouse is sighted and from \$1,000 to \$1,320 when the spouse is also blind.

With government assuming greater responsibility for maintenance to blind persons, private organizations assisting the blind will be free to concentrate their energies and funds on treatment, training and rehabilitation programs for the blind, Mr. Martin said.

The new residence provision of the amended Act will permit many persons to be eligible for pension who, under the former legislation, would have been disqualified because of absences from Canada during the 20 years immediately preceding their application.

Another important change will benefit a considerable number who have come to Canada from other countries and who for one reason or another have not been able to qualify for pension under the former Old Age Pensions Act on account of the nationality requirement.

Employment and industrial statistics

The accompanying table contains the latest available statistics reflecting industrial conditions in Canada. Figures are shown for certain months in the current year as compared with the corresponding period in 1946.

Employment at August 1 was at an all-time high, while per capita weekly earnings continued to rise. Wholesale prices were up somewhat, and the cost-of-living index recorded the sharpest monthly increase since May, 1920.

Employment and Earnings—

The index of industrial employment, calculated by the Dominion Bureau of Statistics,

stood at 192.6 at August 1, reaching an all-time maximum. At July 1, the index was 189.5. The indexes at the beginning of August in preceding years were: 1946, 172.8; 1945, 175.0; 1944, 184.3; 1943, 185.9 and 1942, 177.8. General improvement was noted in the major industrial divisions at the date under review as compared with the beginning of August a year ago when industrial disputes seriously affected the situation, especially in manufacturing. A comparison with the later years of the war, however, shows that the improvement was confined to the non-manufacturing industries.

There were considerable increases in manufacturing and in most of the non-manufacturing classes, as compared with the previous month of employment. The exception was trade, in which no general change was indicated. The large additions in construction were above average. In manufacturing, there were substantial increases in the food, lumber, and pulp and paper industries while there were declines in leather, textile, rubber, and electrical apparatus plants. The movement was favourable in all provinces at August 1, but in terms of percentages, the largest gains were in the Maritime Provinces and British Columbia.

Reports from 17,910 employers showed combined staffs of 1,984,123 persons, an increase of 1.6 per cent from the total reported at July 1. The advance was accompanied by a 2.6 per cent rise in weekly salaries and wages. Payrolls distributed by the reporting firms at the beginning of August rose to \$72,417,149 from \$70,560,704 reported at July 1. The weekly average per employee at the date under review was \$36.50; at July 1, the figure was \$36.15. Per capita figures at August 1 in earlier years were: 1946, \$32.64; 1945, \$32.09; 1943, \$31.06 and 1942, \$28.62. In the last 12 months, the indexes of employment and payrolls have risen by 24.7 per cent and 11.5 per cent, respectively. Average weekly earnings in the same period advanced 11.8 per cent.

Prices.—The general index of wholesale prices, based on the 1926 average as 100, was 130.8 in August, as compared with 129.1 in July and 109.3 in August, 1946. Seven of the component sub-groups showed increases while one, chemical products declined 0.4 points, from 110.8 to 110.4. The index of vegetable products advanced 1.5 points from 113.5 in July to 115.0 in August, while the index of animal products rose 2.2 points, from 129.4 to 131.6 in the same period. Increased prices for raw wool and wool cloth were reflected in

the index of textile products which increased from 132.2 to 134.1. The index of wood products advanced from 165.0 to 165.8, while higher wholesale prices for pig iron, steel plates and sheets caused the index of iron products to rise 1.8 points, from 135.0 to 136.8. A slight increase of 0.5 points was noted in the index of non-ferrous metals. The index of non-metallic minerals increased by 2.9 points, from 114.4 to 117.3, reflecting increased prices for imported coal, kerosene, salt and building stone. The index of producers' goods rose from 129.4 in July to 131.4 in August, while the index of consumers' goods advanced from 117.5 to 118.9. The index of Canadian farm products moved slightly downward from 120.1 to 120.0.

The cost-of-living index, based on average prices for the years 1935 to 1939 as 100, rose 2.8 points to 139.4 between August 1 and September 2, 1947. This was the sharpest monthly increase since May, 1920.

Substantial increases in prices for foods, clothing, and home furnishings and services were the principal factors in the advance of the index. A gain of 4.7 points in the food series reflected, among other items, advances for butter, eggs, meats, tea, coffee, lemons and oranges. The clothing group rose to 152.0 due to increases in men's and women's wear, notably overcoats, topcoats and suits. Substantial advances in furniture, floor coverings, and home furnishings were the main factors in the increase of 3.7 points to 147.4 in the home furnishings and services group. Scattered increases for coal and coke raised the fuel and light group 2.5 points to 121.1, while higher health and personal care costs moved the miscellaneous group of items up 0.3 to 117.5. Rentals at 117.8 was the only group remaining unchanged. The advance in the general index since August, 1939, was 38.3 per cent.

The agreement between the International Ladies' Garment Workers' Union and the Winnipeg Ladies' Cloak and Suit Manufacturers summarized elsewhere in this

Unusual features of recent collective agreements

issue in the article *Recent Collective Agreements*, contains two unusual features; one, the establishment of a vacation, sick benefit and/or hospitalization fund into which the employers contribute 5 per cent and the union one per cent of the total weekly payroll; the other, union discipline of members for absenteeism and for changing jobs, without just cause, from one employer in the industry to another, during the busy season. This agreement also

illustrates a feature again being introduced into a number of agreements since the lifting of wage controls, that of making provision for changes in wages in accordance with the changes in the cost of living index.

The agreement, also summarized in the same article, between the United Rubber, Cork, Linoleum and Plastic Workers of America and the Dominion Rubber Company Ltd., at Kitchener, Ontario, has the "open-end wage clause" which provides that although the agreement itself runs for a fixed period, it may be reopened by either party on 30 days' notice for negotiation, if changes in general economic conditions warrant this.

This same agreement contains a clause which is recently becoming more common, the payment to hourly paid workers, at the regular wage rate, for certain statutory holidays on which they do not work.

Discontinuance of Government aid for repatriation to Japan

The Honourable Humphrey Mitchell, Minister of Labour, announced on September 5, that the Government had decided to discontinue the provision for financial assistance which

had been given to persons of the Japanese race desiring to leave Canada and go to Japan. Under this provision, the Government had provided free passage for Japanese from Canada to Japan together with a landing grant payable to persons who had no funds. (L.G., Feb., 1947, p. 122.)

The Minister stated that these provisions for financial assistance had been in effect since December, 1945, that approximately 4,000 Japanese had taken advantage of this offer and proceeded to Japan. After review of the existing situation the Committee of Cabinet on Japanese Dispersal had decided to discontinue this provision for financial assistance.

Dr. Allon Peebles retires from Labour Department

The Honourable Humphrey Mitchell, Minister of Labour, announced on September 25 the retirement of Dr. Allon Peebles, Director of Research and Statistics, Department of Labour, who has entered private enterprise in Chatham, Ontario.

In making the announcement the Minister paid tribute to Dr. Peebles' services to the country through his work with the Unemployment Insurance Commission and his organization of the Research and Statistics Branch, the work of which involves the collection, analysis and publication of information on wage rates,

strikes and lockouts, collective agreements and a host of other labour matters.

A native of New Westminster, B.C., Dr. Peebles was educated at the University of British Columbia, University of California and Columbia University, New York.

From the latter university he received his Ph.D in Economics in 1930. From 1928 to 1932 he was involved in research work in the United States. In 1932 he returned to Canada as Branch Manager in London, Ont., for a life insurance company, remaining in this position until 1935 when he was invited to British Columbia as an adviser on health insurance and chairman of the British Columbia Health Insurance Commission.

In 1941 he was appointed Executive Director of the Unemployment Insurance Commission in Ottawa and in 1943 he was appointed Director of the Research and Statistics Branch of the Dominion Department of Labour, which position he held until his retirement.

Report on labour and living conditions of Polish girls at Dionne mills

A report to the Minister of Labour by Mr. Victor Podoski in regard to 100 Polish girls from displaced persons camps now working at the Dionne Spinning Mills, St. Georges de

Beauce, P.Q., was made public by the Minister on September 23. Mr. Podoski was formerly Minister Plenipotentiary and is now an employee of the Department of Labour.

Mr. Podoski gives a detailed account of his visit to St. Georges, describing the living and working conditions of the girls.

Under the terms of the contract signed with each of the girls in Europe the company assumed responsibility for transportation costs (shared with the Intergovernmental Committee on Refugees), and agreed to provide work for two years, to pay the current rates of pay in the province, and to assure other conditions granted to spinning mills in Quebec.

The girls undertook to remain in the company's employ for at least two years; the proviso was made, however, that this period might be reduced by mutual agreement.

The company undertook to pay only the minimum wage rates set by the Quebec Minimum Wages Commission in the weekly pay envelopes, stipulating that the balance between the minimum and the current rates would be handed over to the girls after two years.

Mr. Podoski reports that the minimum zonal wage rate for apprentices or inexperienced workers is 18c per hour. The company, however, from the start paid the girls 21c per hour

in their pay envelopes, and deposited in their special account the difference between this amount and the 25c current rate. "Thus the weekly envelope usually brings the girl the same sum: \$9.87 which is 21c x 48 hrs., less a deduction of 21c a week for the unemployment insurance (so far the only deduction for insurance). Sometimes the envelope contains less —when the girl worked less hours (Labour Day or insufficient supply of the raw material)."

Some of the girls have subsequently been raised to a 30c or 32c current rate, which brings their special account to \$5.28 a week; and some are beginning to be paid on a piece work basis and save around \$7, in addition to \$9-\$10 received in cash.

Mr. Podoski reports that the plant is modern and well-equipped, and that the girls like their work.

They live at the Foyer, along with about 30 French Canadian girls.

"Though run by nuns it is not a convent." The bedrooms are occupied by 4, 3, 2 girls, or one girl, who pay \$5.50, \$5.75, \$6.00 or \$6.50 accordingly. The sum includes three meals a day.

Mr. Podoski describes the living conditions of the girls, their problems arising out of language difficulties, etc., and their treatment. He concludes as follows:

"I am convinced that even in the cases when the girls felt hurt or indignant there was no ill-intention towards them. On the contrary, the purpose was to assist them in taking the first steps in Canadian life and to protect them from danger. The vast majority of the girls understand it . . .

"My own conviction is that the labour conditions of the Polish girls are quite satisfactory, that living conditions are very good, and that the treatment is absolutely fair and truly Christian."

Joint organization of labour and farmers in Manitoba

Representatives of the Winnipeg Labour Council (CCL) and of the Manitoba Federation of Agriculture and Co-operation met in Winnipeg on September 11

to make plans for a joint organization to promote better understanding between farmers and industrial workers.

It was agreed unanimously that the co-operative movement provided the best medium for creating and fostering unity between the two groups. The representatives felt too, that an interchange of delegates and the promotion of the purposes of the proposed organization through the periodicals published by each

group, would develop better understanding between labour and agriculture. A provisional committee was named to draw up the aims and objects of the joint organization. Other labour union groups, teacher associations and other interested bodies, will be invited to join, with a view to broadening and strengthening the base of the new movement.

Conventions of labour organizations

Conventions of Canada's three leading trade union organizations were held during the latter part of September and early in October. The proceedings of these conventions and the resolutions adopted will be summarized in the November issue of the *LABOUR GAZETTE*.

Richmond H. Neilson, Labour Department Official, dies in Ottawa

The death of Richmond H. Neilson, prominent official of the Department of Labour, occurred in Ottawa on October 5. Mr. Neilson was one of the organizers of the National War Labour Board in 1940. For some time he was Secretary of the Board and later was made its Chief Executive Officer. When the Board was discontinued in 1946, he was assigned by the Minister of Labour, Hon. Humphrey Mitchell, to write a history of the Board's activities and he was engaged in this work at the time of his death.

Mr. Neilson was born at Arnprior, Ontario, 62 years ago, and commenced his business career with the Bank of Ottawa at Carleton Place, Ontario. Subsequently he became manager of several of the Bank's branches in Ontario, Saskatchewan and the Maritimes. Later he was made general manager of the Eastern Trust Company at Halifax, a position he held for several years. He was an authority on Better Business Bureaus and Credit Associations and, following his experience with the Eastern Trust Company, managed Better Business Bureaus in several centres in Canada.

Report on organization in industry, commerce and professions

The "Thirteenth Report on Organization in Industry, Commerce and the Professions in Canada, 1947" was issued recently by the Dominion Department of Labour.

The report was prepared by the Information Branch of the Department and provides a general guide to the main organizations in the various industries, commercial associations and the professions throughout Canada. Details covering the purely local bodies or branches have been eliminated. It is one of

a series originated in 1921 and published annually until 1937, when it was discontinued until after the war. As ten years have elapsed since the publication of the twelfth report, considerable research was involved in the preparation of the current volume.

It is a book of 267 pages, includes a carefully compiled index and not only lists thousands of important Canadian organizations, but gives the names and addresses of their executive officers. It should prove useful as a reference work in business and government offices, libraries and newspapers. Copies may be obtained from the Department of Labour, Ottawa, at 50 cents each.

Emergency order for night work in U.K. factories

To aid in spreading the electricity load, the Minister of Labour and National Service of the United Kingdom has made, under the Emergency Powers, an Order for staggering hours in factories.

Under the Order a wide variety of arrangements for staggering working hours is permitted. Double day-shift working by women and young persons over 16 is made possible, and three-shift working by women over 18 and boys over 16.

The Factories (Hours of Employment in Factories using Electricity) Order, 1947, in force on September 22, applies only to factories where electricity generated outside the premises is used for purposes other than ventilation and lighting.

The Order allows a District Inspector of Factories to permit exemption on certain conditions from the provisions of the Factories Act which restrict the hours of employment of women and young persons. An earlier start or a later finish for day work may be allowed than is ordinarily permitted by the Act. Women and young persons between 16 and 18 may begin at 6 a.m., instead of 7 a.m., or may end at 11 p.m., instead of 8 p.m., and those under 16 years of age may finish work at 6.30 instead of six.

Women and young persons over 16 may work more than 48 hours a week, but not more than an average of 48 a week over two consecutive weeks, or over a period which the Inspector considers reasonable. Work may be permitted on Saturday afternoons or on Sundays provided that another day is substituted.

Night work on not more than six nights a week may be permitted to women and to young persons between 16 and 18. The maximum hours of night work are 48 in a week and nine in a night, or 10 hours if only five nights are worked. The period of employment

on any night may not exceed 11 hours, or 12 if not more than five nights are worked. Work may not begin before 7 p.m. or finish after 8 a.m.

U.K. agreement for public holidays in construction

A scheme for ensuring pay for public holidays for workers in the British building and civil engineering contracting industries was completed on June 25, 1947, by

agreement between representatives of the employers and workers concerned.

The plan was to start operation from September 1, 1947. Administration rests in the Building and Civil Engineering Holidays Scheme Management Limited, to be called the Management Company. Differences over interpretation of the agreement will be settled by the Holidays With Pay Joint Industrial Board, which was established by an earlier agreement.

Each worker will have a numbered Public Holidays Book containing detachable Public Holiday Cards. Public Holidays credits will be made by the employer affixing stamps purchased by him from the Management Company which also supplies the Holiday Books. The worker will carry the book with him from one job to another.

Credit for each week worked will be 2s. except in the case of operatives under 18 for whom it will be 1s. 6d. Payment of credits to operatives will be made by the employer on the pay day immediately preceding the locally recognized holiday. The holidays are Easter Monday, Whit Monday, August Bank Holiday and Boxing Day. These may be substituted for or supplemented in some districts.

U.S. state laws curb jurisdictional disputes

Designed to encourage disputing unions to settle their own differences, laws have been enacted in 1947 by six American States to curb strikes arising out of jurisdictional disputes.

This legislation is summarized in *Labour Information Bulletin*, September, 1947, of the U.S. Department of Labour. Such controversies involve two or more unions each of which claims the right to a particular work or kind of work.

In California and Massachusetts an injunction may be issued to prevent a strike of this kind and, also, picketing in connection with such a strike. The California law declares such a strike to be unlawful, and damages may be recovered by any person injured as a result of such a strike. In Massachusetts, if

the parties to a jurisdictional dispute have submitted it to arbitration and one party fails to carry out the award, an injunction may be issued restraining a strike or picketing.

In Michigan, special machinery is provided for the settlement of jurisdictional disputes through mediation and arbitration. The Pennsylvania Labour Relations Act and the Wisconsin Employment Peace Act were amended to declare such a strike an unfair labour practice. The Pennsylvania law relates to a union or its agents who conduct a strike or boycott or engage in picketing because of a jurisdictional dispute, and the Wisconsin Act, to an employee alone or acting with others in promoting or engaging in a jurisdictional strike. In Missouri the law declares it to be the duty of the parties to such a dispute to settle it without a work-stoppage and, if necessary, to submit the matter to arbitration. If the dispute is not settled or referred to arbitration, the State Industrial Commission, at the request of one of the parties, may investigate it and make a binding determination of all the matters involved.

U.S. legislation on disputes in public utilities

Ten American States have passed laws this year for the settlement of industrial disputes in public utilities.

They are Florida, Indiana, Massachusetts, Michigan, Missouri, Nebraska, New Jersey, Pennsylvania, Virginia and Wisconsin. Texas prohibits picketing and sabotage in connection with public utilities.

Compulsory arbitration which entails the prohibition of strikes and lockouts is called for in the seven States of Florida, Indiana, Michigan, Nebraska, New Jersey, Wisconsin, and Pennsylvania. This provision, however, applies, under most of the laws, only if a strike or lock-out will interrupt essential services. Massachusetts and Virginia laws require postponement of strike action until after inquiry. Florida, Michigan, Missouri, Nebraska, New Jersey, Pennsylvania permit injunctions to enforce the orders of the arbitration board.

In most cases a special tripartite arbitration board is to be appointed by the governors after mediation efforts have failed. Severe penalties for violations are set out.

The States of Massachusetts, Missouri, New Jersey, and Virginia authorize the governor to take over and operate a public utility if there is danger of a strike. The Virginia law specifies that the State shall receive 15 per cent of the net profit of operating the public utility while it is under State control.

**Joint time
study teams held
successful**

Business Week of August 30 discloses the history of a management - labour time study and production-methods department at the Oliver

Iron and Steel Corporation of Pittsburg, which is reported to be regarded by the company as highly satisfactory. The company in 1940, in order to allay labour suspicion toward the function of a desired time-study department, submitted the idea of a jointly manned unit to the United Steelworkers (CIO) which bargains for the corporation's 1,500 production workers. Accepted by the Union, this establishment has been reaffirmed in all subsequent contracts.

Currently the department consists of four full-time joint study teams. When a vacancy occurs in a labour-occupied position, the local submits to the management a list of applicants from which one is selected. The new member is trained by the Department on theory and practical application before undertaking duties, during which time the company continues to pay his salary.

In regard to implementation of decisions, several steps are provided for in the event of either the union or management registering opposition. When a time-study decision is opposed, the team may be ordered to restudy the job, it may be handed to another team or, if necessary, all four teams may make different studies. Usually, it is claimed, a bargaining session resolves the more contentious problems.

The article states that the management is satisfied that more harmony among the employees is created by a better understanding of the purposes of time-study and method changes. Apart from a walkout during the nation-wide steel strike of 1946, no interruptions of production have occurred at the plant. Also, the article states the corporation is sure that the effect on productivity is equally favourable.

**Ford Company
institutes
administrative
training course**

The Ford Motor Company has set up a five-year course to train supervisory employees for higher administrative positions. Leading to the degree of Bachelor of

Science in Industrial Management, the course is based on a program combining work at Ford and at Wayne University's School of Business Administration, at Detroit. Sixty-three Ford supervisory employees have already started on their first year's courses, some of which are taken at the university during evening hours, but most of which are conducted at the Ford

plant after regular working hours with study outlines approved by the university.

The candidates take the courses while carrying on regular working schedules, are paid their regular salaries during the entire five years, and have their tuition paid by the company. The program is open to any supervisor who has been with Ford for five years who meets specified requirements of age, previous training, demonstrated administrative capacity and the ability to meet college entrance requirements.

The aim of the combined program of study and work is to develop men who will be equipped to step into administrative positions in manufacturing industry.

**Conference
to seek
family
security**

A National Conference on Family Life will be held at the White House, Washington, next May, under the auspices of President Truman and with the support

of 110 national organizations.

The Conference will function under a board of directors made up of 35 representatives of labour, business, the professions, and religious and civic groups. Its chairman will be Mr. Eric Johnston, President of the Motion Picture Association of America, and its vice-chairman, Mr. Boris Shishkin, economist, the American Federation of Labour.

Mr. Johnston described the work of the conference as follows: "First, it will take stock of the family in the modern post-war world. Second, it will develop guideposts for voluntary programs of action which would help achieve greater security for the family and all its members, including mental and emotional as well as physical and economic security."

**Tripartite
industrial
conference
held in
Australia**

During August, the representatives of Government, labour and management in Australia met in conference to fashion an industrial program aimed at stepping up production to the equivalent

of a wartime basis. The conference agreed that the two major obstacles to the realization of such an objective were coal and manpower, and accordingly directed that an appeal be issued for increased coal production and a return to industry of men and women war workers to help alleviate production shortages. Of particular significance was the departure of the trade union and Government delegates from their long standing opposition to incentive wage systems. In the case of the trade

unionists, however, this concurrence was accompanied by a demand that employers' books of accounts be opened for inspection to ensure that any such system be adequately policed. A suggestion from the employers that all strikes be eliminated for a period of three years was rejected by the trade union delegates.

The results of the conference were embodied in seven conclusions as follows:

(1) To attain essential increases in production, all must co-operate. More efficient management, up-to-date plant and machinery and elimination of waste through reduction of labour turnover and absenteeism are necessary.

(2) The two major bottlenecks, coal and manpower, must be overcome.

(3) Complete understanding between controllers of enterprise and representatives of workers is essential to maintain free and private enterprise, which "in the past and at present is the major avenue for providing work."

(4) Industrial disputes must be reduced to a minimum through use of the established system of conciliation and arbitration. Conciliation should be exercised to the fullest before resort is made to arbitration.

(5) The Australian Council of Trade Unions is prepared to make a complete investigation into modern incentive systems in the interests of higher production. Employers will supply information and assistance.

(6) Though the conference has indicated varying viewpoints on policy and principle, it has enabled labour and management to state their views and the reasons for them in a free and frank manner.

(7) The parties agree to advise each other on matters which they feel should be considered by the conference so they may be able to investigate them with a view to decisions being reached when this conference meets.

Measures to remedy conditions in coal industry in N.S. Wales

A joint scheme for regulation of the coal mines of New South Wales by Commonwealth and State Governments was incorporated in the *Commonwealth Coal Industry Act, 1946*, and a

statute of like title passed by the New South Wales Legislature.

The Chairman of the new Joint Coal Board outlined the immediate policy. The Board must remedy the industrial and financial instability at present characterizing the industry.

To render employment more attractive the

Board plans to improve working and living conditions. It is hoped that confidence can be restored by having regard to the rights of the employer, the worker and the public.

Officers with experience in the industry will be stationed in the main coal fields, thus making for close contact with all phases of the work. A Chief Welfare Officer will be appointed with special responsibility for ensuring comfortable working conditions. The dust problem is to be attacked at once. Measures for lightening physical labour are to be introduced with all possible speed. The general standard of amenities will be considered, largely with respect to improved living conditions and community and recreation facilities in the coal fields.

The administration of the Acts is entrusted to a Joint Coal Board consisting of a chairman and two other members to be appointed for a period not exceeding seven years. Generally, the duties of the Board are to ensure adequate production of coal, conservation and development, equitable and efficient distribution at prices fair to the public and economical to industry, and to safeguard the workers. The Board has power to supervise the type of equipment to be used, to classify and grade coal, regulate marketing and distribution facilities, to ensure the health and safety of the workers, including the adoption of sound welfare practices, and to regulate employment, training and recruitment to the industry.

The Board may provide for the conduct of research into the industry. It can acquire and sell coal. Notably, it is enabled to acquire ownership or assume control of the management and operation of a coal mine. It is, also, authorized to institute Workmen's Compensation Insurance schemes. No form of industrial conscription is permitted.

To settle industrial disputes, a Coal Industry Tribunal is established, consisting of a practising barrister or solicitor of the High Court or of the Supreme Court of Australia of not less than five years' standing. The Tribunal is to act in accordance with equity, good conscience and the substantial merits of the case and is not bound by rules of evidence.

Local Coal Committees appointed by the Tribunal are to supplement the work of the superior body and may refer matters to it. For each mine a Conciliation Committee may be established to deal with grievances and it may refer matters to the Local Coal Committee.

French machinery makers must furnish safety devices

March, 1947.

The French Labour Code prohibits the sale or hiring of machines or parts of machines which are dangerous for the workers and for which there are safety devices of recognized effectiveness unless the machines or parts are equipped with such devices. By a decree of May 28, 1946, it is stipulated that this section of the Labour Code applies to the following:

- (1) Parts of machines comprising control and transmission equipment such as: connecting rods, flywheels, wheels, shafts, gearing, friction cones or cylinders, chains, cams and slides forming an integral part of any kind of power-driven machine, with the exception of equipment for the purpose of coupling to another machine or for picking up mechanical power;
- (2) Parts of machines comprising accessible elements forming projections on the moving parts of these machines, such as: setscrews, bolts, keys, bosses and ribs.

It applies also to eleven groups of machines, those used in the food industry, rubber and plastic industries, paper making and allied industries, printing industry, textile industry, to laundry machinery, leather-working machinery, wood-working machinery, metal-working machinery, and concrete mixers, and to machines in the tile, brick and pottery industries.

A Committee set up by the Minister of Labour and Social Welfare is to determine and to certify the effectiveness of the protection afforded by the safety devices. Builders, vendors and hirers of machines must provide the Minister with all the information and undertake all tests which the Committee may require. From the date on which this section of the Labour Code is applied to particular types of machines or particular parts, vendors and hirers will be required to furnish purchasers with a certificate to the effect that the machine or part conforms to the type certified by the Committee.

Fees for medical examinations for employment

under the Factories Act, 1937.

An order issued by the British Minister of Labour and National Service raises from October 1 next, the fees to be paid to Examining Surgeons for their duties

Regulations to ensure safe working near dangerous machines and machine parts have been made by the French Minister of Labour according to the *ILO Industrial Safety Survey*, January-

Subject to any agreement concerning fees between the Examining Surgeon and the occupier of a factory, the Order fixes the Surgeon's fees for examination of persons employed in certain dangerous trades and of young persons. For the examination at the factory of young persons under 16, all of whom must have medical certificates before they may be employed, or of boys between 16 and 18 who may be permitted to work on shifts in the iron and steel industry and in paper and glass making, or for examinations at the factory which are made by order of the Factory Inspector when he considers that a person under 18 is in employment prejudicial to his health or to the health of others, the Examining Surgeon is to receive 7s. 6d. for the first, and 4s. for each other person examined on the occasion of any one visit to the factory, and in addition, if the distance between the factory and the Examining Surgeon's office is more than two miles, 2s. for each mile or odd fraction of a mile by which the distance exceeds two miles. For examination at the Surgeon's residence, or at some other place appointed by him and approved by the Chief Inspector of Factories, he is to receive 4s. per person.

For duties carried out in connection with the examination of persons employed in processes connected with lead or other dangerous trades, including the making of entries in registers, issue of certificates, and such other duties as may be required by the Regulations, when the examination is at the factory or other place of employment, the fee is 7s. 6d. for the first person and 2s. 6d. for each other person examined on the occasion of any one visit to the factory and in addition, the same mileage rate as in the case of examination of young persons. For such examinations at the Surgeon's office or other approved place, the fee is 2s. 6d. for each person examined.

These fees do not cover any special examinations of the blood, X-ray examinations and so on, or other special investigations undertaken in connection with the examinations of employed persons on particular occasions or in particular instances.

Legal status of unions and employers' groups in Turkey

Under a Turkish law of February 22, 1947, the status of labour unions and employers' associations, was defined in detail, the August issue of the U.S. *Monthly Labour Review* reports. Previous to 1936 Government policy was to discourage social groupings not connected to the

Government Party, the article states. In June of 1936, a basic Labour Code of the Republic was passed providing for the representation of labour in the settlement of industrial disputes; however only labour delegates for individual establishments—not labour unions—were authorized to exercise this function. A law promulgated in 1938 expressly prohibited associations based on occupational lines. This was modified in 1946 to the extent of granting general permission for various types of organizations, including labour unions to be formed.

As defined by the 1947 measure, the purpose of the associations includes mutual aid, protection of common interests and representation of members. Neither employer groups or unions are permitted to engage in any sort of political activity. Failure to observe such restriction carries penalties of permanent and temporary suspension. Federations (similarly constrained from political activity) may be joined with the consent of two-thirds of the membership of the local organization.

The law limits union membership to manual workers, and only during term of actual employment. Membership is voluntary; contrary provisions being prohibited in labour contracts and factory regulations. Individual unions are precluded from having as members those not engaged in the same or related branch of work. Whether this provision implies an industrial or craft organization is not clear from the available information, the article states.

The unions are authorized by the law to (1) conclude collective agreements; (2) co-operate with the arbitration authorities in the settlement of labour conflicts; (3) participate in the administration of social insurance and of the public employment service both of which are now being developed in Turkey; (4) establish funds of mutual aid for protection against sickness, permanent disability, death, and unemployment; (5) create institutions for health, sport, and education of their members; and (6) create producers' and consumers' credit and housing co-operatives.

Although the law carried no new provisions on labour disputes, the representatives of unions and of employers' associations are expressly warned against encouraging strikes or lock-outs which are illegal under the Labour Code of 1936. In case of contravention, the organizations may be suspended by court decision.

Not all collective work stoppages are forbidden by the Labour Code of 1936. Articles 73 and 74 of this basic law carry somewhat involved definitions of the terms "strike" and

"lock-out" which have the effect of permitting minor labour disputes, provided that they do not lead to the closing down of the whole establishment or of an important part of it. Sympathy strikes are always forbidden.

Guaranteed employment plan of U.S. railway company

The details of a guaranteed employment plan declared to be unique in the United States railroad industry, appears in the August issue of the U.S. Department of Labour's publication, *Monthly Labour Review*. Evolved by the management of the Seaboard Air Line Railroad operating along the southeast coastal area and officials of the Federated Shop Crafts of the Railway Employees' Department (AFL) in 1928, the scheme provides continuity of employment for an average of 2,500 of the company's repair and equipment maintenance workers.

As inaugurated in 1928, the terms of the plan guaranteed that a minimum force of positions, determined jointly at the commencement of each year, were to be continued throughout the entire year at each terminal point of the system. No specific wage assurance was included other than that derived from the employment guarantee based on regular hourly rates. In 1930 the terms were modified to permit the transfer of employees, at the expense of the company, from point to point and from city to city, subject to prevailing rules of seniority and after concurrence by the union.

Since its inception, the plan, which is administered jointly by the management and the union, has been changed 13 times as regards the number included in the minimum force. Three of these changes were mid-year adjustments made feasible by a 1931 modification which permits either party to initiate a review of the minimum force under serious situations. Such mid-year revisions were the result of special circumstances, the article reports, rather than any company attempt to arbitrarily invoke the reduction clause.

In slack periods, non-guaranteed employees are released upon 5 days notice. Those in the minimum force are dischargeable only for cause in conformity with a grievance procedure provided in the general collective agreement. Transfers may not change a worker's classification or reduce his wage rate.

The proportion of positions that have constituted the minimum force since 1928 has ranged from 68 per cent to 100 per cent of the total number of workers in the repair and maintenance classifications covered.

Employment Trends in the Professions

DURING the past year, the Bureau of Technical Personnel of the Department of Labour has been conducting a survey to obtain information on the future trend of labour demand in the professions in Canada. So far, this survey has interviewed some 1,500 firms which employ over 900,000 people.

At the present time there is an acute shortage of professional persons, which remains persistent because of the high qualifications necessary for the work. With the exception of teaching and nursing, where only a small section of the profession have degrees, the bulk of the professional classes are university graduates from such courses as medicine, dentistry, and engineering, where four years' training or more are required.

According to the 1941 Census of Canada, some 245,000 people are classified in the professional category. Included in this total are such occupations as authors, artists, actors, draughtsmen, designers, and musicians, but the major part of the total is concentrated among a few of the better known professions. The teaching, religious, medical, engineering and legal professions take in over 90 per cent of all professional people. Slightly over half are women.

By occupation, 88,000 of the 1941 total were school teachers, of whom 64,000 were female. Nurses and nurses-in-training numbered 39,000 and physicians and surgeons accounted for 12,000. Although the Census does not separate engineers as a unit, indications are that these numbered about 20,000 at that time. Clergymen numbered over 14,000 and lawyers and notaries totalled 8,000.

In 1871, only 34,000 people out of a population of 3,700,000 were classified as professional. Keeping pace with basic changes in the country's social and economic structure, however, their numbers increased rapidly, the period of greatest growth, both absolutely and relatively coming between 1911 and 1921, when the total jumped from 100,000 to 180,000 (see Table I). Now, as has been noted, about a quarter of a million people are found in this group.

Recruitment to the ranks of professional workers will come largely from the record number of young Canadians now attending university. Immigration will also be a factor.

At the present time some 60,000 persons are attending Canadian universities. The influx of some 35,000 war veterans into university,

coupled with a probable high level of prosperity, will see more graduates than ever before in the immediate postwar period.

This spring, an estimated 10,000 students got their degrees or diplomas. During the war, in the period from 1940 to 1945, some 42,000 students were graduated, or 7,000 every year, almost exactly the same number as in the pre-war period from 1934 to 1939.

Of those graduating this year, the largest single group, about 4,800 in number, have been studying Arts and Pure Science courses¹. The majority of these will disperse themselves fairly widely on the Canadian labour market, but a large proportion will return to continue their studies. Many will become high school teachers or university lecturers; others will enter professional schools like the medical or legal faculties; some will return to do graduate studies, some will go into business, and so on.

Most of the other graduating students have taken courses which will afford them entry to professional status in their chosen occupation. Medicine, which normally graduates about 600 annually; engineering (800), dentistry (100), are among the more important of these courses.

Attitude of Employers towards University Training

Two questions asked in connection with the survey of the Bureau of Technical Personnel bear on the subject of the present attitude of these employers towards their professional employees. These topics were (a) the trend towards a freer use of university-trained personnel, and (b) comments on present university training.

Seventy-five per cent of those interviewed thought that there was a definite trend towards the freer use of university trained personnel in industry. A large percentage thought that a university training was becoming essential for more and more types of work, e.g., in the engineering and accountancy fields. Many considered university graduates preferable for key positions, remarking that they are "good material for advancement" and are more easily trained and make faster progress.

Of the 12 per cent who did not believe that there was a trend towards a wider use of

¹The Pure Science courses are distinct from the Applied Science or Engineering courses and include Chemistry, Physics, Biology, etc.

university graduates, there were three main classes. These were (1) those who have sufficient university trained personnel on their staffs already; (2) those who do not use these types of workers because they believe that the nature of their business does not require them; (3) those firms whose company policy is to train younger workers. Thirteen per cent of those interviewed made no reply to this question.

With respect to a question on "comments on present university training," over 60 per cent of those answering had some suggestions to offer regarding the improvement of present courses. The most persistent themes running through these comments can be divided into three main categories.

TABLE I.—GROWTH OF THE PROFESSIONS AND OF THE TOTAL POPULATION IN CANADA, FROM 1871 TO 1941.

(SOURCE: Decennial Census of Canada, Dominion Bureau of Statistics.)

Date	Professions	Population	Ratio per 1,000
1871.....	34,000	3,700,000	9.2
1881.....	44,000	4,325,000	10.2
1891.....	60,000	4,833,000	12.4
1901.....	75,000	5,371,000	14.0
1911.....	99,000	7,207,000	13.7
1921.....	180,000	8,788,000	20.5
1931.....	224,000	10,377,000	21.6
1941.....	245,000	11,507,000	21.3

First, a large number of employers thought that university students lacked practical training. The second point most often stressed was that university graduates often showed a lack of desire to work hard or to start learning the business from the bottom at a low salary. The third general theme concerned suggestions for curricula changes. In regard to engineering, the opinion was that these courses could lay more stress on English (particularly writing), business administration, economics and industrial relations. There were several suggestions that entirely new specialized courses be added.

Of the total number of replies to this question, over 30 per cent found the present system of university training entirely satisfactory and it is significant that this group included most of the larger employers of university-trained staff.

Demand for Engineers

Among returning veterans, the most popular course has been engineering. The postwar crowding of universities will produce five times as many engineers in the next five years as

were turned out in the same period following World War I.

While the 1947 total of 1,100 graduates registers a new high, the peak will not be reached until 1950 when 3,700 will finish their course. A similar trend took place after the last war with the peak coming in 1923 when 629 engineers were graduated.

Canadian industry could use another 5,000 scientific and technically trained persons immediately, according to an estimate made by Mr. Alex. Skelton, Director-General of the Economic Research Branch of the Department of Reconstruction, in a submission to the Senate Committee on Immigration. Mr. Skelton believed that many of the senior and intermediate technical positions could be filled by immigration, leaving the junior positions open for young veterans graduating. Approximately half of this 5,000 demand would be for engineers.

Throughout the past year, the Bureau of Technical Personnel, which, with the Executive and Professional Division of the National Employment Service, is concerned with the placement of engineers, has consistently had orders on hand for upwards of 1,000 technically-trained personnel with steadily fewer applicants.

These agencies report that, in general, this year's graduating class in engineering had little difficulty in finding employment and practically all summer students who were looking for work were placed.

In the twelve month period prior to March 31, 1947, the Bureau reports that 5,437 technical persons were recorded as entering new employment. Of these 1,501 were new graduates, 1,076 were demobilized from the armed forces, and 2,860 were persons who changed civilian employment.

Civil, mechanical, and electrical engineers are the more important groups numerically. Chemistry, the largest single group during the war years, has slipped to fourth place.

Contingent on the continuance of a state of full employment, the supply of engineers is not expected to seriously overbalance the demand in the next five years.

The survey of Canadian Requirements for Professionally Trained Persons, now being conducted by the Bureau of Technical Personnel, has found that the 1,500 employers interviewed expect to have openings for about 9,500 engineers in the next five years. The expected number of new entrants to the Canadian labour market is estimated at 11,000.

This survey is not yet complete and with the addition of openings not yet covered by the survey, it can be expected that the total would be such as to maintain a reasonable state of equilibrium between demand and supply in the engineering profession over the short-term period. This with the proviso that high em-

ployment continues, the only basis on which a survey of this kind was possible.

Age as a Factor in Staff Planning

In seeking reasons for the extensive needs of employers for new technical personnel, such factors as new technological developments, the

THE PROFESSIONS IN CANADA

THE MAIN OCCUPATIONAL GROUPS IN THE PROFESSIONS

1941

SOURCE: DECENNIAL CENSUS OF CANADA

trend towards a freer use of university trained personnel, and the increasing appreciation of the value of professional services all have their place.

An additional factor to which sufficient weight is not always given is to be found in the age characteristics of the various professional groups in the country.

An examination of census returns for selected groups of male professional workers, totalling in all some 119,000, shows that between 1931 and 1941 the proportion of persons aged 55 and over increased from slightly under 16 per cent of the total to somewhat over 17 per cent. This trend towards higher age characteristics was countered to some extent by the teaching group, which was the largest of those selected, and showed a slight decrease in the proportion in the higher age brackets. Veterinarians showed the greatest increase in age, the number in the 55 and over age bracket increasing from 16 to 35 per cent in the 10-year period. Other groups which showed notable increases were designers and draughtsmen, engineers, architects and dentists in that order.

The Bureau of Technical Personnel, in connection with its survey, has encouraged a number of firms to make their own age charts. Some employers have in this way realized the desirability of planning for their imminent as well as their immediate need for replacement.

Salaries of Technical Workers

Upon graduation, the average young technical person, engineer or scientist, now goes to work at a salary of about \$2,400 per annum, which is somewhat higher than the average starting salary of the class of '46, estimated at \$2,100 per annum.

In 10 years, if he is reasonably successful, his annual salary should be over \$3,500 and after that the average salary curve continues to rise. Salaries in the \$6,000 to \$10,000 range are becoming increasingly common and a handful of top men in the profession, mainly holding executive and administrative jobs are in the \$20,000 to \$30,000 bracket. The job expectancy of the engineer is 37 years.

In comparing starting salaries of the class of '47 with those of the class of '46 it should be noted that there has been a change in the average age of new graduates. Under normal conditions, students in engineering and science would reach, on the average, their 23rd birthday in the year of their graduation at bachelor level. In 1946, due to the percentage of cases where there has been some disruption of studies, the average age at graduation was

about half a year greater. In 1947 it was about a year higher than in 1946.

A study made by the Bureau of technical persons in established positions in 1941 indicated that the average age of this group in 1941 was 44 years and the average salary was \$3,800 per year. The median salary (that is, the salary which divides the distribution so that an equal number of items lie on each side of it) was \$3,150, indicating that a few high salaries pulled the general average up.

Growth of the Engineering Course

Since 1921, the number of professional engineers has been increasing at a rate almost double that of the population growth, which is roughly about 1½ per cent per annum. In 1921, there were 13,000 engineers, in 1931, 16,000, and in 1941 the total was 20,000.⁽¹⁾ At the present time, largely due to the increased numbers in this course during the war years, the total is estimated at over 25,000.

While the rate of growth is considerably faster than that of the population as a whole, when compared to the growth of all university courses no marked trend is apparent towards engineering at the expense of other courses, except during the two immediate postwar periods.

After the last war, the proportion of engineering students among all student population reached nearly 12 per cent; in 1929 it was five per cent; by 1939 it was seven per cent.

During World War II, the engineering course was declared to be "essential" and the numbers registered in this faculty rose sharply reaching 10 per cent of the total by 1945. Since the war, engineering courses have been crowded.

Veterans in the Engineering Course

In February 1947, 8,100 veterans were enrolled in engineering courses at Canadian universities. In this year's graduating class, they formed 25 per cent of the whole, these being mainly students who left school at the end of their second year to join the armed forces. Next year, veterans are expected to form about 40 per cent of all graduates and in 1949 about 75 per cent.

Engineers Needed for High Employment

Canada's maximum production potential has not been reached due to widespread manpower shortages. The shortage of engineers has been one of the more important of these.

⁽¹⁾ These data include surveyors.

In the future, the maintenance of the present high levels of employment and income will partially depend on the supply of engineers not only for the technical skills which they can provide but also for their managerial abilities.

To quote from the brief of Mr. Skelton on immigration already mentioned, while speaking in connection with the speed-up in production and reduction in costs resulting from the importation of scientists during the war, "... the demand (for scientific and technical personnel) is likely to become more intensified during a period when such factors as production costs will have to be more carefully considered in meeting domestic and foreign competition than is the case at present. It should, therefore, be borne in mind, when

considering present shortages, that a change-over from a seller's to a buyer's market may increase management's demand for this type of employee, and a forecast of employment needs based on present conditions in industry may be somewhat low". And further on: "Without trained engineers, the capital equipment of the country will suffer. There is at present a great deal of capital maintenance and repair work to be done in Canada to replace the curtailed non-military investment program of the war years. New roads, hospitals, power plants, mining developments will not take place if there are not enough technical personnel with the experience and training to carry out these projects."

Recruitment and Training of Nurses in Great Britain

IMPORTANT recommendations as to recruitment and training of nurses are contained in the Report of a Working Party recently published in Great Britain. The Working Party, consisting of two doctors and two nurses under the chairmanship of Sir Robert Wood, was appointed in January, 1946,

to assess, if possible, what nursing force, in terms of quantity and quality, is likely to be required in the future for the National Health Service as developed, and to suggest how best that force can be recruited, trained and deployed.

Data were obtained by approved methods for investigating social problems, through sample surveys involving over 200 hospitals and direct contact with representative nurses of all ranks.

The report reviews the nursing profession, its size and structure, annual intake of student nurses, age on entry, pre-nursing occupation, educational level, methods of training, and, what is considered most important from the standpoint of the shortage of nurses, loss of nurses during and after training.

As regards wastage, the survey showed that out of 100 persons who enter training not more than 50 complete the course, and in many hospitals not more than about 30 graduate. With student nurses it was estimated that the average annual wastage is 36 per cent of the intake, not including failures in the final examination. The annual loss of trained nurses was found to be about 10 per cent. One-third of the loss of trained nurses from hospitals each year is due to marriage, from five to fifteen per cent to

ill-health, and about another third to "resignation".

The Working Party found that a widespread dissatisfaction which led to resignation usually resulted from a combination of factors, hospital discipline, the attitude of the senior staff, food, accommodation, hours and pressure of work.

Some of the wastage may be attributed to unsatisfactory selection. It was found that many of the students who left training (this usually occurred during the first year) were intellectually and temperamentally unfitted to qualify as nurses and should not have been accepted. Changes suggested by the Working Party were that modern methods of selection, including standard intelligence tests, should be used, and that candidates who are below the level of ability required "should be encouraged to accept employment in a capacity ancillary to nursing."

To reduce such wastage, the Report makes two major recommendations, one, relating to discipline, and the other, to the length of the training course. First, it is urged,—

Nurses in training must no longer be regarded as junior employees subject to an outworn system of discipline. They must be accorded full student status with the conditions such status implies, so far as the intrinsic requirements of nurse training permit.

Second, it is recommended that the training course should be reduced from three to two years. This could be effected by eliminating much of the domestic work and repetitive tasks which now occupy a large part of training time.

(Continued on page 1538)

Family Allowances in Canada, 1945-47

SINCE family allowances came into effect in Canada 26 months ago, \$506,208,673 has been dispersed by the Federal Government for the benefit of 3,704,622 children.

On August 31, this year 1,633,675 Canadian families were receiving family allowances. This number represents an increase of approximately 225,219 families registered since March 31, 1946, the end of the previous fiscal year.

Each month's statistics show a steady increase of families registered for family allowances. These new registrations are attributed largely to the change in the income tax legislation effective January 1, 1947. Under the previous income tax regulations, a number of families did not register for family allowances because their income level was such that no real benefit would have been derived from the receipt of family allowances.

Acceptance of family allowances is not compulsory, but under the now effective income tax regulations, it is assumed that every one under 16 years of age is receiving family allowances. A straight \$100 exemption for each child under 16 is allowed in making up income tax returns. The taxpayer is, in effect, allowed a \$100 annual exemption plus a family allowance. Thus a greater number of families are placed in a position where the receipt of family allowances creates an actual financial benefit.

Allowances are paid monthly and must be spent exclusively for the maintenance, care, training, education and advancement of the child. If it is satisfactorily shown to the authorities that the money is not being spent

for this purpose, payment can be discontinued or made to some other person or agency on behalf of the child. It is further set out in the Act that if any person is dissatisfied with a decision as to his right to be paid an allowance or as to the amount of an allowance payable to him or as to any other matter arising under this Act, he may appeal against such decision to a tribunal established for that purpose.

Education is a very important clause in the eligibility of a child for family allowances. The allowance is not payable to a child who, being of an age when he is required to attend school by the laws of the province where he resides and physically fit to attend school fails to do so or to receive approval of equivalent training.

Effects of Family Allowances

The family allowances experiment is still too brief to permit conclusive statistical measurements of the various possible welfare aspects of the program.

Surveys designed to get first-hand information were conducted by the welfare supervisors in each of the nine regional offices of family allowances. Recipients of family allowances were chosen in such a way as to get a good sample, including families in a variety of districts and at various income levels. These surveys indicated that family allowances are being used by families in various ways, to provide such benefits as: improvement in diet, especially extra milk and fruits; more adequate clothing; extension in use of medical, dental and optical services; and in some cases widening of recreational or cultural opportunities.

STATISTICS BASED ON FAMILY ALLOWANCES PAYMENTS, AUGUST, 1947

An increase in school attendance has been noted by school authorities.

At the Canadian Conference of Social Work, June, 1946, Miss Elinor Barnstead, Supervisor of Case Work, Family Welfare Association, Montreal, presented a paper, "The Experience of Private Family Agencies in Regard to Family Allowances." This statement was based on replies to questions sent to the larger private welfare agencies located in eight of the nine provinces.

Miss Barnstead's summary of the replies included the following paragraphs on the use of family allowances:

"In answer to the questions—'Has the payment of family allowances helped to improve standards of living in the families you know?' 'Have parents used the money constructively for the benefit of their children?'—the replies have been overwhelmingly in the affirmative. For the families in the higher income group, improvements have *not* been particularly noticeable, which is to be expected. But in the middle and marginal income groups the agencies have noticed both a financial improvement and a lessening of tensions due to increased income. It has provided families with more sense of security.

"For many of these families, particularly those in receipt of marginal income, family allowances have made it possible for them to manage without supplementary assistance from social agencies . . .

"In general, clothing seems to be the main item on which the allowances are spent and it has been found that children are being more adequately and warmly clothed . . .

"Many parents have been enabled to improve the diet they give to their children—more milk and oranges are mentioned specifically . . .

"For many of the families on relief or other low incomes, it is not always possible to separate the family allowances from the other income and it is absorbed into the regular maintenance budget. Nevertheless, since income is higher, it is known that both children and adults have benefited from the additional income."

Edward E. Schwartz, Director of the Division of Statistical Research, Children's Bureau,

Federal Security Agency of the United States, came from Washington to make a detailed study of the operation of family allowances in Canada. His observations were reported in the Social Service Review, December, 1946.

Commenting on Miss Barnstead's statement, he wrote:

"The opinions that the writer obtained on the social values of family allowances through interviews with a number of workers in other branches of social work were generally in accord with those obtained by Miss Barnstead from the private family welfare agencies. Among the social workers interviewed in Toronto and Montreal were the administrative heads of such different organizations as a council of social agencies, a Catholic Welfare federation, a public department of welfare, a school of social work, an urban children's aid society, a suburban-rural children's aid society, a settlement house, and an institution for dependent and neglected children . . .

"Those persons familiar with the rural situation were impressed with the fact that the payment of family allowances to mothers meant that for the first time many farm women had cash income of their own and that they were using this to purchase clothing and dental, optical, and other medical care for their children."

Labour and Family Allowances

At the beginning of the program, labour was not entirely in favour of family allowances. In his extensive study of the Canadian legislation, Mr. Schwartz compared the official statements of labour unions, prior to 1946 and the 1946 declarations of the same unions.

He stated that a leading official of a prominent labour organization told him in September, 1946, that his organization now favours family allowances because they assist large low-income families, because no means test is required and because of their economic effects.

A number of officials of the labour organizations told Mr. Schwartz that family allowances had not been used as an argument against wage increases in negotiations in labour disputes.

Collective Agreements in the Fishing Industry in Canada, 1947

A file of collective agreements has been maintained in the Department of Labour for many years and summaries of representative agreements have been published each month in the LABOUR GAZETTE. The Research and Statistics Branch makes analytical studies of current agreements on file, by industry and by topic. The first four of these, covering the Pulp and Paper Industry, the Manufacture of Iron and Steel and their Products, the Manufacture of Non-Ferrous Metal Products, Non-Metallic Mineral Products and Chemical Products, and the Coal Mining Industry, have been published in previous issues and have also been printed as separate bulletins. The fifth, covering agreements in the Fishing Industry is given below.

Summary

The number of workers under collective agreements in the primary operations of the fishing industry (catching the fish and exclusive of fish processing) in Canada is estimated at 9,571, all of whom are in British Columbia. The latest figure available as to employment in primary fishing operations in Canada is shown as 67,423 for the year 1945, in the Advance Report on the Fisheries of Canada issued by the Dominion Bureau of Statistics.

Of the 9,571 workers under agreement, 9·7

per cent are covered by union shop conditions under which all employees must become union members. Under all other agreements, employees are not obliged to be union members, but in the case of 11·2 per cent of workers under agreement, preference is given to union members when new employees are being hired. Provisions for voluntary check-off of union dues, etc., are found in agreements covering 88·8 per cent of the workers under agreement.

Introduction

The Fishing Industry

An evaluation of the importance and scope of Canada's fishing industry is obtained from the following facts taken from the Advance Report on the Fisheries of Canada, 1945 issued April, 1947, by the Dominion Bureau of Statistics.

The value of the production of Canada's fisheries was \$113,690,630 in 1945. Eighty-seven per cent of this amount was contributed by the sea fisheries and the remaining 13 per cent by the inland fisheries. This total is the highest ever attained by the fishing industry and represents an increase of 27·1 per cent over the 1944 figure. The above total includes all fish as marketed, fresh, canned, cured or otherwise prepared, and marine mammals such as belugas and hair seals, as well as such by-products as oil, meal and seaweed.

Fishing is an industry in every province in Canada. British Columbia in 1945 occupied first place with 39 per cent of the total production by value, while Nova Scotia was second with 27 per cent.

The quantity of all kinds of fish, including shellfish, taken by Canadian fishermen in 1945 was 13,371,809 cwt., an increase of 13·4 per cent as compared with 1944. Salmon fishing retained the leading place owing largely to an increase of over 57 per cent in the quantity landed.

The primary operations of catching the fish gave employment to 67,423 persons in

1945, not year round employment for all, of whom 47,998 were in the sea fisheries and 19,425 in inland fishing. A gain of 3,215 persons over 1944 was recorded in the primary industry. Only the primary operations of fishing, tending, and networking are dealt with in this report. It does not cover reduction plants or canneries.

Unions

British Columbia is the only province in which collective bargaining plays an important role in the primary fishing industry, which is mainly on the east and west coasts. The high degree of this concentration is shown by the fact that more than 75 per cent of the marketed value of all fish caught in Canada in 1945 was from British Columbia, Nova Scotia and New Brunswick.

New Brunswick has no established unions in the primary fishing industry.

In Nova Scotia, the Canadian Fishermen and Fish Handlers' Union is the chief union. This Union was formed in 1938 and at that time was called the Fishermen's Federation. It was succeeded in 1943 by the Canadian Fishermen's Union. In October 1946, The Canadian Fishermen's Union merged with the Fish Handlers' Union and became the Canadian Fishermen and Fish Handlers' Union. The Canadian Fishermen and Fish Handlers'

Union is one of the newer Trades and Labour Congress Unions organized under the guidance and with the help of the Canadian Seamen's Union.

When about 500 Nova Scotia fishermen went on strike in December of 1946, for a union agreement providing for an increased percentage of the proceeds, the certification of a trade union for fishermen was questioned, and was referred to the Supreme Court of Nova Scotia. The court's decision held that crews of the three deep sea fishing vessels concerned in the actual case were not "employees" within the meaning of the Wartime Labour Relations Regulations and that therefore the Nova Scotia Wartime Labour Relations Board had no jurisdiction to make orders certifying persons appointed by the Canadian Fishermen's Union as representatives to negotiate collective agreements with the owners on behalf of the crews. (LABOUR GAZETTE, March, 1947, p. 381). There are no collective agreements on file in the department for fishermen in Nova Scotia.

A number of unions were organized in *British Columbia* from 1935 to 1940. Some of these disappeared entirely after a short time while others amalgamated to form, in 1945, the United Fishermen and Allied Workers' Union (a directly chartered union of the Trades and Labour Congress of Canada).

The United Fishermen and Allied Workers' Union is now the main union representing fishermen in British Columbia. The only other union is the Deepsea Fishermen's Federal Union of British Columbia, No. 80 which is a small union at Prince Rupert. There is also the Native Brotherhood of British Columbia, an organization of Indian fishermen. This is not a trade union but assumes some of the functions of a trade union in that it signs collective agreements. The Native Brotherhood of British Columbia and the United Fishermen and Allied Workers' Union usually sign identical agreements.

Agreement Coverage

Ten agreements and one memorandum of understanding for fishermen and tendermen and two agreements for net workers, all in

British Columbia, are on file. All of these are 1947 agreements.

Number of Fishermen Affected by Collective Agreements in B.C., 1947.

Salmon Fishermen	6,596
Salmon Tendermen	725
Herring Fishermen	400
Herring Tendermen	200
Pilchard Fishermen	200
Pilchard Tendermen	100
Halibut Fishermen	925
Tuna Fishermen	150
Networkers	275
Total	9,571

All of the agreements except two are made with an association of employers. The Salmon Cannery Operating Committee are signatory to 8 of the 13 agreements and fishing vessel owners' associations have signed 3. Of the remaining two, one is signed by a single company and the others by various fishing companies.

Of the 10 agreements and one memorandum of understanding for fishermen and tendermen, one concerns herring fishermen and tendermen, one is for pilchard fishermen and tendermen, 3 are for salmon fishermen, 2 for salmon tendermen and 3 for halibut fishermen; the memorandum of understanding is for tuna fishermen.

The total of 9,571 shown in the accompanying table represents the number of workers affected by collective agreements in British Columbia in the primary fishing industry. Salmon fishing comprises 76.5 per cent of the total, halibut fishing 9.6 per cent, herring 6.3 per cent, pilchard 3.1 per cent and tuna fishing 1.6 per cent. The remaining 2.9 per cent of employees are networkers.

Each of the agreements has been analysed and a summary of the findings is given below together with sample clauses. Those agreements pertaining to fishermen and tendermen are dealt with first. The memorandum of understanding for tuna fishermen is given separate consideration. The agreements for networkers are also analysed separately.

General Clauses in Agreements for Fishermen and Tendermen

Duration and Renewal

No general practice is evident in the industry with regard to the duration of agreements. Of the 10 agreements for fishermen and tendermen, 2 for salmon fishing, one for herring and one for pilchard fishing are for the season only; one for halibut fishing is to continue indefinitely unless cancelled by either party

on 30 days' written notice. Of the remaining 5 agreements, 3 are for one year and the other 2 until the end of the year, and all 5 are to continue until 30 days' notice in some cases, 60 in others, is given prior to the signing date of the agreement in any year. Any notices given are to specify the exact clauses in which the modification or change is desired and

negotiations shall be confined to such clauses. Negotiations are to commence as quickly as possible following receipt of notice. A sample of this type of clause is given below:

*This agreement shall be in full force and effect from the date of signature until December 31, 1947 and shall be continued thereafter unless notification in writing is given thirty (30) days prior to December 31, 1947 or of any year thereafter by either party desiring to change or modify any portion of this Agreement. Such notice, where the request is made for modification or for changes shall specify the exact clauses in which the modification or change is desired and subsequent negotiations shall be confined exclusively to such requests. Negotiations shall commence as quickly as possible following receipt of the thirty (30) days notice of modification or change.

Suspension of Agreement for Various Causes

Conditions under which the agreement may be held in abeyance are outlined in 6 of the 10 agreements analysed.

The commonest clause deals with factors beyond the control of the operators or the union and is found in 4 of the agreements, 2 for salmon fishermen, 2 for halibut fishermen.

Provided the terms and conditions outlined above are adhered to by both parties, it is mutually agreed and understood that fishing shall continue uninterrupted during the season for all salmon referred to in this Agreement subject to force majeure, strikes, fires, riots, war, acts of God, and any other factor beyond the control of the Operators or the Union.

*The following extract and those used throughout this study are quotations from agreements on file in the Department of Labour for this industry. Where several paragraphs are quoted in one place, the sequence is not always the same as in the agreement. All such quotations are printed in the smaller size type.

Four of the agreements, one for herring fishermen and 3 for salmon fishermen, contain clauses giving the operator the right to suspend the agreement at certain specified times. The last sentence quoted below is found only in one of these, that for salmon trap fishing.

This agreement is subject to the reservation that the operators reserve the right individually to cease operations at any time when deemed necessary and are thereby released from their obligations herein while closed down except that not less than forty-eight (48) hours' notice in writing shall be given to the Union at its headquarters in Vancouver. In the event of such a close down employees shall be given transportation home upon request.

Two other clauses of this type are to be found in the agreement for herring fishermen.

If, in the opinion of the fishermen, spawning conditions in any area make it undesirable in the interest of conservation to continue operations, Union headquarters and the Operators shall be informed and, if mutually agreed, joint representations shall be made to the Department of Fisheries.

The following clause applies only to the section on wage rates.

In the event that the Canadian government should abolish or revise Wartime Prices and Trade Board Controls on Herring Meal and/or remove the embargo on shipments of such meal and oil to other countries, then the price for herring for reduction purposes contained in this agreement may be reopened for further negotiations by either party on seven days' written notice. Negotiations are to begin on receipt of such notice and during the seven day period fishing is to continue. The fish delivered during this seven day period is to be paid for at the price in this Agreement. If the negotiations so reopened are not concluded satisfactorily to both parties at the end of 7 days, then fishing by members of the Union may cease.

UNION STATUS IN COLLECTIVE AGREEMENTS IN THE FISHING INDUSTRY

Class of Worker	Number of Workers			
	Under Agreement	Under Union Shop	Under Preferential Hiring	Under Check-off
Salmon Fishermen and Tendermen.....	7,321		46	7,321
Herring Fishermen and Tendermen.....	600		600	600
Pilchard Fishermen and Tendermen.....	300		300	300
Halibut Fishermen.....	925	925*		
Tuna Fishermen.....	150			
Net Workers.....	275		125	275
	9,571	925*	1,071	8,496

* For 200 of these workers, the decision on compulsory union membership is left to the captain.

Purpose

Half of the agreements analyzed have no statement of purpose. Only the five agreements pertaining to salmon fishing have such a clause. Generally this clause gives as the purpose the setting out of the basic prices and fishing conditions for the 1947 season for the type of fishermen covered by the particular agreement and belonging to the union signing the agreement. One agreement differs slightly by stating that the purpose is to promote and improve relations between the Company and its employees.

Union Status

The accompanying table shows union status in the fishing industry of British Columbia. There are no closed shop agreements in this industry, and only 9.7 per cent of the employees covered by collective agreements come under union shop provisions. A clause guaranteeing preference in hiring to union members is found in agreements affecting 11.2 per cent of the workers covered by collective agreements. Voluntary check-off is by far the most common provision in these agreements, as 88.8 per cent of the workers are covered by this clause.

RECOGNITION

Five of the 10 agreements, those for herring, pilchard, salmon trap fishermen and salmon tendermen, contain a clause formally recognizing the union. Four of these clauses are identical with the following except for the type of fishermen mentioned.

The operators party to this Agreement agree to recognize the Union as the representative of herring purse-seine fishermen and tendermen who are members of the Union and who have designated the Union as their authorized representative.

One agreement, for salmon trap fishermen, recognizes the union as the collective bargaining agency for all employees, not just those belonging to the union.

The Company agrees to recognize the Union as the collective bargaining agent for the employees classified in this Agreement.

UNION SHOP

Only the three agreements, those for halibut fishermen, affecting 925 fishermen, have union shop provisions. One of these agreements provides that all crew members including the Captain shall be union members.

....That on all vessels covered by this agreement the crew, including the captain, shall be members of the Union. Bona fide

vessel owners shall be members of the Association, and have right to act in any capacity on their own vessels.

The second halibut fishing agreement does not include the Captain. Its provision for owners also differs.

....All members of the crew except the Captain and any owner that owns one-fourth or over in his own vessel shall be members of the Deep Sea Fishermen's Federal Union of British Columbia. If cooks or engineers are members of any other maritime Union of their craft and are in good standing therein, this Union shall claim no jurisdiction over them. Any present member of the Fishing Vessel Owners' Association, when they own one-fourth or over in any Association vessel, may act in any capacity in any Association vessel without interference.

The third agreement for halibut fishermen differs from the other two in that it leaves the choice of operating a union shop to the Captain:

The Company acknowledges that it is the duty of the captain of the vessel engaged in long line fishing to secure his crew and he is at liberty to exercise this duty with respect to the engagement of only Union members. The Company further acknowledges that the captain, along with the boat delegate who is elected by the crew, is at liberty to rule that only Union members in good standing shall sail aboard the Vessel.

No mention of a union shop is made in any of the other seven agreements.

PREFERENCE IN HIRING

The majority, 7 out of 10, of agreements in the primary fishing industry make no reference to preferences in hiring employees. Three agreements, those for herring, pilchard, and salmon trap fishermen, covering 946 fishermen, give preference in hiring to union men. Two of these clauses are identical as follows:

All things being equal, it is agreed when lining up crews, preferential consideration shall be given to Union members. The skipper shall judge the ability and experience of crew members. In the case of engineers, Company approval shall be obtained.

VOLUNTARY CHECK-OFF

The majority of agreements analysed, 7 out of 10, affecting 8,221 fishermen and tendermen, contain clauses providing for a voluntary check-off. The 3 agreements for halibut fishing lack this provision. In each case the clauses are similar and of the following pattern:

The Operators agree to honour Union vouchers for dues signed by fishermen who are members of the Union or are desirous of joining the Union and who have monies due them from one of the Operators. It is

understood that such vouchers, when honoured, shall be paid by cheque by the Operator concerned and forwarded to the headquarters of the Union.

UNION RULINGS

Rules are laid down by the Union for the conduct of the crew in the three halibut agreements.

... All repairs on boats, as painting, engineer's or carpenter's work, if the crew are requested to do such work must be paid by the owners the Union scale of wages. If any members of the Deepsea Fishermen's Federal Union does this work free of charge a fine of twenty-five dollars (\$25.00) shall be imposed on him, and other members of the Union shall not be permitted to sail with him until the fine has been paid to the Union.

One halibut agreement contains the following regulations for union members who work on vessels other than those belonging to the Fishing Vessel Owners' Association of British Columbia.

... Union members who find employment on any vessel the owner of which is not a member of the Fishing Vessel Owners' Association of British Columbia, shall convey this information to union headquarters. In such cases the union agrees to use its influence to have the owner become a member of the Association so that the crew may be covered by this agreement.

CONSULTATION WITH UNION

Only one agreement, that for herring fishing, makes provision for consultation with the union by the Companies when they propose adding an additional boat to the pool during the season.

When any Company working on a wage and bonus basis, proposes to add any additional boat to the pool during the season, the Union shall be informed of the names of the vessel and the crew. Final decision as to whether said vessel shall participate in the pool shall, if any objection is raised, be made after mutual discussion and mutual agreement between the Company concerned and the Union representing the tendermen.

DELEGATES

Five of the 10 agreements, 2 agreements for salmon fishermen and 3 for halibut fishermen, analysed refer to the appointment of delegates. All of these 5 provide for the election of the delegate and outline his duties. The following outline of duties listed is found in 3 of the agreements:

A delegate shall be elected in each boat. He shall see that all members of the crew are members of the Deepsea Fishermen's Federal Union of British Columbia and in good standing. He shall check up the bills with the goods put on board when the same is most

convenient and shall be present when settlement is made. The cook shall be present when stores are taken on board to see that he gets what he ordered.

The other two agreements contain the following clause:

A boat delegate, duly elected by the crew, shall be recognized by the Captain and the owner as the Union representative.

The duties of the boat delegate shall be as follows:

- (a) to ensure that correct tallies and records are kept;
- (b) to ensure that settlements made with all or any members of the crew are fairly and correctly made. Each member of the crew shall receive a copy of the settlement.

The boat delegate, duly elected by the crew, shall be fully recognized by the Operators signatory to this Agreement as the representative of the crew and of the Union on all matters connected with the weighing of fish. In order to facilitate the election of suitable representatives for this purpose the Operators shall, if requested by the Union, make available a list of crew members on boats fishing for them.

Safety and Health

Each of the agreements has some provision for the safety and health of the fishermen and tendermen. Each contains a clause providing that a medicine chest or first aid kit be furnished on each vessel, or in the case of trap fishermen, for each trap. The usual regulations are that the owners supply and maintain the medicine chests and that the crew, usually the boat delegate, take the responsibility of seeing that the chest is kept well stocked.

All of the agreements except those for halibut fishing stipulate that life-saving equipment must be supplied.

Besides these precautions, two of the salmon agreements provide for fire-fighting equipment, and the three halibut agreements specify that:

All Canadian halibut fishing boat owners shall pay the Marine Sick Benefit Tax when taking their first clearance at the Customs office.

Two agreements for salmon fishermen specify that certification that all boats are in a seaworthy condition must be made by the Board of Marine Underwriters of San Francisco Inc., at the start of the season.

The Agreement for salmon trap fishermen states:

The Company shall be bound by the provisions of the B.C. Compensation Act. In conformity with this Act a Safety Committee shall be organized. The Union Shop Steward Committee shall constitute the employee representation on the Safety Committee.

Working Conditions

Four of the ten agreements, one for pilchard fishermen and three for halibut, make no mention of working conditions but the other six contain some reference to them, although they vary. Four of the agreements for salmon fishermen include general clauses which in the main specify that vessels are to be kept in a clean and orderly condition. The Companies are to undertake to have the vessels clean and the crew are to maintain them in this state.

Two of the agreements for salmon fishermen also have the following provision:

It is agreed that at the beginning of the season vessels shall be fully equipped with adequate crockery, dishes and proper cooking utensils. At the end of the season the crew shall be responsible for the replacement of broken crockery and damaged utensils.

The herring fishing agreement specifies that:

... There shall be provided at all plants adequate facilities for bathing and washing clothes and that such bathrooms shall be kept clean at all times.

The agreement for salmon trap fishermen contains provision for hot and cold showers and clean, warm, well ventilated living accommodation for employees who live on plant properties, all to be kept clean and in a sanitary condition.

Grievance Procedure

Only one of the ten agreements, that for pilchard fishermen, has no provision for grievance procedure. Eight of the agreements (herring, 3 halibut, 2 salmon tendermen, 2 salmon fishermen) contain clauses similar to the following:

All disputes that cannot be settled on board must be referred to the Association and the Union for adjustment.

The following sentence is added to this clause in the herring agreement:

In no case shall members of the Union involved in a dispute, take any action without consultation with the Union headquarters.

Four of the agreements, 2 for salmon tendermen and 2 for salmon fishermen also contain a clause similar to the following:

Any dispute arising out of this Agreement which cannot be settled by the Union and the Company shall be referred to a commit-

tee of one representative of the Union and one representative of the Operators and one disinterested party, satisfactory to both the Union and the Operators for settlement.

The 2 agreements for salmon tendermen and 2 of the agreements for halibut fishermen include the following clause:

In no case shall members of the Union or officials of the Company take any action that might cause further discord or violate the intent and meaning of clauses of this Agreement without consultation with the Union and the Company.

One agreement, that for herring fishermen and tendermen, contains the following as well as the first sample clause:

Any dispute arising as to the length of time spent in making up the seine shall be turned over to the officials of the Union to settle, the Company not being involved in the internal Union arrangements with respect to the individual participants in the pool.

The agreement for salmon trap fishermen outlines a more intricate grievance procedure than that found in the other agreements:

The Company agrees to recognize a Shop Steward Committee to be designated by the Union members at the plant. It shall be the duties of the Shop Steward Committee to see that the members of the Union in the plant observe this Agreement, and to see that the rights and interest of such members in this Agreement are protected. In the event that a grievance or dispute arises, every effort shall be made by the Shop Steward Committee and the local manager to settle it. If the grievance or dispute cannot be settled locally, it shall be referred to the representatives of the Union and the Company involved.

Any dispute arising out of this Agreement which cannot be settled by the Union and the Company shall be referred to a committee of one representative of the Union and one representative of the Company and one disinterested party satisfactory to both the Union and the Company for settlement. There shall be no stoppage or slowdown of work and lockout during the period of settlement. In the event of any dispute not being settled satisfactorily, either party or both may have recourse to the governing laws of the Province of British Columbia or Dominion of Canada, whichever take precedence, and the regulations covering continuance of operating shall apply.

The provisions discussed up to this point are common to most of the agreements, but each agreement also contains clauses which are peculiar to it and pertain only to the type of fishing covered by the agreement. These are noted separately.

Salmon Fishermen

Three agreements applying to salmon fishermen are analysed. Two of these are signed by the United Fishermen and Allied Workers' Union and the third by the Native Brotherhood of British Columbia. One of

the agreements signed by the United Fishermen and Allied Workers' Union is for trap fishermen. Because of the unique provisions for trap fishermen, this agreement is considered separately.

The two agreements for salmon seine and gillnet fishermen, one signed by the United Fishermen and Allied Workers' Union and the other by the Native Brotherhood of British Columbia, are identical. The general provisions of these agreements have already been outlined and the particular clauses are dealt with here. Both of these agreements are made with the Salmon Cannery Operating Committee, and consist of: (1) The Salmon Price Agreement for 1947; (2) Supplementary Agreement for Salmon Seine Vessels dealing with share basis and fishing conditions; (3) Memorandum on Procedure and Method for the weighing of Seine caught Pinks and Chums; (4) Blueback Agreement (signed only by the United Fishermen and Allied Workers' Union).

Wages

The cost of fuel oil and lubricating oil is to be deducted from the gross value of the catch. This resultant balance is to be divided on the basis of eleven shares, 4 shares to the boat and net, and 7 shares to the crew. The cost of all provisions is to be deducted from the 7 shares and the balance divided equally among the members of the crew. When a crew member quits before the end of the season, he is entitled to his proportionate share of the catch. Settlements are to be made as quickly as possible at the conclusion of the season.

The salmon fishing agreements lay down regulations for poundage buying, minimum prices, and procedure and method for the weighing of seine caught pinks and chums.

Under the section on poundage buying it is ruled that the entire production of all salmon species shall be purchased from the fishermen on the poundage basis, that they shall be weighed at the time of original delivery and that the weight so recorded shall be the basis of payment. Provision is made that in the case of an exceptionally heavy run of salmon, when it is impossible to weigh the fish, a system of averaging may be adopted.

The schedule of minimum prices laid down in the agreements provides that the salmon caught are to be sorted according to the type of fish, and the purpose for which it will be used, and a specific price per pound is listed for each.

The memorandum for procedure and method for the weighing of seine caught pinks and chums, supplementary to the agreements for salmon fishermen, is a detailed document whose purpose is to establish an efficient, fair and accurate system of weighing seine caught pinks and chums and improve this system

from year to year. It sets out that weighing stations are to be established and assigns fish from specific areas to them. A system for tallying and weighing the fish is also outlined.

Hiring and Discharge

The operators agree that seine boat captains shall have the right to hire and discharge their crew members. Should the captain decide to discharge any of the crew members for cause during the fishing season or should any of the crew members decide to quit during the fishing season, such notice of termination or discharge shall be given 48 hours in advance. In all matters pertaining to the operation of the boat, it is agreed and understood that the captain's decision shall be final, subject only to instructions from the operator or his representatives.

Special Conditions

The following special clauses are also found to be in both agreements:

Transportation:

Should fishermen be discharged by any Operator or his agent at a port other than the port of hiring, the Operator agrees to furnish steamer transportation back to the port of hiring.

Illegal Fishing:

There shall be no illegal fishing and if any is done the Captain and the crew shall be jointly responsible for any fines or penalties imposed.

Limiting Catch:

The Operators agree that should it be necessary to place a limit on fish deliveries, such limit will be set on a per man basis.

Net Work:

Work done by members of the crew in preparing nets for the season shall be paid for in accordance with the terms of the current Union Agreement on net work.

Fuel:

Fuel tanks and lubricating oil tanks will be filled by the Operator at start of the season and will be returned by the crew in a similar condition at close of season.

Charter Boats:

It is agreed that all boats chartered by the Operators for the 1947 salmon season and operated by members of the Union shall come under the terms and conditions of this Agreement.

HOLE BILLS

Regulations with regard to the payment or non-payment, in certain cases, of hole bills are outlined in detail in the agreements.

Special Agreement for Blueback Salmon Fishing

This Agreement is signed only by the United Fishermen and Allied Workers' Union and is supplementary to the Salmon Price Agreement. It recognizes the union as the collective bargaining representative for hand liners and troll fishermen operating vessels in the

Gulf of Georgia who are members of the union and who have designated the union as their representative. It also sets out the minimum price for Bluebacks and Cohoe Salmon and specifies that all Salmon bought under this Agreement are to be delivered to the operators' camps, scows and packers "in number one condition."

Salmon Tendermen

The two agreements covering Salmon tendermen, one with the United Fishermen and Allied Workers' Union and one with the Native Brotherhood of British Columbia, are identical and the particular provisions of both are outlined below:

Wages

A minimum scale, to be paid, on the basis of a calendar month, is laid down for crew members of packers and tenders engaged on a wages basis, and employed on packers and tenders which are chartered or owned by the companies and manned by members of the union. These rates vary, depending on the size of the vessel, from \$225 to \$235 per month for the Captain, \$195 to \$207.50 per month for the engineer, \$168 to \$178 per month for the mate, \$125 to \$167 per month for cook and/or deckhand and \$168 to \$178 for 2nd engineer and deckhand.

The following general provisions with regard to wages and board are also set forth in these agreements:

It is agreed that board shall be to the account of the companies at a maximum figure of \$30.00 per man per month and grocery bills incurred by the crew in excess of this amount shall be to the account of the crew.

The daily rate for broken pay periods and for the weekly day of rest when work is performed on that day shall be computed by dividing the monthly rate, exclusive of board, by 26. Computation of the daily rate for weekly day of rest, when work is performed on such a day, shall be submitted for arbitration to a disinterested third party, and the decision of the arbitrator shall apply for the term of this agreement.

It is agreed that when settlement is made for wages due to any crew member under this Agreement, all time shall be on the basis of a full day and no half days. When the Companies or their agents desire to lay-off a vessel upon reaching a specified port and such vessel arrives at its destination after 10 p.m., the crew shall be paid for the following day when making settlement.

Specific conditions of work where additional wages are paid are listed:

Tendermen specifically engaged in tending troll camps and/or halibut camps and/or liver

camps shall receive an additional \$10.00 per month...

... If boats carry groceries or general supplies (excluding ice) exceeding in weight $1\frac{1}{2}$ tons (3,000 pounds), then the crew shall be paid for such excess weight at the rate of \$1.00 per ton for loading and \$1.00 per ton for unloading, this amount to be divided equally amongst the crew.

Should any company utilize their packing vessels or tenders in freighting, the crew members of such vessels shall receive 75c per hour for all hours spent loading or discharging cargo.

Unloading of fish at processing plants shall not be considered as part of the regular work of tendermen, but should a packer or tender crew while at a processing plant be called upon to unload salmon, dressed or round and/or halibut, the crew shall receive \$1.50 per ton for unloading such cargo, the total amount to be divided equally among the crew. If a packer or tender crew is called upon to unload drums or cans of livers at liver processing plants, the crew members shall be paid 75 cents per hour for all hours spent unloading such drums or cans of livers.

Where the mate or engineer on any of the classified vessels is certified, an additional \$10 per month shall be paid over the rates set out above.

Crew

The duties of the crew are listed in the agreements as well as the crew complement for each type of ship.

Vacations

No definite understanding regarding vacations is given in the agreements, but it is agreed that the application of the Annual Holidays Act of British Columbia to tendermen shall be placed before the British Columbia Courts for a ruling.

Day of Rest

One day of rest in every seven is specified in the agreements. Ordinarily, this day of rest is to be Sunday, but under special conditions the companies may declare any other day as the day of rest on a minimum of twelve hours' notice. Any crew member called upon to perform any services during the 24-hour period of rest will receive an additional day's pay for such services.

Log Books

The agreements specify that captains of vessels classified in the agreements shall keep full time Pilot House Logs. Such Logs are to contain details as to departure times, running times, arrivals, and information as to the day of rest. The captain is also responsible for an accurate record of hours worked handling cargo or of tonnage loaded or unloaded. Such record is to be approved by the manager or other responsible official of the company at the operation where such

hours are worked, with the boat delegate present. Engineers are to keep accurate engine room logs.

Transportation

The agreements guarantee transportation back to the port of hiring by the companies, to tendermen discharged or laid off at any other port. If the crew member through negligence is left behind when the vessel sails, the company may deduct the cost of transportation to hiring point from money due to crew member.

Salmon Trap Fishermen

The following are provisions of the agreement for salmon trap fishermen which have not already been dealt with in the general clauses for all fishing.

Hours of Work and Overtime

The hours of work and overtime provisions for those fishermen covered by the trap fishing agreement are as follows:

The principle of a regular starting time shall be adhered to. Unless specifically excluded herein, all employees shall receive overtime for all hours worked in excess of 192 hours per month. All employees, except those specifically excluded in this section, shall receive overtime at the listed rate for all hours worked in excess of 8 on Monday, Tuesday, Wednesday, Thursday, Friday and Saturday, it being understood that notwithstanding the foregoing the Company will observe the principle of a 44 hour, 5½ day week, with Saturday afternoons off.

Pile drivers and puller crew men, during the driving and pulling season, shall work six days per week with no daily control of hours, in consideration for which, when tidal and climatic conditions are such that off-shore work is impossible, the crew shall receive a full day off and in the event that tidal and climatic conditions interrupt the men while off shore they shall be returned to the plant and given the balance of the day off. It is further understood that overtime at the rates as listed shall be paid for all hours worked in excess of 208 in a calendar month excluding Sundays.

There shall be no control of hours for trap watchmen.

Messhouse crews shall prepare and serve the three regular meals daily without overtime, with the exception of the conditions set forth herein for a weekly day of rest.

....The Company may give any two full days in each two week period in lieu of a regular Sunday day of rest for men when engaged at off-shore work. If days of rest in lieu of Sundays are not given, overtime shall be paid for all hours worked on Sunday. It is understood that men shall be informed at least the previous day of the day or days designated by the management as the day of rest in lieu of Sunday.

Trap watchmen shall have one day of rest in every seven, such day to be allowed on the

basis of one day per week, or four days every four weeks. If it is found to be impossible to grant the day of rest, watchmen shall be paid for such day at a rate to be arrived at by dividing 24 into the monthly wage. Watchmen shall arrange between themselves or with the management for days of rest. It is agreed that, with the exception of days off, both watchmen will be on duty at all times during the day and one person during the evening, both watchmen to be on duty when aprons are to be raised and lowered, and on lifting days.

Culinary staff ashore and afloat shall receive a weekly day of rest on the same basis as that section of the crew for which they are required to cook.

All employees with the exception as provided for trap watchmen, shall be paid overtime for all hours worked on the following Statutory holidays: New Year's Day, Good Friday, 24th of May, Dominion Day, Labour Day, Armistice Day, Thanksgiving Day, Christmas Day, Boxing Day.

Wages

The minimum monthly wage rates as well as overtime rates per hour are listed in the agreement. The agreement specifies that it is understood that no employee shall suffer a reduction in wages because of the rates listed.

Charge Hands receive a minimum of \$210 per month with an overtime rate of \$1.09 an hour; engineers \$240 per month, overtime rate \$1.25 per hour; webmen \$190 per month, overtime \$1.25 per hour; firemen \$190 per month, overtime rate 99 cents per hour; deckhands range from \$180 to \$190 per month with overtime rates from 94 to 99 cents per hour; loftmen range from \$180 to \$200 per month with overtime rate from 94 cents to \$1.04 per hour; boommen range from \$180 to \$190 per month with overtime rates from 94 to 99 cents per hour; cooks \$150 to \$210 per month with overtime from 78 cents to \$1.09 per hour; winchmen and wiremen \$180 per month, overtime 94 cents an hour; funkeys \$135 per month, overtime 70 cents

per hour; carpenters and shipwrights (dual) \$230 per month with overtime at \$1.20 per hour.

These wage rates apply to all employees who have been on the payroll since June 15, 1946. Those who have not been on the payroll that length of time receive \$170 per month for the first year with overtime at 89 cents an hour, and \$180 for the second year with overtime at 94 cents an hour. After this, they receive the wage rates for their classification listed above. However, men known to be experienced, and 1st or 2nd year men who demonstrate sufficient ability and interest in their 2nd year, receive the top wage rate for their classification. Men in a classification with a top rate of less than \$170 receive the listed rate from the date of hiring. Further wage provisions are quoted:

...All employees classified in this agreement are to be employed on a monthly wage basis. Wages shall be paid to employees monthly and no wages can be withheld except for legal cause or as otherwise provided for. A full statement showing total hours including overtime, with total earnings and deductions shall be issued to the employee with each pay cheque.

Where applicable, board shall be payable by the Employees, and the amount deductible shall be \$30 per month.

Vacations

The provisions in the 1947 master agreement for net, cannery and reduction plant workers apply and are as follows:

An employee must work a minimum of six (6) months (1152 hours) to qualify for vacation. Paid annual vacations are given on the following basis:

One day for each month of 192 hours. Each unit of 192 hours shall be cumulative, but shall be within the span of a year. Employees working less than 1152 hours shall receive vacations on the basis of one-half day with pay for each unit of 192 hours.

Overtime work shall not apply in the calculation of hours worked for vacation credits.

The time of year of vacations of individual employees shall be by mutual arrangement between the management and the employees.

Seniority

A detailed description of seniority rulings to be followed is given in the agreement. This section also specifies that:

When hiring at commencement of operations the Company shall give at least one week's notice (7 days) in writing of resumption of operations. At cessation of the operation employees shall leave their mailing address with the Company. If employees do

not report for work after being given the required notice, except when sickness or other reason acceptable to the Company is the cause, their seniority rights shall be considered cancelled.

Special allowances for discharged servicemen are made in the seniority provisions for trap fishermen.

Working Conditions

Several working conditions which are not found in any of the other agreements for fishermen follow:

No employee shall be required to work over five (5) hours without a hot meal, unless the particular job being done can be completed in a period not to exceed six (6) hours.

There shall be at least ten (10) consecutive hours of rest in every twenty-four (24) hour period.

Employees when not doing work covered by their own classification shall do such work as instructed by the management. If the employee is assigned to work of a higher classification for a period exceeding one day, he shall receive the rate of pay of the higher classification for the total period so employed. If such work requires a journeyman in some other trade and such employee is a qualified journeyman he shall receive the Union rate established for that trade in B.C. The employee concerned shall produce credentials to show his qualifications. It is understood that five (5) years employment at a particular trade shall be accepted as proof of qualification.

The length of the lunch period and the time at which it shall be taken shall be arrived at in mutual discussion between the local management and the Shop Steward Committee. When meal periods less than half-hour duration are given, such meal periods shall be considered as working time.

Fair Labour Practices

A provision that no employee covered by the agreement for trap fishermen shall be asked to make written or verbal agreement with the Company covering hours of work, wages or working conditions, during the term of the agreement unless such individual agreement is approved by the union members at the plant and the Executive Board of the union is included in the agreement for the employees' protection.

A section outlawing any changes in the agreement without the mutual consent of both parties is quoted:

It is definitely understood that neither the Company, Superintendent in charge, or any agent or employee of the Company, nor the Union, or any delegate of the Union, has the power or authority to change the provisions of this Agreement, unless by mutual consent of both parties.

Herring Fishermen and Tendermen

All the general clauses pertaining to herring fishermen and tendermen have already been discussed and the remaining provisions of the agreement for herring fishermen and tendermen are analysed here.

Wages

The prices per ton for herring, from different areas, for the 1947-48 season are set out in the agreement. Five cents per ton of this price shall be payable into a Herring and Pilchard Welfare Fund. Fishermen's wages are calculated at these prices on the basis of the following rules:

The gross payment for herring for all purposes at the prices established in clause 3, shall be pooled separately by each company and the gross payment shall be divided by the total tonnage for the purpose of arriving at a per ton price to be paid on all herring delivered to each respective company.

There is to be one company price regardless of the number of pools that may be working for any individual company.

This per ton price shall be the basis of settlement for herring catches by the individual companies.

The per ton price for pilchards caught during the herring season shall be the price contained in the 1947-48 Pilchard agreement.

Any payments prior to the end of the season when the price as per the above is finally determined, shall be made at the reduction price level and the adjustment to be made after the final price is known.

It is understood that a fisherman's share shall be calculated on the basis of one-eighth of the agreed prices.

Tendermen's wages are also stated. The skipper is to receive one fisherman's share, 72½ cents per ton for reduction herring and 89½ cents per ton for other herring. The engineer receives one fisherman's share less 3 cents per ton, that is 69½ cents per ton for reduction herring and 86½ cents per ton for other herring. The mate receives one fisherman's share less 5 cents per ton, that is 67½ cents per ton for reduction herring and 84½ cents per ton for other herring. A cook receives one fisherman's share less 7 cents per ton, that is 65½ cents per ton for reduction herring and 82½ cents per ton for other herring. A 2nd engineer (where employed) receives one fisherman's share less 5 cents per ton, that is 67½ cents per ton for reduction herring and 84½ cents per ton for other herring. The fisherman's share referred to means a fisherman's share in the particular fishermen's pool for which the tender is engaged in packing herring. A deduction of ½ cents per ton shall be paid into the herring and pilchard welfare fund for each tenderman.

If the company or the tender crews working for the company request a wage and bonus

basis of payment instead of a straight lay, as provided above, an agreement may be signed between such company and the union if it is fully approved by the tender crew concerned and the wages are as laid down.

Depending upon whether the tender has a carrying capacity of 50 tons or over, or under 50 tons, the captain receives \$225 or \$235 per month, the engineer \$197.50 or \$207.50 per month, the mate \$178 per month on tenders of 50 tons or over, the cook on tenders of 50 tons or over receives \$167 per month and the cook-deckhand on tenders under 50 tons receives \$157 per month. If a fourth man is employed on a tender of under 50 tons he will receive \$157 per month. All of these wages on a monthly rate are less board.

In addition, each respective company party to this agreement shall place \$1.75 into a pool for each ton of herring and \$2 for each ton of pilchards delivered to the various plants of the said company wherever located in British Columbia. From this pool 2½ cents per ton is to be paid into the Pilchard and Herring Welfare Fund and the balance is to be equally divided on a per man basis between the actual number of herring tendermen who have participated in the packing of herring.

The wage scale to apply to vessels employed in the herring operations and not classified as regular tenders shall be the same as the above monthly scale plus board.

Engineers on herring seine boats are to receive a bonus of \$20 per month during the fishing season.

Weighing Rules

Detailed rules for the weighing of fish are given in the Herring agreement.

Under this agreement a ton shall be 2,000 pounds of green herring, the weight of such fish shall be determined by the automatic hopper system on the basis of the scale set by the Department of Weights and Measures, except in the case of herring canneries where measured bins or boxes may be used. In such event a committee of men concerned shall have the right to check the system and scale used at any time during the season. The present certificate of the Federal Weights and Measures Department specifies 996 pounds of herring per revolution of the automatic hoppers or 249 pounds per dump.

Operators' Responsibility

Several clauses in the herring fishermen's agreement specify items for which the operators take responsibility.

Each company will do everything possible to furnish regular reports weekly and undertakes to supply such report at least once monthly to the crews of all vessels, whether seiners or tenders, involved in a pooling arrangement. A copy of each such report shall also be furnished to the Union.

The Operators agree to pay for the use of the small assist boats, excluding scout boats carried on seine boats, together with the men employed thereon.

It is mutually agreed that the Operators shall give full priority rights in unloading and processing at their various plants, to fish caught by company's own gear.

Insofar as possible the Companies undertake to have all Herring seines prepared and ready for the crews of seine vessels. Should any crew be required to make up its own seine, the vessel concerned shall be included in the company pool for the time only they are engaged in making up the seine. All payment due the crew for such work shall be paid to the Company pool concerned.

It is agreed that fuel for cook stoves on tenders is to be furnished by the Companies.

It is agreed that all tenders shall be supplied with a proper receipt when landing herring at any of the Company's plants. This receipt shall show the number of tons landed by the tenders and the number of tons used for reduction, and shall be given to the skipper of the tender following each delivery. Such slips shall be subject to adjustment if different disposition is made of the fish.

The Companies agree to pay the expenses of fishermen and tendermen for transportation back to the port of hiring when discharged at another port by the Companies or their agents.

Time Off

The various rulings pertaining to time off for herring fishermen are given in the agreement as follows:

... From the date of this Agreement all Union members who are engaged in either

herring or mixed fishing shall observe a 36 hour closed period beginning 12 o'clock midnight, Friday, until 12 o'clock noon Sunday in the East Coast area only. In all other areas a regular 24 hour closed season as defined in the fisheries regulations for Herring fishing shall be observed.

Fishing operations are to cease at midnight December 18, for all West Coast and other outside areas, and shall cease at midnight on December 19, in the East Coast area for the Christmas lay-up and boats shall leave for the re-opening of operations so that fishing will recommence on Sunday, January 4, 1948.

It is agreed that the crews on vessels engaged in the herring operation, if paid on a monthly wage basis, shall receive one day's extra pay unless a weekly day of rest is provided. The obligations of the company for this weekly day of rest is met by release of tender crews on or before 12 o'clock noon on Saturdays. In the event that any crew, or crew member, is held after 12 o'clock noon on Saturday the companies agree to pay for that day in lieu of a day of rest.

Loss of Time

Provision is made in the agreement for herring fishermen and tendermen that in case of a breakdown or accident, resulting in a loss of time which continues for seven days, the conditions under which tender crews are working shall be applicable for the seven day period only.

It is further agreed that in the event of any boat breaking down for a period not to exceed seven days due to mechanical or other difficulties beyond the control of the crew, the said vessel shall be included in the company pool for this length of time.

Likewise should there be any dispute arising from this arrangement between the crew and the Company, the matter shall be referred to the officials of the Union to settle.

Pilchard Fishermen and Tendermen

Those clauses pertaining to pilchard fishing and not dealt with previously are discussed in the following section.

As in the herring agreement, the price per ton for pilchards is set forth in the agreement. Of the \$9.25 per ton price, \$9.20 is to be divided into 8 equal shares for the crew and 5 cents per ton is to be paid into a Herring and Pilchard Welfare Fund.

Wages

Each fisherman's share is determined on the basis of an eight man crew.

Each tenderman's share is determined on the basis of the fisherman's share by the following method. The skipper is to receive one fisherman's share (\$1.15 $\frac{1}{2}$ per ton); the engineer one fisherman's share less 5 cents per ton

(\$1.10 $\frac{1}{2}$ per ton); the mate one fisherman's share less 12 cents per ton (\$1.03 $\frac{1}{2}$ per ton); the cook one fisherman's share less 14 cents per ton (\$1.01 $\frac{1}{2}$ per ton); the second engineer, if employed, one fisherman's share less 12 cents per ton (\$1.03 $\frac{1}{2}$ per ton); and the 5th man when employed one fisherman's share less 14 cents per ton (\$1.01 $\frac{1}{2}$ per ton).

Spare tendermen are paid on the same basis as the regular tendermen's scale outlined above. An average of the entire pilchard catch of each company's fleet is used for the number of tons. For each tenderman paid on this basis a deduction of $\frac{1}{2}$ cents per ton is to be paid into the Herring and Pilchard Welfare Fund.

Engineers on seine boats are to receive \$20 per month as a bonus during the fishing season.

Weighing Rules

Weighing rules are stated in the agreement as follows:

Under this Agreement a ton shall be 2,000 pounds of green fish, the weight of such fish shall be determined by the automatic hopper system on the basis of the scale set by the Department of Weights and Measures for the automatic weighing system, subject to authorized adjustments made with consent of both parties, for the 1947-48 season.

There is also a Memorandum of Understanding forming part of the agreement for pilchard fishermen which provides that during the 1947-1948 season a technical expert will be authorized by the operators to make a complete survey of all existing methods of weighing and/or measuring fish in order to recommend the most reliable and practical method of giving fair weights. A representative from the Weights and Measures Branch is to accompany the expert and a copy of their findings is to be forwarded to the Union.

Crew

The crew of all pilchard tenders of 40 tons and over is to be 4 men and all boats with no pilot house control shall carry a second engineer. Under special conditions an additional man may be employed. All pilchard seine boats manned by members of the Union and actually engaged in pilchard fishing, except seine boats fishing singly with their own power pull off boats, shall be serviced with a regular tender and the crew members of such tenders shall receive the tendermen's lay already outlined.

Two of the 3 agreements for halibut fishing, are signed by the United Fishermen and Allied Workers' Union and the third by the Deepsea Fishermen's Federal Union of British Columbia.

One of these agreements with the United Fishermen and Allied Workers' Union is composed of a Master Agreement and a Long Line Agreement.

The following provisions apply particularly to halibut fishing and are included in the agreements along with the general provisions of all the fishing agreements already discussed.

Coverage

The two agreements signed by the United Fishermen and Allied Workers' Union each

Companies' Responsibility

The Companies agree to be responsible for the following: to furnish fuel for cook stoves; to pay the expenses of fishermen and tendermen for transportation back to the port of hiring when discharged at another port by the Companies or their agents.

Loss of Time

The pilchard agreement provides that:

Where loss of time is incurred through breakdown or accident, and such loss shall continue for seven days, the regular lay for the regular tender crew of the seine boat's catch shall be paid to the regular tender crew. For loss of time after the seventh day the crew of the regular tender, if on work, shall be paid under the conditions provided in the 1947 Tendermen's Agreement.

Length of Season

The memorandum of understanding forming part of the agreement also makes the following provisions for a break between pilchard and herring fishing:

It is hereby agreed that the closing date for pilchard fishing shall be determined on the basis of pilchard fishing conditions as determined from information supplied by the fleet. A joint committee composed of representatives of the union and the operators shall meet at a suitable location on the west coast immediately on request from the majority of the pilchard fleet.

The companies recognize the desirability of a break between pilchard and herring seasons and agree to settle the question of length of time of this break and period when this break should come in accordance with fishing conditions at the time, either by mutual agreement with the Union for all companies, or by discussion and agreement between the individual companies and the Union members working for that company.

Halibut Fishermen

have coverage clauses, while the agreement signed by the Deepsea Fishermen's Federal Union of British Columbia has no mention of coverage.

One lists the type of fish:

It is further agreed that this Master Agreement shall cover the operations of halibut, soupfin and dogfish net fishing, otter trawl fishing and tuna fishing out of ports of British Columbia.

The other provides for the listing of the vessels:

This Agreement covers the operation of all vessels engaged in long line fishing of which the Company is the registered owner. A list of vessels covered by this Agreement will be supplied by the Company to the Union and the Union will be informed by the Company of all changes in the list of vessels thus covered as they occur.

Wages

The halibut agreement signed by the Deep-sea Fishermen's Federal Union states with regard to wages:

The share of the vessel shall be one-fifth of the gross stock except when fishing gear is lost in the fishing grounds or stolen from the vessel in port, or when pilot or Customs dues is incurred, in which case such must first be deducted . . .

If deckhands or extra men are carried, such men's wages shall be paid by the vessel.

The two agreements signed by the United Fishermen and Allied Workers' Union specify that after deductions of the necessary expenses, which are listed in the agreement, the remainder is called the net stock and the share of the vessel is to be 20 per cent of the net stock.

The two agreements also stipulate that:

When a man is going fishing for the first time he shall receive a share to be decided by the crew and skipper.

If a man seeking employment represents himself as being an experienced fisherman and it develops that he has misrepresented his abilities the trip share paid to such man shall be left to the crew and the skipper to decide.

The halibut agreement signed by the Deep-sea Fishermen's Federal Union of British Columbia and one of the two agreements signed by the United Fishermen and Allied Workers' Union specify that:

Settlement to be made in the port where the fish is sold and to be made between the Captain or his agent and the fishermen. After the bills are paid, back bills shall be paid as follows: When the share is twenty-five dollars or less, nothing shall be taken out; when the share is over twenty-five dollars, one-half of the amount from twenty-five dollars to the full share shall be taken out. If the Captain desires to fit out on a cash basis he shall be empowered to use the proceeds of the voyage for this purpose. When money from the stock is used for cash payments the crew shall receive their share of whatever discount may be allowed for such cash payment.

Besides the agreements themselves, there is a memorandum attached to each of the halibut agreements signed by the United Fishermen and Allied Workers' Union. These memoranda provide that a deduction of \$22 per month for radio-phone and of \$39 per month for an echo sounder may be made from the gross stock on any vessel covered by these agreements that has a radio-phone and/or an echo sounder on board. This deduction is intended to apply to maintenance, licence and depreciation of these instruments.

Marketing of Fish

Two of the halibut agreements, those signed by the United Fishermen and Allied Workers'

Union, contain clauses giving the Captain and crew freedom to market their trips as they see fit.

One is as follows:

When operating a boat the skipper and crew must, at all times, have the same freedom of action as the independent skippers and crew to market their trips as they see fit, without interference from the owner or owners of the boat.

The corresponding clause in the second agreement is more detailed:

With the objective in mind that the Captain and crew have freedom of action to market their trips so as to obtain the highest possible return for their catches, it is mutually agreed:

- (1) The Captain and crew shall have the sole right to decide at which port they will land their catches.
- (2) Should they decide to deliver at Vancouver or Prince Rupert all fish on board shall be offered for sale to the highest competitive bidder on the Fish Exchange at these ports. Fish so offered shall be subject to the rules of the Exchange, it being specifically understood that if dissatisfied with the highest bid offered the fishermen may:

(a) hold their fish over for further bidding at a later day.

(b) take their fish to another port.

The Captain and crew may market the crew share of all livers and viscera on board where and as they please without restriction.

The Halibut agreement with the Deepsea Fishermen's Federal Union of British Columbia contains no such clause.

Disposal of Fish

The rulings for the disposal of fish are the same in the three halibut agreements and provide that all fish except halibut must be sold as first class or be dumped or destroyed. Halibut when not sold as first or second class must be dumped or destroyed. Non-compliance with this is punishable by fine.

Notice of Termination of Employment

All three of the halibut agreements contain the same ruling concerning notice of termination of employment.

When the Captain intends to discharge any members of the crew or any member decides to leave, notice of same shall be given when settlement is made . . .

Two of the agreements (one signed by the Deepsea Fishermen's Federal Union of B.C. and one signed by the United Fishermen and Allied Workers' Union) also specify that "When a fisherman desires to lay off he shall hire a substitute and notify the captain to that effect."

The two agreements signed by the United Fishermen and Allied Worker's Union also

specify that "If no substitute is provided and/or the Captain is not notified, a man may be hired by the Captain and paid at the prevailing rate. The sum will be deducted from the trip the share of the man replaced. If there is no man taking his place then the sum collected from the absentee member shall be divided equally among the members of the crew doing the work.

Crews' Responsibility

All of the halibut agreements contain clauses specifying the duties and responsibilities of the crew. They are listed below:

A sufficient number of fishermen shall be on board and work when oil, ice, stores and bait are put on board. Failure to do so, and if they wilfully delay the vessel in any manner, shall be deemed sufficient cause for discharge provided they can give no good reason for their absence.

The fishermen agree to keep the fishing gear in good order and to replace lost and condemned fishing gear.

The fishermen agree to discharge fish from tackle and to scale and head the fish if required, to keep the living quarters clean and in a sanitary condition, and to clean all the paint work inside the bulwarks each trip.

The fishermen agree to pay for a watchman when the vessel is in actual commission unless delayed by repairs, overhaul, or through neglect of the captain or the Operator, in which case the Operator shall pay the cost. If no watchman is available the captain shall hire one of the crew for this purpose. The captain and boat delegate shall determine whether a watchman is needed in small outside ports.

The fishermen agree to pay their share of supplies . .

All work done on the gear shall be done by the crew without any charge to the Company.

The fishermen agree to put away the gear within three days after the fishing season is over or when fishing boat arrives in port, weather permitting and any man not show-

ing up to clean the boat and put away the gear shall be charged at the prevailing rate which shall be paid to the man taking his place. If no man takes his place this sum when collected shall be divided among the members of the crew doing the work.

The Cook shall keep the galley and all equipment clean.

Sleeping quarters shall be kept clean by the crew.

The Engineer shall work on the engine one full day while in port without compensation and while working without compensation shall be released from work on gear, but any additional time is to be paid for at standard machinists' wages.

It shall be the responsibility of the Captain and the crew, that at the end of the season a written record definitely stating the number of skates of gear and other related equipment put ashore and fit to take out the following year be listed. Such record shall be signed by the Captain and boat delegate and a copy deposited with the Union for the benefit of the crew taking such gear out the following year.

Owners' Responsibility

The three halibut agreements specify that:

Should the owners desire to change from the use of light to heavy gear, or to space the hooks closer together, they must pay the difference in cost. Likewise, if the case is reversed, the owners are entitled to the differential.

The two agreements to which the United Fishermen and Allied Workers' Union are party state that:

All fuel tanks and lub tanks shall be filled by the owner at the start of the season and shall be returned by the crew in a similar condition at close of season, excepting, however, where crew and owner wish to make other arrangements mutually agreed upon.

Towing and Hole Bills

All of the halibut agreements have sections devoted to the settlement or non-settlement depending upon the conditions of towing and hole bills.

Tuna Fishing

On July 15, 1946, a Memorandum of Understanding was signed between the Vessel Owners' Association and the United Fishermen and Allied Workers' Union to govern the division of the tuna catch until such time as a full agreement should be drawn up. At the present time no agreement has been drawn up and the Memorandum of Understanding is still in effect.

An arbitration board shall be set up composed of one representative of the union and one of the association, plus one impartial third person, agreed upon by both parties to determine what percentage of the gross or

net share of the catch a tuna vessel should receive as a fair return from this fishery. The majority award of this arbitration Board shall be binding on both parties and shall become part of the tuna share agreement.

In the interval all tuna settlements are to be made as follows: Twenty seven per cent of the gross stock is to be deducted first, 20 per cent of this is to go to the boat share and 7 per cent to a trust fund to be redistributed after the arbitration award is known and to be deposited with the settlement service in the meantime. The balance of the gross stock is to be divided among the crew.

Net Workers

Both the United Fishermen and Allied Worker's Union and the Native Brotherhood of British Columbia have signed 1947 agreements for Cannery Workers and Supplements for networkers. Networkers are covered by the general clauses of the Cannery Workers' agreements as well as by the Networkers' supplements.

The provisions of the two agreements for cannery workers are not identical but follow the same general pattern and the Networkers' supplements are exactly the same except for a clause dealing with the transportation of female networkers. These agreements are analysed below:

Duration and Renewal

Both of the agreements have indefinite termination dates. They are for a period of one year and continue thereafter subject to 60 days' notice prior to March 15, by either party desiring to change or modify any portion of the agreements or to terminate the entire agreement.

Both provide also that when notice is given requesting modification or change, such notice shall specify the exact clauses in which changes are desired and subsequent negotiations shall be confined exclusively to such requests. Negotiations shall commence as quickly as possible following receipt of the two months' notice of modification.

The following provisions also deal with duration and renewal:

It is definitely understood that neither the company, superintendent in charge, nor any agent or employee of the Company, nor the Native Brotherhood or any delegate of the Brotherhood has the power or authority to change the provisions of this Agreement. The company reserves the right to cease operations at any time when deemed necessary and is thereby released from its obligations under this agreement while closed down, and not less than 48 hours' notice in writing shall be given to the employees, such notice to be posted in a conspicuous place at the plant. In the event of such a close down transportation to home port shall be given to employees upon request.

Purpose

Both of the agreements have essentially the same statement of purpose.

It is the intent and purpose of the parties hereto that this Agreement is to provide orderly collective bargaining relations between the Company and the Union, to secure a prompt and equitable disposition of grievances and to eliminate interruptions of work and interference with the proper operations of the Company's business, and to maintain mutually satisfactory working con-

ditions, hours and wages for the employees covered by this Agreement and the supplementary Schedules hereto.

Union Status

RECOGNITION OF UNION

Both agreements recognize the Union as the representative of the workers classified in the agreements. One agreement adds the qualification "and who are members of the Native Brotherhood and who have designated the Native Brotherhood as their collective bargaining agency", while the other adds "and who are engaged in a plant or section of a plant for which the Union is the certified bargaining representative."

PREFERENCE TO UNION MEMBERS IN HIRING

In the United Fishermen and Allied Workers' Union agreement, the companies pledge themselves to give preferential treatment in hiring to union members. The Native Brotherhood agreement contains no such provision.

VOLUNTARY CHECK-OFF

Both agreements provide for voluntary check-off of union dues and initiation fees from the employee's wages, upon receipt of a signed authorization from any employee who is or who desires to be a member of the union. The money is to be forwarded to the Secretary-treasurer of the Union and this practice is to be continued until such time as the employee revokes the authorization in writing.

UNION CO-OPERATION

One of the agreements pledges the union's support to the requirements of the Company that all employees shall perform to the best of their abilities the assigned work as directed by the Company management and to make certain that all shop steward Committees are fully aware of the terms and conditions of the agreement and its supplementary schedules and the employees' responsibility thereunder. The Union recognizes the need and importance for high productivity on the part of employees consistent with the terms and conditions of the agreement and the supplements thereof.

The union also agrees that there will be no union activity during working hours, except that which is necessary in connection with the enforcement of this agreement.

The other agreement, signed by the Native Brotherhood, merely states:

The plant committee shall co-operate with and assist the management in the maintenance of Company regulations.

Seniority

The agreement, signed by United Fishermen and Allied Workers' Union, contains an article on seniority and outlines the procedure to be followed in computing seniority.

Hours of Work

The regular hours of work for all net lofts are laid down as 44 per week.

In the Vancouver and District area, however, by mutual consent of the management and the shop steward committee of the individual plant, it may be determined to work in such net lofts on the basis of a 40-hour week during certain periods of the year. Special wage rates are set forth in case this 40-hour week is adopted. It is also agreed that in the Vancouver and District area an average 44-hour work week may be worked by having alternate 40- and 48-hour weeks.

Details of meal periods are set out and recess periods of 10 minutes in the morning and 10 minutes in the afternoon are provided.

Overtime

Overtime rules are set forth in the agreement as follows:

Overtime to be paid for all hours worked in excess of eight (8) in any one day.

For all hours worked after 12 noon on Saturdays and for all hours worked on Sundays, except when the company shall, because of the volume of work or other emergency conditions, specify and allow thirty-six (36) consecutive hours of rest between Saturday a.m. and Tuesday p.m.

For all hours worked on the following statutory holidays and for any other days that may be proclaimed British Columbia statutory holidays within the meaning of the "Factories Act" during the term of this agreement (New Year's Day, Dominion Day, Christmas Day, Good Friday, Thanksgiving Day, Boxing Day, Empire Day, Remembrance Day, and Labour Day).

Vacations

Vacation provisions are identical in both agreements. Briefly, they provide one day for each month of 192 hours, after six months of service. When the service is less than six months the vacation is to be at the rate of one half day per month. Overtime hours worked shall not apply in the calculation of hours worked for vacation credits.

Wages

Wage scales are set out in the supplements for both monthly and hourly rated employees. Overtime rates are also listed. A seasonal net boss receives \$295 per month with no control of hours; yearly net boss \$215 to \$260, over-

time \$1.12 to \$1.35 per hour; assistant net boss \$220, overtime \$1.15 per hour; combination camp and net man \$220 to \$230, with no control of hours; camp net man \$210 with no control of hours; qualified net man \$205, overtime \$1.07 per hour.

Fishermen qualified net men (temporarily employed on net work) \$1 per hour, overtime \$1.50 per hour; semi-qualified net men 85 cents an hour, overtime \$1.27½ per hour; inexperienced net men 70 cents an hour, overtime \$1.05 an hour; qualified net women 85 cents an hour, overtime \$1.27½ an hour; semi-qualified net women 70 cents an hour, overtime \$1.05 an hour; inexperienced net women 65 cents an hour, overtime 97½ cents an hour.

The following provisions are to be found in both agreements:

Subject to the conditions set out in the Supplementary Schedules to this Master Agreement, employees when not doing work covered by their own classification shall do such work as instructed by the management. If the employee is assigned to work of a higher classification for a period exceeding one day, he or she shall receive the rate of pay of the higher classification for the period so employed. Likewise, if an employee is assigned to work of a lower classification for a period exceeding one day, he or she shall receive the rate of pay of the lower classification for the period so employed.

Just one of the agreements stipulates further:

If work is assigned to an employee which requires a journeyman in some other trade and such employee is a qualified journeyman in that trade, he or she shall receive the union rate established for that trade in British Columbia. The employee concerned shall produce credentials to show his or her qualifications. In establishing qualification any employee who can prove five years' employment at his or her particular trade shall be considered qualified.

Qualifying Time

The following clauses specify conditions of advancement:

Men and women commencing net work for the first time shall be classified as "Inexperienced Net Men" or "Inexperienced Net Women". After 1 year's employment at net work (1 season is equivalent to 1 year) they shall be eligible for classification as "semi-qualified" net men or women. After 2 additional years (or seasons) they shall be eligible for classification as "Qualified Net Men" or "Qualified Net Women".

Should instances occur where, in the opinion of the management, sufficient skill and ability has not been demonstrated by an individual employee during the qualifying periods to justify upgrading, such cases shall be referred to the Qualified Net Men or Net Women in the net loft concerned. If in the opinion of the qualified workers the employee concerned is entitled to the upgrading, they shall meet as a committee with the management for the purpose of working out a sat-

isfactory solution. If it is found impossible to work out a mutually acceptable solution by this procedure, the case shall be dealt with in the regular grievance procedure.

Contract Net Work

Both agreements limit contract and piece work:

No work on nets, except selvedging, shall be done on a contract or piece work basis, other than by the mutual consent of both parties. It is agreed that should any group of fishermen preparing their seine desire to work on a contract basis there shall be no objection on the part of the Union.

Absenteeism

Penalties for absenteeism are on the following basis:

Absenteeism without permission shall be deducted from the wages of monthly paid employees on the basis of the hourly overtime rates set forth herein.

Working Conditions

The provisions pertaining to working conditions in the two agreements are similar and the following examples are quoted:

No employee shall be required to work over five hours in any one shift without being relieved for meals . . .

There shall be at least 9 consecutive hours of rest in every 24 hour period.

The following clause is found in the agreement of the United Fishermen and Allied Workers' Union only.

At plants where ten or more employees are housed in company bunkhouses the management shall designate or employ one person who shall be responsible for maintaining the cleanliness and warmth of the accommodation. It is understood that such employee shall not be required to service individual employee rooms.

Besides these quoted clauses provision is made in both agreements for hot and cold shower baths in all plants except those on the Vancouver waterfront, and clean, warm living accommodation.

The companies also agree to recognize and co-operate in the establishment of an individual record book system showing the service and experience of a man or woman engaged in net work.

Transportation

Both agreements provide that the Companies shall be responsible for two way transportation if the employee stays for six months or more, completes the season, or completes the work for which he or she was engaged and one way transportation if the employee works at the plant 2½ months or

more, up to six months. If an employee quits of his or her own accord or is discharged for just cause within two and one-half (2½) months from his or her arrival at the plant, the employee shall be responsible for all transportation costs. Employees shall pay their own transportation when travelling for personal reasons.

One agreement then provides that:

In the case of the Networkers' Supplementary Schedule it is agreed that in instances where fishermen travel to out of town net lofts in their own boats and engage in pre-season net work, immediately on arrival their wages for time spent travelling shall be computed on the basis of the time allowed for steamer passage to the plant concerned, and the usual gasoline allowance shall be provided.

The other agreement provides only for gasoline allowance for employees travelling in their own boats.

Fair Labour Practices

One of the agreements contains a clause pertaining to fair labour practices while the other does not. This clause is as follows:

No employee covered by this Agreement shall be asked to make written or verbal agreements with the Company covering hours of work, wages or working conditions during the term of this Agreement, unless such individual agreement is approved by both the majority of the Union members in the plant and the Executive Board of the Union.

Safety

The Companies are bound by the B.C. Workmen's Compensation Act.

Grievances

Both agreements contain practically the same grievance procedure clauses, the only difference being that one agreement contains a sentence prohibiting all stoppage of work or slowdown of work and no lockout during the period of settlement, while the other does not.

The Company agrees to recognize a Shop Steward Committee to be designated by the members at each plant. It shall be the duty of the Shop Steward Committee to see that the members of the Union in that plant observe this Agreement and to see that the rights and interests of such members in this Agreement are protected. In the event that a grievance or dispute arises every effort shall be made by the Shop Steward Committee and the local manager to settle it. If the grievance or dispute cannot be settled locally it shall be referred to the representatives of the Union and the Company.

Any dispute arising out of this Agreement which cannot be settled by the Union and the Company shall be referred to a committee of one representative of the Union

and one representative of the Company and one disinterested party, satisfactory to both the Union and the Company, for settlement. There shall be no stoppage of work or slowdown of work and no lockout during the period of settlement. In the event of any dispute

not being settled satisfactorily either party or both may have recourse to the governing laws of the province of British Columbia or Dominion of Canada, whichever take precedence, and the regulations covering the continuance of operating shall apply.

Improved Lighting in Coal Mines of the United Kingdom

Recommendation of Technical Committee

RECOGNITION of the fundamental importance, in the production of coal, of good underground lighting has led to recommendations to improve lighting conditions in the coal mines of the United Kingdom. That good lighting is essential was stressed by a Technical Advisory Committee appointed in September, 1944, by the Minister of Fuel and Power

to examine the present technique of coal production from coal face to wagon and to advise what technical changes are necessary in order to bring the industry into a state of full technical efficiency.

The Mine-Lighting Sub-Committee of the National Illuminating Committee of Great Britain has recently made recommendations to improve lighting conditions. These are summarized in the I.L.O. *Industrial Safety Survey*, January-March, 1947. Basing its recommendations on the findings of three panels of experts, the Sub-Committee, in addition to dealing with the general conditions affecting illumination underground, makes recommendations concerning portable lamps, mains lighting, and self-contained pneumatic-electric lamps with particular reference to coal-face lighting. The Sub-Committee endorses the opinion of the Technical Advisory Committee concerning the great importance of good lighting, and refers to the opinion of experts that poor lighting may well be the main factor in causing miners' nystagmus. A joint committee of medical experts and mining engineers appointed by the Colliery Owners' Research Association is now studying nystagmus.

Comparing the standards of illumination required by the Ministry of Labour for work in other industries, the Sub-Committee considers it anomalous that a much lower standard should be accepted for underground work. In factories, the compulsory lighting standards vary from 6 foot-candles where persons are at work to 0.5 foot-candles for places where they pass. Even at such places as docks, wharves and train sheds, 0.5 foot-candles is generally regarded as the minimum. The 1934 Regulations of the Mines Department approved 0.25 foot-candles, but it is now generally admitted that this standard is

too low. The Sub-committee, agreeing with the Technical Advisory Committee, considers that, in the interest of safety, health and efficient working at the coal face, particularly in mechanized mining under dusty conditions, every effort should be made to ensure that the illumination is at least 0.4 foot-candles, the lowest standard considered acceptable in any other industry. The Sub-Committee, however, recognizes the difficulty of attaining this standard because of such normal factors at the coal face as shot-firing, confined space, presence of supports, moving ground, and the difficulty of installing and moving cables for mains lighting.

As regards the use of portable lamps, the Sub-Committee expresses the opinion that the underground worker should

be provided with the most efficient means of portable lighting even though portable lamps may ultimately be secondary to the permanent lighting system.

It does not consider that portable lamps are at any time likely to be completely displaced by mains lighting; the application of mains lighting is still in its infancy and a considerable time, possibly years, may elapse before such lighting becomes general at the coal face. The Sub-Committee, therefore, considers that advantage should be taken of every possible advance in the development of portable lamps but it believes that much attention is rightly being focussed on the development of general mains lighting.

To improve the service of portable electric lamps, the Sub-Committee considers that a higher standard of lamp-room maintenance is necessary. Competent persons should be supervised by adequately educated and technically trained men who are given the status of mine officials and paid accordingly. Courses in lamp-room maintenance should be given at Mining Technical Colleges by the Local Education Authority, and selected men from the collieries encouraged to attend. A recognized form of certificate should be awarded to successful students.

Other steps already undertaken for improving portable lamp service include extending the use of krypton-filled lamp bulbs which

give 20 per cent more light than similar argon-filled bulbs, and reducing the British Standards Specification for the life of the bulb from 600 to 250 hours for cap-lamps and 300 hours for pillar lamps. More efficient cap-lamp reflectors are being developed, and methods of easily cleaning them.

The Sub-Committee considers that the switch in hand- and cap-lamps should be retained so that a miner, imprisoned in the workings, may conserve the light by intermittent use; that manufacturers of miners' lamps should be encouraged to take full advantage of light non-ferrous alloys and plastics with the requisite strength in order to reduce the weight of lamps; that the Regulations of 1934 requiring certain specified places to be whitewashed should be extended, more mine roadways whitewashed, and experiments made with applying whitewash or a white dust to the roof, pack-walls, props, pans, etc., at the coal face; that encouragement should be given to developing, if possible, the use of the electric discharge bulb, instead

of the filament type, for miners' lamps; and that attention should be given to developing transportable battery-fed lamps for local flood-lighting where neither mains lighting nor compressed air is available, as in driving of drifts, shafts, and so on.

As regards mains lighting, the general conclusion of the Sub-Committee is that the degree of illumination and the type of lamp are of secondary importance as compared with the mechanical design of the coal-face lighting equipment, including fitting, cable and plug attachments, since unless the lighting equipment can, itself, be easily moved forward after each working-shift with a minimum of damage to the apparatus, it will never become popular no matter how efficient the illumination it provides.

Pneumatic-electric lamps for illuminating the coal face are also considered, and the Sub-Committee refers to the desirability of installing inbye compressors for face lighting with such lamps.

Hours of Work and Output in United States

THE findings of a study of the effects of long working hours on efficiency, absenteeism, industrial injuries and output, published in the July issue of the *Monthly Labour Review*, official publication of the United States Department of Labour, were that when operations were not automatic or semi-automatic, longer hours generally resulted in reduced efficiency and increased absenteeism and injuries. Where automatic operations prevailed, slightly better output was often obtained through the spreading of non-productive time for preparation and cleaning, etc., over a longer operating period.

Commenced during the war when long work schedules were the general rule and carried into the post-war period, the study investigated the situations in 34 manufacturing plants.

Because of the inadequacies found in maintaining records, the number of workers included in the different phases of the survey varied. Some 3,500 workers were studied for efficiency information, 14,400 for data on absenteeism and about 85,000 for data on industrial injury.

In a summary of the findings, the article stated that generally, longer hours resulted in larger output. "Although some of the observed output schedules maintained 11- and 12-hour shifts totalling more than 60 hours weekly, such schedules were the exception. As a rule, daily hours rarely exceeded 10, and weekly hours fell below 58. In only a few instances were hours so long that the fatigue engendered re-

sulted in no increase in output during the longer hours. But at times, the additional output was so small as scarcely to warrant the additional time worked. Unit labour cost must have increased to indefensibly high levels. In such instances, the same or better results could have been achieved by very much shorter hours, as 44 or 45 per week. Generally, however, the longer hours yielded additional output—but at a regressive rate. Even if overtime pay was excluded from consideration, as hours increased, the proportionate output return decreased, and unit labour cost rose.

"Except for a few clothing plants, studies of the effects of weekly hours less than 40 are not included in the survey. It is not possible, therefore, to make any suggestions as to the relative value of shorter work schedules. However, the shorter the workweek the less any worker can afford to absent himself. The longer the workweek, the greater is the pressure for some time out to attend to personal matters—shopping, seeing the dentist or physician, attending to family matters, or just a day off for additional rest—and there is less urgency not to lose a day's pay. It is literally true that workers cannot afford to be ill when working shorter hours, and that they frequently come to work in spite of great discomfort."

On the effect of lengthened work periods upon absenteeism the article reported that

some managements attributed the higher absenteeism during the longer hours to the fatigue engendered by the longer work schedules. "In addition, they realized that the long hours imposed considerable hardships on the workers, particularly women who had duties outside the plant. Others thought workers were earning so much money that they did not know what to do with it and consequently did not see the necessity of working a full schedule. At times, this explanation appeared to have considerable basis in fact. For instance, the labour in one large foundry which had been recruited from the South, received much higher hourly rates than previously earned. Absenteeism was high—presumably because this type of labour had not yet raised its standard of living to a point that required a full week's pay. But, whatever the reason, one fact stands out clearly in the survey: the higher the hours, the more scheduled worktime lost through absenteeism.

"As a rule, the time lost by women through absenteeism exceeded that of men. This was generally true at every level of hours. It is known that women lose more time than men through illness, and that the periodic menstrual cycle has a bearing on the problem. When home responsibilities and the care of a house-

hold or children are added, it is not difficult to find additional explanations for the difference."

Injuries also increased as hours increased, not only in absolute numbers but also in the rate of incidence. "The number of injuries per million hours worked, in most of the instances observed, was very much higher at the longer hours. Sometimes an effective accident-prevention program managed to hold the rates down; at other times the rates went up in spite of everything that was done.

"The findings concerning the effects of longer workdays and longer workweeks apply almost entirely to workers under some sort of incentive system. In a few instances it was possible to evaluate the effects of longer schedules on workers not paid under the wage incentives. For these workers, neither the lengthening nor shortening of daily or weekly hours had any appreciable effect on efficiency. They performed about as well at 58 hours as they did at 40, or at some schedule between these limits. The pace during the shorter hours was not so fast that it could not be maintained at higher schedules. Conversely, shortening hours did not speed up the operating pace. Absenteeism, however, tended to be higher on the longer schedules."

Developments in Consumers' Co-operative Movement in 1946

A BULLETIN published by the United States Bureau of Labour Statistics describes the developments in the Consumers' Co-operative Movement in 1946. The outstanding event of the year for co-operators in the United States according to the bulletin was the biennial Co-operative Congress, which made far-reaching changes in the structure of the organized co-operative movement. The bulletin also reports substantial progress in the fields of co-operative housing and medical care in 1946. The year, states the bulletin, was also notable for the unusually large number of new branches opened or new departments added by established associations and for the organization of national federations of co-operative housing associations, of co-operative medical-care associations and of students' co-operatives, as well as of an international association to carry on trade in petroleum products among the co-operative movements of the various countries of the world.

Previous efforts toward closer relationships with other groups, such as labour, churches, and farmers were continued and expanded. "Particularly successful have been the moves

in the direction of labour, which are now paying dividends in the active support of co-operatives by unions and their members in many places."

As usual, many new distributive co-operatives were started during the year, and a large number of associations opened new branches or added new departments. Electrical-appliance departments were the most popular with some 2,300 local associations reported as dealing in electrical appliances by early 1947. Among the new ventures, were departments for building supplies, lumber yards, coal yards, a carpenter shop, general stores, gasoline stations, cold-storage lockers, dry-cleaning service, watch-repair service, a dry goods store and a hardware store.

From reports received by the Bureau of Labour Statistics it was evident that housing co-operatives were being formed all over the country. Especially active were the veterans who undertook new developments and planned the remodelling of existing buildings.

Numerous housing developments on the co-operative plan were sponsored by labour groups. Among others may be mentioned the

printing trades, a local of the UAW-CIO, and joint participation of the AFL and CIO unions as well as the local consumers' co-operative at Racine, Wisconsin.

In no case, however, had any of the associations listed in the bulletin actually built any dwellings by the end of 1946. The principal reasons for this were restrictions on building materials and uncertainty as to prices. In many cases the association had bought land and others had taken options on sites. Some had selected architects or contractors and a few had even obtained plans for a whole community lay-out.

The bulletin states that the spread of co-operative provision of medical care was outstanding in 1946 from the Mississippi River westward. The greatest advance was in the formation of hospital associations. The number of co-operative hospitals increased from 6 in 1945 to 9 by the end of 1946 with 13 associations formed and under way and 22 others in process.

In most cases the hospitals have been organized in rural districts but in Washington State urban industrial workers as well as farmers have been behind the organizing drive. In Seattle a Group Health Co-operative was formed in 1946 with widespread community support including local labour organizations, co-operative associations and several other groups. Among the labour organizations were the boilermakers, milk wagon drivers, aircraft mechanics and Renton Central Labour Council.

A nation-wide conference of health co-operatives was held in August, 1946, at which were present delegates from medical-care associations, labour and farmer groups. A new incorporated organization, the Co-operative Health Federation of America, was announced at the Co-operative Congress in September. At the same time a labour committee was formed to foster the formation of prepayment medical-care plans; a small executive committee was elected to further the federation's work.

Campus co-operatives showed a general revival in 1946. The return of male students from the Armed Forces was the main factor. Many new associations were formed and others revived. The co-operatives furnish rooms, meals, or both. Most of the students' enterprises are run for the benefit of unmarried students but a large proportion of the membership now consists of married ex-servicemen.

Many noncommercial federations have been formed during the past two years, some of

which were a clearing point of experience for existing co-operatives.

On the educational front much was done to create an informed membership in the co-operative movement and to provide well-trained efficient employees. The Rochdale Institute held two short-term courses while the regional wholesales also offered technical courses for co-operative managers and employees. Several universities included co-operative subjects, such as co-operative law and consumers' co-operation. The Co-operative and Labour Institute at the University of Wisconsin was attended by both CIO and AFL unionists.

Relationships between co-operatives and organized labour continued closer in 1946. At the 1946 AFL convention the report of the Federation's executive noted "significant progress in strengthening the ties between AFL and the Co-operative League of the U.S.A." It commended this interest and urged affiliated unions to take an active part in co-operatives and, where necessary, to organize them.

At the 1946 Co-operative Congress the president of the United Auto Workers (CIO) pledged the support of his union in a drive to organize 'consumers' co-operatives wherever it has locals. Individual local unions are also reported to be actively supporting the organization of new co-operatives in various places while over the years there have been many instances where co-operatives have aided striking unionists.

In the international field the most important event was the Congress of the International Co-operative Alliance in Zurich, Switzerland, in October. Delegates were present from co-operatives in 20 countries. Also attending were observers representing the governments of 7 countries, the Economic and Social Council of the United Nations, and the International Labour Organization. At this Congress the furtherance of co-operative international trade was emphasized. In February, 1946, the General Assembly of the United Nations confirmed the permanent consultative status for the International Co-operative Alliance in the Economic and Social Council.

Late in 1945, 25 relief agencies in the United States formed a non-profit co-operative organization for European relief. They included various relief agencies, the welfare organizations of several religious faiths, representatives of the AFL and CIO, and the Co-operative League of the U.S.A. The new organization popularly known as CARE (Co-operative for American Remittance to Europe) sent food parcels to 11 European countries. The president of CARE is also the president of the Co-operative League of the U.S.A.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles concerning proceedings under the *Wartime Labour Relations Regulations, P.C. 1003*, and under the *Conciliation and Labour Act*.

During the war and its aftermath, the Dominion Wartime Labour Relations Regulations (P.C. 1003) of February 13, 1944 (which suspended the Industrial Disputes Investigation Act, enacted first in 1907), have required employers to negotiate with the representatives of their employees and provided machinery for the settlement of disputes.

At the present time the Regulations apply only to industries within the legislative authority of Parliament, including navigation and shipping, lines of steam or other ships, railways, airlines, canals, telegraph, telephone and radio communication, ferries, and works situated in a province but which have been or may be declared by Parliament to be for the general advantage of Canada or two or more provinces. Jurisdiction over war industries and industries within the scope of certain provinces which entered into wartime agreements with the Dominion, has now reverted to the provinces. (A summary of the present position with respect to labour relations legislation in Canada appears in the July issue of the *LABOUR GAZETTE*, pp. 940-43.)

The Regulations, which were issued under the authority of the War Measures Act, are continued in effect under the continuation of Transitional Measures Act, 1947. A bill incorporating many of the features of the Regulations, with modifications and additions, was introduced in the House of Commons on June 17, 1947, but was allowed to stand over until the next session of Parliament (L.G., July, 1947, p. 923, Aug., p. 1102).

The Regulations are administered by the *Wartime Labour Relations Board (National)* in respect of those provisions relating to:

the certification of bargaining representatives, the intervention of the Board for the purpose of obtaining conciliation services from the Minister of Labour, the establishment of procedures for the final settlement of disputes concerning the interpretation or violation of collective agreements, and the institution of prosecution proceedings.

The provisions of the Regulations relating to conciliation services are under the administration of the Minister of Labour and are provided to parties desiring to negotiate agreements through the formal intervention of the Board.

The Board, with the approval of the Minister of Labour, has adopted rules or regulations which govern procedure in making the various types of applications invoking the provisions of the Regulations and the services of the Board. Copies of these procedural regulations and of the *Wartime Labour Relations Regulations, P.C. 1003*, may be obtained from the Department of Labour, Ottawa.

Proceedings under the Regulations are here described in two separate articles. The first deals with applications made to the Board for the certification of bargaining representatives and other services, and records the decisions reached in such matters; the second describes conciliation proceedings under the Regulations and includes the reports of Boards of Conciliation.

Conciliation proceedings are also provided through the Industrial Relations Branch of the Department of Labour under the provisions of the Conciliation and Labour Act. This Act empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together and to appoint a conciliator or arbitrator when requested by the parties concerned.

Applications for Certification under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Board (National) met for two days during the month of September. During the month the Board received nine applications, held six hearings, issued seven certificates designating bargaining representatives, rejected one application, allowed the withdrawal of three applications and ordered two representation votes.

Certificates Issued

Seven applications for certification of bargaining representatives were approved by the Board and certificates issued as below:

(1) *Canadian Brotherhood of Railway Employees and Other Transport Workers* and certain of its officers for the employees of the *Temiscouata Railway Company, Riviere du Loup, P.Q.*, generally described as station employees, shop employees and maintenance of way employees (including bridge and building employees) who are presently covered by separate agreements between the company and the Brotherhood, together with station clerks other than headquarters staff.*

(2) *Flin Flon Base Metal Workers' Federal Union No. 172* and certain of its officers, for the hourly rated employees employed in the *Research Department of Hudson Bay Mining and Smelting Company, Limited, Flin Flon, Man.*, in the classifications of test plant shift boss, pilot plant head operator, pilot plant operator 1st, pilot plant operator 2nd, labourer, test plant craneman, electric furnace operator 1st, electric furnace operator 2nd and electric furnace operator 3rd.*

(3) *National Association of Marine Engineers of Canada, Inc.*, and certain of its officers for engineer officers including the chief engineer, employed by *Consolidated Dredging Limited* on its tugs *Edward C. Whelan* and *Lisgar*.

(4) *National Association of Marine Engineers of Canada, Inc.*, and certain of its officers in the engineer office below the rank of chief engineer employed by the *Ontario Car Ferry Company Limited*, a subsidiary of the Canadian National Railways, operating between Cobourg, Ont., and Charlotte, N.Y., aboard the *SS Ontario No. 1* and *SS Ontario No. 2*.*

(5) *Canadian Seamen's Union, Pacific Coast District*, and certain of its officers for the unlicensed personnel employed by the *Shell Oil Company of British Columbia, Vancouver*,

B.C., in the deck, engine and stewards' departments of its vessel the *MS Western Shell*.**

(6) *Canadian Brotherhood of Railway Employees and Other Transport Workers, Division No. 182* and certain of its officers for the regular and part-time employees of the *Toronto Terminals Railway Company, Toronto, Ont.*, employed in the Restaurant Department (Oak Room, lunch room, soda fountain, laundry and office) in the classifications of cashiers, waitresses, waiters, chefs (without authority of hiring and firing), cooks, laundresses and clerical employees, attached to the restaurant department in the classifications of storeman and clerk, clerk, night clerk and assistant clerk and waitress. The supervisor of restaurants, one chef, assistant supervisor of restaurants, head dietitian, dietitian working the opposite shift from the head dietitian, soda fountain dietitian, steward and all employees of news stands were excluded from the bargaining unit.***

(7) *National Association of Marine Engineers of Canada, Inc.*, and certain of its officers for marine engineers employed by *Westward Shipping Limited, Vancouver, B.C.*, on its vessels the *MS Standard Service* and the *MS B.C. Standard*. The chief engineer was excluded from the bargaining unit.***

Applications for Certification Rejected

Canadian Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and Canadian Pacific Railway Company, Vancouver, B.C. (L.G., August 1947, p. 1134). Following a representation vote the Board rejected the application for the reason that it was not supported by a majority of the employees affected.

Representation Votes Ordered

(1) *Canadian Seamen's Union and Lakeland Tankers Limited, Toronto, Ont.*, (L.G. August, 1947, p. 1133). Following an investigation of the application the Board ordered a representation vote of the unlicensed personnel on the *SS Makawelli* of *Lakeland Tankers Limited*,

Note: *Following an investigation of the application

**Following an investigation of the application and a public hearing.

***Following an investigation of the application and a representation vote.

Toronto, Ont. The steward-first cook was excluded from the list of eligible voters. Mr. Harold Perkins, Industrial Relations Officer, Toronto, Ont., was appointed Returning Officer by the Board to supervise the ballot.

(2) *National Association of Marine Engineers of Canada, Inc.*, and *Lloyd Tankers Limited, Toronto, Ont.*, (L.G., August, 1947, p. 1134). Following investigation of the application and a public hearing the Board ordered a representation vote among the engineer officers employed by Lloyd Tankers Limited, Toronto, on its vessels the *SS Bruce Hudson* and the *SS Joan Virginia*. The chief engineers were excluded from the list of eligible voters. Mr. Harold Perkins, Industrial Relations Officer, Toronto, was appointed by the Board to conduct the vote.

Applications for Certification Withdrawn

(1) *Canadian Navigators Federation and Riviere du Loup-Tadoussac Ferry Company Limited, Montreal, P.Q.* (L.G., June, 1947, p. 796). On the request of the National Secretary of the Federation the application was withdrawn.

(2) *Canadian Lake Seamen's Union and Canada Steamship Lines Limited, Montreal, P.Q.* (L.G., August, 1947, p. 1134). On the request of the National Secretary-Treasurer of the union the application was withdrawn.

(3) *Order of Railroad Telegraphers and Quebec Railway, Light and Power Company Limited, Quebec, P.Q.* (L.G., September 1947, p. 1273). On the request of the Chairman of the Quebec Division No. 103, Order of Railroad Telegraphers, the application was withdrawn.

Applications for Certification Received during the Month of September, 1947

(1) *Canadian Navigators Federation* on behalf of licensed officers and/or non-licensed officers holding the position of officer on Board

the vessels *MS Elmbranch*, *MS Firbranch*, *SS Pinebranch* and *SS Sprucebranch* of *Branch Lines Limited, Sorel, P.Q.*

(2) *Canadian Brotherhood of Railway and Steamship Clerks, Freight Handlers and Station Employees*, on behalf of clerks in the superintendent's office, *Canadian Pacific Railway Company, Moose Jaw, Sask.*

(3) *National Association of Marine Engineers of Canada, Inc.*, on behalf of engineer officers employed by *Shell Canadian Tankers, Toronto, Ont.*

(4) *Canadian Navigators Federation* on behalf of licensed officers and/or non-licensed officers holding the position of officer on board the vessels *C.G.S. Sir Hugh Allan*, *C.G. Tug Glenkeen* and *C.G. Tug Glenada* of the *National Harbours Board, Montreal, P.Q.*

(5) *Air Engineers Society of Canada* on behalf of air engineers below the rank of assistant chief mechanic and assistant chief inspector employed by *Canada Air Lines, Winnipeg, Man.*

(6) *Canadian Seamen's Union* on behalf of the unlicensed personnel employed on vessels of the *Anticosti Shipping Company, Montreal, P.Q.*

(7) *National Association of Marine Engineers of Canada, Inc.*, on behalf of marine engineers on the vessels *C.G.S. Sir Hugh Allan*, *C.G. Tug Glenkeen* and *C.G. Tug Glenada* of *National Harbours Board, Montreal, P.Q.*

(8) *Seafarers International Union of North America* on behalf of employees in deck, engineroom and steward's departments of the vessel *Britamerica* of the *British American Oil Company Limited (Britamerican Ltd), Vancouver, B.C.*

(9) *Canadian Merchant Service Guild* on behalf of the licensed deck personnel employed by the *National Harbours Board (Port of Montreal)* on the vessels *C.G. Sir Hugh Allan*, *C.G. Tug Glenkeen* and *C.G. Tug Glenada*.

Conciliation Proceedings under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Regulations provide conciliation machinery to attempt settlement of disputes where negotiations for an agreement following certification of bargaining representatives, or negotiations for the renewal of an existing agreement, have been unsuccessfully continued for thirty days. Disputes of this nature are referred to the

Minister of Labour by the Wartime Labour Relations Board (National), and, until May 15, 1947, such disputes in certain provinces were also referred to the Minister by the Provincial Boards in their respective jurisdictions. The Minister then appoints a Conciliation Officer to confer with the parties and endeavour to effect an agreement. If the

Conciliation Officer is unable to bring about settlement of the matters in dispute and reports that in his view an agreement might be facilitated by the appointment of a Conciliation Board, a Board is then established by the Minister. The duty of such Board is to endeavour to effect an agreement between the parties on the matters in dispute and to report its findings and recommendations to the Minister.

I *Assignment of Conciliation Officers*

During September, 1947, Conciliation Officers were assigned to confer with the parties in an attempt to effect an agreement in the following cases:

Canada Steamship Lines, Ltd. (waterfront freight handlers at various points in Quebec and Ontario) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). Harold Perkins, Conciliation Officer. (*See also III*)

Canadian Pacific Railway Co. (coal dock employees, Britt, Ont.) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). F. J. Ainsborough, Conciliation Officer.

Canadian Pacific Railway Co. (coal dock employees, Little Current, Ont.) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). F. J. Ainsborough, Conciliation Officer.

II *Agreements Facilitated by Conciliation Officers or Applications Withdrawn*

In the following case, a report was received from the Conciliation Officer indicating the withdrawal of the application for intervention:

Clarke Steamship Co. Ltd., Montreal, P.Q., and Canadian Seamen's Union (TLC). R. Trepanier, Conciliation Officer (*vice* J. S. McCullagh).

III *Boards Established*

During the month, Conciliation Boards were established to deal with disputes between the following parties:

Canada Steamship Lines, Ltd. (waterfront freight handlers at various points in Quebec and Ontario) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). Harold Perkins, Conciliation Officer. (*See also I*).

Canadian National Steamships (Pacific), Canadian Pacific Railway Co. (B.C. Coast Steamship Service) and Union Steamships Ltd., and Seafarers' International Union of North America (AFL). G. R. Currie, Conciliation Officer.

United Towing & Salvage Co. Ltd., Montreal, P.Q., and Canadian Seamen's Union (TLC). R. Trepanier, Conciliation Officer (*vice* J. S. McCullagh).

IV *Boards Fully Constituted*

Various Railway Companies. The Conciliation Board established to deal with a dispute between the Canadian National Railways and the Canadian Pacific Railway Co., their subsidiaries and jointly-owned undertakings, and Algoma Central & Hudson Bay Railway Co., Ontario Northland Railway, Toronto, Hamilton & Buffalo Railway Co., Pacific Great Eastern Railway Co., Essex Terminal Railway Co. and Sydney & Louisburg Railway Co., and the Brotherhood of Railroad Trainmen was fully constituted on September 12, 1947, with the appointment of Honourable Mr. Justice E. K. Williams, Winnipeg, as Chairman of the Board, in the absence of a joint recommendation from the other two members of the Board, George Hodge, Montreal, and Ralph Maybank, K.C., M.P., Winnipeg, who had been appointed on the recommendation of the employers and employees, respectively.

Various British Columbia Shipping Companies. The Conciliation Board established to deal with a dispute between the Canadian National Steamships (Pacific), Canadian National Railways (B.C. Coast & Lakes Barge & Ferry Service), Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Union Steamships Ltd., and Frank Waterhouse & Co. Ltd., and the Canadian Merchant Service Guild, (TLC) was fully constituted on September 10, 1947, with the appointment of H. A. Beckwith, Victoria, as Chairman of the Board, on the joint recommendation of the other two members of the Board, W. H. M. Haldane, Victoria, and S. M. Jamieson, Ph.D., Vancouver, who had been appointed on the recommendation of the employers and employees, respectively.

Canadian Pacific Railway Co. (dining, cafe and buffet car employees). The Conciliation Board established to deal with a dispute between the Canadian Pacific Railway Co. (dining, cafe and buffet car employees) and Brotherhood of Railroad Trainmen was fully constituted on September 12, 1947, with the appointment of Honourable Mr. Justice E. K. Williams, Winnipeg, as Chairman of the Board, in the absence of a joint recommendation from the other two members of the Board, George Hodge, Montreal, and Ralph Maybank, K.C., M.P., Winnipeg, who had been appointed on the recommendation of the employer and employees, respectively.

V *Board Reports Received*

During the month, Board reports were received in the following cases:

Canada Veneers Ltd., Saint John, N.B., and Industrial Union of Veneer Workers (CCL).

Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Canadian National Railways (B.C. Coast & Lakes Barge & Ferry

Service), Union Steamships Ltd., and Frank Waterhouse & Co. Ltd., and National Association of Marine Engineers of Canada, Inc. (TLC).

Ray-O-Vac (Canada) Ltd., Winnipeg, Man., and Local 3929, United Steelworkers of America (CIO-CCL).

City of Winnipeg and Federation of Civic Employees, Central Council (CCL).

Report of Conciliation Board in Dispute Between Canada Veneers Ltd., Saint John, N.B., and Industrial Union of Veneer Workers (CCL)

On September 2, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge H. O. McInerney, Saint John, Chairman, appointed by the Minister of Labour on the joint recommendation of the other two members of the Board, T. L. McGloan, Saint John, and J. K. Bell, Halifax, appointed on the nomination of the employer and employees respectively.

Report of Chairman

To The Honourable
HUMPHREY MITCHELL, M.P.,
Minister of Labour,
Ottawa.

Sir:

Your Board of Conciliation, consisting of Mr. J. K. Bell, of Halifax, N.S., nominated by the Union, Mr. T. L. McGloan, Barrister, nominated by the Company, and myself, as Chairman, was convened on June 23 last, and the members were duly sworn. The Chairman read the letter of Mr. M. M. MacLean, Director of Industrial Relations, dated June 11, 1947, as to the Constitution of the Board, documents enclosed with it, and instructions for proceedings. Representatives of the Union and of the Company were asked to submit briefs, which was done at the next meeting, held the following day.

At a meeting held on July 29 last, pursuant to an extension of time granted by you, Sir, the following representatives were present:

For the Company—

Mr. L. McRitchie, K.C., Vice President
Mr. W. F. Ryan, Barrister
Mr. W. W. Rogers, General Manager
Mr. Burton Scott, Personnel Manager
Mr. Arthur McNair, Superintendent

For the Union—

Mr. Angus MacLeod, District General Representative, C.C.L., and Bargaining Agent.

At a meeting on July 30, the same representatives of the Company, excepting Mr. Scott, were present, and for the Union, Mr. MacLeod, Mr. Henry Martin, President, and Mr. Ellery Mason, Recording Secretary of the Union. Mr. MacLeod filed a rebuttal brief. There was discussion by Mr. MacLeod, Mr. Ritchie, Mr. Ryan, Mr. Rogers, Mr. Mason and Mr. Martin.

Both sides professed the undesirability of overtime, the Company saying it is sometimes necessary to save demurrage on cars, and the Union taking the position that there must be a penalty on overtime to discourage and prevent it.

At the next meeting, the same representatives were present, with the addition of Mr. K. C. Irving, President of the Company. A new brief was filed for the Company, and lengthy discussion occurred.

Mr. Irving finally said that if the Company representatives had already agreed to time and one-half for Sunday work, and double time for holidays worked, except as to boiler men, and maintenance men, he would consent.

At a subsequent meeting of the Board alone, on July 31, I proposed that, as a basis of agreement. Mr. Bell said that he could agree to nothing less than double time for all employees on Sunday and holidays. Mr. McGloan agreed to the proposal. It thus became evident that there could not be unanimity.

The proposal so submitted is that previously made by Mr. H. R. Pettigrove, Industrial Relations Officer, but as qualified by the Company, and as so qualified, and agreed to by Union and Company negotiators alike, not accepted by the members of the Union when submitted to them.

It is true that the proposal as so qualified represents something less than the men had during some of the war years: it was then double time for Sundays, but for fewer holidays. From 1941 to 1943, non-shift workers received double time for all Sundays and six holidays. Beginning in 1943, all employees,

without distinction, were included in such double time. But the position of the Union, that there be a penalty to discourage Sunday and holiday work, is met. The only difference is as to the amount of the penalty for Sunday work, and boiler room and maintenance men are not included. They are offered, however, a day free from work in lieu of the Sunday or holiday worked. There is a substantial penalty, nevertheless, quite sufficient, from my understanding of the submissions, to discourage overtime during these uncertain years in the Veneer business. Costs of operation are undoubtedly rising, raw material is far more difficult to obtain, practically not obtainable now in this Province, most of it is being brought in from the State of Maine and from the Province of Quebec, we were told, and, I believe, increased competition is appearing and is inevitable. The demand at any price has ceased. There can be little doubt that the overtime to be worked will not be anything like it had been prior to this year—indeed the figures submitted showed it to be almost a thing of the past. Regularity in the supply of gondola cars by the railways is something to be hoped for, but not a present condition. There may be, it is said by the Company, short periods of Sunday work, because of unusually large numbers of cars arriving together: demurrage would thus be saved and the cars started on their way again. This is a temporary thing, however, and from what can now be seen, the amount of Sunday work is likely to be very limited.

If so, it is replied, the cost to the Company will not be significant, so why disturb the order of the war years? Because, "The old order passeth." If increasing competition and more difficulty in obtaining raw material develop, as I believe to be the case in this industry, other costs most certainly cannot be increased, or perhaps even maintained. It would, in my view, be equitable that overtime allowances suffer somewhat, especially if a substantial penalty on Sunday and holiday work is provided.

At first, I was inclined to the Pettigrove proposal, as qualified by the Company and as accepted by the Union Committee, but refused by the Union itself. On further reflection, however, I feel that all employees, including boiler men and maintenance men, should be entitled to time and one-half for Sundays and double time for proclaimed holidays. The penalty indicated is sufficient, but it should be general.

I should like to add that the proceedings throughout were conducted by the representatives of the Union and of the Company alike in a most dignified and helpful manner.

(Sgd.) H. O. McINERNEY,
Chairman.

Report of Mr. Bell

To the Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ont.

DEAR SIR:— The Board of Conciliation appointed by you to deal with the above dispute has concluded its deliberations. I regret that I cannot agree with the conclusions arrived at by His Honour Judge H. O. McInerney, the Chairman, and Mr. T. L. McGloan, my fellow member of the Board, and I beg leave to submit my report herewith.

In the several briefs submitted by the company the request for the discontinuance of double time payment for work performed on Sundays and statutory holidays, a condition granted by the company in 1941 and not included in the current agreement, having been referred by both parties to this Board for consideration, that such request by the company at this time centres around the following points: 1. Company's belief in the necessity of the Union granting the company a return concession for the "sweeping concessions made by the company to its employees over the past nine years and the very marked concessions granted by the company during the negotiations which led to the October 31st, 1946, agreement." 2. Expectation of foreign competition in the United Kingdom, which is principal market for company products, necessitating reduction in production costs. 3. Higher cost of raw material due to long haulage from forest stands unaffected by ravaging bronze borer. 4. Double time payment for Sundays and statutory holidays worked not paid generally to other Canadian workers in wood products industry.

However, in the course of the Board hearings it was shown that the working of Sundays and statutory holidays has been discontinued for production workers by the company as of May 4, 1947, and other than a few maintenance workers being called in on Sundays and statutory holidays and being paid double time rates accordingly the three latter concerns of the company as listed above are thereby eliminated and thus confining the company's argument to the first numbered point. This viewpoint is strengthened by the disclosure made by the company management at the Board hearing that it is the policy of the company to avoid the working of

Sundays and holidays in the future and that arrangements were being made to place certain maintenance workers on a 6 day week as soon as possible. The union representatives at the Board hearing also supported the principle of a standard work week without overtime and pointed out that their insistence for double time payments for Sundays and holidays be continued was for the purpose of ensuring the 6 day week for the greatest number of the employees.

The Board was informed that at the commencement of negotiations of the current agreement both parties reviewed the section providing double time for Sundays and holidays worked without objection to same by the company and at a subsequent meeting the company made a counter-proposal to the union providing for double time for Sundays and holidays worked with the exception of Armistice Day from the listing of holidays proposed by the union as this day was not a double time day in previous years. Both parties not having agreed that each section of the agreement was being negotiated separately when negotiations first opened the union is being denied this counter-proposal which has never been formally withdrawn by the company and was not followed by any marked concessions on the part of the company which would justify the request of the company for a concession from the union in return. Representative of the company acknowledged the union's claim that any agreement improvements negotiated following the counter-proposals of the company to pay double time for Sundays and holidays (Armistice Day excepted) were not of a nature which would increase production costs, all of which does not strengthen the statement of company representative that the granting of double time for Sunday and holidays *when worked* could easily become another factor leading to the removal of the plant from the area.

While comparison was made with other Canadian wood products plants it was pointed out by the union representatives that working conditions and plant operation in the Saint John, N.B., plant were totally different from other wood products plants in North America. The company is specializing in a veneer product of a graded quality of which it is practically the sole manufacturer on the continent and in the opinion of the union was and is anxious to institute reductions based on future conditions expected and not on any present conditions demanding same. Several proposals in shift arrangements were made by union representatives at the Board hearing which could effect a saving to the company of an amount comparable to the

amount estimated and submitted by the company with the discontinuance of double time payments for Sundays and holidays worked. The union expressed a fear that any reduction from double time payment for Sundays and holidays might encourage the company to operate the plant with a reduced working force working excessive overtime.

It is my opinion that the company's main basis in this dispute lies in the request for further concessions from the union notwithstanding the evidence submitted that numerous compromises were effected during the negotiation of the working agreement which are more clearly shown by comparing wages and conditions of the company's plant as against prevailing wages and conditions in the locality rather than a comparison of wages and conditions received by the company employees in the past or with wages and conditions experienced by employees in certain wood products industries elsewhere.

Being in full support of the continuation of double time payment for work performed on Sundays and statutory holidays by the employees of the company it is not possible for me to join with the other Board members in their report.

All of which is respectfully submitted,

(Sgd.) J. K. BELL
Member of the Board.

Report of Mr. McGloan

To the Honourable
HUMPHREY MITCHELL, M.P.,
Minister of Labour,
Ottawa.

Sir:—

The first meeting of the Board of Conciliation appointed by you in the above mentioned matter was held on June 23, 1947, at which H. O. McInerney, Esq., K.C., as chairman, Mr. J. K. Bell, the nominee of the Union, and myself, the nominee of the Company, were duly sworn. After considerable discussion the meeting adjourned and reconvened on June 24, at which meeting the briefs of the Company and the Union which had been submitted were considered in detail.

At this latter meeting Mr. Bell stated that another dispute between the Company and the Union concerning the method to be employed in computing holiday time was then pending and it was felt by the Board that until this latter dispute was settled or officially referred to a Board of Arbitration for action, there would be no purpose in the Board proceeding to attempt a conciliation on the matter in dispute which had been specially referred to it

until the other dispute had been settled and it was agreed by the chairman and the members that the Board would adjourn sine die pending further action on the dispute concerning holidays.

At a later date advice was received that the Company and the Union had satisfactorily settled the dispute concerning the holiday time, the Company having conceded to all of the Union's demands, and the Board reconvened on July 29, at which meeting five representatives of the Company and three representatives of the Union attended. The Company submitted a revised brief and Mr. Angus McLeod of the Canadian Congress of Labour, a Union representative, submitted a brief in rebuttal.

The representatives of both the Union and the Company agreed that working overtime, particularly on Sundays, was not desirable and a Company representative stated it would be the policy of the Company to have as little overtime work as possible and the schedule attached to the Company's brief showed that a material drop had occurred in Sunday work at the Company's plant in recent weeks. The Company representatives submitted a schedule of wage rates paid by the Company and comparative rates paid by other companies in a similar business in Quebec and Ontario which comparative statement showed that the local Company is paying quite considerably higher basic rates than similar companies in Ontario and Quebec. While wage rates were not the subject of dispute between the parties, yet the Board admitted the submission of wage figures by the Company as part of its submission that the Company in paying higher rates than its competitors is not in a position to further penalize itself by paying the overtime rates demanded by the Union.

The Company representatives also stressed that conditions over which the Company has no control have greatly increased its production costs. They stated that the supply of its raw material from New Brunswick sources had been completely exhausted by the destruction of hardwood trees by the bronze borer and the Company is now compelled to bring its raw material by railway from Northern Maine and the Province of Quebec with the result that its freight costs have increased very greatly over the past two or three years. Also the Company representatives stated that because of the scarcity of railway cars its supply of veneer logs no longer moves normally but comes in in unexpected quantities at unexpected times with the result that the Company is faced

with the problem of working the log yard crew overtime and on Sundays in order to unload logs and save railway demurrage. In addition to saving demurrage, such overtime work has resulted in continuous operation of the plant and had it not been for such overtime work, there have been and can be occasions when the mill would or might have to close down until the raw material is brought into the log yard.

At this meeting of July 29, 1947, and at subsequent meetings, it was made abundantly clear to me that the Company is faced with a rather serious situation and that its future is or can become precarious. All during the war years the Company was making a fine grade of veneer and a market was always available because of the war. This situation, however, has changed quite radically in the past year and an even more radical change can be expected in the future when the Company will be faced with a greatly reduced market in the United Kingdom and serious competition from other mills in Quebec and Ontario in the domestic market. According to the schedule of comparative wage rates submitted by the Company to the Board, its competitors pay lower rates of wages to their employees, and, being located in close proximity to raw material supply and market for manufactured product, they will not have to carry the very real burden of freight rates which Canada Veneers has now to bear. Also heretofore the product of veneer plants has had free access into the United States but it was stated by a Company representative that this entry would be terminated in this present month of August.

At a subsequent meeting, held on July 30, the representatives of the respective parties made computations of the probable cost to the company of overtime work on a basis of double time for all such work and various suggestions were made for changing certain shifts and methods of production. However, in my opinion, nothing of a definite nature in the way of cost to the Company or prospective savings by readjustment of shifts was adduced.

At the meeting on July 30, Mr. K. C. Irving, the President of Canada Veneers, appeared and made certain representations to the Board; in brief his contention being that the payment of double time for overtime work was not sound in the industry in normal times. He admitted he had agreed to such overtime payments during the war years but contended that the abnormal situation then prevailing warranted such being done. However, he further contended that because the Company had agreed to such overtime under war conditions

it should not be taken as a precedent and govern in normal times. Eventually, however, Mr. Irving said he would agree to all workmen, excepting boiler-house men and maintenance men, being paid double time for holidays worked and time and one-half for Sunday work.

Mr. Angus McLeod, a Union representative, stated that the Union was not asking for double time for work done on Sunday, but if he were required to work on Tuesday or the seventh day worked in any one week, that is if a workman commences his work week on Wednesday morning he would work through until the following Monday night without double time for work on Sunday, but if he were required to work on Tuesday or the seventh day in that work week he must be paid double time.

At a subsequent meeting of the Board members, no representatives of either the Company or the Union being present, the chairman stated he was of the opinion that the proposal made by Mr. Irving on behalf of the Company was reasonable and that his recommendation would be that such proposal be adopted. For my part, I was of the opinion that in view of the fact that the maintenance of a supply of raw material in the log yard is essential for continuous operation of the plant and that the Company had little or no control over the movement of such supply but is obliged through circumstances beyond its control to handle logs on Sundays and beyond the standard working day, the log yard crew should also be excluded from the double time and time and one-half the same as boiler-house men and maintenance men. However with a view to procuring a unanimous report by all members of the Board I agreed not to press for the exclusion of the log yard crew. Mr. Bell, however, stated that he could not agree to any recommendation except for double time rates for all employees for all Sunday and holiday work. Later I was informed by the chairman that he had revised his opinion and would recommend that boiler-house men and maintenance men be paid at the same overtime rates as all other employees. I regret I am unable to concur in the opinion of the chairman or Mr. Bell, the other member of the Board.

From the facts submitted by the Company in its two briefs and the verbal submissions made by the Company's representatives I am

quite of the opinion that Canada Veneers Limited has already absorbed and in the future will be required to further absorb very greatly increased production costs if it is to remain in business in its present location. Unquestionably the mill is not strategically located either from the view point of log supply or serving the Canadian Market. When the mill was first established it was in close proximity to its log supply and all during the war years practically its entire products were shipped from the port of Saint John to the United Kingdom. But these factors have changed very much in recent months and an even greater change can be expected in the future and I am quite of the opinion that unless a greater degree of co-operation exists between the Company and the Union it can reasonably be expected that the Company will have to move to another location in which event a very valuable source of employment will be lost to the people of this community.

Both the Company and the Union agree that Sunday and holiday work is not desirable. The Company contends, however, that on many occasions it is absolutely unavoidable and the Union does not dispute this. Very little of overtime work is being done by productive labour but rather by boiler-room, maintenance men and log yard men. Work in the boiler-room and in maintenance must be performed on Sundays and holidays in order to ensure continuous operation on regular working days and also in the log yard when a number of cars arrive unexpectedly with logs. It is to the advantage to the men and to the Company that these logs be unloaded without delay since it saves the Company from paying demurrage and ensures that a supply of logs will be available for the mill on the next work day.

I respectfully submit that the following in all the circumstances is a fair and reasonable proposal for the settlement of the question in dispute:

That employees be paid time and one-half for work performed on the seventh day of any work week and double time be paid for work performed on legally declared holidays except that maintenance and boiler-house crews shall not be paid double time for holiday work if given a day off without pay within the work week next following.

Respectfully submitted,
(Sgd.) T. LOUIS McGLOAN

Report of Conciliation Board in Dispute Between Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Canadian National Railways (B.C. Coast & Lakes Barge & Ferry Service), Canadian National Railways (B.C. Coast Service), Union Steamships Ltd., and Frank Waterhouse & Co. Ltd., and National Association of Marine Engineers of Canada Inc.

On September 3, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: J. E. Eades, Vancouver, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, G. E. Housser, K.C., and H. Gargrave, M.L.A., both of Vancouver, appointed on the nomination of the employer and employees respectively.

Report of Board

To The Honourable HUMPHREY MITCHELL,
Minister of Labour

1. A meeting of the Board was held at the office of the Chairman on July 31, 1947, A.D., at which the members were duly sworn. The order establishing the Board dated June 24, A.D. 1947 was filed as Exhibit 1, the oaths of the members as Exhibits 2, 3 and 4 respectively, the order appointing the Chairman dated July 18, 1947, was filed as Exhibit 5 and the orders appointing Messrs Gargrave and Housser as Exhibits 6 and 7 respectively. The time and place for the first meeting and procedure were discussed and agreed upon.

2. The sittings were held at the Court House, Vancouver, B.C., on August 4, 5, 6, 7, 8, 11 and 13 at which the Employees were represented by Mr. B. Marcuse and Mr. E. G. Bjarnason of the Trade Union Research Bureau and by Mr. Dennis Heard, President of the National Association of Marine Engineers. The Canadian Pacific Railway (B.C. Coast Steamship Service) was represented by Capt. O. J. Williams, the Port Superintendent, and Mr. S. M. Gossoge, Assistant Manager, Department of Personnel. The Canadian National Railways (B.C. Coast, Lake, Barge and Ferry Service) was represented by its Superintendent, Mr. G. A. McMillan and Mr. P. E. Ayhart, Assistant to the Director of Labour Relations. Union Steamships Limited and Frank Waterhouse & Co. Ltd., were represented by the General Manager, M. Gerald McBean and Personnel Manager, Mr. P. W. Lawrey. An opening brief was read by the Association, witnesses were called on behalf of the Employees and were examined, cross-examined and re-examined. An opening brief was filed by each

of the Canadian Pacific Railway Co., Canadian National Railways and the Union Steamships Ltd. Questions were asked and answered. A further brief was presented by the Canadian Pacific Railway and by the National Association of Marine Engineers in rebuttal. In all fifty-five exhibits were filed.

3. The matters in issue before Mr. G. R. Currie, the Conciliation Officer appointed to deal with same, were:—

- (a) Increases in rates of pay
- (b) Reduction in hours of work from 48 to 40 per week
- (c) Time off in lieu of statutory holidays worked
- (d) Preferential hiring
- (e) Increase in subsistence allowance to \$4.00 per day
- (f) Improvement in accommodation provided for engineer officers
- (g) Annual sick leave with pay

At the opening meeting at which all parties were represented it was agreed that the Board did not need to deal with (c) and (d), these matters having been resolved.

4. The Companies took the position throughout with respect to the increase in wages, hours of work, subsistence and annual sick leave that the Marine Engineers were in the same position as the Railway Employees, that increases granted to the Railway Employees had been given to the engineers, that the present wages and working conditions were equitable and no case had been made out by the employees and that in any case the companies were operating at substantial loss and no increase or change in working conditions could be granted and that any such change as requested would result in demands in the case of Canadian Pacific Railway Company and Canadian National Railways from the railway employees and certainly in the case of all the companies from other seagoing categories. The possibility of settlement through the mediation of the Board was considered from time to time but no common ground could be found.

5. The Board has met at length on several occasions and has carefully reviewed the briefs presented by both sides and considered the same together with the evidence and the ex-

hibits and the oral arguments presented. The Board is set up to deal with the position of the Marine Engineers only in the coastwise service of the Companies involved and the fact that two of the Companies also operate great railways and that an increase in wages or change of working conditions applied to these engineers may be used in support of demands by a group or groups of employees on the railways or any other branch of transportation is not a circumstance that the Board considers of weight. On the other hand it is urged that the steamship service of the Canadian Pacific Railway and the Canadian National Railways and particularly the Union Steamship Company and Frank Waterhouse & Co., Ltd., presently are operating at substantial losses. This is due to greatly increased operating costs and in spite of greatly increased traffic. A slight increase in passenger fares and a small freight increase has not served to close the gap. Any increase in wages or reduction of hours (where the recipient is on a monthly wage) of course adds to the operating costs and unless followed by an increase in efficiency adds to the deficit. Due to the nature of the employment under consideration the efficiency cannot be materially increased and therefore the additional cost of the requests is a straight overhead addition and if allowed can be compensated for only through increased operating efficiency and/or increased passenger fares and freight rates.

6. Figures produced of which the correctness was unchallenged show that since 1922 Marine Engineers have lagged far behind the general average in percentage of wage increases and although since 1939 they have received cost of living bonuses totalling \$32.41 and a general increase in 1946 of \$20.80 that they have lagged substantially behind all the quoted industries in this period. The standard required of marine engineers is high and not only has not declined in recent years but rather has increased and the use of older ships (necessary due to lack of building during the war period) makes the work more onerous than heretofore. The differential in favour of marine engineers as against stationary engineers formerly in favour of those at sea now appears to favour those in industry and although there are certain factors favouring the marine engineers such as stability of employment, certainty of promotion, pension (in Canadian Pacific and Canadian National) and free transportation, there are other factors such as absence from home life, difficult living conditions and length of time on duty which must be considered.

7. The Board sees no justification in the request that chief engineers be paid a salary

within \$15.00 per month of the master's wage or that the second engineer should have 80 per cent of the chief's wage and feels that an arbitrary differential would be unsatisfactory and probably a detriment to the service. Furthermore, the wages requested would bring the chief engineer in most cases to a wage in excess of that of the master. The Board recommends that the present monthly rates paid to chief engineers on all ships in the various services should be increased by twelve and one-half per centum and that all other engineers involved in this dispute should receive an increase of fifteen per centum. The Board further recommends that an increase be given to junior engineers of \$5.00 per month after one year's satisfactory service and \$10.00 per month after two years' satisfactory service. The Board further recommends that the said increases be put into effect retroactive to the 1st day of July 1947.

8. The Board strongly favours the reduction of the weekly hours of work of the marine engineers. Forty-eight hours per week (44 while in port) is too long for the type of work done by these employees and the conditions under which it is done. Such a reduction would not mean that a five-day week can be worked. Now the men are on duty, except when the ship is undergoing repairs, seven days per week but are allowed one day free of the ship which is accumulated and taken at a suitable time. The application of a 44-hour week or a 40-hour week therefore presents no technical difficulty and the Board recommends that a reduction of hours be placed in effect as soon as practicable. Evidence further clearly shows that sufficient relief cannot be obtained to enable the senior engineers to have their full shore leave and this factor, coupled with the increased cost would seem to prevent its application at the present date.

9. The Board finds that no case has been made out for an increase in subsistence allowance. The rates paid deep sea engineers who have no alternative accommodation have no application to this coast-wise industry where full alternative subsistence aboard the ship must be made available by the companies.

10. The Board strongly favours the principle of pay during enforced absence from work due to illness and believes that the sense of security engendered thereby is of marked advantage to both employer and employee. In the absence of compensation the tendency is for the employee to remain on duty even though suffering from a communicable illness or disease and thereby endangering the health and efficiency of those with whom he is working. The question of a contributory scheme has never been discussed between the

parties. The Board is of the opinion that a well planned scheme of health insurance providing for a reasonable monthly sum to cover those who may fall ill not only for short periods but for a lengthy time is far superior to a one or two weeks' sick leave with pay and recommends that a voluntary scheme be established under which the Company should pay 50 per cent of the cost and the Marine Engineers 50 per cent. The Board would further urge that a system of superannuation be established by the Union Steamship Co. and Frank Waterhouse & Co. Ltd. for its engineer employees as soon as practicable. The present system whereby an old employee may receive a pension of an undeterminate amount if the Company is able and willing at the time of his retirement is unsatisfactory and unfair in this relatively stable transportation industry.

11. The agreement suggested by N.A.M.E. contains reference to accommodation provided and to be provided aboard the respective ships and a great deal of evidence to this question has been led by the Marine Engineers and, although not referred to in the opening brief of the employees, is covered later at length by both sides. It is agreed that the accommodation aboard the two ships presently under construction by the Canadian Pacific Railway is entirely suitable and that substantial progress has been made with respect to the accommodation on certain others. A definite effort to make improvements has been and is being made. The Board agrees in principle that the engineer officers should have as satisfactory accommodation as that accorded to the deck officers of similar rank and cannot help but feel that the Companies are alive to the problem.

All of which is respectfully submitted.

Dated at Vancouver, B.C. this 29th day of August A.D. 1947.

(Sgd.) J. E. EADES

I concur herein save as to paragraph 7 in respect of which I am filing a separate memorandum.

(Sgd.) GEO. E. HOUSSEY

I concur herein save as to paragraph 8 in respect of which I am filing a separate memorandum.

(Sgd.) H. GARGRAVE

Minority Report of Mr. Herbert Gargrave

To the Honourable HUMPHREY MITCHELL,
Minister of Labour

With regard to the question of a reduction of weekly hours of work, I find myself in slight disagreement with other members of

the Board. In the paragraph on page 5 dealing with this matter I agree with the content matter with the exception of the final sentence commencing with the words "Evidence further clearly shows."

Evidence given showed that it is the intention of the B.C. Coast S.S. of the C.P.R. to lay up the *Princess Alice* at the end of the summer thus releasing five engineers. This would enable adequate relief for an immediate shorter work week.

The C.N.S.S. with but one boat in operation lays over in Vancouver for two full days and this too would enable a shorter work week without any handicaps.

Admittedly the relief engineer problem with the Union S.S. Co. is somewhat more difficult, but with the summer season nearly over it is almost certain that one or more of the Union boats will be tied up, thus releasing engineers for relief purposes.

For these reasons I cannot agree with my fellow Board members that a shorter work week is not immediately practicable and therefore wish to recommend the institution of a forty-four hour week for marine engineers as from the end of September 1947.

(Sgd.) H. GARGRAVE.

Minority Report of Mr. G. E. Houssey

I concur in the report of the other two members of the Board in all its findings and recommendations save those dealing with the wage increases. As to these, I am reluctantly compelled to disagree.

I agree that the wages of the Marine Engineers appear to have lagged behind the general average of wage increases since 1922, but, for the reasons set forth by the employers in Paragraphs 5 to 14 (Pages 3 to 17) of their Brief in Rebuttal, I am of the opinion that this in itself is not justification for a wage increase. There is, however, an apparent lag behind the increases obtained during this period by employees in steam railways and water transportation, for which no satisfactory explanation appears to have been offered. I would therefore be prepared to join in recommendations tending to rectify this seeming inequality had the case presented by the Engineers been so framed and had evidence been available to justify our so doing and provide a proper formula.

The Engineers have in their Brief limited their request for wage increases to the establishment of a formula by which their wages would be arbitrarily tied to those of the Master, with percentage differentials between the Engineers themselves according to their various grades. I am in entire agreement with other members of the Board in their

disposition of this request. It is illogical and no justification whatsoever was advanced for placing the Chief Engineer on practically a wage parity with the Master.

I cannot agree, however, that we can substitute therefor an arbitrary percentage increase which is neither asked for by the Engineers nor agreed to by the employers. Such an increase might not be so objectionable were it workable, but in my opinion it is not.

I have applied the proposed percentages to the wages now paid the Masters and Engineers, as shown in the various Briefs, particularly Exhibits 38 and 49. In the result, it would mean that in many instances the Chief Engineer would receive a wage equal to or greater than that of the Master. Even more serious, the differentials which have been worked out over many years between the various classifications and the various ships would be completely dislocated. This is not the wish nor the desire of the Engineers themselves, as shown by the reply of Mr. Heard to a question propounded by the

Chairman to him at an early stage of the enquiry.

Mr. Gossage stated in effect towards the close of the enquiry that the employers would welcome and give serious consideration to any recommendations by the Board tending to remedy any inequalities or injustices. I have endeavoured to work out of the evidence and exhibits before us some satisfactory formula. This I have been unable to do. I did not, for the reasons above stated, seek to establish a formula based on the above-mentioned difference between the general wage increase and that enjoyed by the Marine Engineers. I rather attempted to work out some formula based on the seeming inequality between wage increases enjoyed by railway employees generally and those engaged in water transportation. The necessary information, however, was not available.

Save as above indicated, I am in agreement with the other members of the Board in their report.

All of which is respectfully submitted.

(Sgd.) GEO. E. HOUSER

Report of Conciliation Board in Dispute Between Ray-O-Vac (Canada) Ltd., Winnipeg, Man., and Local 3929, United Steelworkers of America (CIO-CCL)

On September 2, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: J. K. Morton, K.C., Winnipeg, Chairman, appointed by the Minister of Labour on the joint recommendation of the other two members of the Board, T. M. Long and David Orlikow, both of Winnipeg, appointed on the nomination of the employer and employees respectively.

Report of Board

To the Honourable Minister of Labour,

SIR,—The matters in dispute referred to this Board are set forth in a submission made by the Union and are as follows:

1. Wages
2. Hours of work and overtime
3. Statutory holidays with pay
4. Union security

There was considerable delay in the Board being able to hold hearings due to the fact that on April 11, 1947, there was a lay-off of the employees. The lay-off continued until sometime in July and the hearings were proceeded with immediately it was possible to do so.

The inaugural meeting of the Board was held on the 6th day of May, when the members of the Board completed their oaths of

office and discussed the procedure to be followed and the situation as it existed. It was decided to ask for an extension of time, which was granted.

The Board held its next meeting on the 14th day of May, at which the Union and the Company were present. After hearing the parties, they mutually agreed to an adjournment until the employees were back at work.

On the 28th day of July the members of the Board, accompanied by the representatives of the parties to this dispute, met and later inspected the plant in operation.

The Board sat and took evidence on the 6th and 7th days of August, 1947. On the 8th and 21st days of August, the Board sat and endeavoured to come to some agreement on the points in dispute. It was found, however, that although an agreement could be reached on the second, third and fourth matters in dispute, no agreement could be reached on the question of wages.

A separate report will therefore be made by each member of the Board on the question of wages.

HOURS OF WORK

The Union asked for a forty-four hour week to which the Company agreed. The Company contended, however, that it should be at liberty to require the employees to work

more than eight hours per day and that overtime would only be paid for the time worked in excess of forty-four hours per week. The Union on the other hand, contended that the employees should not be required to work more than eight hours per day for the first five days of the week and four hours on Saturday.

The Company then agreed to a maximum of nine hours per day for four days a week and eight hours for the other day, no work to be done on Saturday, but submitted that it should adopt either of these plans to suit its convenience. To this the Union would not agree.

The Board therefore recommends that the forty-four hours per week agreed upon should be either five days of eight hours each and four hours on Saturday, or four days of nine hours per week and eight hours on the other day with no work on Saturday.

In view of the fact that there does not appear to be much dispute as to which of these recommendations is preferable and both are acceptable to the Union, the Board recommends that the Company adopt either one or the other as a policy.

The rate of time and one half for overtime and double time for work done on statutory holidays including Sundays was agreed upon by both parties.

STATUTORY HOLIDAYS WITH PAY

The Union asked for the following statutory holidays with pay: New Year's Day, Good Friday, Victoria Day, King's Birthday, Dominion Day, Labour Day, Thanksgiving Day, Remembrance Day, and Christmas Day. The Company refused to grant any statutory holidays with pay.

Taking into consideration the practice that is rapidly being adopted by all employers, the Board recommends that the following statutory holidays be granted with pay: New Year's Day, Dominion Day, Labour Day and Christmas Day.

UNION SECURITY

The Union asks for maintenance of membership with an irrevocable check-off; the Company refuses to grant either, saying that this practice has tendency to make the Union lazy and gradually become ineffective.

However, the Board recommends that voluntary revocable check-off be permitted but no maintenance of membership.

WAGES

The members of the Board are not in agreement with respect to wages.

All of which is respectfully submitted.

(Sgd.) JOSEPH K. MORTON
Chairman

(Sgd.) T. MACKAY LONG
Member

(Sgd.) DAVID ORLIKOW
Member

Report of Chairman on Wages

It is with some regret that I find myself in disagreement with both the other members of the Board. Two long meetings were held and every attempt was made to bring the parties together. However, no results could be achieved and it was felt that it could serve no useful purpose to hold any further meetings.

I have carefully considered the submissions made by the Union and by the Company on the question of wages. The basic rate for women is 42c per hour and for men 55c, with an incentive pay in addition thereto.

I am concerned with the basic rate of pay.

Mr. Guild for the Company stated that the Company paid its employees in the United States, in a plant manufacturing the same articles produced here, from 70 cents per hour for women and 90 cents to \$1.00 per hour for men. The Company's main product in Winnipeg is a flashlight battery which sells here for 15 cents, the same article selling in the United States for 10 cents.

The Company would not agree to an increase in the basic rate of pay, but suggested the following: "there be a rate range of 10 cents per hour for all day-rated male jobs so long as they remained day-rated jobs. It is agreed that the management on a merit basis can raise or lower the pay of a given individual within the limits of said rate range."

The Company contends that the employees earn considerably more than the basic rate on the incentive plan and, outside of the proposal referred to, makes no further suggestions in so far as wages are concerned.

The Company stressed the fact that they were carrying on a new type of industry in Manitoba and that they had not made a profit last year, and would not do so this year.

The Company granted an increase of 3 cents per hour for women and 5 cents per hour for men on November 1 last.

The Union asks for a flat across-the-board increase of 15 cents per hour.

The Union strongly contended that the cost of living should be the deciding factor in the fixing of the wages.

The Union submits for comparison wages paid in the vicinity of Winnipeg in packing houses, wholesale and retail stores, steel industry and the brewery industry, all of which show the rate considerably higher than that paid by the Company. It is doubtful if I can apply the rates suggested by the Union to the Company in question here. I feel I must take into consideration the working conditions in a plant. The high rate of wages paid by the packing plant is undoubtedly a result of the nature of the work to be done and other working conditions.

I have carefully considered all of the representations made and to the best of my ability endeavoured to apply the rate of wages paid in different industries taking into consideration the nature of the work done in those industries.

I cannot hold with the Union that the cost of living is the deciding factor of the rate of wages to be paid, neither can I agree with the statement of the Company that the standard of living required to be maintained in the United States is higher than that required in Canada, and that this accounts to some extent for the difference in pay.

I feel that the employees are entitled to a fair remuneration for the work that they do, taking into consideration the nature of the employment, the ability of the employer to pay, the amount involved, the working conditions of the plant and the fact that the present employees are all experienced.

I had tentatively made the suggestion to the other members of the Board, with the intention that we fix a basis for bargaining, that an increase of 7 and 5 cents per hour be granted; however, the desired result was not attained because, although the Union were prepared to come down in their demands, the Company was not prepared to grant any increase.

There was a lay-off of three and a half months this year. The Company hopes to give some continuity of service. There is no guarantee as to this, however. It would appear to me that continuity of service should be a strong factor in determining the basic rate of wages and in my opinion, if continuity of service cannot reasonably be assured then the rate should be higher.

I, therefore, recommend that the basic hourly rate for men be increased from 55 cents per hour to 62 cents per hour and the basic rate for women be increased from 42 cents per hour to 47 cents per hour.

Respectfully submitted.

(Sgd.) JOSEPH K. MORTON,
Chairman

Report of Mr. Long on Wages

To The Honourable Minister of Labour,

The members of the Board are in agreement in all matters in dispute except wages.

I oppose any increase in wages principally on the following grounds:—

1. The Company began operations in Winnipeg about two years ago at a time when there was very high employment and the Company had no difficulty hiring all the help they wanted at the wages they offered. These rates were increased in late 1946.

2. After the lay-off of employees for over two months in 1947, the Company had no difficulty getting former employees to return to work, although many had obtained other employment during the lay-off. This shows the rates of pay and working conditions were attractive to these employees.

3. At least nine employees had formerly been employed by packing houses which the union states pay considerably higher wages. These employees returned to this Company's employ after the lay-off in 1947.

4. The letter dated March 28, 1947, from Arthur J. March of the Union addressed to the Company at the time the Union applied for a Conciliation Board, does not mention wage rates as being a matter in dispute. The Union was apparently satisfied then with the wages.

5. The Company is a new industry in Canada, and has still no very clear idea as to what its business experience will be, and what success it will have in operating in Canada. The Company stated that it had a small profit of about \$500 in 1946, and expected a loss in 1947, and had cut down many expenses accordingly such as advertising and sales promotion expense. Every effort should be made to encourage this new industry in Manitoba in order to provide employment here. Hence labour costs should not be increased unless clearly justified. In my opinion an increase is not clearly justified.

6. An anxious comparison of comparable wage rates in Manitoba leads me to believe that the Company is paying good wages in comparison with rates prevalent in light manufacturing industries in Manitoba. The majority of the Company's employees are women. According to the Company's evidence of earnings their female employees earn as much as a good experienced stenographer though not as much as the highest paid stenographers of the secretary class. I consider this rate of earnings very satisfactory for practically unskilled female help.

Respectfully submitted

(Sgd.) T. M. LONG
Member of Conciliation Board

Report of Mr. Orlikow on Wages

In my opinion the requests of the union in respect to wages, hours of work, statutory holidays with pay and union security were entirely justified in themselves and in relation to the prevailing conditions in the Winnipeg area.

In order to reach agreement with the other members of this Board, I have compromised on three of the Union's requests—hours of work, statutory holidays with pay and union security. Because of the Company's adamant refusal to make any real offer to raise its sub-standard wages, which was the main issue at stake, this compromise has proven fruitless.

I have agreed to the recommendation of the other members of this Board that four statutory holidays be granted with pay despite the fact that it is becoming more and more the practice to grant pay to employees on all statutory holidays.

I have agreed to the recommendation for a voluntary revocable check-off reluctantly in view of the fact that there has as yet never been an agreement between the Union and the Company, and with the hope that the Union's compromise on this point would induce the Company to compromise on other points. More and more agreements are today being negotiated containing a closed shop clause. According to LABOUR GAZETTE figures, more than 50 per cent of all agreements now negotiated contain such clauses. It seems to me, therefore, that the Union's request for maintenance of membership and irrevocable check-off clauses were reasonable requests.

It was, however, on the question of wages that the Company showed that it had no intention of giving its employees anything but the lowest possible standards. The Union requested a fifteen cent an hour increase for all employees. The Company refused to increase the wages of its employees at all, except that at its own discretion it might raise or lower the base pay of its male employees by ten cents over the base pay. Naturally no union could accept such a proposal.

In support of its request the Union pointed out that wages paid in the packing, steel and brewery industries, and in wholesale and retail stores in the Winnipeg area were much higher than they were in the plant concerned in this dispute. The Union also pointed out in its presentation that the cost of living has increased very substantially in recent months and that this increase is continuing. From July 2, 1946 to April 1, 1947, the cost of living index increased by 5.5 points; the cost of

living index for food for the same period increased by 7.4 points; the retail index for commodities in the same period of time increased by 7.8 points.

The members of this Board had an opportunity to see the plan in operation. This plant has an assembly line type of production and the work, in my opinion, is as arduous as that done in most other industries in the Winnipeg area.

In the discussions with the representative of the Company, it became apparent that even the small number of employees at present employed have no assurance that theirs is likely to be continuous and permanent employment. Their wages, ought, therefore, to be substantially higher than those of employees who have guaranteed, continuous employment.

This Board was informed that the Company's employees in their American plants are paid from 80 cents to \$1 an hour instead of the 42 cents and 55 cents paid here. This is done despite the fact that the Company sells its flashlight battery at 10 cents in the United States instead of the 15 cents for which the battery is sold in Canada. I cannot believe, without evidence which was not forthcoming from the Company, that the price of materials is so much greater in Canada, that the Company's rates of pay are all that they can afford to pay without being able to make a profit.

The Company's representative argued strenuously that "ability to pay" had no bearing on the case. I cannot believe that the Company really believes that this is so, since I am certain that the Company would not hesitate to pass on part of the burden of hard times to the employees in the form of wage cuts. At the present time, when business profits are at an all-time high, the Company ought to be willing to pass on part of its increased earnings to its employees in the form of higher wages.

The Company has argued that it has not been in production for long enough at one time to know what its actual costs of production are. In view of this fact and in view of the fact that the present agreement would only run until the 1st of December of this year, at which time the whole question of wages could again be discussed without prejudice to either side, I would therefore recommend, taking into consideration everything I have referred to, that the basic hourly rate for men be increased from 55 cents to 65 cents and that the basic hourly rate for women be increased from 42 cents to 52 cents.

Respectfully submitted,
(Sgd.) DAVID ORLIKOW

Report of Conciliation Board in Dispute Between City of Winnipeg and Federation of Civic Employees, Central Council (CCL)

On September 2, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Honourable Mr. Justice A. K. Dysart, Winnipeg, Chairman, appointed by the Minister of Labour on the joint recommendation of the other two members of the Board, G. F. Bentley and A. S. Simpson, both of Winnipeg, appointed on the nomination of the employer and employees respectively.

Report of Board

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

We the undersigned, being members of a Conciliation Board appointed by you on February 26, 1947, to "endeavour to effect an agreement between the parties" above named "on the matters on which they have not agreed",—having done all that has been practicable in the circumstances, beg leave to submit herewith our *Report*.

The matters on which the parties had not agreed, or which developed out of our discussions, were,—

(1) the date on which a \$10 a month increase in wages to all civic employees was to become effective, namely: whether July 1, 1946 (as the Federation requested) or January 1, 1947 (as the City Council had decided), and

(2) the procedure for settling wage claims.

At those meetings of the Board which the parties, respectively, attended, the City was represented by Garnet Coulter, K.C. (Mayor of Winnipeg) and Alderman H. C. Morrison, K.C., Chairman of the City's Standing Committee on Legislation and Reception—that is, the Committee which has the duty of considering and reporting on matters of salaries and wages to be paid to officers and employees of the City, which for brevity is hereinafter referred to as the Wage Committee; and the Federation was represented by Leon Mitchell, the Business Agent of the Federation, and at times by others.

Regarding the date from which the pay increase should begin: the material filed with us shows that in December, 1945, the Federation requested the City Council to enter into negotiations for a collective agreement for the year 1946. The request was referred to the Wage Committee, but little more, if anything, was done until June 18, 1946, when the Federation filed a claim for a blanket increase in pay of \$15 a month to begin

July 1, 1946. On July 3 negotiations were begun by the Federation with the Advisory Board of Employer and Employees (a Board newly set up by the City Council to advise and assist the Wage Committee) and were continued with that Board until October 17, 1946, when they were continued with the Wage Committee assisted by that Board; and on November 11, 1946, the Wage Committee, by a majority vote, decided to recommend a \$10 a month increase retroactive to July 1, 1946. That recommendation was then submitted to the Finance Committee of the City, as required by by-law, and was there approved. It then went to the City Council on December 16, 1946, but was there rejected by a vote of 10 to 8. On this vote some of the members of the Wage Committee voted against the recommendation.

The refusal of the Council to adopt a recommendation which had been passed by two of its standing committees, comprising thirteen of the nineteen members of the Council, came as a shock to the Federation. The Federation now claims that the rejection amounted to a repudiation of what, in their view, was an agreement. In rejecting the recommendation, however, the City did so only as to the date of retroactivity,—it did grant the \$10 monthly increase to begin January 1, 1947. Incidentally, that increase has been paid ever since January 1, 1947.

In our discussions with them, the City representatives indicated quite clearly that in their opinion there was no reason to expect the Council to make this increase retroactive to July 1, 1946, or to any other date prior to 1947. This view had been previously expressed at the meetings held by Thomas J. Williams, your Conciliation Officer, who, in his Report to you of February 24, 1947, records that "it is generally felt there will be no change in the City Council's decision to make the \$10 a month effective from January 1, 1947"; and he adds that Mr. Mitchell, the Federation's Agent, shared in that opinion. Our inquiries have led us to the same conclusion. The basic fact is that the City, always tightly pressed in its efforts to balance its annual budget, can not, without great embarrassment, open the matter up at this stage and add to the 1947 budget an appropriation for the previous year. Having come to that conclusion, we early decided that it would be not only unnecessary, but a waste of time and effort, to call for any evidence or argument on the merits of the Federation's claim to have July 1, 1946, as the retroactive

date. Accordingly, we called for no such evidence or argument, and therefore make no recommendation on the merits of the Federation's claim in this respect.

Instead, we have devoted our main efforts to improving the procedure complained of. There is no doubt at all in the minds of anyone concerned in the matter, that the procedure heretofore followed by the City Council has been inadequate, and has resulted in dissatisfaction. The least satisfactory feature of that procedure has been that the employees have had to negotiate with a Committee of the City on matters of wage applications, without knowing what might or might not be acceptable to the City Council; and that if the recommendations of the Committee are rejected—as they were in this instance—the whole application falls to the ground without giving the employees another chance to modify their claims or to effect any compromise. To go any farther, they really have to begin all over again. This feature of the procedure ought to be remedied. Both the Mayor and Alderman Morrison fully concurred in this view. The Federation, in the meetings with Mr. Williams, your Conciliation Officer, declared in effect they would be satisfied if “some guarantee were given by the Council that the same situation would not again happen.” In their meetings with us, the Federation's spokesmen, while not abandoning their claims to the retroactive pay increase, did lay special emphasis upon the urgent need of getting some such “guarantee”, and they contributed great assistance to us in our efforts to obtain it.

Difficulties lay in the way of working out some satisfactory formula. The difficulties were not with men, but with the legal aspects of the problem. On the one hand, the provisions of the City Charter, and the nature of the City Council, impose limitations which have to be observed. The Council is a legislative as well as an administrative body and cannot be committed, in advance, to the adoption of any recommendation of its Committees, nor to indicate in advance any particular course of conduct that it will follow. Every alderman must be left free to decide in Council meeting each question upon its merits—as those merits appear at the moment he votes upon it.

Accordingly, we had the Federation prepare a Formula to suit their desires. This we submitted to the City representatives, but it was, as we knew, far too wide to fit into the City Charter. Then Alderman Morrison submitted to us a counter proposal,—but this, when submitted to the Federation, fell far short of their minimum requirements. Next,

the Board drafted a Formula—a sort of compromise—which the Federation approved, but which the City could not accept. However, with that as a basis, the matter was shuttled back and forth between the Federation and the City, at every step being revised, until after no fewer than eight attempts it was finally got into shape, when it was acceptable to both parties. In this form it has been approved by the Federation, and, on the recommendation of the Wage Committee, was adopted by the City Council at its regular fortnightly meeting on August 25.

We are satisfied that this new procedure will prove of real value to both the Federation and the City. It will be given a fair chance; and while it may need to be further developed in the future, to take care of “working conditions” as well as “wage schedules”, it is at least a substantial start in the right direction. Nor should it embarrass any of the other three Unions of civic employees, —rather it should aid them in their own respective negotiations with the City.

The provisions for the new procedure are set forth in Appendix A. attached hereto.

In conclusion, we express our appreciation of the spirit in which these negotiations were carried on. It was evident throughout that the Federation had a real ground of complaint and were anxious to improve conditions for the future. It was also evident that the Mayor and Alderman Morrison were very sympathetic and anxious to have the procedure so revised that the relationship between the City and the employees might be conducted in the most harmonious and satisfactory way.

All of which is respectfully submitted.

(Sgd.) A. K. DYSART
Chairman

(Sgd.) G. F. BENTLEY

Appendix A

Regulations governing the Procedure to be followed in all applications by Civic Employees for changes in their wage structure

1. Employees of the City may, not later than October 1 in any year, through their representatives, notify Council of their desire to discuss the general Civic wage structure, and shall forward their submissions in writing.

2. Council shall notify all representatives of employees of such submissions, and refer the submissions to its appropriate Standing Committee, which shall meet, in camera, with the representatives, and, as soon as possible, report to Council.

3. If the discussions result in concurrence between the representatives and the Committee, the Committee shall report thereon to the Council, and if the Council adopts the report the general wage structure shall be determined thereby for the period of the next calendar year, unless Council on its own initiative makes a general increase in wages.

4. If there has not been concurrence in the discussions leading up to the report, or if Council is not prepared to adopt the report, the

Council shall not then pass or reject the report; but after discussion and consideration as full as may be practicable, shall refer the report back to the Committee for further discussion with the representatives of the employees, and for subsequent report. Upon the submission to the Council of this subsequent report, the discussions between the Committee and the employees' representatives shall be considered to be at an end, unless the Council decides upon some other course.

Appointment of Industrial Disputes Inquiry Commissions under War-time Labour Relations Regulations, P.C. 1003

Alberta Wheat Pool, Vancouver. B.C.

FOLLOWING receipt of a complaint that the Alberta Wheat Pool had dismissed three employees in its Elevator Department at Vancouver, B.C., allegedly because of their membership in Local No. 501, United Grain Elevator Workers' Union, and after a preliminary inquiry by an Industrial Relations Officer, the Minister of Labour on September 8, 1947, appointed His Honour Judge Charles J. Lennox, of Vancouver, as an Industrial Disputes Inquiry Commission under the provisions of Section 46A (6) of Order in Council P.C. 1003 to investigate the situation. A hearing of the complaint took place on September 29.

In his report to the Minister of Labour, the Commissioner stated that it was agreed by the parties that there was the necessity for laying off some of the employees as the work, being seasonal, had reached a stage where it was necessary that the number of workers be reduced. The Union based its case upon various circumstances surrounding the selection of the men to be discharged.

After considering all the evidence, the Commissioner came to the conclusion that the three men were honestly of the opinion that they had been laid off because they were members of the Union, but he could not find that in fact their suspicions were justified. He also pointed out that the management had agreed to take on the same three men again when the work justified it.

Canadian Pacific Railway

During August the Department of Labour was informed of a dispute between the Canadian Pacific Railway and the Brotherhood of Sleeping Car Porters relative to the interpretation of a Finding and Direction of the former National War Labour Board. The

management of the Railway took the position that the sleeping car porters were monthly-rated employees and that under the award of the National War Labour Board they were entitled to and were receiving \$20.80 per month in addition to the existing basic rates of pay. The Union claimed that sleeping car porters in assigned service were entitled to an increase of 10 cents per hour for a minimum of 240 guaranteed hours per month, with straight increases of 10 cents per hour for porters in unassigned service.

Following a meeting between the Minister of Labour and representatives of the Brotherhood of Sleeping Car Porters, the Minister on September 17, 1947, appointed the Honourable Mr. Justice W. F. Schroeder, of Toronto, as an Industrial Disputes Inquiry Commission to investigate the dispute.

At the end of the period under review, the report of the Commissioner had not been received.

Canada Coach Lines, Limited, Hamilton, Ont.

During September an Industrial Relations Officer of the Department of Labour conducted a preliminary inquiry into a complaint made by the Canadian Brotherhood of Railway Employees and Other Transport Workers that the Canada Coach Lines, Limited, Hamilton, Ont., had discharged or otherwise discriminated against two employees because they were members or officers or representatives of the said Brotherhood. After consideration of the investigating officer's report, the Minister of Labour on October 2, 1947 appointed His Honour Judge Samuel Factor, of Toronto, as an Industrial Disputes Inquiry Commission to conduct a formal inquiry into the circumstances.

Conciliation Work of the Industrial Relations Branch during September, 1947, under the Conciliation and Labour Act

OFFICERS of the Industrial Relations Branch dealt with 10 industrial disputes during the month of September, involving 730 work-people employed in 16 separate establishments. Of these, 6 were new disputes which originated during the month and 4 were situations which had been untermi-nated as of August 31, and received further attention in September. These disputes were dealt with under the provisions of the Conciliation and Labour Act. They were thus distinct from and in addition to the conciliation proceedings described on previous pages, which developed under the Wartime Labour Relations Regulations.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Fredericton, N.B. The territory of the officer resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation Service; two officers in Montreal are assigned to the Province of Quebec and the officer resident in Fredericton, N.B., represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of the Industrial Relations and staff are situated in Ottawa.

Summaries of some of the cases of general interest are given below:—

Longshoremen, Montreal, P.Q.—When called upon to load a cargo of ammonium nitrate on the ss. *Mont Clair* for the Montreal Shipping Company, Limited, Montreal, P.Q., on September 15, a group of 57 longshoremen quit work after a few hours on the job as a result of apprehension caused by precautions taken to prevent fire. On instructions of the National Harbours Board, steel rollers had been replaced with wooden rollers, and the company had relieved the men of matches, pocket lighters, tobacco, etc., and had provided them with rubber boots. Also, traffic had been kept at some distance from the vessel. Later in the day four gangs of men undertook to load the vessel when the company agreed under protest to pay double the regular hourly rates of wages.

In response to a request for conciliation, an Industrial Relations Officer of the Department of Labour attended a meeting on September 16 with representatives of the Shipping Federation of Canada and Local 375 of the International Longshoremen's Association in order to secure an agreement as to what practice would be adopted in future in such circumstances. It was explained to the representatives of the employees that ammonium nitrate was not an explosive and that the National Research Council of Canada was conducting investigations to determine what special hazard, if any, was involved in loading the commodity on board ship. Agreement was finally reached that pending a finding by the National Research Council, the companies loading this commodity would

agree to pay into a bank designated by the union the difference between double-time rates and the ordinary rates of wages payable for this class of cargo under the present collective agreement between the parties. It was further provided that if the National Research Council did not issue a finding by November 20, the amount so held in trust would then be distributed to the workers concerned. The arrangement was stated to be a temporary one for the present shipping season only, and made to avoid delays in sailing, without prejudice.

Coal Miners, Fernie, B.C.—It was reported in the August issue of the LABOUR GAZETTE (p. 1161) that the Minister of Labour had appointed Mr. I. F. Fitch, K.C., of Calgary, as the independent chairman of an Arbitration Committee to deal with a dispute between District 18, United Mine Workers of America, and the Crow's Nest Pass Coal Company, Limited. The question at issue was whether four employees engaged on the operation of a caterpillar tractor were engaged on "continuous employment" within the meaning of the collective agreement between the parties. The agreement provided that swing shifts might be used on all continuous employment operations and that the necessary arrangements might be made between the company and the local union to maintain an orderly change of shifts without application of punitive overtime rates, provided that the additional time involved did not exceed two hours per week on the average. The chairman of the Arbitration Committee arrived at the conclusion that the employees were engaged on continuous employment operations and should be paid accordingly.

Coal Miners, Shaughnessy, Alta.—In compliance with a joint request received from representatives of the Domestic Coal Operators' Association of Western Canada and of District 18, United Mine Workers of America, the Minister of Labour on September 25 appointed Mr. J. W. Hugill, K.C., of Edmonton, as the independent chairman of an Arbitration Committee to deal with a dispute between the union and Lethbridge Collieries Limited, Lethbridge, Alta. The matter involved the interpretation of the collective agreement between the parties to determine whether a man employed as a driver during July, 1947 was entitled to continue in that classification rather than be transferred to a job as a loader. In his findings, the chairman upheld the right of the employee, under the clause of the agreement relating to "preference of employment" and in the light of his seniority, to continue as a driver.

Leather Products Workers, Oshawa, Ont.—In the August issue of the LABOUR GAZETTE (p. 1157) it was reported that, upon the joint request of the parties, the Minister of Labour had appointed a Board of Arbitration to deal with a dispute between the Robson Leather Company, Limited, of Oshawa, and its employees represented by the International Fur and Leather Workers' Union. The report of the Board was made during July, but a copy was not filed with the Department of Labour until September. The Majority Report of the Board, written by the chairman and concurred in by the employer's nominee, is reproduced below:—

"The Board of Arbitration constituted under Article VII of the Agreement, consisting of Dr. A. Brady, Chairman, Mr. Drummond Wren and Mr. R. R. Evans, K.C., as Members, to interpret Article XII (f) of said Agreement having completed its findings now renders its finding and decision as follows:—

"The arbitration here pertains to Article XII on Wages; (f) in the Agreement.

"In interpreting a section in an agreement an arbitrator will normally seek to interpret the intention of the parties which originally governed their agreement to the section. Unfortunately it is not always easy to discern that intention, and months after the signing of an agreement the parties may express different and conflicting intentions, as they do in this particular instance. Hence the arbitrator is driven to the task of putting upon the disputed words what seem to him the more commonly accepted meanings. Otherwise he might be led into subtle logic about what the intention of the parties must have been that would be most unreal.

"In this case a scale of wages was to remain in effect for the duration of the Agreement or until a period of four months had elapsed 'after the lifting of price ceilings on hides and Side Upper Leather'. Was the crucial word "lifting" intended by the parties to mean 'removing' or 'raising'? It is needless to traverse the arguments pro and con which were fully and ably presented before the Board. The outsider is struck by the fact that the language in the section is not the language of government orders or announcements, which do not refer to lifting of price ceilings. It is the language of the popular press, and it must, therefore, be given the meaning current in the press. In the experience of the chairman of this Board the phrase 'lifting of price ceilings' had reference generally to the removal of price ceilings. Sometimes it referred to the raising of the ceilings

to a higher level, the commoner meaning was their removal. At the hearing the Union representative quite correctly pointed out that the dictionary meaning of lifting did not support the connotation of removing. But unfortunately the parties in their negotiations were not following dictionary phrasing as closely as would have been desirable. Otherwise they would probably have used such simple and clear words as 'removing' or 'raising', whichever they meant. Or indeed they might have used both words if they wished wage changes to be contingent upon both eventualities. Instead they adopted a loose phrase from the press, and thus created the present embarrassing ambiguity. Yet in interpreting that phrase, it must be given its most common meaning at the time, and that common meaning would appear to be 'removing'. Such is the Chairman's decision."

Notwithstanding the Arbitration Board's decision regarding the proper interpretation of the agreement, a strike of 270 employees of

the company occurred on July 30, 1947, in connection with the union's demands for increased wages. As a result of mediation by an officer of the Ontario Department of Labour, a settlement of the dispute was secured on September 25 and work was resumed on September 29. The terms of the settlement fixed new starting rates, higher rates for day workers and an increase of 14 cents per hour for piece-work employees. It was provided that no present employees would receive an increase of less than 10 cents per hour, and that the company would pay under certain conditions for four statutory holidays when not worked. The new rates were to become effective as of September 25 and, in view of the company's previous offer to pay an increase of 5 cents per hour, the management agreed to make the offer effective for the period from June 15 to July 29, 1947. The parties agreed to renew their present agreement for a period of 12 months from September 25, with minor changes.

Collective Agreements and Wage Schedules

Recent Collective Agreements

COLLECTIVE agreements received in the Department are outlined in the *LABOUR GAZETTE* from month to month. It is not possible because of limitation of space to include all agreements received. The agreements are in most cases signed by representatives of the employers and workers, but schedules of rates of wages, hours of labour and other conditions of employment drawn up and verbally agreed to by representatives of the employers and workers are also included.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Act are summarized in separate articles following this.

Mining: Metal Mining

KIMBERLEY AND CHAPMAN CAMP, B.C.—THE CONSOLIDATED MINING AND SMELTING COMPANY OF CANADA LTD. AND INTERNATIONAL UNION OF MINE, MILL AND SMELTER WORKERS, LOCAL 651.

Agreement to be in effect from June 1, 1947, to May 31, 1948, and thereafter unless 2 months' notice is given by one party to the other. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, August, 1946, p. 1089 with the following changes and addition:

Check-off: employer agrees to deduct initiation fees and union dues for employees who so desire.

Basic hourly wage rates: (effective June 1, 1947) common labourers 74 cents, plant labourers 77½ cents, helpers 81 cents, operators 84½ to 91½ cents, chief operators and repairmen 95 cents to \$1.02, timbermen, miners (drift and stope) 98½ cents; miners (raise or shaft), painters and steam engineers third class \$1.02; chief flotation operators and journeymen tradesmen \$1.05½; toolmakers \$1.09; steam engineers—second class \$1.12½; barmen \$1.16. The company also agrees to pay to each employee an "interim adjustment" amounting to 17½ cents per hour for the period of 12 months commencing on the effective date of this agreement.

Manufacturing: Rubber Products

KITCHENER, ONT.—DOMINION RUBBER CO. LTD., TEXTILE DIVISION AND UNITED RUBBER, CORK, LINOLEUM AND PLASTIC WORKERS OF AMERICA, LOCAL 296.

Agreement to be in effect from March 13, 1947, to March 12, 1948, and thereafter from year to year subject to notice, with supplementary agreement of July 10, 1947. The agreement may be re-opened by either party for negotiation on 30 days' notice, if warranted

by economic conditions. The company recognizes the union as the sole collective bargaining agency for all eligible hourly paid employees. There will be no discrimination, intimidation, or coercion because of membership or non-membership in the union. Check-off: company will deduct union dues monthly from pay of employees who so authorize and remit same to the union.

Hours of work and overtime: company agrees to furnish union with standard daily hours as at present set by the company. Overtime shall consist of all hours worked in excess of standard daily hours, or of all hours in excess of 48 hours per week whichever is the greater. Time and one-half will be paid for such overtime and for all work on Sundays and 3 specified holidays. Six additional holidays are paid holidays for employees working the last scheduled shift preceding and the first scheduled shift succeeding the holiday. Double time will be paid for any work performed on any of these 6 holidays and single time for the balance of the standard shift.

Vacation: one week with pay for employees with one year's service with the company, 2 weeks with pay for employees with 5 or more years' service. A 10-minute rest period will be permitted on each half shift. One 10-minute rest period will be allowed on each 8 hour shift.

Wage rates: a general wage increase of 9 cents per hour across the board will be granted to all hourly paid employees effective June 30, 1947. Where standard shift operation is three shifts per day, the company will pay off-shift premium of 3 cents per hour for second shift work, and 5 cents per hour for third shift work. Where 2 shift operation is standard in a department, 4 cents per hour premium will be paid for second shift work. (In the case of boiler house personnel where 24-hour operation is required, 4 cents per hour extra will be paid for work done between 7 p.m. and 7 a.m.)

Provision is made for seniority rights and grievance procedure.

Manufacturing: Textiles and Clothing

WINNIPEG, MAN.—THE WINNIPEG LADIES' CLOAK AND SUIT MANUFACTURERS ASSOCIATION AND THE INTERNATIONAL LADIES' GARMENT WORKERS UNION, LOCAL 216.

Agreement to be in effect from January 1, 1948 to December 31, 1952, and for a further period of one year unless 3 months' notice is given by either party. The employers recognize the union as the sole agent and representative of the workers engaged in the industry. Closed shop: the employers shall engage and retain in their employ only workmen who have been furnished by the union and who are union members in good standing, and who present to the employer a working card, properly signed by the union. No discrimination shall be exer-

cised by the employer or employees because of past activities or attitude of employer or employees.

Hours of work: 8 per day Monday through Friday, a 40-hour week. Overtime: no overtime shall be worked in the industry unless and until all unemployed members of the union have been absorbed, nor during the period from Good Friday to July 1, inclusive, and from Thanksgiving Day to January 1, inclusive, nor any Friday or Saturday, excepting with union permission, nor at any other time for more than 2 hours in each of the first 4 days of the week during the spring season or for more than one hour in each of the first 4 days of the week during the fall season. All such overtime work after 40 hours shall be paid for at the rate of time and one-quarter after 8 hours each day, and for any work on all legal and religious holidays, based on the week's earnings of the week during which the overtime was worked.

Vacation: one week with pay to all employees and provision made for a fund for vacation pay as well as sick benefit and/or hospitalization, with the employer contributing 5 per cent and the union one per cent of the total weekly pay of all employees. Benefits shall be available from January 1, 1948 during the term of the agreement.

Wage scale: only one system of work shall prevail in any one craft of any one factory of an employer, either piece work or week work, excepting that in any factory operating on a piece work basis, the cutters and pressers may be excluded and permitted to operate on a weekly basis. Piece work rates shall be settled by a union committee and the employer. All beginners engaged by the manufacturer after the execution of the agreement shall be paid on the basis of 35 cents per hour during the first 2 months of employment. All workers engaged in sample making shall be paid a minimum of \$43 per week; fully-skilled cutters, pressers and operators' minimum weekly wage to be \$43 and that of fully-skilled finishers to be \$33. All general, unskilled, non-craft help, performing services in any factory upon work which it is not convenient or advisable to have performed on a piece work or incentive basis shall be paid on a weekly basis at a rate to be mutually agreed upon and adjusted from time to time between the employer and the union representative.

Cost of living bonus to compensate for the rise in the cost of living as shown by the Dominion Government cost of living index, or for an adjustment in the event of a fall, has been agreed upon. The figure for the first of October shall set the bonus for the following year—if the figure is between 121 and 129 the manufacturers agree to pay to each employee weekly thereafter for the whole of the year a 7 per cent bonus on the total amount earned by each employee each week, including moneys earned for overtime work at the established overtime rate (employee must have completed a minimum of 40 hours' work in each week in each year to be eligible for such bonus). If the cost of living figure is between 130 and 134 the bonus payable shall be 10 per cent of the total weekly wage earned, and similarly, if the cost of living index figure is between 135 and 139 the bonus shall be 15 per cent and so on, 5 per cent for each 5 points increase thereafter. On the other hand if the cost of living index drops there will be a corresponding reduction in the bonus.

Changing job: In order to ensure to each employer a sufficient number of skilled help to enable him to turn out the season's work it is agreed that no employee, other than for just cause, be allowed to change his or her position from one employer to that of another during the months of January to April inclusive, nor during June to November inclusive in each year of the term of the agreement without first receiving the express permission from the union, otherwise the union is not to furnish employee with a requisite union card.

Lateness, leaving work early and absenteeism shall be dealt with by special committee set up by the union and management which shall have the power, if they find any employee guilty of any of the above infractions, to deny such employee a union working card thereafter and/or withhold from such employee in addition the whole or any part of any bonus unpaid and owing to such employee at the date of finding by committee.

Provision is made for division of work during slack seasons, grievance procedure and arbitration of disputes.

Manufacturing: Metal Products

MONTREAL, P.Q.—PHILLIPS ELECTRICAL WORKS LIMITED AND THE UNITED ELECTRICAL, RADIO AND MACHINE WORKERS OF AMERICA, LOCAL 528.

Agreement to be in effect from April 11, 1947 to April 10, 1948, and thereafter from year to year subject to notice. The company recognizes the union as the sole and exclusive collective bargaining agency of employees in respect of wages, hours of work or other working conditions. The Company and the union agree that there will be no discrimination, intimidation or coercion because of membership or non-membership in the union.

Check-off: The company shall deduct initiation fee and/or monthly union dues from the pay of employees who so authorize and remit same to the union until revoked.

Hours of work: 8 per day Monday through Friday, a 40-hour week. Overtime: time and one-half shall be paid for the first 4 hours' overtime after 8 hours in any one day Monday to Friday inclusive and for the first 12 hours' work on Saturday. Double time shall be paid for all work beyond 12 hours in any one day Monday to Saturday inclusive and for work on Sundays and 5 specified holidays. An additional 3 holidays are paid holidays for employees having 90 days' or more continuous service with the company and who work the workday immediately preceding and the workday after the holiday. Employees working on any of these 3 holidays will receive time and one-half in addition to their regular rates of pay. Vacation: 3 weeks with pay for employees with 21 years' or more seniority, 2 weeks with pay to those with 3 years' seniority and one week with pay to employees with 1 year's seniority. Employees with 6 months' seniority will be entitled to 2 days vacation with pay, those with 8 months to 3 days and those with 10 months to 4 days. A premium of 10 per cent will be paid for night shift work over the rates paid for the corresponding day shift. The last 5 minutes of working time before lunch will be granted for washing up. Hourly wage rates: the company agrees to pay 15 cents per hour increase

from effective date of agreement to all employees and the union agrees to accept for the duration of the agreement the company's present schedule of wage rates with the addition thereto of such increase, unless the Dominion Bureau of Statistics' Cost of Living index for any consecutive 2-month period, after the expiry of 4 months from the date of signing of the agreement, shows an increase or decrease of not less than 5 points above or below the index figure for April, 1947, then the parties agree that after the expiry of the sixth month the matter of wage rates may be re-opened once during the life of the agreement on 15 days' notice and to negotiate with regard thereto. If, after 30 days of such negotiating an agreement cannot be reached, the matter will be arbitrated as provided in the agreement. The decision of the majority of said Arbitration Board shall be accepted by both parties. Starting rates for new male employees shall be 69 cents per hour and this rate shall automatically be increased at the end of 6 weeks to 74 cents. The starting rate for new female employees shall be 61 cents per hour and shall automatically be increased to 66 cents per hour after 6 weeks' employment. Males—power cable department includes cabling machine operators 82 to 89 cents, helpers 74 to 76 cents, paper insulating machine operators 79 to 82 cents; telephone cable department includes belting machine operators, 74 to 79 cents, insulating machine operators, twisting machine operators, labourers 74 to 76 cents, paper cutting machine operators 77 to 82 cents; lead department includes impregnating tank operators 76 to 89 cents, labourers, lead press helpers 74 to 76 cents, lead press operators 76 to 89 cents; armour department includes spooling machine operators (hand), wire armouring machine helpers 74 to 76 cents, wire armouring machine operators 76 to 86 cents; test department includes wire and cable inspectors 74 to 94 cents, labourers 74 cents; braiding department machine operators 74 to 79 cents; finishing department—dip tank operators 74 to 77 cents, leading hand 79 to 84 cents; shipping department—labourers 74 to 77 cents, clerks 77 to 84 cents; machine shop department—stationary engineer 79 to 81 cents, maintenance machinist 82 to 96 cents, maintenance mechanics 74 to 82 cents, steamfitter 84 to 99 cents, steamfitter's helper 79 to 84 cents; stores department—stockkeeper 74 to 79 cents; yard and reel department—carpenters 84 to 94 cents, labourers 74 cents, reel assemblers 74 to 76 cents, reel builders 76 to 84 cents; electrical department—maintenance electricians 79 to 99 cents; females—braiding machine operators, twisting machine operators, insulating machine operators, spoolers, inspectors (wire and cable) 66 cents, clerks 66 to 68 cents.

Provision is made for seniority rights and grievance procedure.

BROCKVILLE, ONT.—PHILLIPS ELECTRICAL WORKS LIMITED AND THE UNITED ELECTRICAL, RADIO AND MACHINE WORKERS OF AMERICA, LOCAL 510.

Agreement to be in effect from April 11, 1947, to April 10, 1948, and thereafter from year to year subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, June 1946, p. 780, with the following changes:

Hours of work: 8 per day Monday through Friday, a 40-hour week. Overtime: time and one half for first 4 hours, overtime after 8 hours in any one day Monday through Friday

and for the first 12 hours work on Saturday. Double time to be paid for all work beyond 12 hours in any one day Monday to Saturday inclusive and for work on Sundays and 5 specified holidays. Three additional holidays are paid holidays if employee works on the work day immediately preceding and immediately following the holiday. Any work on these 3 days to be paid for at time and one half in addition to the regular rate of pay. Vacation: two weeks with pay for employees with 3 or more years' continuous service with the company and 3 weeks with pay for those with 21 years' service.

Hourly wage rates: the company agrees to pay 15 cents per hour increase from April 11, 1947, to all employees in addition to the rates given in the agreement for the duration of the agreement unless the Dominion Bureau of Statistics' cost of living index for any consecutive 2 month period, after the expiry of 4 months from the date of signing of the agreement, shows an increase or decrease of not less than 5 points above or below the index figure for April, 1947 (as published by the Dominion Bureau of Statistics) then the parties agree that after the expiry of the 6 months the matter of wage rates may be re-opened once during the life of the agreement on 15 days' notice and to negotiate with regard thereto. Starting rate for new male employees shall be 69 cents per hour and this rate shall automatically be increased at the end of the first 6 weeks to 74 cents per hour. The starting rate for new female employees shall be 61 cents per hour and shall automatically be increased to 66 cents per hour at the end of the first 6 weeks' employment. A premium of 10 per cent will be paid for night shift work over the rates paid for the corresponding day shift.

HAMILTON, ONT.—UNITED-CARR FASTENER COMPANY OF CANADA LTD. AND UNITED ELECTRICAL, RADIO AND MACHINE WORKERS OF AMERICA, LOCAL 520.

Agreement to be in effect from April 3, 1947, to April 2, 1948, and for an additional year unless either party gives notice. The company recognizes the union as the sole and exclusive collective bargaining agent for all eligible employees. There shall be no discrimination, intimidation or coercion because of membership or non-membership in the union. Employees are free to join or refrain from joining the union.

Check-off: the company agrees to deduct from the pay of employees who so authorize it the initiation fee and monthly union dues and remit same to the union.

Hours of work: 9 per day Monday through Friday, a 45-hour week for all except engineers, firemen and watchmen-janitors. Overtime: time and one half for work in excess of 9 hours per day and for work on Saturdays. Double time for overtime work in excess of 2 hours on weekdays, 6 hours on Saturdays and for all work on Sundays and 8 specified holidays. Engineers, firemen and watchmen-janitors shall receive time and one-half for work in excess of 8 hours per day or 48 hours per week and double time for work on the seventh consecutive day and the 8 specified holidays. Two 10 minute rest periods will be allowed daily and two periods of 5 minutes before lunch and before quitting time each day for washing are also allowed. Shift workers on the

5 p.m. to midnight shift, will be allowed a paid lunch period of one-half hour in lieu of any rest periods.

Vacation: one week with pay equal to 2 per cent of earnings during previous year to all employees with 3 months' service with the company. An additional week with pay is granted to employees with 5 or more years' service and a third week to those with 15 or more years of service with the company.

Wage rates: all rates in effect prior to this agreement to be increased by 5 cents per hour retroactive to January 1, 1947. All adjustments (excepting 5 cent increase) are retroactive to February 1, 1947. These rates are accepted as satisfactory under present economic conditions and will apply during the term of the agreement unless a substantial inflation occurs, when the question of wage rates may be reopened at any time after 5 months from the effective date of the agreement and may be reopened a second time 3 months after the establishment of new wage rates. The following are the hourly starting rates, and the rates after 3 months for some of the classifications,

males—machine operators' (production) 83 and 91 cents, machine operators (tool room) \$1.05 and \$1.10, tool and die makers \$1.08-\$1.21 and \$1.13-\$1.26, machine maintenance \$1-\$1.21 and \$1.05-\$1.26, receivers 85 and 90 cents, millwrights 90 and 95 cents, stationary engineers 90-95 cents and 95 cents-\$1, maintenance electricians 88 to 93 cents; females—assembly, spray paint, buffers, packers and sewing machine operators 58-67 cents and 64-72 cents. Provision is also made for a review of the hourly rated employees every 6 months on the basis of skill, accuracy, production, etc., with the general intention of granting increases to those who merit them within the limits of the ceiling rates of their occupational group. (This ceiling averages about 10 cents above the rates effective after 3 months). A night shift bonus of 5 cents per hour on hourly rates up to and including 79 cents per hour and one of 7 cents on hourly rates over 79 cents shall be paid to all employees on off shifts (shifts starting between 2 p.m. and 6 a.m.)

Provision is made for seniority rights, grievance procedure and an apprenticeship plan.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN Quebec, The Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the *LABOUR GAZETTE*, January, 1943, p. 86. Proceedings under this Act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Recent proceedings under the Act include the extension of one new agreement, the amendment of 4 other agreements, the correction of 2 agreements and the repeal of another agreement. These include the correction of the agreement for the corrugated paper box industry in the *Quebec Official Gazette* of August 30 and the amendment of the agreement for grocers and butchers at

Joliette in the issue of September 6. The others are summarized below.

Requests for the amendment of the agreements for building materials for the province and for building trades at Chicoutimi were gazetted August 23. Requests for the amendment of the agreements for building trades at Sorel, at St. Johns and Iberville and at Montreal, as well as a request for a new agreement for clockmakers at Montreal, were published August 30. Requests for the amendment of the agreements for building trades at Hull, for the shoe industry for the province and for the wholesale fur industry at Montreal were all published September 6. Requests for the amendment of the agreement for retail food stores at Quebec and for a new agreement for building trades at Quebec were gazetted September 13.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

Manufacturing: Fur and Leather Products

SHOE INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated August 20, and gazetted August 30, extends the term of the previous Order in Council for this industry (L.G., Sept., 1946, p. 1247) to December 1, 1947.

SHOE REPAIRERS, THREE RIVERS

An Order in Council, dated September 4, and gazetted September 13, makes obligatory the

terms of a new agreement between "L'Association nationale catholique des Maîtres-Cordonniers des Trois-Rivières et district" and "Le Syndicat national catholique des Employés et Artisans Cordonniers des Trois-Rivières et district, inc." Agreement to be in effect from September 13, 1947, to September 12, 1948, and thereafter from year to year, subject to notice. Territorial jurisdiction includes the cities of Three Rivers, Cap-de-la-Madeleine and within 5 miles from their limits.

Hours: from 8 a.m. to 6 p.m. on Monday, Tuesday, Wednesday, Thursday and Saturday, and from 8 a.m. to 9 p.m. on Friday. Employees to be given one hour for the noon meal, and another hour for the evening meal when working after 6 p.m. All work in excess of 8 hours per day is payable at time and one-half. No work to be performed on Sundays and 8 specified holidays.

Minimum wage rate for competent cobblers and shoemakers: 40 cents per hour. Apprentices to be paid from 25 cents per hour during first 6 months to 37½ cents during sixth 6 months. Vacation: 6 days with pay after one year's service. If room and/or board are provided, not more than \$2 per week per room and \$5 per week for board may be charged.

Provision is made for apprentice regulations.

Manufacturing: Textiles and Clothing

MEN'S AND BOYS' CLOTHING INDUSTRY, PROVINCE OF QUEBEC

Corrections of Orders in Council relating to this industry (L.G., Oct., 1945, p. 1520; Aug., 1946, p. 1093; Aug., 1947, p. 1174, Sept., p. 1306, and previous issues) were published in the *Quebec Official Gazette* of August 23, 1947. These corrections provide that all employees

are to receive the increase of 7½ cents per hour, effective July 1, 1947, with the following exceptions—employees in the odd pants industry to receive increase of 7½ cents from August 16, 1947; employees manufacturing sportswear and children's clothing to be paid an increase of 5 cents per hour from July 1, 1947. These increases do not apply in the case of overtime rates.

EMBROIDERY INDUSTRY, MONTREAL

An Order in Council, dated August 27, and gazetted September 6, extends the term of the previous Orders in Council for this industry (L.G., Dec., 1944, p. 1514; Sept., 1946, p. 1249, Nov., p. 1584; Jan., 1947, p. 48) to October 31, 1947. This agreement was previously extended to August 31, 1947, in the *Quebec Official Gazette* of August 16, 1947.

Manufacturing: Miscellaneous Wood Products

FURNITURE INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated August 27, and gazetted September 6, extends the term of the previous Orders in Council for this industry (L.G., April, 1946, p. 499; Jan., 1947, p. 49, March, p. 370, April, p. 543) to January 2, 1948. This agreement was previously extended to September 2, 1947, in the *Quebec Official Gazette* of May 31, 1947.

Service: Municipal

FIREFIGHTERS, QUEBEC

An Order in Council, dated August 27, and gazetted September 6, repeals the Order in Council making this agreement obligatory (L.G., April, 1946, p. 500).

Industrial Standards Acts, Etc.

Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Nova Scotia, Ontario, Saskatchewan and Alberta

IN six provinces—Ontario, Alberta, Nova Scotia, Saskatchewan, New Brunswick and Manitoba—legislation provides that, following a petition from representatives of employers and employees in any (or specified) industries, the provincial Minister charged with the administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zones designated by the Minister. The Minister may also establish an advisory committee for every zone to which a schedule applies to assist in carry-

ing out the provisions of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the *LABOUR GAZETTE*, October, 1940, page 1077.

Schedules of wages and hours recently made binding by Orders in Council under these Acts include the schedules for the retail gasoline service industry at Windsor, published in the *Ontario Gazette* of July 19, and for the retail gasoline service industry at Brantford in the *Ontario Gazette* of August 23. The rescission of the schedule covering carpenters at Swift Current was published in the *Saskatchewan Gazette* of July 18. A new schedule for the beauty culture industry at Regina was published August 15. Amendments of the schedules for barbers at Medicine Hat, Lethbridge, Edmonton and Calgary were all published in the *Alberta Gazette* of July 31. Other schedules of wages and hours made binding are summarized below.

Nova Scotia

*Construction***BRICKLAYERS, HALIFAX AND DARTMOUTH**

An Order in Council, dated July 15, and gazetted July 16 and 23, makes binding the terms of a new schedule for bricklayers, masons and tile setters in Halifax and Dartmouth, to be in effect until April 30, 1948, and thereafter from year to year, subject to notice.

Hours: 8 hours per day, 5 days a week. Work performed on Saturday morning is payable at time and one-half; double time for all other overtime and for work on Sundays and specified holidays. Men working on night shift shall receive 8 hours' pay for 7 hours' work. Minimum wage rate: \$1.33 per hour. Apprentices to be paid from 40 per cent of journeyman's rate during first 1000 hours to 85 per cent during eighth 1000 hours.

CARPENTERS, HALIFAX AND DARTMOUTH

An Order in Council, dated July 15 and gazetted July 16 and 23, makes binding the terms of a new schedule for carpenters at Halifax and Dartmouth, to be in effect until April 30, 1948, and thereafter from year to year, subject to notice.

Hours: 8 hours per day, 40 hours per week. Work on Saturday morning is payable at time and one-half; double time for work on Saturday afternoons, Sundays and specified holidays. Men working on night shift shall receive 8 hours' pay for 7 hours' work. Minimum wage rate: \$1.11 per hour. Apprentices shall be paid from 50 per cent of journeyman's rate during first 1000 hours to 90 per cent during eighth 1000 hours.

ELECTRICAL WORKERS, HALIFAX AND DARTMOUTH

An Order in Council, dated July 15, and gazetted July 16 and 23, makes binding the terms of a new schedule for electrical workers in Halifax and Dartmouth, to be in effect until April 30, 1948, and thereafter from year to year, subject to notice.

Hours: 8 per day, 40 per week. Time and one-half for work on Saturday morning and for 4 hours after the regular working day; double time for all other overtime and for work on Saturday afternoon, Sundays and specified holidays. Men working on night shift shall receive 8 hours' pay for 7 hours' work. Minimum wage rate: \$1.23 per hour. Apprentices shall be paid from 45 per cent of journeyman's rate during first 1000 hours to 80 per cent during eighth 1000 hours.

PLASTERERS, HALIFAX AND DARTMOUTH

An Order in Council, dated July 15, and gazetted July 16 and 23, makes binding the terms of a new schedule for plasterers at Halifax and Dartmouth, to be in effect until April 30, 1948, and thereafter from year to year, subject to notice.

Hours: 8 hours per day, 40 hours per week. Time and one-half for work on Saturday morning and for the first 4 hours after the regular shift; double time for all other overtime and for work on Saturday afternoons, Sundays and specified holidays. Men working on night shift shall receive 8 hours' pay for 7 hours' work. Minimum wage rate: \$1.21 per hour. Apprentices shall be paid from 45 per cent of journeyman's rate during first 1000 hours to 80 per cent during eighth 1000 hours.

PLUMBERS, HALIFAX AND DARTMOUTH

An Order in Council, dated July 15, and gazetted July 16 and 23, makes binding the terms of a new schedule for plumbers and steamfitters in Halifax and Dartmouth to be in effect until April 30, 1948, and thereafter from year to year, subject to notice.

Hours: 8 hours per day, 40 hours per week. Time and one-half for overtime work until 10 p.m. and for work on Saturday morning; double time for all other overtime and for work on Saturday afternoons, Sundays and specified holidays. Minimum wage rate \$1.19 per hour. Apprentices to be paid from 45 per cent of journeyman's rate during first 1000 hours to 90 per cent during tenth 1000 hours.

SHEET METAL WORKERS, HALIFAX AND DARTMOUTH

An Order in Council, dated July 15, and gazetted July 16 and 23, makes binding the terms of a new schedule for sheet metal workers in Halifax and Dartmouth, to be in effect until April 30, 1948, and thereafter from year to year, subject to notice.

Hours: 8 hours per day, 40 hours per week. Overtime: time and one-half until 10 p.m. and on Saturday morning; double time on Saturday afternoons, Sundays and specified holidays and for all overtime on ship work. Minimum wage rate: 99½ cents per hour. Apprentices shall be paid from 50 per cent of journeyman's rate during first 1000 hours to 90 per cent during eighth 1000 hours.

Ontario

*Manufacturing: Wood Products***HARD FURNITURE INDUSTRY, PROVINCE OF ONTARIO**

An Order in Council, dated July 17, and gazetted August 9, makes binding the terms of a new schedule for the hard furniture industry of Ontario, to be in effect from August 19, 1947, during pleasure. This schedule is similar to the one previously in effect and summarized in the *LABOUR GAZETTE*, June, 1946, p. 784, Dec., p. 1776, with the following amendments: the number of working hours per week is reduced from 47 to 45. Minimum wage rates: class B employees from 36 cents per hour during first 6 months to 52 cents during fifth 6 months,

afterwards class A rates; class C from 46 cents per hour during first 6 months to 52 cent during third 6 months, afterwards Class A rates; Class A 58 cents per hour; classes A and C combined 70 cents minimum average. (These are increases of from one to 5 cents per hour over the previous minimum rates in the previous schedule.)

*Construction***CARPENTERS, CORNWALL**

An Order in Council, dated July 4, and gazetted July 19, makes binding the terms of a new schedule for carpenters at Cornwall, to be in effect from July 29, 1947, during pleasure.

Hours: 8 per day, 4 on Saturday, a 44-hour week. All overtime is payable at double time, except that 3 hours' overtime may be added to any regular working-day at time and one-half. Employees working on night shift shall receive 8 hours' pay for 7 hours' work. Minimum wage rate: \$1.10 per hour. Apprentices are governed by the provisions of the Apprenticeship Act.

CARPENTERS, BROCKVILLE

An Order in Council, dated July 4, and gazetted July 19, makes binding the terms of a new schedule for carpenters at Brockville, to be in effect from July 29, 1947, during pleasure. Hours: 8 per day, 4 on Saturday, a 44-hour week. Overtime: time and one-half for ordinary overtime work performed on Saturday before 4 p.m. or during a 3-hour period immediately following any other regular working day; overtime work on Saturday before 6 p.m. to permit the pouring of concrete is payable at regular rates, as well as 8 hours' work performed at night which cannot be performed during regular working periods. All other overtime is payable at double time. Minimum wage rate: \$1 per hour. Men working on night shift shall receive 8 hours' pay for 7 hours' work. Apprentices are governed by the terms of The Apprenticeship Act.

PLUMBERS, WINDSOR

An Order in Council, dated July 4, and gazetted July 19, makes binding the terms of a new schedule for plumbers at Windsor, to be in effect from July 29, 1947, during pleasure. Hours: 8 per day, 5 days a week, a 40-hour week. Overtime: time and one-half for overtime work on emergency repairs between 8 a.m.

and 12 noon on Saturday, where the owner of the shop does not work on emergency repairs and does not employ more than one journeyman mechanic on the emergency repairs; double time for all other overtime work. Minimum wage rate: \$1.50 per hour. Men working on night shift shall receive 8 hours' pay for 7 hours' work. Apprentices are governed by the terms of The Apprenticeship Act.

PLUMBERS, OTTAWA

An Order in Council, dated July 31, and gazetted August 30, makes binding the terms of a new schedule for plumbers at Ottawa, to be in effect from September 9, 1947, during pleasure. Hours remain unchanged, at 40 per week. Overtime: time and one-half for work from 5 p.m. to 12 midnight from Monday to Friday inclusive and from 8 a.m. to 12 noon on Saturday; double time for all other overtime work, except that one hour's overtime at regular rate may be added to any regular working day to complete a repair job. Men working on night shifts shall receive 8 hours' pay for 7 hours' work. Minimum wage rate: \$1.25 per hour. Apprentices are governed by The Apprenticeship Act.

PLUMBERS, WELLAND

An Order in Council, dated July 31, and gazetted August 30, makes binding the terms of a new schedule for plumbers at Welland, to be in effect from September 9, 1947 during pleasure. Hours: 8 per day, 4 on Saturday, a 44-hour week. Overtime: time and one-half for all overtime work. Men working on night shifts shall receive 8 hours' pay for 7 hours' work. Minimum wage rate: \$1.25 per hour.

Saskatchewan

Manufacturing: Fur and Leather Products

SHOE REPAIRERS, REGINA

An Order in Council, dated July 9, and gazetted July 18, makes binding the terms of a new schedule for shoe repairers in Regina, to be in effect from August 1, 1947, during pleasure. Hours: 8 per day, 5 days a week with 4 hours on Wednesday, a 44-hour week. Overtime is payable at time and one-half. Minimum wage rates: inexperienced employees from \$18.50 per week during first 6 months to \$22.50 during third 6 months, thereafter \$25 per week. Employees working less than one week shall receive 60 cents per hour. Employees who work on any of the 8 specified holidays shall be paid, in addition to one day's wages at their regular rate of wages, time and one-half their regular rate of wages for every hour or part of an hour during which they work on such holiday. Minimum price to be charged for each piece of work is included in the schedule.

Service: Business and Personal

BARBERS, PROVINCE OF SASKATCHEWAN

An order in Council, dated July 18, and gazetted July 25, makes binding the terms of a new schedule for barbers in the province of Saskatchewan, to be in effect from August 11, 1947, during pleasure. Schedules previously in effect for barbers at Biggar, Estevan, Hum-

boldt, Melville, Moose Jaw, North Battleford, Prince Albert, Regina, Rosetown, Saskatoon, Swift Current, Weyburn and Yorkton are rescinded. Territorial jurisdiction of the present schedule comprises the entire province of Saskatchewan.

Hours: 44 per week. Overtime: all work performed by employees in excess of 11 hours in any one day of a week and in excess of 8 hours in any other day of the same week, as well as all work in excess of 44 hours per week, is payable at time and one-half; anything to the contrary contained in section 4 of The Hours of Work Act shall not apply to such employees. The schedule also provides that the minimum rate for overtime work for all employees shall be 75 cents per hour together with the bonus of 60 per cent of all charges made for work done by the employee in excess of the minimum weekly wage rate. Employees working on any of the specified holidays shall be paid, in addition to one day's wages at the regular rate, time and one-half their regular wage rate for every hour or part of an hour during which they work on such holiday.

Minimum wage rate for full-time employees: \$18.50 per week (\$20 in cities) plus the bonus of 60 per cent of all charges made for work done by such employee in excess of minimum weekly wage rate. Part-time employees are paid 75 cents per hour plus the bonus, with a minimum of \$2.25 per day.

A minimum charge scale is included in the schedule.

Vocational Training

Reorganization of Training Centres

IN order that a high standard of training might be maintained, it has been necessary to amalgamate courses and close various Training Centres. In the Maritime Provinces, the large Training Centres at Pictou, Saint John Airport and Windsor, N.S., were closed during the month of September. Pre-Matriculation Training for veterans from Nova Scotia and New Brunswick will be carried on during the Winter of 1947-48 at Moncton, N.B. The teaching staff for the course at Moncton has been drawn in approximately equal numbers from the two provinces. Instructional facilities of the two provinces in Radio, Refrigeration and Diesel Repair have also been pooled.

In Quebec, the Vocational Training Centres at Montreal and Quebec City were closed during the month of August. The Commercial School in Quebec will close in September and the Vocational School at Sherbrooke will close on October 31. Some of the veterans undergoing training in these schools have been transferred to Three Rivers, where a C.V.T. School will continue in operation throughout the Winter. Other veterans have decided to complete their training on the job and still others have been absorbed in special classes which have been organized by the Provincial Government at various Technical, and Arts and Crafts Schools.

In Ontario, all C.V.T. Training Centres have been closed with the exception of those at Toronto and Hamilton. The total capacity of these two schools is large, and will be more than sufficient to handle all the veterans who may come forward for training during the next six months. In this connection, there has not been any indication of a large increase in the numbers of veterans who desire Vocational Training. The numbers approved for such training by the Department of Veterans Affairs for the whole of Canada have been under 200 per week since the week ending May 24, 1947.

In the Prairie Provinces, C.V.T. Training Centres will probably remain open until the Spring of 1948 at Winnipeg, Regina, Saskatoon, Edmonton, Red Deer and Calgary. The C.V.T. Commercial School and the Hair Dressing School at Winnipeg were closed in August. The Prince Albert Vocational School closed in June and the School at Moose Jaw will cease operations at the end of September. Both in Saskatchewan and Alberta, a consolidation of courses has taken place, so that instruction in any particular trade is given at only one point in each province.

In British Columbia, most of the training has been carried out in Vancouver. The majority of the Centres which are operating there under the auspices of C.V.T. will continue throughout the Winter, but it has been possible to release a large rented building which had been used for the past year and a half in the central part of the city.

The consolidation and reduction of training facilities has constituted almost as difficult and complex a job as that of their original establishment. However, it has been carried out with a minimum of inconvenience to the veterans under training and, generally speaking, has had little, if any, adverse effect on the training being carried out. The uncertain future for administrative staff and instructors has made it necessary for them to keep a constant watch for other opportunities. Many of them have stayed with the program longer than was wise for them to do, because they wished to see the training of veterans more or less completed. Other members of the staff, who were retired from teaching duties before taking employment with C.V.T., have remained on the job longer than they intended to do. Generally speaking, it can fairly be said that C.V.T. and the veterans undergoing Vocational Training have been well served by the men and women who took part in the program.

Status of Training of Ex-Members of Armed Forces

THE training of veterans reached its peak, in so far as numbers enrolled are concerned, some months ago, and there has recently been a steady decline in the numbers undergoing all types of training. At the end of August, there were 16,747 veterans undergoing courses, or Training-on-the-Job, as com-

pared with 37,295 at the end of January, 1947. Up to August 31, the total enrolment from the commencement of the program has been 127,488.

The two tables which follow afford comparison, in detail, between the Veterans Training situation on January 31, and August 31, 1947.

Assistance to Vocational Schools

THE agreement between the Dominion Government and the provinces covering Dominion contributions to Vocational Schools has been in effect for the past two and a half years, and the amount of construction work which is being carried out with funds provided by it is increasing rapidly. This agreement calls for an outright contribution by the Dominion of \$10,000 annually to each province, and a further amount of \$1,910,000 each year to be divided among the provinces in proportion to the population in the provinces between the ages of 15 and 19 years. This contribution must be matched dollar for dollar by the province. In addition, the Dominion is contributing \$10,000,000, also to be matched by the provinces, and to be distributed on the same basis as the annual grant of \$1,910,000. However, the sum of \$10,000,000 is to be available for capital expenditures only and, under the terms of the Agreement, must be spent before March 31, 1949. Twenty-five per cent of it must be spent on equipment.

The whole object of this agreement is to extend Vocational Training. The primary test of any expenditure proposed by a province is whether or not it achieves this purpose.

A recent report from the Province of Quebec indicates that a great deal of construction work has already been carried out, more is now under contract and still more is under study, although plans and specifications have not been completed.

A sum of \$365,000 has already been spent on alterations to the Central Arts and Crafts School in Montreal and for the construction of a new Arts and Crafts School at Rouyn. Both these projects are completed. Work amounting to another \$2,000,000 has been approved and construction has been started on the following:

- Technical Schools at Montreal, Quebec and St. Hyacinthe.
- Arts and Crafts Schools at Cap-de-la-Madeleine, Granby, Lauzon, Montreal, Rimouski and Thetford Mines.

- (c) The Saw-Mill School at Duchesnay, the Forest Protection and Forest Ranger Schools and the Provincial Domestic Science School at Montreal.

Plans and specifications have been approved for additional work at the Montreal Technical School and additions to the Technical School at Hull. The same applies to Arts and Crafts Schools in Drummondville, Maisonneuve, Sorel, Verdun and Sherbrooke. Plans for new construction at the Paper Making School in Three Rivers have also been approved.

Plans are now being prepared for additions to the Three Rivers Technical School, the

Furniture School and the Graphic Arts School in Montreal, and the Arts and Crafts Schools in Chicoutimi and Amos. The work which is contemplated will cost approximately \$1,100,000.

The contributions of the Dominion Government, added to the large annual vote which is provided by the province, will permit the Technical and Arts and Crafts Schools to accept and maintain, within the next few years, about 9,000 in the regular day courses and about 15,000 in the evening refresher courses. This enrolment means that approximately 4,000 pupils will finish their courses annually and be able to assist in the Industrial and Commercial expansion of the country.

Unemployment Insurance

Activities of Unemployment Insurance Commission*

Analysis of Statistics for August—Insurance Registrations—The Fund—Decisions of Umpire

A TOTAL of 17,281 initial and renewal claims was filed in local offices of the Unemployment Insurance Commission in Canada during August. This compares with 20,034 in July and 25,115 during August, 1946. The claim load in August this year is the smallest in any month since July, 1945, indicating that the number of insured persons becoming unemployed in a period has reached a new post-war low point.

Similarly, the number of ordinary claims on the live unemployment register at August 30, was 37,350 (23,817 males and 13,533 females) as against 41,877 (26,943 males and 14,934 females) at July 31 and 61,822 (44,224 males and 17,598 females) at August 31, 1946. This is the smallest number at any time since August 31, 1945. Ordinary claimants on the live unemployment register at any date measure the number of cases of unemployment recorded among insured persons at that date. In addition to the ordinary claimants, there were 1,720 other (short-time and casual) claimants on the register at August 30, compared with 1,328 at July 31.

Persons on the live unemployment register at August 30 are classified in Table 6 according to the number of days they have been continuously on the register during the current

* Statistics (including tables) based on returns supplied by the Unemployment Insurance Commission and Dominion Bureau of Statistics

case of unemployment. Little change has occurred in the proportion of the total found in the various time categories between the end of July and the last working day of August.

During August, 21, 348 claims were adjudicated by Insurance officers (some of them being claims received in July and some being readjudications based upon new information or changed circumstances, i.e., revised claims) of which 14,759 were considered entitled to benefit and 6,589 not entitled to benefit. The chief reasons for non-entitlement were: "voluntarily left employment without just cause" 1,852 cases, "refused an offer of work and neglected an opportunity to work" 1,644 cases and "insufficient contributions while in insurable employment" 1,574 cases.

A total of 42,756 persons were paid benefit in August aggregating \$1,515,868 for 791,850 compensated unemployed days, compared with 51,270 persons paid \$1,956,722 for 1,018,204 days in July and 73,138 persons paid \$2,861,278 for 1,448,399 days during August, 1946. Thus, the average duration of the unemployment compensated was 18.5 days in August, 19.9 days in July and 19.8 days in August last year. The average amount of benefit paid per beneficiary was \$35.45 in August, \$38.17 in July and \$39.12 during August, 1946. The average amount of benefit paid per compensated day of unemployment was \$1.91 in August, \$1.92 in July and \$1.98 in August last year.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending August 31, 1947, showed 2,948,486 employees were issued with insurance books and had made contributions to the Unemploy-

ment Insurance Fund at one time or another since April 1, 1947, an increase of 85,823 since July 31, 1947.

As at August 31, 1947, 192,951 employers were registered as having insurable employees representing an increase of 11,880 since July 31, 1947.

The column for "Bulk" includes Miscellaneous \$1,756.89 and Contributions for Armed Service \$14,100,283.00.

The column "Interest on Investments and Profit on Sale of Securities" represents:—

(a) The exact amount of interest earned for each completed fiscal year and the approximate amount for each month in the current year;

(b) Profit on sale of securities taken into account at the end of each year only.

*April receipts for Stamps and Meter and the proportionate Government Contributions for these items were included with figures for March 1947.

*National Employment Committee Studies Placement of Older Workers**

THE problem of the older-age worker was considered by the National Employment Committee which met in Ottawa on September 16 and 17. The Committee is a statutory body advisory to the Unemployment Insurance Commission on all matters in the unemployment field. Judge W. J. Lindal, of Winnipeg, Chairman, presided, and the meeting was attended by members of the Committee, the Unemployment Insurance Commission and staff officers.

Regional Employment Committees, of which there are five in Canada, and Local Employment Committees numbering 67, send minutes of their meetings to the National Employment Committee. For some time certain of these minutes have emphasized the growing gravity of the employment situation as it affects the worker over 45 years of age. On the Pacific coast, where the problem appears to be most pressing in so far as Canada is concerned, a special committee has been conducting investigations. This Committee reported on the situation to the Pacific Regional Employment Committee and its findings were sent to the National Committee.

After canvassing the situation, the National Employment Committee reached the conclusion that a campaign of education directed primarily to employers offered the best hope for solving the problem. Employers, some of whom are inclined to demand young workers, should be convinced that in so doing they are frequently ignoring valuable experienced workers who stay

on the job and give competent, faithful service. Such a campaign should stress the value of the older worker, a value which has been demonstrated by many organizations in Canada and elsewhere. The important objective in the opinion of the National Employment Committee, was to create a public opinion favourable to employment of men and women over 45 years of age.

During the interval between now and the next meeting of the National Employment Committee early in December, three sub-committees will consider certain specified subjects. The first, headed by Mr. A. R. Mosher, will deal with widening of the insurance field, amendments to the Unemployment Insurance Act, and the question of benefit payments during a strike or lock-out. Mr. J. C. G. Herwig is chairman of another sub-committee which will consider re-training of veterans and civilians. Finally, the National Chairman, Judge Lindal, presides over a sub-committee on appeals to Courts of Referees. All three sub-committees will report to the main body at its next meeting.

The National Employment Committee is representative of employer and employee organizations as well as of veterans, women, agriculture and the retail trade. According to present arrangements, it will meet next in Ottawa on December 2, 1947.

* See, "The Problem of the Older Worker," LABOUR GAZETTE, September, 1947, p. 1251.

Digest of Selected Decisions of the Umpire Under the Unemployment Insurance Act, 1940

THE Unemployment Insurance Commission submits the following digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act, 1940, and its amendments. These cases are an extension of the series commenced in the April, 1945, number of the LABOUR GAZETTE and continued in each of the succeeding issues. They are selected on the basis of their possible precedent value for the determination of questions which may, from time to time, confront Insurance Officers and Courts of Referees. In addition, they provide a medium for presenting to employers and employees alike brief statements of the principles upon which insurance against unemployment operates in Canada and of

actual facts in specific cases coming before the Umpire on appeal.

The selected decisions are published in two series: (1) Benefit cases, designated CU-B and (2) Coverage cases, CU-C.

CU. B. 111

(24 July. 1946)

Held that a local office of the Commission goes beyond its jurisdiction in permitting an insured person residing within easy access of the local office to file a claim for benefit by mail.

The material facts of the case are as follows:

The claimant, a single girl, aged 24 years, was last employed as a comptometer oper-

ator from November 1 to December 31, 1945, receiving \$118.40 a month.

On March 28, 1946 she registered for employment as a comptometer operator and filed claim for benefit giving as the reason for separation from her employment that she had had an accident and was three months in the hospital.

This statement is confirmed by her employer who stated further that she was unable to return to her work on account of the accident suffered on the 30th of December.

Although the claimant was living in a city where a local office of the Commission was located, she was unable to report to the local office due to her physical disability and her claim was accepted as a postal claim, which procedure is permitted only in the case where local office facilities are not available.

The Insurance Officer disallowed the claim on the grounds that under Section 28 (iii) of the Act the claimant was not capable of and available for work due to her physical disability and that there was no reasonable prospect of her obtaining employment at home which could ordinarily be obtained under a contract of employment.

From this decision the claimant appealed to the Court of Referees on the following grounds:

Owing to the fact that I have my leg in a cast, I can accept only certain types of employment (such as a person who has lost an eye or a hand). But I am available and capable for that type of employment. For example—telephone solicitor position, also sewing, knitting, crocheting for individuals who so desire, or for institutions such as Hospitals, Homes where there is always a great deal of work in that line.

The Court of Referees by a unanimous decision allowed the claim on the grounds that the claimant was capable of and available for work within the meaning of the Unemployment Insurance Act.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the following grounds:

- (1) That the claimant's physical disability as established by the evidence is such as to so restrict the field of possible employment as to render her neither capable of nor available for work within the meaning of Section 28 (iii) of the Act; and
- (2) That the Court of Referees erred in advising that the claimant had fulfilled the third statutory condition.

DECISION

The Umpire's decision was that the claim should be disallowed and gave as his reasons:

The Court of Referees in its decision refers to B-351 of the Insurance Manual which permits persons living at a distance from a local office to file claim for benefit by mail. It should be pointed out that what is contained in the manual is not part of the Act but a guide to the Officers of the Commission in carrying out their functions under the Unemployment Insurance Act.

The case of the claimant is covered by Section 6 (1) (2) of the Benefit Regulations.

The first part of Section 6 definitely states that a claimant shall, as evidence of being unemployed, attend at the local office.

Part (2) of this section was placed in the regulations in order to give facilities for registration and filing of claims to persons who live at a distance and where no local office facilities are available.

Where persons are living within access of a local office, it is necessary to prove capability and availability by attending at the local office and signing a register, at such times and on such days as the Officers of the Commission may deem desirable or necessary, to prove that they are unemployed. This is required by the Act because registration is necessary to prove that a person is unemployed and that he is capable of and available for employment.

It is apparent that at the time the claimant made application for benefit she was confined to her home through physical incapacity and was unable to leave the premises. The local office went beyond its jurisdiction in permitting an insured person residing within easy access of the local office to file claim for benefit by mail.

One of the first tests of capability and availability for employment is registration at the local office. If an insured person claims benefit, in order to prove capability and availability he must be in a position to call at a local office at such times and on such days as the Commission may designate. There is no doubt that in this instance the claimant was not in a position to fulfil this first essential requirement.

The claimant contends that although unable to follow her usual occupation or other types of office work to which she was accustomed, she could perform restricted light duties in the confines of her home. From the claimant's submission it would appear that she was anxious for a very brief period to re-establish herself in a new form of employment either under contract of service or to become self-employed until such time as she could resume

her former employment. In such case the the onus of re-establishment does not rest upon the Commission.

It must be noted that whilst the claimant is deserving of sympathetic consideration, the Unemployment Insurance Act must be applied in accordance with its provisions and the Act does not contemplate the payment of benefit to any person temporarily or permanently disabled and, as already stated, the basic conditions for receipt of benefit are capability of and availability for work.

If the claimant's contentions in this case were to be held as a valid reason for the payment of benefit, it would permit insured persons who are confined to the home but able to sit up in bed and use their hands, to obtain benefit.

In the present instance it would appear that the claimant is not in a position to meet the usually accepted standards of capability and availability within the meaning of the Act.

CU. B. 112

(24 July, 1946)

Held that leaving employment in order to look after personal business cannot be regarded as "good cause" within the meaning of the Act.

The material facts of the case are as follows:

The claimant, married, aged 27 years, voluntarily left his employment where he had been employed from August 13, 1945 until April 6, 1946, giving as his reasons for so doing the necessity of returning to his former home in another part of the country so that he might release his mother-in-law who has been in charge of his home.

On April 18, 1946 he made application for benefit. The Insurance Officer disallowed the claim for benefit for a period of six weeks on the grounds that the claimant had not shown just cause for voluntarily leaving his employment.

From this decision the claimant appealed to a Court of Referees before whom he appeared. By unanimous decision the Court of Referees reversed the decision of the Insurance Officer and allowed the claim.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the grounds that the claimant left his employment for personal business reasons and not because of any domestic circumstances requiring him to live at his former home.

DECISION

The Umpire's decision was that the claim should be not allowed and gave as his reasons:

From the evidence and facts before me it appears that the claimant left his home town to reside in another part of the country in order to secure better medical attention for his wife, leaving certain business interests to be looked after by his mother-in-law.

It is further indicated in the submissions that his mother-in-law later decided to move to the United States and, as his wife's health had improved, the claimant decided to return to his home town to look after his business affairs.

Leaving one's employment in order to look after personal business affairs cannot be regarded as "good cause" within the meaning of the Act.

Labour Law

Labour Legislation in Quebec and Saskatchewan in 1947

OUTSTANDING among the legislative changes in Quebec and Saskatchewan were amendments in the Workmen's Compensation Acts and a new Hours of Work Act in Saskatchewan. In both Quebec and Saskatchewan the monthly benefit to a widow in case of a fatal accident was raised from \$40 to \$45. In Saskatchewan, the maximum earnings on which compensation may be based

were increased from \$2,000 to \$2,500, the maximum in Ontario, Quebec and British Columbia.

Hours of work are limited by the Saskatchewan statute, unless time and one-half is paid for overtime, to eight and 44 in cities, in all factories in the Province, and in offices and shops in places of over 500 population.

Quebec

The Quebec Legislature was in session from February 12 to May 10, during which time amendments were made in existing laws dealing with workmen's compensation, minimum wages, professional syndicates and mothers' allowances. An amendment in the Trade Disputes Act gives the Quebec Municipal Commission power to ratify, amend or annul decisions of arbitration boards set up with respect to disputes between municipal or school boards and their employees.

Workmen's Compensation

Amendments in the Workmen's Compensation Act increase the monthly payment in fatal cases from \$40 to \$45 to a widow or invalid husband, from a minimum of \$50 to \$55 to a widow or invalid widower and one child, and from a weekly payment of \$12.50 to a monthly pension of \$65 to the surviving consort and more than one child.

Other amendments raise from \$2,000 to \$2,500 the maximum amount of annual earnings on which compensation may be based and the maximum wages or salary of an employer or director of a corporation who wishes to be insured as a workman under the Act.

These amendments came into force July 1, 1947, but persons who on that date had a right to compensation or who had received a payment on account of an accident which happened previously are entitled to the increased benefits.

Minimum Wages

Amendments in the Minimum Wage Act clarify certain provisions and facilitate its administration.

One amendment makes the Act applicable to employees of an employer whose business or residence is in the Province but who either work in and out of the Province or who live in the Province and work outside it, provided that they are not covered by another Minimum Wage Act when working outside the Province.

The Minimum Wage Commission is authorized to fix not only minimum time or piece-rates, as previously, but also, rates on a commission basis or on the basis of any other remuneration of the worker or on a combination of any of these. Specific power is given to establish a higher rate for overtime and for work done on certain days or periods or hours.

Holidays with pay which may be required under the Act and which are based on length of service are to be calculated according to the period of employment in the same business, without regard to changes of ownership. For not granting an employee a holiday to which he is entitled, an employer is liable to a fine, with costs, equal to twice the holiday pay. The fine must be paid to the Commission which is to remit half to the employee.

The Commission must now submit to the Minister a semi-annual report of its operations, receipts and disbursements instead of the quarterly report previously required.

Another amendment provides that the Commission is to place at the disposal of the conciliation service of the Department of Labour its employees whose services are required by the Minister.

A new section changes from two to six months the maximum period during which a minimum wage order may be totally or partially suspended.

As regards the levy permitted to be made on any class of employers of not more than one per cent of the payroll, a 1947 amendment authorizes the Commission to fix the maximum wage and also the minimum annual wage which are to be subject to the levy. Excepted from the levy are municipal and school corporations, agencies of the Crown, and corporations of trustees of churches, hospitals, charitable, educational or religious institutions. An employer is jointly and severally responsible with a sub-contractor or any intermediary for the payment of levies due to the Commission, as well as for the payment of the proper wage rate. A special time-limit of five years is placed on an action for the recovery of a levy from employers. The ordinary time-limit for civil actions for the recovery of wages is six months.

When a claim for wages is made by the Commission, the employer must make payment to the Commission but this provision is declared not to apply when an action is instituted by the employee himself.

Labour Disputes

MUNICIPAL AND SCHOOL EMPLOYEES

The Trade Disputes Act was amended to add sections relating to disputes between municipal and school corporations and their employees. Another change requires members of a council of arbitration, appointed under the Trade Disputes Act, to be Canadian citizens instead of British subjects. These changes were effected by an Act respecting Municipal and School Corporations and their Employees.

It is stipulated that a council of arbitration dealing with any municipal or school dispute which was not decided on or before April 10, 1947, must consider the corporation's financial standing and ability to meet any further obligations. Since there is provision for an appeal to the Quebec Municipal Commission within 15 days of the award, the council of arbitration may not fix the coming into force of an award before the sixteenth day following the date of the award. If there is an appeal, execution of the award must be suspended until the decision of the Commission has been received.

On appeal, the Quebec Municipal Commission, whose decision is final, after hearing the parties may decide that the council of arbitration has not sufficiently taken into account the financial position of the corporation and may revise, annul or amend the award. Otherwise, it may confirm the council's decision.

The provision in the 1946 Act to Insure the Progress of Education which stipulated that

decisions of arbitration or conciliation committees in disputes between teachers and school boards in cities of 10,000 or more people, must be approved by the Quebec Municipal Commission is repealed, in view of the above. The prohibition of arbitration in the 1946 Act with respect to disputes between teachers and school boards in rural municipalities remains.

Professional Syndicates

Changes in The Professional Syndicates Act include the application of the Act to employers and the requirement that at least 20 persons of any group seeking to form a syndicate must be Canadian citizens. The memorandum of association must set out the nationality as well as the names and addresses of the directors and officers of the association. Only Canadian citizens may be members of the administrative council of a syndicate or be on its staff. Previously, the Act required two-thirds of the members of a syndicate to be British subjects.

Employers may form a syndicate and, in the case of a company, one of its directors, members or employees may be designated to vote in its name at syndicate meetings. Such representatives may be elected members of the administrative council of the syndicate.

The Provincial Secretary may terminate the corporate life of any syndicate, union, federation or confederation if he is satisfied that (a) it has ceased to exercise its corporate powers; (b) its members in good standing who are Canadian citizens number less than 20; or (c) more than one-third of its members are not Canadian citizens.

New sections of the Act stipulate: that the by-laws of a syndicate must indicate the amount of the entrance fee and the annual contribution of the members which, in the case of employees, are to be not less than one dollar and six dollars, respectively, but the by-laws may provide that the assessment may not be required from a member who is unemployed or not employed in his usual occupation; that a member whose assessment is three months in arrears is automatically suspended but the suspension may be lifted without retroactive effect under conditions laid down in the by-laws; new by-laws and amendments must be approved by the Provincial Secretary; and a syndicate must keep a register containing minutes of meetings, names, nationalities, addresses, occupations and date of admission of members, and its receipts and disbursements, assets and liabilities.

Unions and federations of syndicates are granted the right to form confederations. The

by-laws governing an insurance or indemnity fund established by a confederation must be approved by the Provincial Secretary on the recommendation of the Superintendent of Insurance, and the administrative council of the confederation must appoint a committee of at least ten persons to administer the fund.

Technical Education

Amendments in the Specialized Schools Act bring under the Act, in addition to those at present governed by it, any new technical schools and applied arts and trades schools which the Lieutenant-Governor in Council may establish. The director of any new technical school is to have a seat on the Superior Council of Technical Education.

On the authorization of the Lieutenant-Governor in Council the Minister of Social Welfare and of Youth may make agreements with school boards, or municipal or other corporations for the setting up of technical schools, handicraftship training schools, applied arts and trade schools or of any other specialized schools, subject, as regards school boards and municipal corporations, to the approval of the Quebec Municipal Commission.

Municipal Pensions

A revised section of the Cities and Towns Act enables a municipal council to pass a by-law for setting up a retirement pension fund for municipal officers and employees upon conditions set forth in the by-law. Such a by-law would empower the council to grant subsidies for such fund, and, if necessary, to enter into an agreement with a life insurance company or with a corporation or Government issuing annuities; to fix the maximum age of entry; to retain employees' contributions not exceeding five per cent of salaries; and to provide for contributions by the council to permit employees to include their previous years of service, and to borrow sums necessary for such purpose.

The enactment, repeal or amendment of a pension by-law must be approved by the Quebec Municipal Commission and by the Superintendent of Insurance. If such by-law provides for a loan, it must be submitted for the approval of the electors who are property-owners and of the Lieutenant-Governor in Council.

Mothers' Allowances

Amendments in the Needy Mothers' Assistance Act bring under the Act a mother who has with her a child under 19 unable to work because of mental or physical disability or a

step-son or step-daughter of whom she has the charge and care. Previously, the Act applied only to a mother who had residing with her at least one legitimate child under 16. The right to an allowance is extended, also to the wife of a man held in prison or other place of detention for 12 months or more.

An applicant must be a Canadian citizen by birth or of at least 15 years standing or the wife or widow of a Canadian citizen. Previously, an applicant was required to be a British subject or the wife or widow of a British subject. The period during which a needy mother must have been domiciled in the Province before application is reduced from seven to five years. She must have actually resided there for 1095 days during such period instead of 1825 days, as before. She must also give reasonable guarantees of her good conduct as well as her ability to care properly for her children.

Payment of an allowance is to continue to the last day of the month during which a beneficiary ceases to be eligible, and, in the case of a child who becomes 16 and is still in school, to the end of the current school year.

A final amendment empowers the Lieutenant-Governor in Council to make regulations authorizing the Old Age Pension Commission, which administers the Act, to grant allowances in special cases not covered by the Act in which, after investigation, it is deemed fair and just to do so.

Miscellaneous

An Act to contribute to the success of credit unions authorizes the Lieutenant-Governor in Council to grant, on conditions he may determine, to any federation of people's savings banks commonly called "Caisses Populaires Desjardins" formed under the Quebec Co-operative Syndicates Act, or to any group of such federations, annual subsidies not exceeding a total of \$90,000 during a period of three years.

An Act to encourage the establishment of physicians in country districts provides for the expenditure by the Government out of the Consolidated Revenue Fund of one million dollars over a period of ten years. Scholarships not exceeding \$600 a year will be granted to medical students, recommended by the council of a faculty of medicine of a University in the Province, who undertake to practice, after graduation, in rural districts, and allowances will be given, too, to other doctors, members of the College of Physicians and Surgeons of the Province of Quebec, who agree to settle in country districts.

Resolution

A motion of April 23 urging the Government to amend the Workmen's Compensation Act to entitle every worker suffering from tubercular lung infection after being employed in mining for at least five years to the benefits of the Act was amended and adopted. As amended, it recommended that the Govern-

ment continue making all reasonable improvements so that workmen who are employed in mining industries in the Province and who contract silicosis, amiantosis, tuberculosis of the lungs or other similar diseases, due to the nature of the work, might profit by all the benefits granted under the Workmen's Compensation Act.

Saskatchewan

The Saskatchewan Legislature, in session from January 30 to April 1, enacted, in addition to the new Hours of Work Act, amendments in the laws relating to collective bargaining, workmen's compensation, minimum wages, annual holidays, industrial standards, licensing and steam boilers.

Hours of Work

The Saskatchewan Hours of Work Act, in effect July 1, the first enactment of its kind in the Province, restricts working hours to eight in a day and 44 in a week unless time and one-half is payable for all time worked beyond those limits. The Act stipulates that take-home pay cannot be reduced.

It should be noted that the Saskatchewan Factories Act limits weekly hours of women and of boys under 18 in factories to 48, but permits the factory inspector to allow hours up to 12½ in a day and 72½ in a week on not more than 36 days in a year to make up for time lost in case of accident to the motive power or machinery or in accordance with any custom or exigency of the trade.

The Hours of Work Act applies to all workers employed in or within a five-mile radius of any city, to employees in all factories in the Province, and to workers in shops and offices in the towns or villages which are covered by Minimum Wage Orders. Not included as "factories" are creameries, grain elevators, garages, blacksmith shops or machine shops used chiefly for the repair or servicing of farm machinery. "Shops" include barber shops, beauty parlours, and dry cleaning or dyeing establishments.

Exempted from the Act are: workers employed in farming, ranching or market gardening, domestic service, undertakings where only the employer's family is employed, janitors or caretakers, persons whose duties require them to travel regularly to two or more cities, towns or villages at least ten miles apart, those with managerial duties, and workers to whom the Fire Departments Platoon Act, 1947, applies.

As regards earnings, the Act provides that, where the previously established weekly hours exceeded 44, the employer must not, within a

year after the coming into force of the Act, reduce wage-rates which are paid on a weekly, fortnightly, semi-monthly, monthly or yearly basis or any other rate calculated with reference to a period of time worked, except an hourly or daily rate. Hourly, daily, and piece-rates or any other rates not referred to above must be increased in the same proportion as the hours are reduced, but not by more than 25 per cent. The increased rate must not be reduced within 12 months. An increased rate must be established at the nearest cent, except where by established practice the rates paid are fixed at the nearest half cent.

Certain variations from the legal limits may be allowed. To permit a five-day week, nine hours may be worked on some days without payment of time and one-half in cases where the employer and a majority of his employees agree on the arrangement and the Minister approves it, but the work-week must not exceed 44 hours.

Shift-workers may be required to work more than eight hours in a day or 44 in a week without payment of time and one-half, provided permission is obtained from the Minister, but, unless overtime is paid, the average number of hours worked over a prescribed period must not exceed eight and 44.

The Lieutenant-Governor in Council, on the recommendation of any municipal council or without such recommendation, may subject to such conditions as he may prescribe regarding the averaging of hours over any period, exempt any specified industry, business, occupation or undertaking from the Act or any of its provisions for any period of time or season he may consider necessary or expedient.

The Act is not to affect any more favourable provision contained in any Act, agreement or contract of service, but it is to supersede any less favourable provision. Agreements depriving workers of the benefits of the Act are forbidden.

Employers of three or more employees to whom the Act applies must keep posted in a conspicuous place any prescribed abstract of the Act or regulations and a notice of the hours at which work, or each shift, begins and ends and at which meal intervals begin and

end. The eight and 44-hour limits set by the Act do not include any intervals for meals if notice to this effect is posted and if the worker is not at the employer's disposal during such intervals.

Employers are required to keep records showing the name and address of each worker, hours at which he begins and ends work in each day and at which meal intervals begin and end, the total number of daily and weekly hours worked, his regular wage-rate and the total wages paid for each week or other pay period. Such records may be incorporated with any other record of wages and hours required under any other Act. Records may be inspected by the Minister or any person authorized by him, and an employer may be required to verify entries on oath and any person may be required to supply any further information.

The Minister is authorized to investigate any alleged partnership, association or scheme which he considers is being used to defeat the purpose of the Act, and may, by order, declare persons engaged in such partnership or scheme to be within the scope of the Act.

The Act forbids any employer to discharge, threaten to discharge, or to discriminate against a worker who gives evidence in any proceeding under the Act or who furnishes information on wages or hours to the Minister or his representative. No employer may require a worker to return to him, or accept, the whole or any part of any wages paid to the worker under the Act or regulations.

Power to determine the amount of unpaid wages which are due to any person under the Act is given to an authorized representative of the Minister and if the amount is agreed to in writing by both employer and employee, the employer must within two days pay it to the Deputy Minister of Labour thus freeing himself of further liability. The Deputy Minister must immediately pay the money received to the worker but if he is unable to find the worker and the money is not claimed within two years, it must, upon order of the Deputy Minister, be paid into the consolidated fund.

Authority is given the Lieutenant-Governor in Council to make regulations under the Act.

For failure to comply with any provision of the Act or of any regulation under it, or for making false or misleading statements to the Minister or his representative or for interfering with or obstructing him in the exercise of any power conferred by the Act or regulations the penalty for a first offence is a fine ranging from \$25 to \$100, or, in default of payment, imprisonment for from 10 to 30 days, and for each subsequent offence, a fine of from \$50 to \$200 or imprisonment for not less than 30 days and not more than 90.

On convicting an employer of failure to pay the wages required, the magistrate, in addition to imposing a fine, must order their prompt payment to him for transmitting to the employee. If the employer fails to pay any money under such an order he may be imprisoned for a further term of from 30 to 90 days.

Collective Bargaining

GENERAL

The changes made in the Trade Union Act, 1944, became effective on April 15, except in two cases.

These two amendments are a result of legal proceedings involving the Labour Relations Board (L.G. Sept., 1947, p. 1341). An application to enforce a Board order may now be made to the court not only by the union affected but also by the Board or by any interested person. The court is to be bound by the findings of the Board and must make the necessary orders to cause the party concerned to comply with the Board order. This section came into effect April 1, and is to be deemed to have always been in force. A further amendment, effective on Proclamation, provides that the Board may in its own name appeal from any court decision affecting any of its orders.

An amendment dealing with dismissal for union activity declares that the discharge by an employer or employer's agent of "an employee", rather than "a member of a trade union" will be presumed to be an unfair labour practice unless the contrary is shown. Unfair labour practices on the part of employees have been extended to cover the *commencing* to take part in or persuading any employee to *commence* to take part in a strike while an application is pending before the Labour Relations Board. An application is deemed to be pending before the Board from the day on which it is first considered at a formal Board meeting to the day on which a decision is reached, and before a conciliation board from the day on which a conciliation board is established until its report is received by the Minister.

A new section provides that Board orders or any consent of the Board purporting to be signed by its chairman or vice-chairman or other member may be deemed to be authorized by the Board unless proved otherwise.

For failure to comply with a Board order, an individual is subject to a fine of \$10 a day and a corporation to a fine of \$25 a day, in addition to any other penalty imposed by the Act.

A final amendment enables the Lieutenant-Governor in Council to declare any Dominion Labour Relations Act or order applicable, in

place of the Trade Union Act, within the Province in connection with any work, undertaking or business, and permits the Minister, with the Government's approval, to enter into an agreement with the Minister of Labour of Canada for the joint administration within the Province of such Act or order.

PUBLIC SERVICE

Collective bargaining within the meaning of the Trade Union Act, 1944, is provided for by the Public Service Act, 1947. The basic pay structure of the public service is to form the basis of collective bargaining.

On behalf of the Crown, a member of the Executive Council, named by the Lieutenant-Governor in Council for the purpose, may enter into a collective bargaining agreement with a trade union representing a majority of the employees in any unit of employees in the public service which has been determined to be an appropriate unit for collective bargaining.

"Public Service" is defined to cover all persons employed by Government agencies. Crown corporations, the Department of Telephones and Telegraphs, the Saskatchewan Power Commission, the Liquor Board and the Workmen's Compensation Board are excluded.

Regulations made by the Public Service Commission may be submitted, in draft form, to any trade union representing employees in the public service. The Chairman of the Commission is directed to report to the Government at least once a year upon the degree to which uniformity of treatment of employees in the public service has been attained, under the provisions of collective agreements or otherwise, with respect to pay, hours of work, working conditions and other conditions of employment.

A permanent employee not within the scope of a collective agreement who is dismissed or demoted may appeal to the Commission within 30 days; where such a worker is within the scope of an agreement, his appeal is governed by the provisions of the collective agreement.

Workmen's Compensation

Certain benefits under the Workmen's Compensation (Accident Fund) Act were increased from July 1. Where a worker is killed as a result of an accident, the minimum monthly payment for a widow or invalid husband without children is now \$45 a month instead of \$40, to a widow with one child \$57 a month, and with two or more children \$65 a month. A new section permits compensation to be paid, at the discretion of the Board, if there is no widow, to the common-law wife of a deceased workman who was maintained

by him for seven years and by whom he had one or more children, whether or not such child or children are living at the time of the workman's death.

Other changes prohibit a suit by an employer or a workman of an employer against a workman of an employer within the collective liability system, and provide that "medical aid" may include treatment by any person licensed under provincial law to practise any of the healing arts if the Board has given written approval for such treatment.

An amendment in the Blind Workmen's Compensation Act, 1945, gives the Canadian Federation of the Blind equal jurisdiction with the Canadian National Institute for the Blind as to the proper placing and the nature of the work of blind workmen. As before, on the recommendation of the Workmen's Compensation Board, the Government may designate any other organization for this purpose.

Minimum Wages

PUBLIC HOLIDAYS

Amendments in the Minimum Wage Act, in force by Proclamation on May 12, give the Minimum Wage Board power to require pay for public holidays. The change was made in the Act following a Regina Magistrate's decision that the Board had no authority to require payment when no work was done. The Board, now, may, by Order, determine what days will be public holidays and may fix the minimum wage to be paid when employees do not work and the minimum wage payable for work done on such holiday. (For Orders, see L.G. 1947, p. 1026).

WAGE ORDERS

As re-worded, the section setting out the Board's power to make regulations, subject to approval of the Lieutenant-Governor in Council, provide that such orders may: define classes of employment; determine, subject to the Factories Act and the Hours of Work Act, 1947, what employees in any class of employment are full-time employees and fix a minimum wage for such workers; determine what employees are part-time employees, limit the number of part-time workers in any establishment and fix their minimum wage; determine, subject to the Hours of Work Act, the daily or weekly hours which are to be counted as overtime and fix an overtime rate; fix the period within which daily hours must be confined; fix the minimum period to be allowed for meals; fix the maximum price which an employer may charge for board and lodging or the maximum deduction from wages permitted; and fix the minimum age

for employment in any industry, business, trade or occupation.

Section 7 of the Act, in force by Proclamation on June 2, provided that all existing minimum wage orders should be rescinded within 30 days after the section came into force. These were rescinded and replaced by new orders effective on June 30. (L.G. 1947, p. 1026).

A new section stipulates that every provision in a Board order, unless specifically declared not to apply, is to apply to every worker in any establishment in the area or areas covered by the order irrespective of the basis on which the worker is paid.

On the recommendation of the chairman of the Board, the Minister may issue special licences to handicapped employees, learners or apprentices authorizing the employment of the licensee under the conditions prescribed in the licence.

Another amendment requires an employer convicted of paying less than the minimum rate to pay the difference between the amount paid and that to which the worker was entitled to the convicting magistrate or justice of the peace instead of to the Deputy Minister of Labour.

To the section of the Act providing that an authorized representative of the Minister may determine the amount of the minimum wage not paid by an employer to an employee, and if the amount is paid by the employer to the Deputy Minister within two days, the employer is not liable for prosecution are added sections identical to those in the Hours of Work and Annual Holidays Acts requiring the Deputy Minister to keep records of all money paid to him by employers under the above provision and directing that money unclaimed for two years by the employee concerned is to be paid into the consolidated fund.

Payment of Wages

The Workmen's Wage Act which provides for the method and time of payment of wages and for recovery of unpaid wages was amended as to the schedule describing the persons to whom the Act applies by replacing the words, "Persons employed at a daily or weekly wage in any shop or store or in any establishment which comes under the Factories Act" by "Persons employed at an hourly, daily or weekly wage in any establishment or undertaking which comes under the Factories Act or the Minimum Wage Act."

Holidays with Pay

"Employer" in the Annual Holidays Act, 1944, is amended, to replace "or" by "and"

in linking the two dependent clauses: "Employer" means any person, firm or corporation, including an agent, manager, representative, contractor, sub-contractor or principal, who either has control over one or more employees or is responsible for the payment of wages to one or more employees. This amended definition also appears in the Hours of Work and Minimum Wage Acts.

There are new sections concerning unpaid wages which are similar to those in the Hours of Work and Minimum Wage Acts. The amount of the average wage which an employer has failed to pay a worker under the Holidays Act may be determined by the Minister's representative.

Industrial Standards

Slight amendments were made in the Industrial Standards Act. It is now stated that the Minister must, before approving a schedule, be satisfied that it is agreed to by a majority of the employees affected and "one or more" employers representing a major portion of the particular industry. The quoted words were added.

A second amendment stipulates that any provision concerning wages, hours or other working conditions contained in a schedule is to be superseded by any more favourable provision in the Minimum Wage Act or in any other Acts, orders or regulations.

Vocational Education

The Vocational Education Act was amended with regard to the membership of the Vocational Education Committee, two members of which the Act previously stipulated were to be nominated by "such local organizations as the board may determine". These members are now to be nominated by recognized labour organizations at the request of the board of trustees, and in case of dispute the Department of Education is to have exclusive power to determine whether any specified organization is a recognized labour organization.

An amendment in the School Grants Act provides for grants to school districts maintaining high school rooms devoted solely to vocational or technical instruction of one dollar per teaching day for every such room.

Licensing of Electricians

New provisions are directed to administrative changes in connection with the Electrical Inspection and Licensing Act. The appointment of a Director of Electrical Inspection and Licensing is provided for, also a deputy director, inspectors, including a chief electrical inspector, and such officers and clerks as are

necessary for the carrying out of the Act. Previously, inspectors, including a chief inspector, appointed by the Saskatchewan Power Commission were responsible for the enforcement of the Act and regulations. "Commission" is now struck out wherever it appears in the Act and replaced by "Director".

The Director is to foster public safety by establishing proper standards of material and workmanship with respect to distribution systems, installation and operation of electrical apparatus and the work of electrical wiring. Inspectors are to be qualified electricians.

The section defining terms used in the Act was revised and a definition of "employer of electricians" added. The term covers persons who employ one or more journeymen electricians whether employed in the business of the employer or on the staff of the owner or occupant, in a municipal, provincial or federal building or plant, an assembly or public building, apartment, commercial, industrial, institutional, storage and mixed occupancy buildings, a radio broadcasting station, mine, quarry or travelling show, a railway, express or telegraph company's building or plant, or in any premises designated by the Lieutenant-Governor in Council. An "electrician" means a journeyman electrician or electrician employed on the staff of the owner or occupant in any of the premises mentioned above who takes charge of the operation or maintenance of the electrical installation, machinery, appliances or equipment or the repair and alteration of wiring.

Another amendment stipulates that no person may advertise himself as operating, or engage in the business of, a supply house unless he holds a licence to do so.

Steam Boilers

Amendments made in the Steam Boilers Act, effective May 1, provide for regulations concerning, specifically, liquefied petroleum gas plants as well as for boilers, pressure vessels and refrigeration plants.

The Lieutenant-Governor in Council may make regulations prescribing conditions respecting the design, construction, registration, testing, installation, and governing the classification of, boilers and pressure vessels, and prescribing the fees to be paid for such service; and also regulations governing the inspection and registration, construction, operation and maintenance of liquefied petroleum gas plants, in addition to refrigeration plants, oxyacetylene plants and pressure vessels, as formerly. (See p. 1499).

It is forbidden to do welding or for any person, firm or corporation to employ a person to do welding in the construction,

alteration or repair of a boiler or pressure vessel except in accordance with the regulations which the Lieutenant-Governor in Council is authorized to make. Such regulations may require the registration of every person, firm or corporation employing welders to work on boilers or pressure vessels and of every welder so employed; govern the welding methods to be employed and provide for the recording of the welding procedure in use by registered welders; prescribe qualifications, tests, frequency and conduct of tests, and the fees to be paid; and provide penalties for breach of the regulations.

Certificates provided for include interim, provisional and final certificates issued to engineers, and certificates valid for one year from date of issue or permanent certificates for firemen.

A revised section setting out the duties of the owner of a boiler or steam plant prohibits him from operating a boiler or steam plant, other than a low pressure boiler of less than 20 h.p., unless a certificated engineer or fireman is responsible for its operation and in constant attendance, and from requiring an engineer or fireman to perform any unrelated duties which, in the inspector's opinion, interfere with the safe operation of the boiler or plant.

Provisos are added that a boiler with a banked fire may be left unattended if such engineer or fireman is available on call at all times, and that a low pressure steam heating boiler under 50 h.p. which is equipped with an approved automatic control device may be left unattended for not more than 10 consecutive hours if the safety valve is set to relieve at not more than 15 pounds per square inch and if both automatic control device and safety valve are tested daily. Further requirements are set out respecting the installation of the automatic control device, inspection of the boiler by the inspector, repairs, and returns required to be submitted to the Minister. The owner must pay the prescribed fee for the inspection of a boiler which has been condemned and a fine of \$50 may be imposed for operating a boiler which has been declared unsafe or condemned.

Where an engineer or fireman for one or more years has not applied for re-registration of his final or permanent certificate, as required by the Act, he must pay, in addition to the prescribed fee for the current year, the sum of all fees owing for re-registration in previous years, before his certificate may be re-registered. If he fails for five consecutive years after May 1, 1946, to apply for re-registration, the Minister may cancel his certificate. Any engineer or fireman who operates or assists in operating a boiler or steam plant without holding a subsisting

certificate of re-registration is subject on summary conviction to a fine of not less than \$5 and not more than \$50. The same penalty is laid down for the operation of any boiler, other than a low pressure boiler under 20 h.p., without a certificate or permit and a certificate of re-registration where such is required by the Act.

A fireman's certificate now enables a fireman to operate any boiler, instead of one exceeding 40 h.p., as formerly.

Fire-Departments

A new Fire-Departments Platoon Act revises and consolidates the earlier Act and amendments. Officers and employees of fire-departments in cities in which the three-platoon system is in operation are entitled to a weekly rest of at least 24 consecutive hours, and no part of the hours off duty at the changing of platoons is to be included in such period of rest. Previously, such employees were entitled to whatever periods of rest were prescribed by by-law.

Civil Rights

Designed to prevent discrimination on racial or religious grounds, the Saskatchewan Bill of Rights, in force on May 1, declares the right of "every person and every class of persons" to enjoy freedom of conscience, belief and religious association; freedom of speech; freedom of association; freedom from arbitrary arrest and imprisonment and freedom for qualified voters to vote. It limits the life of a Legislative Assembly to five years.

Discrimination on grounds of race, creed, religion, colour or national origin is forbidden against persons with respect to employment, the conduct of any occupation or business under the law, the purchase, rental or use of property, access to public places, membership in a professional, trade union or other occupational organization, and to education. Excepted from these provisions are religious or educational institutions where a particular creed or religion is taught and domestic service or employment involving a personal relationship.

The Act also prohibits, without restricting the right to freedom of speech, the publication or display of any notice, symbol or other representation tending to cause racial or religious discrimination.

Fines ranging from \$25 to \$200, and, in default of payment, imprisonment for not more than three months are provided for offences against the Act.

Except as expressly provided, nothing in the Act is to be construed as taking away

from any person any right, freedom or liberty to which he is entitled under the law.

Hospitalization and Health Services

Beneficiaries under the Hospitalization Act, 1946, as amended in 1947, are declared to be eligible for hospital services during 1947 or any succeeding year, if they are registered, have resided in Saskatchewan for the previous six months, and have paid the current tax as well as all arrears. From September 24, 1946, however, the Government may reduce the six months' residence requirement for any class of persons. Another amendment, in effect from the same date, permits the Lieutenant-Governor in Council to exempt any class of persons from part of the taxation and part of the benefits, or from either, as well as from taxation or from benefits, or from taxation and benefits, as originally provided in the Act. He may also provide for a graduated scale of payment on behalf of the members of a family provided the levy for any family does not exceed \$30.

Subject to certain exceptions, Saskatchewan residents 16 or over who are self-supporting are liable for the annual tax to be paid by or on behalf of each beneficiary. The original Act fixed 21 as the minimum age, or less in the case of self-supporting persons living apart from their parents. Any person designated by the Government may pay the tax and thereupon is then eligible for benefits as prescribed by the Government.

Subject to the regulations, the Health Services Planning Commission may make provision for payment for hospital services rendered to beneficiaries under the Act by nursing homes as well as hospitals outside the Province.

An amendment in the Health Services Act, 1946, reduces from \$60 to \$40 the total personal tax that may be collected from a family, consisting of father, mother and dependants under 21, for the financing of health services.

Social Aid

The Social Aid Act, 1947, is a revision of a 1944 Act. The Act, which enables municipal councils to grant aid, medical and hospital care to indigent persons, changes the definition of "residence" for the purposes of the Act to provide that every single adult or adult head of a family is to be deemed to reside in the municipality in which he has most recently lived for at least a year, without having received "public assistance" during that period. "Municipality" includes a local improvement district. Where a resident of one municipality moves to another municipality, and has

received "public assistance" at any time within three months before moving or within three months from the date of arrival in the other municipality, he is not to be deemed a resident of the latter until he has resided there for two years.

"Public assistance" includes old age and blind persons' pensions; mothers' allowances; general, poor, indigent and unemployment relief; war veterans' allowance and war veterans' employment assistance, except pensions and superannuation; aid granted under the Child Welfare Act; dependants' allowances paid by the Department of National Defence to relatives of members of the Armed Forces; and financial aid granted to a needy person by a private agency designated by the Social Welfare Board. A former member of the Armed Forces is deemed to be a resident of the municipality in which he resided before enlisting until he has gained residence elsewhere.

Co-operation

Several amendments were made in the Credit Union Act. Credit unions are now permitted to accept deposits from Saskatchewan Co-operative Credit Society Limited and to become a member in Saskatchewan Co-operative Superannuation Society or other organization formed to set up associations or trusts calculated to grant benefits and allowances to members and employees of a credit union.

Other new sections empower the directors to determine the maximum individual and aggregate loans which may be made by a credit union to its members for terms of over three years provided that the total of all outstanding loans does not exceed 20 per cent of combined paid-up capital and deposits; provide for the disposal of a surplus if a credit union is dissolved; and provide for payment to the estate of a deceased credit union member whose shares and deposits do not exceed \$500.

Changes in the Co-operative Associations Act add to the purposes for which associations

may be incorporated that of operating a cold storage plant or cannery, and permit an association to become a member of, deposit money in, loan to, or borrow from, a credit union incorporated under the Credit Union Act or of Saskatchewan Co-operative Credit Society Limited. Other revised sections deal with certain credit transactions, dissolution of an association and with the formation of a federation of associations.

Resolutions

A resolution adopted on March 4 urged amendment of the British North America Act to vest in the Parliament of Canada jurisdiction to enact legislation establishing national minimum labour standards relating to wages, hours of labour, holidays, age for employment, and other labour matters and to give the Parliament of Canada exclusive power to enact legislation relating to trade unions, collective bargaining, unfair labour practices and the settlement of labour disputes, and upon the coming into force of such amendment, to enact laws establishing minimum labour standards throughout Canada at least as high as those of Saskatchewan or as any more effective standards which might be established elsewhere in Canada.

A motion of the same date, agreed to unanimously, urged the Dominion Government to implement the social security measures presented to the Dominion-Provincial Conference, August, 1945, in those provinces which have signed tax agreements with the Dominion Government.

On March 11 a resolution was passed recommending that the Dominion Government amend the Railway Act to provide that, with respect to any railway retirement or pension plan, railway employees should not be deprived of benefits to which they would otherwise be entitled because of leave of absence, suspension, dismissal followed by reinstatement, temporary lay-off on account of reduction of staff or absence due to an industrial dispute, strike or lockout.

Recent Regulations under Dominion and Provincial Legislation

CHANGES in the regulations under the Dominion Old Age Pensions Act are summarized.

Saskatchewan has made new regulations to ensure safe methods of handling and distributing liquefied petroleum gas, and to prevent accidents in garages and motor-vehicle-repair shops.

Other provincial regulations provide for hospitalization and treatment services to old age and blind pensioners and recipients of mothers' allowances in Alberta, and for more liberal unemployment relief, old age pensions and mothers' allowances in Ontario.

Dominion

Old Age Pensions

Restrictions concerning proof of age, residence and calculation of income of applicants for pension were relaxed by new regulations under the Old Age Pensions Act (Canada) approved by Order in Council (P.C. 1732) of May 1, gazetted May 15.

As regards age, an applicant must have reached 69 years and six months instead of 69 years and nine months, as previously. He must produce a certificate of birth or of baptism, or, if neither is obtainable, any other documentary evidence from which his age may be determined. Failing this, the pension authority must try to obtain the information from other sources, or, as a last resort, take into account such evidence as it has been able to obtain.

Eligibility as to marital status may be established by marriage certificate or such other evidence as the pension authority considers satisfactory.

With regard to residence, the pension authority is permitted to take into account a statutory declaration made by any reliable and disinterested person other than the applicant. Additions were made to the list of temporary absences which are considered residence in Canada if the applicant returns to Canada where he has maintained a self-contained domestic establishment. Added are: seasonal employment such as lumbering or harvesting for not more than six months in a year; employment by a Canadian firm or corporation; employment by the United Nations or one of its agencies; and missionary work. The earlier

regulations (L.G. 1938, p. 286) provided for absences due to employment on ships, fishing boats, on trains running out of Canada operated by a railway company with its head office in Canada, employment by the Government of Canada or of a province, and service in connection with the war.

In calculating the income which a pensioner may have and still be eligible for a pension, eight types of income are to be disregarded. These are: mothers' allowances, family allowances, cost-of-living or supplemental allowances paid by a province to old age or blind pensioners, assigned pay of a member of the Armed Forces on active service, direct relief provided by municipality or province, if approved by the pension authority, small casual gifts, contributions other than for ordinary maintenance to pensioners who require special care, and an amount received by a blind pensioner for the purpose of hiring a guide.

Obtaining, or aiding another to obtain, a pension to which a person is not entitled renders him liable to a fine of not over \$50 or to imprisonment for not more than three months, or to both fine and imprisonment.

Changes were also made with respect to the method of assessing the income value of real or personal property which a pensioner may have and still be eligible for a pension.

These Dominion regulations have been adopted as regulations under the Alberta and British Columbia Acts. In Alberta this was done by O.C. 461-47, gazetted June 14, and in British Columbia they were gazetted on May 15.

Provincial

Alberta Bureau of Public Welfare Act

Old age and blind pensioners and recipients of mothers' allowances and their dependents, as shown on the monthly report issued by the Department of Public Welfare, are entitled to hospitalization and treatment services under the Act by regulations of June 26, approved by Order in Council on June 27 (O.C. 654-47) and gazetted July 15.

"Dependent" means the spouse of a pensioner and children under 18 who are maintained by the pensioner. "Treatment services" includes treatment by medical doctors and by persons other than medical doctors on a doctor's written recommendation and with the approval of the Director of Medical and Hospital Services; special services while in hospital when prescribed by the attending physician;

dental care except the provision of new dentures; and the provision of glasses when prescribed, if approved by the Director.

Hospitalization is to be provided as long as it is recommended by the patient's physician and authorized by the Director.

The Director may continue to provide hospitalization and treatment services to a pensioner or dependent whose name has been removed from the report until the end of the calendar month in which the report is received, and may pay for the completion of any service which has been authorized.

Alberta Trade Schools Regulation Act

Regulations covering all trade schools under this Act as well as beauty culture, hair-dressing and barbering schools were revised, approved

by Order in Council on April 15 and gazetted June 14. Earlier regulations (L.G., 1941, p. 959) are repealed. The more important changes are noted below.

Total fees for registration may not exceed \$250. The fee for one course only is to be \$50, with \$10 for each additional course.

When a person drops a course, the operator of the school is forbidden to retain any money paid for fees except an amount proportionate to the part of the course already supplied plus the sum of \$5, or 10 per cent of the amount remaining due on the contract, whichever is greater. Security which must be provided by the operator of a school for the performance of contracts continues to be \$1,000, in the form of a bond of a bonding company authorized to do business in Alberta. The Minister may call upon the bonding company to make good any fees which the operator of the school has failed to repay.

Previously, a student giving one month's notice of discontinuance had to be given back all fees paid in advance except 25 per cent of the total fees for the full course and the proportion of fees payable for the months of instruction received to the date of expiry of the notice.

An instructor in a trade designated under the Tradesmen's Qualification Act must have four years' practical experience in the trade and must hold the highest certificate issued under that Act or under the Welding Act for the trade he proposes to teach. In barbering and beauty culture schools, there must be a full-time instructor for each 20 pupils enrolled. In the latter trade it is stipulated that the eight-months' course of instruction required is to comprise 1400 hours.

Except with the Minister's approval, no person under 16 may be admitted to any course.

The number of students enrolled in any trade school must not exceed the number certified to by the Medical Health Officer and the Fire Chief of the locality in which the school is situated.

Ontario Mothers' Allowances Act

Maximum allowances which may be granted under the above Act are set out by new regulations issued on September 23 and gazetted September 27. These may be: \$42 a month to a mother with one dependent child and \$6 for each additional child; a further sum not over \$10 a month where the need is apparent to the Mothers' Allowances Commission; the cost of medical services provided under agreement between the Minister of

Welfare and the Ontario Medical Association; and a monthly fuel allowance based on the price of coke and varying with type of residence and number of rooms.

For the care of orphan children, foster-mothers may be paid a maximum allowance of \$24 a month for one child, \$48 for two children and \$6 a month for each additional child. Cost of medical services may be provided, as above.

Ontario Old Age Pensions Act

A cost-of-living bonus not exceeding \$10 a month and to be based on need is provided for unmarried old-age pensioners, including widows, widowers and divorced persons by an Order (O. Reg. 141/47) gazetted August 23. The new regulations amend those (O. Reg. 67/47) of May 15, gazetted May 31, which authorized the payment of old age pensions in Ontario to the persons and under the conditions specified in any Dominion Act or regulations. Where a pensioner and non-pensioner spouse are living together, the pensioner is to be deemed unmarried. Where two pensioners are a married couple living together, the bonus is payable to each but not to pensioners living in homes for the aged or in charitable institutions.

Where a pensioner pays more than \$10 a month for shelter, or more than \$25 a month for board and lodging, the excess up to \$10 in either case is to be paid as cost-of-living bonus.

The Commission may, by unanimous decision, pay the bonus to meet cases of exceptional need, of which the circumstances have been set forth in a written application and confirmed by a written report of an investigator.

A pensioner whose income is such as to make him eligible only for part of a pension, or one whose liquid assets exceed \$250, is not entitled to the bonus, except in cases of exceptional need. If his income exclusive of pension is under \$120 a year, he may be paid a monthly amount, including the bonus paid for shelter or board and lodging, so that his total income, with the pension, is \$480 a year.

Another provision, in effect from May 1 on proclamation on September 9 of the Old Age Pensions Act (Canada) 1947, stipulates that a pensioner residing in a Canadian province other than Ontario is not to receive a cost-of-living bonus if the province does not pay any additional amount over the \$30 a month pension to which the Dominion contributes, but, in any province which pays a supplemental allowance, he must be paid a bonus.

not to exceed the amount of the supplemental allowance.

Ontario Unemployment Relief Act, 1935

Regulations under this Act governing the granting of relief allowances by municipalities were amended by an Order (O. Reg. 122/47) made on July 4 and gazetted August 9 to increase the maximum amount payable weekly for food per person according to age and to add a new section permitting a monthly allowance to be paid, at the discretion of the Municipal Relief Administrator, for certain common household sundries. The allowance may be \$1 for a family up to three persons, \$2 for more than four to seven persons, and \$3 for more than seven persons.

Saskatchewan Factories Act

SAFETY IN MOTOR-VEHICLE-REPAIR SHOPS

Safety regulation for garages, automobile service stations and motor-vehicle-repair shops, including rules with respect to ventilation, working under motor-vehicles, spray painting, battery repair, guarding of machinery and eye protection, have been made under sec. 63 of the Factories Act which empowers the Lieutenant-Governor in Council to make regulations for the prevention of accidents in factories. The regulations were approved by Order in Council (O.C. 1359/47) on August 27 and gazetted September 5.

No worker may work under a motor vehicle or elevated dump truck unless it is resting normally on the floor, upon a rack or substantial rests. Jacks, chain blocks or similar apparatus must not be solely depended upon and use must be made of any safety device provided with a hoist by the manufacturer.

As regards ventilation, in any enclosed premises occupying an area of 1,500 square feet or more, exclusive of office space, the employer must instal a mechanical ventilation system capable of changing the air at least three times an hour, or more often if the inspector so directs in writing. In smaller premises, or where the floor space is divided into stalls with separate outside doors, the provision of such equipment is left to the discretion of the inspector. Discharge pipes must be placed so that air discharged cannot re-enter the building or enter any other building. Adequate heating equipment must also be provided.

The engine of a motor vehicle may not be operated inside any premises covered by the regulations unless a flexible tube properly connected with the exhaust pipe leads outside the building.

Where spray painting is being carried on, a separate ventilating fan must be furnished, and the operator must wear a respirator. If more painting is done than can be performed by one spray gun operating for an hour a day, it must be done in a separate enclosed booth. No open flames or other source of ignition may be permitted near spray-painting operations.

Batteries must be repaired in a well-ventilated place, and in cleaning the floors of such rooms or premises care must be taken not to scatter lead dust in the air. Any person handling battery plates must take care to prevent lead dust or particles from being inhaled or swallowed.

All dangerous parts of machinery, including gearing, pulleys, belting and shafting, and all grinding wheels must be securely guarded. No person may remove or make ineffective any guard, safety appliance or device attached to any such machinery or grinding wheels except to make repairs or adjustments, and he must immediately afterwards replace the guard.

Suitable goggles or other eye protection must be supplied by employers and used by workers when engaged in welding, operating grinding wheels, buffers or sanders, or cutting or chipping metal.

Tools, jacks, hoists and other servicing equipment must be kept in good repair. Tool handles must be of sound material and securely fastened. A suitable vice must be used with all power drills. The use of hammers, chisels, punches and other similar tools having burrs or mushroom heads is prohibited.

Saskatchewan Steam Boilers Act

SAFE HANDLING OF LIQUEFIED PETROLEUM GAS

Minimum standards of safety in the handling, storing and distributing of liquefied petroleum gas are laid down in new regulations approved by Order in Council on August 27 (O.C. 1362/47) and gazetted September 5. The first of their kind in Canada, the regulations are based on information drawn from a variety of sources.

The regulations cover all pressure vessels, portable cylinders, storage and transport tanks, and other pressure containers and equipment and distributing plants connected with liquefied petroleum gas.

All distributors of liquefied petroleum gas must be registered, for which the fee is \$15, with an additional amount in proportion to the number of installations serviced.

Every installation other than a portable cylinder must be inspected at least once in every two years, and the prescribed fee paid

for an inspection certificate. The certificate must be posted conspicuously near the installation.

The regulations and the Code for unfired pressure vessels established by the American Society of Mechanical Engineers and, also, the standards of the National Board of Fire Underwriters where not inconsistent, are to govern the design, construction and operation of any liquefied petroleum gas equipment. Portable cylinders must be constructed, tested and marked according to specifications of the Board of Transport Commissioners for Canada (formerly, the Canadian Railway Commission). They must be registered with and approved by the Department of Labour. Only persons holding permits may own portable cylinders unless special permission is given by the Department, and any sale or change of ownership must be notified to the Department by both parties.

Provision is made for inspecting portable cylinders and ensuring their safe installation or location. They must be equipped with an approved type of safety-valve, tested periodically, and kept in good condition.

Storage tanks and pressure containers must be constructed according to a design approved by the Department and must be registered. The regulations and A.S.M.E. Code as well as those parts of the N.B.F.U. standards which are not inconsistent are to apply to design and construction. Standards are set out for the thickness, design pressure, location, for the design of concrete supports, the protection against trucks or other objects, for the cooling system, pressure and liquid level gauges, safety-valves, piping and grounding.

Transport tanks must conform to the A.S.M.E. Code and that of the N.B.F.U., and must be equipped with fire extinguishers.

Filling and distributing plants must be constructed according to the regulations, special provision being made for fire prevention. Similarly, plant equipment, electrical wire and equipment, piping and fitting must be of an approved type; unloading operations must be done in accordance with the order of the Board of Transport Commissioners, and in certain other respects this order must be complied with.

A fine ranging from \$25 to \$1,000 is payable for each offence under the regulations.

Legal Decisions Affecting Labour

B.C. Court Dismisses Appeal of Laundry Workers' Union—Holds Union may be Prosecuted Under Conciliation Act

On August 19, the British Columbia Court of Appeal dismissed the appeal of Eula Patterson, President of the Nanaimo Dry Cleaning and Laundry Workers' Union, from the decision of Mr. Justice Macfarlane of the B.C. Supreme Court on July 22 last (L.G., September, 1947, p. 1337). Mr. Justice Macfarlane denied her application for an order to make final an order *nisi* issued by Mr. Justice Coady on June 30 prohibiting Magistrate Beevor-Potts of Nanaimo from proceeding with a charge against the Union of authorizing a strike which was unlawful under the Industrial Conciliation and Arbitration Act of British Columbia.

The Court of Appeal was unanimous in holding that, for the purposes of the particular statute and proceedings under it, the trade union which acted as a "bargaining agent", as defined in the Act, has been given by the Legislature, through this enactment, the status of a *persona juridica*. As such a legal entity, the union is subject to the provisions and penalties of the Act even though

it has not been incorporated. The question of how a union can be served with a summons is merely a matter of procedure for the Magistrate to determine.

This was the gist of the opinion given by Chief Justice Sloan. The other members of the Court, Mr. Justice O'Halloran and Mr. Justice Robertson, agreed that the mode of service was one for the Magistrate. They dealt at greater length with the question of the legal status of the union.

As regards the position of the union, Mr. Justice O'Halloran based his opinion, not only on the sections of the Industrial Conciliation and Arbitration Act which enable a union to act on behalf of its members, to have exclusive authority after certification by an administrative authority, to enter into an agreement with the employer, to act as an agent and to employ agents, and to suffer penalties distinct from those imposed on individuals if it acts contrary to the provisions of the Act, but also on the British Columbia Trade Unions Act which was enacted first in 1902. This latter statute stipulates that a trade union or its trustees shall not be liable in damages for certain wrongful acts unless its members or executive

committee have authorized or concurred in them.

Mr. Justice O'Halloran referred to the judgment of the House of Lords in the *Taff Vale* case in 1901 (A.C. 426) in which it was held that the union concerned, which was registered under the Trade Union Act, 1871, could be sued in its own name for damages inflicted by its members in connection with a strike. It was indicated, too, that an unregistered union could be sued in a representative action if the persons selected to defend the action fairly represented the union. In his opinion,

the test is not registration *solus* but is recognition by the Legislature,

and that recognition is accorded by both the Industrial Conciliation and Arbitration Act and the Trade Unions Act.

Mr. Justice Robertson, also, found in the privileges and immunities, the restrictions and liabilities, which the Industrial Conciliation and Arbitration Act confers or imposes on trade unions ground for the opinion that a trade union is a *persona juridica* which may be prosecuted in its own name for an offence under the Act. He referred to the *Taff Vale* case as establishing that a legal entity which is not a corporation may be recognized by the law as distinct from its members.—*In re Patterson and Nanaimo Dry Cleaning and Laundry Workers' Union Local 1* (1947) 2 WWR 510.

Pension Plan of George Weston Limited

THE Department of Labour has received word of a pension plan for employees of George Weston Limited and subsidiaries, which became effective on December 1, 1946.

The plan provides for the establishment of a trust fund created by a substantial initial contribution by the Company and its subsidiaries, followed by regular contributions by the several companies and by employee members. The fund is administered under a "trust deed" between the Company and a Board of Trustees.

Participation in the plan is voluntary, and is open to employees with two years' service. Special provision is made for employees who were in the Armed Services during the second World War. New employees, however, in order to participate must be under 50 if male or under 45 if female.

Retirement is normally at the age of 65 for men and 60 for women, but may be taken five years earlier with a reduction in the pension rate. An eligible member who has five years' continuous service to his credit on the inception of the plan is entitled to a minimum annual pension of an amount equal to thirty per cent of his earnings for the calendar year 1946. Provision is made for computing pen-

sions for such of those members who were on leave of absence, or absence because of illness during 1946.

Subject to the provision for minimum pensions, the normal annual pension consists of 1½ per cent of the aggregate of all earnings received by the employee after becoming a member of the plan.

Each member contributes 3½ per cent of his earnings as an employee of the Company, deducted by the Company each pay period and paid to the trustees of the fund.

The Company contributes by paying to the trustees in 20 equal consecutive annual instalments such an amount as is recommended by a qualified actuary as sufficient for the purpose of insuring that the obligations in respect of the minimum pension provisions for services rendered to the Company prior to the date of the inception of the plan, will be discharged in full.

The plan also provides for death benefits, and includes optional settlements in the event of an employee terminating his service before reaching pensionable age.

The cost of administration is borne by the Company.

Employment, Hours and Earnings

Introduction

BY the end of August, the shortage of labour had reached serious proportions. Industrial demand was expanding under seasonal pressure while the loss of student labour was creating large gaps in the employment field. Unemployment had been at a minimum since the beginning of June, except among the student population. As the season advanced and the students withdrew, rising industrial needs had to be met largely within the ranks of the employed. Thus, shifting of workers between jobs greatly increased. In some cases, the movement was spontaneous, the higher wages of the seasonal jobs attracting labour from non-seasonal fields while in others, organized transfer schemes directed workers from job to job.

In agriculture, a co-ordinated transfer program arranged for extensive inter-area and inter-provincial movements. In construction, the transfer of workers from project to project increased to offset the loss of labourers to agriculture. Food processing plants were extending their search for labour beyond the immediate local supply and transportation services were being provided to accommodate workers in outlying districts.

The absence of major industrial strikes during the summer months of 1947 had promoted the buoyant employment conditions. Uninterrupted production steadied the flow of both consumer and producer goods with the result that expansion was stimulated all "along the line." Fewer persons were involved in labour disputes during July and August than in any comparative period since 1939. However, the scene was somewhat darkened during September by a strike involving some 12,500 workers in meat packing plants.

General labour market conditions, as revealed by the operations of the National Employment Service, indicated a steadily growing surplus of jobs. At September 25, unfilled vacancies numbered 116,000 representing an excess of 29,000 over the available supply of workers. The full brunt of peak seasonal demand in food processing plants and logging had yet to be met, thus labour needs were expected to continue the uptrend for several weeks. Unplaced applicants appeared to have reached

their lowest point early in September, the number levelling off and gradually increasing during the latter part of the month. At September 25, unplaced applicants totalled 87,000 (59,000 male and 28,000 female). Claimants for unemployment insurance fell off sharply during the summer and at the latest available date, August 31, numbered 37,000.

Employment in firms with 15 or more employees, as reported by the Dominion Bureau of Statistics, rose by almost 40,000 during July. The entrance of thousands of students into the labour market stimulated the already heavy rate of absorption. All main industry groups but particularly the seasonal transportation, construction, and service industries, expanded employment. The index of employment (June 1, 1941=100) rose from 123.8 at July 1 to 126.1 one month later. At the beginning of August, reported employment in the eight leading industries totalled 1,984,000.

Average hourly earnings in manufacturing continued their upward trend during July. Employers were tending to increase wages in order to attract workers in the steadily tightening labour market. Hourly earnings of hourly-rated workers in manufacturing totalled 81.3c at August 1, as against 80.8c and 79.8c at the beginning of July and June respectively. The pressure of seasonal activity was reflected in a slight rise in the number of hours worked per week, the work-week increasing from 42.1 in the last week of June to 42.4 during the comparative period in July.

In the Maritime region, the employment situation remained fairly stable during August, the unemployment problem being chronic rather than seasonal. The movement of unemployed persons to factories in Ontario and Quebec continued. In Halifax and Fredericton, industrial activity was at a satisfactory level; a shortage of labour existed in Fredericton, but lack of housing prevented workers from moving to the area. Heavy manufacturing industries in New Glasgow had enough orders on hand to sustain production well into next year. Farm labour demand was not insistent, although in some districts competition with construction had caused a slight scarcity. Logging activity was expected to begin shortly. Con-

(†) Not available

(1) Estimates are based on sample Labour Force Survey of the Dominion Bureau of Statistics. All figures represent persons 14 years of age and over.

(2) Statistics are based on the eight leading industries. Data are compiled from reports of firms with 15 or more employees, weekly average for month in non-agricultural industries reporting to National Employment Service.

(4) Average hourly earnings and man-hours apply to manufacturing only. The chart is adjusted for holidays.

(5) During the month.

(6) For more recent figures, see below, under Operations of the National Employment Service.

struction work was on such a large scale that it frequently outran available material supplies, thus delaying activity.

The Quebec region reported that unemployment was at a low ebb while labour shortages were developing rapidly. In many areas, and in many industries, acute labour scarcities were being felt. There were few industries which had not increased operations appreciably in the past year. Consumer spending had been well sustained at a level high enough to absorb the expanding output of goods. The cancellation of some United Kingdom orders affected employment slightly, but not seriously in any field. The farm labour situation was very satisfactory; in September about 5,500 workers were expected to be sent to the United States to harvest American crops. General logging activity had started and the outlook for adequate labour this season was hopeful. Hard rock miners and mine beginners were in great demand; prospecting and developmental work was making good progress. Construction work continued at a peak level, despite acute shortages of skilled men and materials; residential construction was showing signs of renewed activity.

In the Ontario region, there was a marked shortage of workers. Although the greatest pressure was currently arising out of the seasonal requirements of the construction, agriculture, and food processing industries, all indications pointed to a continuing high level of employment during the winter. Manufacturing industries needed workers in large numbers. Iron and steel firms, with heavy backlogs of orders registered steady demands; labour turnover was one of the chief problems confronting the industry. Textile, rubber, and food processing companies were extremely short of workers. Students returning to school left many vacancies for unskilled labourers, particularly in construction and agriculture. The scarcity of skilled construction tradesmen was acute. Farm labour was not plentiful; over 1,500 workers were sent to help with the Prairie harvest, and about 300 more were needed.

In the Prairie region employment conditions were very buoyant and the upswing should reach its peak in the early part of October. A serious shortage of harvest workers appeared to be developing earlier in the season but the situation was again under control. The Ontario harvest was late, which delayed the transfer of eastern workers to the Prairie region where crops had ripened earlier than expected. Grain handling activity was expected to begin shortly at the Lakehead. Industrial disputes blocked operations in the meat packing industry. Mining companies still required skilled men; hirings, however, were increasing where housing projects had been built, and labour turnover was being reduced. The logging industry was absorbing the workers recently brought from the European camps for displaced persons. Construction progress had been held up by the scarcity of skilled workers and by the limited amount of supplies. Most contractors were speeding up work, so that their building would be "housed in" before the advent of winter.

The Pacific region reported that agriculture, logging, and mining were at peak activity and workers were needed urgently. This situation brought into sharp relief the chief problem of this region, decentralization of the labour force. Employment was available for all workers who were physically fit and willing to leave the metropolitan area. Students returning to school and university left a large gap in primary industry employment. Wages in the logging industry were very high in relation to other industries, the new 1947-48 agreement having been signed in all three forest areas. The mining industry reported no change in its labour picture, with major expansion continually held back by the lack of workers. The farm labour situation was well in hand, but demands were increasing as tree fruits ripened. Construction workers were in heavy demand; the new projects scheduled for the coming months should maintain the full employment of all skilled men.

Employment and Payrolls at the Beginning of August, 1947

INDUSTRIAL employment showed important expansion at the beginning of August; this was seasonal in character, but rather exceeded the gain usually indicated at the time of year. The monthly survey of employment and payrolls made by the Dominion Bureau of Statistics showed that 17,910 larger establish-

ments in the eight major industrial divisions employed a total of 1,984,123 men and women, as compared with 1,952,083 at July 1; the increase, which amounted to 1.6 per cent, was accompanied by that of 2.6 per cent in the weekly salaries and wages disbursed by these employers.

The movement was generally favourable in all provinces at August 1. In terms of percentages, the largest gains were in the Maritime Provinces and British Columbia. Industrially, there were considerable increases in manufacturing as a whole, and in most of the main non-manufacturing classes. The exception was trade, in which no general change in the level of employment was indicated in the co-operating establishments. The additions reported in construction were especially large, being rather above average in scale. Within

the manufacturing division, there were substantial increases in the food, lumber and pulp and paper industries, while the trend was downward in certain groups, notably in leather, textile, rubber and electrical apparatus plants.

Based on the 1926 average as 100, the index of employment at August 1 reached a new all-time maximum, standing at 192.6, as compared with 189.5 at July 1, 1947. At August 1 in immediately preceding years, the indexes were as follows: 1946, 172.8; 1945, 175.0; 1944, 184.3; 1943, 185.9, and 1942, 177.8. General

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

¹ This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments, and clay, glass and stone products. The non-durable group includes the remaining manufacturing industries with the exception of electric light and power.

² Mainly hotels and restaurants, and laundries and dry-cleaning plants.

improvement was indicated in the major industrial divisions as compared with the beginning of August in 1946, when industrial disputes had seriously affected the situation, particularly in manufacturing. An examination of the figures for the later years of the war, however, shows that the improvement at the date under review was confined to the non-manufacturing classes, there being a decline in recorded employment in manufacturing as a whole as compared with August 1 in the period, 1945-1942.

Payrolls

The amounts expended in salaries and wages by the establishments furnishing statistics in the eight leading industries at August 1 aggregated \$72,417,149, giving an average of \$36.50 per employee. At July 1, the sum of \$70,560,704 had been paid to the employees of these firms, a per capita figure of \$36.15. The earnings reported at August 1 in 1946, 1945, 1944, 1943 and 1942 had averaged \$32.64, \$32.09, \$31.63, \$31.06 and \$28.62, respectively. In the last 12 months, there has been an advance of

24.7 per cent in the general index of payrolls, and of 11.5 per cent in the index of employment, while the average weekly earnings of the persons in recorded employment have risen by 11.8 per cent.

If the statistics for financial institutions are added to those given above for the eight leading industries (namely, manufacturing, logging, mining, communications, transportation, construction, trade and hotels and restaurants and laundries and dry-cleaning plants), the latest survey shows that the larger establishments in the nine major industrial divisions had a combined staff of 2,064,635 persons at August 1, as compared with 2,032,426 at the beginning of July. The aggregate weekly payrolls reported by such employers amounted to \$75,437,347, as compared with \$73,573,301 in the preceding period of observation. The average earnings of the workers employed by these firms rose from \$36.20 at July 1, to \$36.54 at the date under review, as compared with \$32.72 at August 1, 1946, and \$32.14 at August 1, 1945.

Table II summarizes the latest statistics of employment and payrolls for the leading in-

¹ The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

dustrial groups, the provinces and economic areas, and the leading industrial cities, and gives comparisons as at July 1, 1947, and August 1, 1946. Table I shows a monthly record for the eight and the nine leading industries as a whole, and for manufacturing, showing the movements of employment, salaries and wages and average weekly earnings in the period since 1943. The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls the indexes of employment have been converted from their original base, 1946=100, to June 1, 1941 as 100.

Table I indicates that since June 1, 1941, when the current record of payrolls first became available, the number of men and women in recorded employment in the eight leading industrial groups has shown an increase of 26.1 per cent; the aggregate weekly salaries and wages of such workers are higher by 78.4 per cent, while their average weekly earnings have advanced by 44.6 per cent. Including finance, the gain in recorded employment from June 1, 1941, to August 1, 1947, amounted to 26.4 per cent, that in the indicated payrolls, to 78.1 per cent, and that in the per capita earnings, to 43.4 per cent. These increases are the highest in the record of over six years. In other monthly reports, the following factors have been cited as largely responsible for the much greater rise in the payrolls than in employment (1) the payment of higher wage-rates in very large numbers of industries and establishments, in addition to the general increase resulting from the mandatory payment of cost-of-living allowances to the majority of workers; the rates at which these bonuses were paid were increased on more than one occasion before they were absorbed in the basic wage rates as from February 15, 1944; (2) the progressive up-grading of employees as they gained experience in their work, and (3) reductions in the numbers and proportions of women workers.

The advance in the index of employment in manufacturing during the period of which data on current earnings are available has amounted to 20.4 per cent, while the index of salaries and wages has risen by 71.5 per cent, and that of weekly average earnings, by 44.6 per cent. The increase in recorded employment in the non-manufacturing industries taken as a whole in the same period was 33.6 per cent, and that in the weekly payrolls, 87.3 per cent.

With regard to the marked variations in the average earnings of workers in the different

industrial classes, it must again be pointed out that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages; which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in the industry is of course a factor of paramount importance.

Sex Distribution of Persons in Recorded Employment

The increase in recorded employment at August 1 took place among men, there being a small reduction in the indicated number of women. The reporting firms in the eight leading industries had a staff of 1,573,311 men and 410,812 women, a total of 1,984,123, there being 793 of the former sex and 207 of the latter in each 1,000 persons in recorded employment. The reported number of male employees increased by 32,719, or 2.1 per cent, as compared with July 1, but there was a loss of 679, or 0.2 per cent, in the indicated women workers in the same comparison. The ratios a month ago were 789 men and 211 women per 1,000 employees. At August 1, 1946, the proportions were 781 men and 219 women per 1,000 workers reported in the eight major industrial divisions.

The larger firms in the nine leading industries indicated the addition of 32,209 persons to their working forces as compared with July 1; the number of men taken on was 32,873, while 664 women were released from these establishments. The proportion of women in this group of industries was 217 per 1,000, as compared with 221 at July 1, 1947, and 230 at August 1, 1947; the latest ratio, like that in the eight major industrial groups, was the smallest indicated in any of the enquiries into sex distribution made since 1942. The proportion of women per 1,000 persons in recorded employment had reached its highest point at October 1, 1944, when the number of women reported in the eight leading industries was 261 per 1,000, and in the nine major industrial divisions, 271 per 1,000.

Establishments in manufacturing and the trading industry indicated the employment of fewer women at August 1, the losses being seasonal in character. These two divisions, however, showed increases in the month in the number of male workers. In all other major

industrial divisions covered in the surveys there were gains in employment for workers of both sexes, but those among the latter sex were relatively larger.

As compared with August 1, 1946, increases of about 13 per cent and five per cent respec-

tively, were recorded in the number of men and women on the staffs of the co-operating firms in the nine major industrial divisions taken as a whole. Improvement was indicated for workers of both sexes in each of these main groups in the year.

Operations of the National Employment Service

THE problem of fitting the limited pool of labour into expanding seasonal needs became increasingly difficult during August. Available supply was strained to the utmost—44 per cent of all applicants registered at employment offices were referred to jobs as against 25 per cent in the winter months. Labour tended to move towards the higher paying seasonal jobs thus easing shortages in these industries, but at the same time intensifying scarcities in the lower wage industries. Immigration, although gradually increasing, had not yet appreciably affected the labour market situation.

Seasonal influences and student replacement needs intensified demand, especially for unskilled workers. A most urgent need was in agriculture, the peak in demand being reached at about the first of September; seasonal pressures were rapidly increasing

labour needs in food processing plants. Employment in construction, mining, and transportation, which was already well below capacity, received a further set-back by the exodus of thousands of student workers. In the service and light manufacturing industries, a heavy demand persisted for skilled and unskilled female help.

The tightening labour market was reflected by a steady accumulation of jobs while the number of unplaced applicants continued to fall off. By September 18, unfilled vacancies totalled 116,000 while the number of persons remaining on file was 85,000. Unfilled vacancies were expected to continue the uptrend for some weeks due to the pressure of logging requirements. Unplaced applicants, however, were beginning to level off and were expected to increase sharply as agricultural workers reappeared in the labour market.

Agriculture

The full weight of seasonal labour requirements in agriculture was felt during the latter part of August and September. Demand was largely met by an extensive program of transfers, the varying maturing dates of tree and field crops lending themselves to considerable dovetailing of work from area

to area. The movement of western workers to Ontario farms during July was reversed in August when some 2,100 persons were recruited for the Prairie harvesting season. Smaller movements to meet local harvesting needs were in progress in other parts of the country. The transfer of help to Ontario

(1) Latest figures subject to revision.

tobacco fields was estimated to have reached approximately 1,500 workers; some 700 Nova Scotia helpers were moved to Prince Edward Island for potato picking; in the fruit growing belt in Nova Scotia, considerable help was being brought in from nearby areas for the apple harvest. In addition, the temporary migration of labour across the

United States border was proceeding in both eastern and mid-western sections.

Placements into agriculture climbed rapidly during August. An average of 1,186 persons were placed each week as against 997 in July. At the end of August, 2,968 vacancies remained on file.

Non-agricultural Industry

Vacancies Notified

Vacancies accumulated rapidly during August due to the greater number of jobs reported and, at the same time, the slow rate of absorption. Unfilled vacancies rose by 20,000 during August and, at the month-end totalled 107,511.

Seasonal influences in the main were responsible for the greater number of vacancies reported. However, several other factors were intensifying the normal seasonal upswing. Replacement needs were heavy as the large student force withdrew from the labour market. The freer flow of materials was stimulating production which in turn tended to enlarge the employment capacity of industry. Also, a more active recruiting program was taking shape at the close of the vacation shut-downs.

A heavy program faced the food canning industries, with prospects of attracting sufficient labour uncertain. In construction, the levelling off in rising building costs renewed residential building somewhat, while institutional and industrial construction was proceeding as rapidly as the supply of manpower permitted. Labour demand was intensified

in mining and transportation due to the withdrawal of a large body of student workers.

The rise in vacancies notified during August was predominantly in manufacturing and trade where increases of 25 per cent and 9 per cent respectively were recorded. In manufacturing, all industries except the non-ferrous metal group shared in the upswing; the most outstanding increase was in the food processing plants, followed by appreciable rises in machinery and transportation manufacturing. Reporting of vacancies averaged 31,794 a week during August, representing a 5 per cent gain over the previous month.

Applicants Registering

Fewer persons entered employment offices during August than in any month in the post-war period. Approximately 27,000 workers registered per week as against 36,000 in the comparative period in 1946. The rapid expansion of employment which began in early May quickly absorbed fully employable labour. Thus, with the exception of the temporary student force, the bulk of applications received during the summer were from the handicapped, the less skilled, or the older

worker. As the season advanced and the competition for workers grew, rising labour turnover boosted somewhat the declining rate of registrations.

Despite the steady depletion in the number unplaced, pools of surplus labour have continued in a few areas. In both the Maritime and Pacific regions, unplaced applicants exceeded the number of vacancies on file. The problem in the Maritimes was one of a chronic shortage of jobs. The situation was showing improvement, however, because of the exodus of some 2,400 Nova Scotia workers to the Quebec and Ontario regions. In the Pacific region, the surplus continued due to the unwillingness of applicants to accept the many jobs which were available in outlying districts.

Immigration was beginning to be an important source of labour. The most urgent needs of agriculture had been satisfied by the absorption of the Polish and Dutch immigrants. In logging, the labour shortage was being eased by the importation of some 4,500 displaced persons; at the end of September, 2,193 had arrived in Canada. The group movement of 1,000 girls for service work had begun and authorization had been given to import 2,000 skilled needle workers for the textile industry.

Referrals

Referral activity slackened appreciably during August. Pronounced contractions

occurred in the service, mining, construction, and transportation industries which more than offset the slight gain in manufacturing. Average weekly referrals numbered 22,341 during August in comparison with 24,223 and 25,225 one month and one year before respectively.

The limited pool of labour with which to meet the expanding seasonal needs demanded careful screening and re-screening of available labour supply. As a result, a greater proportion of applicants were referred to jobs. Forty-four per cent of all available applicants during August (those on file at the beginning together with those registering during the period) received referral slips as compared with 42 per cent in July. In contrast, a smaller proportion of vacancies received referrals, the percentage dropping from 46 per 100 jobs available to 42 in August.

Placements

The declining registration of workers was reflected in a sharp fall in placement activity. Average weekly placements which held at about 15,500 during May, June, and July fell to 14,000 in August. By the end of July the two main sources of seasonal labour—the winter unemployed and the student force—had been absorbed. Thus by August placements were confined largely to a more intensified sifting of the physically handicapped and to directing labour shifting from job to job.

The drop was most severe in the seasonal construction, transportation and service industries where heavy recruiting of the opening months of activity was beginning to taper off. In mining, the hiring rate continued to lag behind that reported in 1946, placements during August being 24 per cent below the level reported one year before. Placements into logging were small, the seasonal upswing being slower than usual due to the general scarcity of labour.

Placements into manufacturing showed a slight gain during August reflecting the absorption of transferred labour into heavy industry and seasonal workers into textile plants. The following table gives the place-

ments effected by the Offices, each year, from January, 1937, to date:—

Year	Placements		
	Regular	Casual	Totals
1937.....	275,300	114,236	389,536
1938.....	256,134	126,161	382,295

1943.....	1,890,408	53,618	1,944,026
1944.....	1,693,119	46,798	1,739,917
1945.....	1,445,692	47,889	1,493,581
1946.....	785,593	73,819	859,412
1947 (34 weeks).....	447,693	63,795	511,488

Special Placements

Employment opportunities for the physically handicapped were steadily increasing. Vacancies which, in a less stringent labour market might have been held for the fully employable, were opened up to the impaired worker. As a result, the number of handicapped applicants remaining on file had been scaled down by almost 50 per cent over the year. At August 14, there were 3,608 unplaced as against 6,728 one year before.

The peak in placement of handicaps occurred during May and June when approximately

1,400 were effected each month. By July, those on file had been pared down to cases of severe physical impairment; placements dropped to 1,154 from June 16 to July 14 and to 1,078 during the following monthly period.

Special placement officers continued to render valuable service to youths entering the labour market for the first time. The bulk of first jobbers had been absorbed by the end of August, although the shifting of workers from seasonal to permanent employment was creating a steady stream of youth applicants.

Executive and Professional Offices

Placement activity at Executive and Professional offices indicated a seasonal slackening similar to that experienced in the general field. However, the current situation compares favourably with that reported in the 1946 period when expansion was crippled by prolonged strike activity. Placements during August were 35 per cent greater than those recorded one year before. The increase came about because of the greater number of jobs reported by employers; vacancies

during July and August exceeded those reported in the corresponding period in 1946 by 12 per cent. Applications on the other hand, indicated a 35 per cent decline.

Average weekly placements during August totalled 51 as against 33 in the corresponding period in 1946. Unfilled vacancies showed a similar gain jumping from 1,307 at August 31, 1946 to 1,700 one year later. Those unplaced, however, were considerably fewer, dropping from 2,430 to 1,999 over the year.

Veterans

Applications.—Registrations were maintained at a steady rate during July and August in contrast to the dropping off in the general field. Heavy labour turnover among the younger veterans largely accounted for the constant level. An average of 6,057 ex-servicemen reported per week, 5,345 of whom were dischargees of World War II and 712 of World War I.

Placements.—Hiring swung upwards during August as many veterans were taking advantage of the favourable employment situation to better their present status. In seasonally active areas, workers were shifting

into agriculture where high wages drew workers from other industries; in industrial centres, the movement was largely from temporary to permanent employment.

Average weekly placements totalled 3,536 during August as compared with 3,372 in July. Districts in the Prairie region showed the greatest proportionate gain, weekly placements in Winnipeg jumping from 379 to 485 and in Regina from 76 to 100.

Unplaced Applicants.—Fewer than 23,000 veterans were seeking work at the end of August as compared with the seasonal peak of 62,000 at January 31. The reduction took

place in all areas although a heavy concentration has continued in the Halifax area where 3,900 still remained on file.

A greater proportion of the registrations were of a long term nature, indicating that

available supply was narrowing down to the unemployables and those in chronically depressed areas. Applicants registered for more than two weeks totalled 15,213 or 68 per cent of the total unplaced.

Regional Analysis

The following regional analysis is based on reports received from National Employment Service offices throughout the country. The report covers the month of August, 1947.

Maritime Region

The seasonal expansion, principally in the agriculture and construction industries, had somewhat relieved the chronic unemployment problem.

Agriculture.—There were indications that the 1947 potato crop would be good—an estimated 1,400 men would be required for harvesting operations. It was not expected that any labour shortage would materialize as local pickers would be supplemented by men transferred from outlying points within the region.

The agreement of the Prices Support Board to guarantee apple prices gave new life to the Annapolis Valley fruit growers who had anticipated heavy losses with the withdrawal of their principal buyer, the United Kingdom. It appeared that 1,500 workers from outside the valley would be required to harvest the estimated 1,000,000 barrel crop.

Plans have been completed by the New Brunswick Government for a survey of marshlands in order to improve agricultural output in the southeastern part of the province.

Logging.—A very heavy demand for woods workers still existed, mostly for large operations in northern New Brunswick. Prospects of filling most of the orders, however, were slight.

Agents for the B.C. Logging Industry had recruited some 300 workers, the vanguard of which had already left for the Pacific Coast.

Fishing.—Fish processing plants in the Bay of Fundy, South Shore and Halifax districts all reported low fish landings. Although almost as many boats were out as last year, the catch was down about 50 per cent. Market conditions generally were improving.

Mining.—Production in collieries in the Glace Bay area continued to increase while at mines in the Minto area, where the situation was unsettled, operations continued below normal. Operators claimed that due to the

increased cost of coal and the shortage of transportation facilities they were unable to get orders.

Manufacturing.—Textile production was returning to normal after the vacation period. One plant had registered a standing order for skilled machine operators and general factory workers because of the high rate of labour turnover.

The arrival of materials in September for the building of 1,700 C.N.R. box cars should ease unemployment in the Trenton area. This order, along with a possible order for 250 hopper cars for the C.P.R., should assure steady work until about March, 1948.

Firms engaged in dairy products, and canned and cured fish all reported a heavy season and peak production. The employment situation was fairly stable with only limited demands except in fish processing where there was a moderately high labour turnover.

The completion of contracts at the Mahone Bay Shipping Co. plant had resulted in a partial lay-off in August, to be followed by a complete shut-down about the end of September. Repair work was active at Halifax shipyards with forecasts of steady employment throughout the winter. At this location additional arc welders, riggers and electricians were needed.

Construction.—Working conditions had been ideal for construction but the acute shortage of cement, nails, and plumbing supplies had seriously retarded progress on projects already underway and had had a detrimental effect on the number of permits being issued. With a few exceptions, skilled and unskilled labour was in good supply.

Except where veteran housing projects were under construction, the increased building costs had eliminated most of the home building for rental.

Work was progressing on the ferry terminal at Cape Tormentine, officials reporting that labour needs were being met. It was expected that the present staff of approximately 150 men will be maintained until the end of the year. Completion of work on the new runways at Lakeburn Airport was held up by the shortage of railway cars with which to bring gravel from Debert.

Transportation.—While there had been a heavy turnover in extra gang labour, local offices were able to supply men to fill the vacancies. The freight car shortage had affected the movement of pulpwood, coal and other materials.

Quebec Region

All industries excluding agriculture, continued to be handicapped by the shortage of workers and materials. Despite these draw-

backs production in most fields was at a high level.

Agriculture.—The harvesting of a good crop of hay had been completed and work had been started on the grain crops which, it was expected, would result in only a fair yield. Vegetables had suffered heavily during the prolonged dry spell. Generally speaking no real shortage of help had materialized and it was thought that this situation would prevail to the end of the season.

REGIONAL EMPLOYMENT TRENDS

SEASONALLY ADJUSTED

FROM 1939 TO 1947

(AVERAGE = 1939 = 100)

A movement of about 5,500 workers to the United States for a five-week harvesting period was scheduled to take place during the next four weeks. Already 150 workers had been sent to Ontario and 450 to the Prairie Provinces.

Fishing.—Cod fishing continued to fall off in the Gaspe area.

Logging.—During the month there was a free flow of workers to the woods, all companies showing an increase in their labour force over former years. However, orders were still being placed for more workers. It was felt that with new inducements, such as the bonuses offered by many companies, this season would present an all-time record for woods operations.

Mining.—The movement of men to producer mines in western Quebec was fairly satisfactory considering the scarcity of suitable applicants for this work. However, it seemed likely that clearance of orders would be necessary in order to fill the general need for workers.

Prospecting in northwestern Quebec, particularly at the Quebec-Labrador iron deposits, had continued to make good progress.

Manufacturing.—New peaks were being reached in industrial production and there were few industries which had not increased operations over the past twelve months. An example of this was newsprint output which was nine per cent greater during the first seven months of 1947 than in the comparative period in 1946. All Quebec mills were operating at peak capacity and there was no indication that the recent United Kingdom export cut-backs would affect production schedules.

There was a slight production recession in the footwear industry due to the shortage of leather and the cancellation of a large contract for Great Britain. Several plants had been forced to close for short periods.

The flow of steel and sheet metal had improved but the need for skilled workers persisted. All Montreal shops of Canadian Car and Foundry Co. were working at capacity and staffs were being increased to speed the delayed work on 6,000 railway cars.

Radio and electrical establishments were finding it difficult to maintain an adequate staff of skilled and unskilled workers. Northern Electric Co. Montreal, was transferring its electronics division to Belleville, and the cable division to Lachine which will affect several thousand employees.

In shipbuilding, employment was maintaining a high level with all shipyards in the market for more workers.

The majority of saw mills had completed their cut of logs but larger operators will continue sawing until freeze up.

Construction.—New contracts were being awarded in commercial and residential construction, the latter seeming to exhibit a renewal of life. Completion of work already started was being pushed forward despite the continued shortage of skilled workers and some materials.

Maintenance work and the construction of new roads and bridges were being successfully carried out.

Transportation.—Conditions on the Montreal water front had improved after the settlement of the labour dispute. Ocean going shipping continued at a high level.

Railway companies continued busy both in freight and passenger traffic. Long distance hauling companies were extending their services as additional equipment became available. Air transportation was being stepped up noticeably.

Ontario Region

Industrial development was at a high level although somewhat hampered in all fields by the prevailing shortage of labour, especially skilled workmen.

Agriculture.—The wheat harvest had been completed in good time but much spring grain remained to be handled. In some localities it was expected that work would not be completed until the middle of September.

Fruit growers in the Niagara district were appealing to university students to assist in picking fruit now that high school students were returning to school. Recruits from the Ontario Farm Service Force in North Bay and Timmins had responded to the need.

The flue-cured tobacco harvest was in full swing—a few early areas being already processed while the heavy crop of burley in southwestern Ontario had yet to be dealt with. The demand for curers had been successfully met in most cases.

In view of the general scarcity of help in the Province, there was some difficulty in meeting the orders for harvesters to go to the Prairies. However, about 1,400 men had been dispatched by the end of the month.

Logging.—Due to labour unrest in pulpwood camps, orders were not being placed to any extent. Once the difficulty was settled it was expected that the demand would be stepped up. One company had opened an office in Quebec City and was paying transportation.

The second group of displaced persons consigned to lumber camps had arrived and a third party was expected early in September.

Mining.—The demand for mine beginners and surface workers persisted in base and precious metal mining with little hope of filling orders.

Manufacturing.—Employers were showing a greater interest in hiring once the annual vacation period was passed and employment officers were expecting a fuller measure of employment during the winter months. Orders for skilled workers were mounting while unplaced applicants were diminishing in numbers.

Material shortages hindered industries dependent upon iron and steel, household appliances being among the most seriously affected. Agricultural implement plants were in great need of more workers as labour turnover was high. Machine tool tradesmen were in firm demand in most areas but semi-skilled workers were not readily placed. Foundry workers continued to be in short supply.

While some furniture plants were slack there had been a marked increase in the demand for skilled workers in Toronto, Kitchener and Stratford.

The textile industry in general and the hosiery plants in particular remained at the top of the labour shortage list, with no sign of appeasement. Shoe manufacturers were confronted with a hide shortage while small leather goods firms reported a slow market and were looking to the fall and Christmas activity to stimulate trade. Raw materials in the rubber industry were more plentiful and the demand for workers steady.

Canning plants were seriously concerned by the shortage of help. Operators at New Toronto, Niagara Falls, Trenton and Belleville, estimated that they needed approximately 2,000 more workers. Special buses to nearby towns and the transference of workers from other areas had been of great help. Swifts Canadian at Toronto was engaged in a labour dispute which started August 27.

Construction.—Residential and industrial construction projects were being pushed to completion although somewhat retarded by the lack of skilled workers and the short supply of structural steel, nails, and plumbing fixtures. The flow of lumber had shown improvement. Also, there was a noticeable increase in the demand for construction labour throughout the region due to the withdrawal of student labour.

Transportation.—The demand for seamen on the Great Lakes was confined largely to replacements.

Prairie Region

Agriculture which was at its seasonal peak, was drawing off essential workers from other industries thus having an adverse effect on general production.

Agriculture.—Grain harvesting was in full swing. Insufficient labour supply during the peak period was seriously hampering progress. Offsetting this factor, however, was the excellent weather which allowed harvesting to proceed without stoppages. As work was finished in one area workers were moved to other points. The general shortage of labour had resulted in an upward revision of wage schedules, some districts reporting that as high as \$8 per day was being offered.

Logging.—Although activities were at a low ebb the demand for workers remained high. It was feared that there may be a scarcity of blacksmiths and qualified cooks when the cutting season begins. New camps were being erected and roads built.

Mining.—Good steady labour and certificated miners were in demand in all areas. This situation, which had existed throughout the year, became more acute as students left to resume their studies. Once harvesting will be completed, it was expected that many miners who had temporarily left would return to the mines. In order to attract workers, coal operators at Blairmore were taking measures to supply living quarters.

Manufacturing.—Saw and planer mills had an adequate labour force although currently affected by the exodus of workers to the farms. Small saw mill operators reported less favourable market conditions, the demand for poplar lumber having fallen off considerably.

Production in pulp and paper mills continued at a high level and absenteeism was on the decline. Some mills, however, were having difficulty in retaining their woodyard crews despite a high wage scale. The lack of suitable housing for married men was a contributing factor to this situation.

The production of construction materials such as brick, tile and sash and door materials was being successfully pushed forward. Heavy labourers were required at most rolling mills in the Winnipeg area, some of which forecast operations on a 24-hour basis for the next year.

Construction.—Work was progressing on residential construction with many units

having been completed. As an indication of the improved flow of materials, homes were being started even at this late date.

Industrial projects were generally behind schedule but contractors were working to have buildings closed in so that activity could be continued on into the winter months.

Highway construction and maintenance work was moving forward although retarded by a shortage of road building materials and operators of heavy machinery.

Skilled carpenters, plasterers and bricklayers were in short supply, but generally speaking, there was a balance of labour and materials available. Skilled carpenters, plasterers and bricklayers had been in greatest demand.

Transportation.—It was reported that approximately 3,000,000 bushels of wheat and 4,000,000 feet of lumber had been moved to Churchill and were ready for overseas shipment.

Extra gang labourers and boilermakers were in great demand by railway companies while steamship operators were placing orders for seamen, especially firemen.

The passenger season on Lake Winnipeg was over but boats had heavy commitments for mine and trading companies.

Pacific Region

Industrial production was forging ahead highlighted by peak activity in agriculture and fishing. General employment was at a high level.

Agriculture.—Labour shortages and wet weather had prolonged haying operations and considerable damage was done to the crop. There was a fair demand for farm and dairy hands but no applicants were available.

Pears and canteloupes were moving in volume from the southern part of the Okanagan Valley and prospects for the peach crops were excellent. Labour demands were easily met in the early part of the season by transient labour but when tree fruits started to mature rapidly towards the end of the period it became difficult to supply immediate needs.

A large bean and pea crop had been successfully harvested in the Delta area. At Chilliwack several thousand pickers were working in the hop fields; more workers were needed but no difficulty was anticipated in obtaining them.

Fishing.—The season's total pack of all varieties of salmon at the end of August showed an increase of 187,512 cases over that of the comparative period in 1946. There was, however, a reduction in the number of

sockeye caught. Markets were already assured for this year's pack. Pilchards were scarce but tunas were being caught in increasing numbers. Halibut landings were slightly higher than last season and prices were favourable. Herring seining and canning was about to begin with no difficulty expected in marketing the total catch.

Logging.—The satisfactory negotiating of the 1947 agreements in the three major forest areas in the Pacific region placed the wage scale higher than in other industries. B.C. forest fire losses were down 20 per cent from last year's due to the lack of prolonged hot spells and the extra precautions taken. Bush labour had been made available through clearance to Edmonton but skilled workers were always readily absorbed.

The Provincial Forestry Branch needed more workers for the extensive reforestation program which had been undertaken. Considerable difficulty was encountered in meeting their needs.

Mining.—Coal mining presented a picture of steady demand for workers at most points. The T'Sable River mine which was showing promise of becoming a major producer, was having trouble in getting workers as roads leading to the mine from nearby towns were in poor condition. Strip mining in the Cranbrook and Princeton areas reported a shortage of surface workers, shovel operators and truckers.

Employment opportunities in base metal mining were increasing as students withdrew.

All major quartz operators were concerned about the shortage of help which was hindering expansion. Gold placer operators were more fortunate and work was expected to continue until freeze up. The Yukon Consolidated workings at Dawson reported that production had increased over the last year, due to the lack of labour disputes. A new large gold washing plant was en route to Quesnel, the sight of a promising new field which it was expected would require a large number of workers in the coming season.

Manufacturing.—Employment at drydocks in the Vancouver and Victoria areas remained high and as requirements decreased at one point the men were readily absorbed at another. Much of the work was repairs on tugs and small commercial crafts. There were noticeable shortages of ship's joiners, shipwrights and welders.

All fruit and vegetable packing and canning plants, with the exception of Swifts Canadian Co., were working at capacity.

Pulp and paper mills were forging ahead despite the limited labour supply. A new pulp mill which was coming into production at Port Alberni was expected to provide permanent employment for 200 workers. Full production was expected to be reached by November 1 when an adequate supply of power would be available.

Construction.—In general, the higher class skills and members of the trowel trades were in constant demand and production was being maintained only by continual transfer of workers from job to job. The new wage scale

for carpenters working on out-of-town jobs should improve the situation in outlying areas.

Residential construction continued to taper off except at Trail and Kimberly where the Consolidated Mining and Smelting Corp. was constructing dwellings for employees.

The new water gas plant of the B.C. Electric Co., had been completed and work was starting on the building of coke ovens and installation of gas mains. It was expected that this would provide hundreds of jobs for

many months to come. Foundation work had started on the celanese plant in the Prince Rupert area. It was expected that at the cessation of the fishing activities, many would turn to work at this project.

Transportation.—The Vancouver area shipping activity had increased considerably resulting in a scarcity of cooks and certified officers for both deep sea and coastal operations.

Hours and Earnings, August, 1947

AVERAGE hourly earnings in the manufacturing industries of Canada were 81·3 cents at August 1, 1947. This figure was half a cent higher than the previous month's, and compared with 70 cents and 69·5 cents at August 1 in 1946 and 1945, respectively.

Average hours worked were 42·4, compared with 42 in the week ending July 1, and 43 in that of August 1, 1946.

Data were received by the Dominion Bureau of Statistics from 6,354 plants which indicated a staff of 780,234 persons paid by the hour, working a total of 33,118,949 hours in the week ending August 1, for which they were paid the sum of \$26,927,150. In the week of July 1, these firms had had 774,805 hourly-rated employees, whose working time was

given as 32,574,510 hours for which they received \$26,321,426.

The weekly wages of the wage-earners for whom data were available at August 1 averaged \$34.47, as compared with \$33.94 in the week of July 1, \$30.10 at August 1, 1946, and \$30.79 at August 1, 1945. Thus the average weekly wages of the hourly-rated wage-earners employed by the co-operating manufacturers showed increases amounting to 14·5 per cent in the 12 months' comparison, and to 12 per cent in the 24 months' comparison.

Hours Worked.—The hours worked by the hourly-rated wage-earners employed by leading manufacturers at August 1 aggregated 33,118,949, a total which was 1·7 per cent

* The averages at these dates were affected by loss of working time at the year-end holidays in the case of January 1, and by the Easter holidays in the case of April 1, 1945, and May 1, 1946.

above that of 32,574,510 reported for the week ending July 1. There were considerable increases in the hours stated as having been worked in the animal and vegetable food, lumber, pulp and paper, textile, beverage, clay, glass and stone, tobacco, petroleum and certain other classes. The trend was downward, however, in the aggregate hours reported by manufacturers of electrical apparatus, chemical and iron and steel products. In most cases, the indicated changes were seasonal in character, frequently being associated with the holiday factor.

The hours reported by plants turning out heavy manufactured goods in the week of August 1 aggregated 16,603,266, a figure exceeding by 0.6 per cent that of 16,507,314 indicated in the July 1 data from the same firms. In the non-durable manufactured goods division, the hours were given as 16,515,683; this was greater by 2.8 per cent than the total of 16,067,196 worked by persons employed in the same plants in the week of July 1. The increase in both categories, but particularly in the light manufacturing division, was due in part to the resumption of operations on a more usual scale in Quebec

following the St. Jean Baptiste holiday which had fallen in the preceding period of observation.

Hourly Earnings.—The weekly earnings of hourly-rated wage-earners reported in manufacturing at August 1 were stated at \$26,927,150. This was greater by 2.3 per cent than the sum of \$26,321,426 disbursed in hourly wages by the same manufacturers in the week of July 1. The respondents classed in the durable manufactured goods division disbursed a total of \$14,567,705 in weekly wages among their hourly-rated personnel; as compared with the sum of \$14,320,776 which they had distributed in the week of July 1, there was an increase of 1.7 per cent. Firms in the non-durable manufactured goods industries reported weekly wages aggregating \$12,359,445, an amount which exceeded by three per cent their July 1 total of \$12,000,650. As already indicated, the payment of higher rates in several industries in the light and the heavy manufacturing industries was a factor contributing to the larger wage payments reported at the date under review, when the longer working time also contributed to the increases. The hourly average

*The industries classed in the durable manufactured industries are indicated by an asterisk.

¹ Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows: June 1, 1947, 169.8; July 1, 1947, 170.6; Aug. 1, 1947, 181.2; Aug. 1, 1946, the index was 135.9. ² Chiefly street and electric railways. ³ For information respecting the sex distribution of the persons in recorded employment, see monthly reports on employment and payrolls.

earnings in manufacturing as a whole showed a further advance, to 81.3 cents, the maximum in the record, which goes back only to November 1, 1944. The previous high figure was that of 80.8 cents indicated at July 1, while at August 1 in 1946 and 1945, the hourly averages were 70 cents and 69.5 cents, respectively. In the last year, the average rate per hour has risen by 16.1 per cent and in the 24 months, by 17 per cent.

The reported hourly earnings in the durable manufactured goods industries averaged 87.7 cents at the date under review, as compared with 86.8 cents at July 1, 1947, 75.8 cents at August 1, 1946, and 76.9 cents at August 1, 1945. In this class, small increases were indicated as compared with July 1 in several branches of the lumber, clay, glass and stone, electrical apparatus, iron and steel and non-ferrous metal industries. The largest rise was in the lumber division as a whole, in which the hourly rate advanced by 1.8 cents in the month, to 74.5 cents at the first of August.

In the production of light manufactured goods, the reported hourly earnings, at 74.8 cents, were slightly higher than at July 1, previously the high figure in the record. The mean at the first of August in 1946 was 64.4 cents, and that in 1945, 60.7 cents. In the 12 months, the increase amounted to 16.1 per cent, and that in the 24 months, to 23.2 per cent. As compared with the July 1 averages, there were advances in a considerable number of groups, notably in rubber, textiles and beverages. There were very general increases as compared with August 1 of last year.

Average Weekly Earnings.—Statistics of man-hours and hourly earnings are not available for all classes of wage-earners, but only for those workers for whom employers keep accurate records of hours worked, such workers being mainly those who are paid by the hour; in general, this restriction results

in the exclusion of salaried personnel. Among the classes of wage-earners for whom satisfactory records of hours worked are frequently not available are piece-workers in some but not all establishments, route-drivers, delivery men, etc. It may be noted that many firms state that the earnings of their wage-earners paid at other than hourly rates exceed those of their hourly-rated personnel; this is particularly the case among piece-workers. In general, however, the wage-earners for whom statistics are given in the present article form important proportions of the total personnel of the co-operating establishments. At August 1, the wage-earners for whom information on man-hours and hourly earnings were available made up 75.3 per cent of the total number of persons of all categories on the payrolls of the manufacturers furnishing monthly statistics of employment and payrolls at the same date; in the heavy manufactured goods division, the proportion was 78.9 per cent, and that in the light manufactured goods division, 72 per cent.

As compared with July 1, 1947, there was a rise of 51 cents in the weekly salaries-and-wages figure in manufacturing as a whole at the first of August as compared with that of 53 cents in the weekly earnings of the reported hourly-rated personnel. In the heavy manufactured goods industries, the indicated weekly salaries-and-wages figure advanced by 57 cents at August 1, when the reported weekly wages were higher by 47 cents than at July 1. In the non-durable manufactured goods division, the average weekly earnings of the persons on salaries and wages were increased by 47 cents in the month, during which the weekly earnings of the hourly-rated staffs of the co-operating establishments rose by 56 cents.

In comparison with August 1 of last year, the latest figures of hourly wages show rather larger percentage increases than were reported

Industrial Division

in the more general figure of salaries and wages. Since August 1, 1945, however, the average weekly salaries and wages in manufacturing have advanced to a rather greater extent than the weekly wages of hourly-rated wage-earners. This is also the case in the heavy manufactured goods industries, where curtailment in premium overtime work for wage-earners has been a factor of considerable weight, while the relaxation of wartime controls on salaries has had a buoyant effect upon the earnings of persons in that category; another factor no doubt is the employment of smaller numbers of salaried workers. In the non-durable manufactured goods division, on the other hand, the average weekly wages of hourly-rated wage-earners showed an increase of 19.3 per cent at August 1, 1947, as compared with the same date in 1945; since then the rise in the combined salaries-and-wages figure has amounted to 18.1 per cent.

Non-Manufacturing Industries

The proportions of wage-earners in the non-manufacturing industries paid by the hour are smaller than in the case of the manufacturing industries, with the result that records of hours worked are frequently not available for such persons. Thus the representation of the non-manufacturing industries in the monthly statistics of man-hours and hourly earnings is smaller than in the manufacturing division.

There was a further increase in employment in the extraction of coal at August 1, when the aggregate hours and earnings were also higher. The average working time advanced from 37.6 hours in the week of July 1 to 39.2 in that of August 1, as compared with 38.9 a year earlier; the latest average hourly rate was \$1.073, rather lower than the July 1 figure of \$1.098 cents, but higher than the mean of \$0.957 indicated at August 1, 1946. The number of wage-earners reported in metallic ore mining was larger than at July 1, and there were also increases in their aggregate hours and wages; the average hours rose from 44.5 in the week of July 1, to 44.8 in that of August 1, when the average earnings stood at \$1.009 per hour, as compared with \$1.001 at July 1. At August 1 in 1946, the mean was 88.4 cents.

Firms in the miscellaneous non-metallic mineral mining group showed an increase of one cent in the hourly average earnings of their hourly-rated wage-earners, bringing the rate to 78.3 cents.

There was a moderate advance in the number of wage-earners reported in the local transportation group, in which the co-operating firms belong largely in the street and electric railway division; the average working time, however, declined by one-fifth of an hour, while the average hourly rate fell by nine-tenths of a cent, to 83.6 cents at August 1, as compared with 71.5 cents at the same date in 1946. The building contractors furnishing statistics indicated the employment of 79,219 hourly-rated wage-earners, a gain of 5.2 per cent over the number they had reported at July 1. The aggregate hours and weekly wages also showed considerable increases; the working time advanced from an average of 38.8 hours in the week of July 1, to 40.7 in that of August 1, when the average hourly rate stood at 90.9 cents, slightly above the rate of 90.7 cents at July 1, also exceeding the August 1, 1946, mean of 82.7 cents. In connection with the rate in building construction, it will be recalled that the industry employs considerable numbers of unskilled and casual workers, as well as many skilled tradesmen at high rates of pay. In highway construction and maintenance work, the reported numbers of wage-earners showed an important increase, accompanied by longer working time, and the payment of larger amounts in wages. The average hours indicated rose from 38.7 in the week of July 1 to 38.9 in that of August 1, as compared with 38.5 hours 12 months previously. The average hourly rate in this industry at August 1 was at 71.8 cents, as compared with the mean of 71 cents at July 1, and 65.8 cents at August 1, 1946. Activity in hotels and restaurants seasonally advanced, there being increases in the reported numbers of hourly-rated wage-earners, in their aggregate hours and their weekly wages. The average hours rose from 43.1 in the week of July 1, to 43.6 in that of August 1, but the average hourly rate fell from 52.3 cents a month earlier, to 51.6 cents in the week of August 1, as compared

with 44.4 cents at August 1, 1946, and 41.1 cents at August 1, 1945. In the laundry and dry-cleaning division, there was a small reduction in the number of hourly-rated wage-earners reported by the co-operating firms;

their average hours declined from 40.8 in the week of July 1, to 40.4 in that of August 1, when the hourly rate was 55 cents, as compared with 54.7 in the week of July 1, 1947, and 48 cents in the week of August 1, 1946.

Labour Income in June, 1947

THE total of wages, salaries and supplementary labour income received by residents of Canada in June has been estimated by the Dominion Bureau of Statistics at \$497 million. This is \$14 million more than the estimate for May and \$76 million or 18 per cent above the estimate for June 1946.

Between June 1, 1946 and June 1, 1947 the number of paid workers employed in Canada increased by about four per cent. This indicates that the average income of wage earners has not increased as much as total labour income. In the same period the cost of living index rose by about 9 per cent, so that the rise in prices to a considerable extent offsets the increase in workers' incomes.

Estimates of labour income include all wages, salaries and supplementary remuneration for employees' service, by months. Salaries and wages include bonuses and commissions and are reckoned before deductions for income tax, employee contributions to unemployment insurance and employee contribu-

tions to other social security schemes. Supplementary labour income consists of all other employers' expenditures in cash or in kind that can be regarded as compensation for the employees' services. Examples of the latter are: employers' contributions to unemployment insurance; clothing and living accommodation or cash allowances for these provided by employers; and other benefits such as discounts and free insurance, etc., accruing to employees by reason of their employment.

An account of the methods used in computing labour income appeared in last month's LABOUR GAZETTE (p. 1262).

Comparison of Six-Month Totals

Total labour income for the first half of 1947 is estimated at \$2,845 million. This is 17 per cent or \$410 million more than labour income in the same period of last year.

More than half the increase occurred in manufacturing and trade, the two groups accounting for \$219 million of the difference of \$410 million. On a relative basis the greatest

increases occurred in logging, water transport and construction, where labour income in the first half of 1947 was from 30 to 40 per cent higher than in the first half of 1946. Agriculture showed a decrease of almost 30 per

cent which was due entirely to a reduction in the number of workers. Wage rates of male farm help, as reported to the Bureau, increased from \$96.27 on May 15, 1946 to \$103.96 on May 15, 1947.

Annual Review of Employment and Payrolls in Canada, 1946

THE Dominion Bureau of Statistics has issued its Annual Review of Employment and Payrolls for 1946. The report deals with the situation in manufacturing, logging, mining, transportation, communications, construction and maintenance, services and trade, and also contains a brief section dealing with the subject of employment in banks and other financial institutions. Employment of women and a review of industrial employment geographically are also discussed.

Employment in Canada as a whole was maintained during 1946 at a relatively high level although there was some falling off from the wartime peak, according to the report. The situation was affected, directly and indirectly, by industrial disputes, which involved many workers for lengthy periods. Scarcity of materials, and in some cases, shortages of skilled labour, continued seriously to hamper reconversion and other activities in certain industries and areas. On the other hand, the pent-up demand for commodities and services at home and abroad constituted a decidedly buoyant influence to counteract the unfavourable effects of slow-downs due to reconversion operations, strikes and shortages of essential materials. As a result of these various factors, the general level of employment showed comparatively little change from month to month from the opening of the year until the summer.

During the period, January 1 to August 1, the monthly indexes of employment were uniformly lower than in the same part of 1945, there being an average decline of 4.2 per cent in the index during these months. In the latter part of 1946, this situation was reversed, and the indexes for the period, September 1 to December 1, averaged 5.2 per cent higher than in the corresponding months of 1945. On the whole, however, the annual index in the eight leading industries showed a falling off of 1.1 per cent from 1945; the loss from 1944 amounted to 5.4 per cent, while as compared with the all-time high in 1943, there was a decline of 5.9 per cent. The level of activity in 1946 nevertheless continued substantially higher than in pre-war years, there being an increase of some 52 per cent over the 1939 index.

The firms participating in the surveys of employment and payrolls during 1946 reported the disbursement of an average of \$57,409,624 in weekly salaries and wages in the eight leading industrial divisions. This would indicate an annual payroll of some \$2,985,300,000 distributed by the co-operating establishments. The firms furnishing data in 1945 had paid a weekly average of \$57,178,954 to their staffs. When adjustment is made for the increase in the number of reporting firms in the year under review, there was a decrease of 0.1 per cent in the disbursements. Based on the June 1, 1941, payrolls as 100 per cent, the index was 142.4 in 1946, as compared with 142.6 in 1945. The highest annual figure in the record of about 6½ years was that of 148.2 in 1944.

A feature of the situation in the first complete post-war year was the marked revival of activity in the non-manufacturing industries, which taken as a whole, had been adversely affected by wartime labour and material shortages. Thus a composite index for the reporting non-manufacturing classes shows an increase of 10.1 per cent in 1946 over 1945, while that in the manufacturing division declined in the same comparison by 8.5 per cent.

Within the manufacturing group, there was a small fractional decline in recorded employment in the production of non-durable manufactured goods, together with a loss of 17 per cent in plants turning out durable manufactured goods. While reconversion to peacetime production in the latter category was obviously a cause of greater dislocation than in the light manufactured goods division, it is also noteworthy that labour-management disagreements in the lumber and metal industries accounted for 53.5 per cent of the all-industries' total of working days lost through disputes during 1946; striking workers in these two branches of the heavy manufactured goods industries made up over 41 per cent of all persons directly involved in industrial disputes in the year under review.

Among the non-manufacturing industries, the most significant increase reported over 1945 was that of 18.8 per cent in construction; in building, the gain amounted to 43 per

1 This division includes the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

cent. Logging, mining, communications, transportation, trade, finance, and the service industries for which data are available (mainly hotels and restaurants and laundries and dry-cleaning establishments) showed generally heightened activity as compared with 1945 and immediately preceding years.

The events of the year under review had an adverse effect upon the employment of women. In 1945, statistics on sex distribution were collected semi-annually, at April 1 and October 1, while from January, 1946, the record was established on a monthly basis. A comparison of the situation at October 1, in the two years shows at that date in 1946 an increase of about 8.7 per cent in recorded employment for men accompanied by a decline of a little more than three per cent among women workers in the covered indus-

tries. The general index of October 1, 1946, was higher by 5.6 per cent than that indicated 12 months earlier.

A brief review of the situation, geographically, shows a lower level of industrial employment in 1946 than in 1945 in Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia, the losses ranging from that of 0.3 per cent in Ontario, to 4.9 per cent in British Columbia and 6.3 per cent in Nova Scotia. In Prince Edward Island and the three Prairie Provinces, the trends in the year under review were upward. In the latter group of provinces, industrial disputes were not so numerous nor so serious as in those first mentioned. Manufacturing operations in all five economic areas diminished, but equally generally, the non-manufacturing industries showed improvement over 1945.

TABLE II.—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS. (1926=100).

NOTE: The relative weight shows the proportion of employees reported in the indicated province or area, to the total number of employees reported in Canada by the firms making returns at Dec. 1, 1946.

Wage Rates, Hours and Working Conditions in the Motor Vehicle Parts and Accessories, and Agricultural Implements Industries

AVERAGE wage rates in the Agricultural Implements Industry and in the Motor Vehicle Parts and Accessories Industry, in common with the movement in other industries, increased substantially in the period 1939 to 1946. By 1946 the index for the Agricultural Implements Industry, based on 1939 average rates, had risen to 178.5 compared with a figure of 162.4 in the Motor Vehicle Parts and Accessories Industry. Both showed particularly large gains in 1942 and 1943 prior to the initiation of wage control and again in 1946 when these controls were being relaxed.

In the 1946 survey of "Wage Rates and Hours of Labour in Canada"¹, employers were asked to report their straight-time wage or salary rates or the average straight-time earnings for workers on piecework for the last pay period preceding October 1 as well as the total number of workers in each establishment, including both plant and office staffs. Information was also obtained on certain other conditions of work², such as hours worked, overtime, vacations with pay, sick leave, Sunday work, and the number of workers under collective agreement in each establishment.

Motor Vehicle Parts and Accessories Industry

The 1946 index of wage rates in this industry, based on 1939 rates as 100, was 162.4, approximately ten per cent greater than in 1945. This annual increase is not as large, however, as that recorded over both 1941 and 1942 as noted in the following indices based on 1939 wage rates:

Year	Index
1939	100.0
1940	103.4
1941	110.2
1942	127.0
1943	145.7
1944	147.1
1945	148.2
1946	162.4

Returns from forty-eight establishments in Ontario have been analysed as representative of the industry in Canada. These establishments reported 11,800 workers in their employ at the time of the 1946 survey, of which

In the tables on wage rates the averages shown are for selected representative occupations in each industry. They do not include the value of any allowances to employees, such as free transportation, group insurance, sick benefits or other welfare plans. The predominant ranges of rates include approximately the middle 80 per cent of the workers in each occupation. The purpose of this is to exclude extremely high and low rates and at the same time to show the ranges between which the great majority of the workers are located. The averages, however, include all the workers in the occupation.

¹ Comparable information on the Lumber and Lumber Products Industries was published in the September issue of the *LABOUR GAZETTE* (p. 1374); on the Rubber Products and Motor Vehicle Industries in the August issue (p. 1164); on the Pulp and Paper Products Industry and the Brewery Products Industry in the July issue (p. 988); and on the Construction and Steam Railways Industries in the June issue (p. 890).

² Information on provincial legislation pertaining to workers in industry may be found in an annual summary published by the Legislation Branch of the Department of Labour entitled, "Provincial Standards Concerning Child Labour, Annual Holidays, Hours of Work, Minimum Wages and Workmen's Compensation."

slightly more than 17 per cent were women workers. Forty-one of the establishments, employing up to 300 workers each, accounted for nearly 5,000 workers or 43 per cent of the total number covered in this analysis while the two largest establishments, with a total of 3,900 workers, represented 33 per cent of the employment.

Collective Agreements.—Collective agreements were reported in returns from 30 establishments covering 9,300 workers or 80 per cent of the total employment within the industry.

Wage Rates, Table I.—Average wage rates in selected occupations in the industry are given in Table I, showing rates for both 1945 and 1946 with the range of rates in each occupation in 1946. Increases of from three to ten cents per hour in the average wage rates in the various occupations were recorded in 1946 over those in 1945.

Standard Hours of Work, Table II.—Forty-five per cent of the plant workers in this industry were on a normal 45-hour week in 1946, 25 per cent were working 48 hours and four establishments on a 40-hour week included 16 per cent of the workers.

One-half of the establishments, employing 67 per cent of the workers in the industry, reported a five-day week varying from 40 to 48 hours. The most common schedule was a 45-

hour week of nine hours per day. Four establishments reported a 40-hour week of eight hours per day and another four a standard week of 42½ hours.

Twelve establishments reported a varying schedule of 48 hours on the basis of the six-day week, while another seven reported a 44-hour week.

The only Sunday employment reported in this industry during the survey period was ap-

proximately 100 workers engaged solely on maintenance work in 21 establishments.

Overtime, Table III.—Overtime work after daily or weekly hours in 1946 was paid at the rate of time and one-half in all but seven of the 48 establishments from which returns were analysed. This was also the predominant rate for Sunday and holiday work, although one-quarter of the firms gave no information on overtime rates for these same work periods.

Vacations with Pay, Table IV.—Of the returns analysed, ten reported provision for paid vacations of less than one week for service of no specified period or less than one year. Of those not stating the length of service required or vacation given, four reported payment of two per cent of annual earnings, while another gave 2½ per cent. Although another establishment reported giving one week after six months, payment was only at the rate of 2 per cent of annual earnings. Two establishments provided for one day per month after one

month of service while another gave two per cent of annual earnings after one month. In one other case, the establishment reported permitting one-half day per month after three months of service.

More than one-half the establishments had a maximum vacation of one week, mainly after one year of service, which is in accordance with provincial legislation. Sixteen, however, reported giving two weeks after five years and two granted similar vacation period after ten years.

Sick Leave with Pay.—Seventeen of the establishments reported some provision for sick leave with pay, seven reporting group insurance benefits. Two establishments allowed six days per year while another two reported giving half pay, one of these adding that this was allowed only if the employee were absent for more than one week. Six establishments provided payment for sick leave in the case of salaried or office employees only, although

(2) One establishment also reported three weeks after 25 years of service.

one of these reported that their factory workers had sickness and accident benefits.

Production or Incentive Bonus.—Seven of the establishments in this industry reported a production or incentive bonus in 1946. They paid a guaranteed base rate in all cases and standards of efficiency were established in most cases on the basis of an individual operation.

Shift Work.—Two-shift operations were the most common type of shift work in this industry. Sixteen establishments, employing a total staff of over 5,000, reported some 600 workers on this second shift. Eight of these plants reported no wage differential for second shift

work while five paid five cents per hour. Of the remaining three, one paid eight cents per hour, another provided a differential of five per cent and the other paid for a half-hour lunch period.

Three plants on three-shift operations employed 133 men on second and 37 men on third shift. One of these establishments reported a wage differential of five cents per hour, one paid for a half-hour lunch period and the other reported no wage differential. The above shift information applies to work performed other than by maintenance and power crews.

Agricultural Implements

The effect of the lifting of wage controls is indicated in this industry where a 13·3 per cent increase in 1946 was recorded over 1945 rates. The annual changes since the beginning of the war are shown in the following table which gives yearly index numbers of wage rates based on the 1939 rates as 100:—

Year	Index
1939	100·0
1940	105·1
1941	117·6
1942	136·7
1943	151·9
1944	155·8
1945	157·5
1946	178·5

The industry is located mainly in Ontario with employment in Quebec plants comparatively small. The returns received from these two provinces have been used in the present analysis. Some 11,600 workers were employed during the 1946 pay period reported, of which only four per cent were female workers engaged mainly on clerical work.

The following table gives the regional distribution of establishments and employees used in the present analysis:—

	Canada	Quebec	Ontario
Total Establishments.	26	4	22
Male	11,173	261	10,912
Employees:			
Female	384	5	379
Total	11,557	266	11,291

Fifteen establishments, employing less than 100 workers each, accounted for only six per cent of the total employment while four large establishments, employing between 1,300

and 2,800 workers per plant, included 68 per cent of the employees in the industry.

The 1945 Census of Industry report of the Dominion Bureau of Statistics shows a total of 30 establishments in Ontario and Quebec, covering an average of 13,300 workers in that year.

Collective Agreements.—Eleven of the 26 establishments reported collective agreements covering some 9,600 workers or 82 per cent of the total employment in the industry. Employees of two of the four Quebec establishments and nine in Ontario were included.

Wage Rates, Table I.—Average hourly wage rates for selected occupations in this industry in 1945 and 1946 are shown in Table I. These averages are calculated from all rates reported for these particular occupations and are weighted by the number of workers at each rate. In one-half the occupations shown, increases in the average rates in 1946 over 1945 ranged between 10 and 14 cents per hour.

Standard Hours of Work, Table II.—One-half the establishments, all in Ontario and employing 93 per cent of the total workers, were on a standard five-day week. Ten of these establishments, of which four employed 68 per cent of the total workers, were on a 45-hour week, while the remaining three worked a 48-hour week.

The six-day standard week varied from an 8-hour day Monday to Friday with four hours on Saturday to a ten-hour day Monday to Saturday, inclusive. Only two establishments, employing a total of 130 men during the survey period, worked a full six-day week of nine and ten hours respectively.

Sunday work was confined to maintenance and power crews, averaging three workers to a plant in nine plants.

Overtime Rates, Table III.—Time and one-half, the predominant rate for work after daily hours in this industry, was reported by eight plants in which a total of 7,800 workers were employed. Straight time rates after daily hours were reported by seven plants in which total employment was 2,900. When overtime was paid only after weekly hours had been worked, the rate was time and one-half in eight plants and time and one-quarter

in one. For any overtime required on Sundays and holidays the predominant rate was time and one-half. A number of plants did not give overtime information, particularly on Sunday and holiday work.

Vacations with Pay, Table IV.—All the establishments complied with the minimum provincial legislative requirements of one week paid vacation after one year of service, one

establishment giving a full week with pay after only three months of service.

Four plants reported granting vacations with pay of less than one week for service under one year. Of these, one reported giving four and one-half days after ten months, another one-half day per month and the remaining two stated that although they granted one full week of vacation after nine months, payment was only at the rate of two per cent of gross annual earnings.

In sixteen cases, the maximum vacation did not exceed one week but in the remaining ten the maximum was two weeks after either five or ten years. Two of these establishments also granted three weeks after twenty-five years of service with their respective companies.

Sick Leave with Pay.—Three of the 26 establishments reported provision for sick leave with pay, two stating they gave it

*Two establishments also reported giving three weeks after 25 years.

only to salaried employees, while the other reported a group insurance scheme.

Production or Incentive Bonus.—Two Ontario plants reported plans which provided bonuses for production over a computed normal efficiency. Both were based on a standard in minutes for each job.

Shift Work.—Six Ontario plants reported 750 production workers on the second shift

of a two-shift operation. Three of these plants reported a wage differential of five cents per hour in each case which would be paid to 230 workers.

One of the six establishments also reported 200 workers on the second and 140 on the third shift of a three-shift operation, paying a five-cent wage differential for work on the third shift only.

Recruitment and Training of Nurses in Great Britain

(Continued from page 1423)

The student nurse in general training spends, on the average, a third of her first year, a quarter of her second year, and a sixth of her third year in domestic work. Taking the three years together, some 1,500 hours, or rather less than a quarter of the time, is now taken up with duties of a domestic kind.

It is proposed that the two-year training period should be based on a five-day, 40-hour week and a three-shift system, with six weeks' annual holiday. Eighteen months should be devoted to studies of a general nature, including more attention to preventive medicine, and the remaining six months should be given over to specialization in a chosen field. Only provisional registration would be permitted at the end of two years, with a further year under supervision before final registration.

In order that nurses-in-training may have student status, training schools must have an adequate nursing and training staff, and teachers trained in modern educational methods. Courses should suit student needs rather than staffing requirements. The financing of nurses' training should be independent of hospital finance. Students should receive free tuition, with board, residence, and an allowance to cover personal expenses.

To introduce a three-shift system and student status would require, it is estimated,

from 22,000 to 24,000 additional nurses and 14,000 orderlies. It is thought that this number of nurses might be made available in five years by reduction of wastage. The Working Party advocates the greater use of part-time nurses, male nurses and orderlies, and the removal of restrictions on the employment of married nurses.

The Working Party estimates that, in all, not less than between 120,000 and 125,000 persons would be required to effect the changes recommended, but it does not attempt to determine what nursing strength will be necessary for the expansion of the National Health Service. The Chairman has added a note commenting on general manpower trends in which he points out that the number of working women is expected to drop by 350,000 by 1951.

In view of the possibility of a lack of sufficient recruits in future years, the Working Party expresses the opinion that "to some extent the long-term solution of staffing the nursing service lies in reducing the burden of sickness". It emphasizes the importance of "health nursing" as distinct from "sick nursing" and indicates that

the problem of sickness can be attacked quite as much by reducing the number of patients as by increasing the number of nurses.

Strikes and Lockouts

Strikes and Lockouts in Canada during September, 1947

DURING September, 1947, there was a sharp increase in strike activity in Canada as compared with the previous month but the resulting time loss was substantially below that recorded for September, 1946. In September, 1947, the strike of meat packing plant workers, which commenced on August 27, 1947, and has extended across Canada, was

*Preliminary figures.

‡ Strikes un-terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

responsible for about 63 per cent of the workers involved in all strikes and more than 72 per cent of the total time loss. Preliminary figures for September, 1947, show 41 strikes and lockouts in existence, involving 19,879 workers, with a time loss of 276,859 man-working days, as compared with 36 strikes in August, 1947, with 7,184 workers involved and a time loss of 52,314 days. In September, 1946, there were 37 strikes, involving 33,451 workers, with a time loss of 657,714 days.

For the first nine months of 1947 preliminary figures show a total of 171 strikes, involving 58,025 workers, with a time loss of 1,855,463 man-working days. For the same period last year there were 198 strikes, with 129,453 workers involved and a time loss of 4,067,064 days.

Of the 41 strikes recorded for September, seven were settled in favour of the workers,

seven in favour of the employer, three were compromise settlements, one was partially successful, and five were indefinite in result, work being resumed pending final settlement. At the end of the month 18 were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., Edmonton, Alta., and Vancouver, B.C., which commenced on May 30, 1946, are still continuing. A strike of food products factory workers at Vancouver, B.C., which commenced on March 28, 1947, is considered to have lapsed.

(3) 123 indirectly affected; (4) 177 indirectly affected; (5) 700 indirectly affected; (6) 80 indirectly affected.

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing up to date that given in the March, 1947, issue in the review "Strikes and Lockouts in Canada and Other Countries". The latter includes a table summarizing the principal statistics as to strikes and lockouts since 1919 in the countries for which such figures are available. Statistics given in the annual review and in this article are taken from the government publications of the countries concerned.

Great Britain and Northern Ireland

The *British Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in July, 1947, was 87 and 18 were still in progress from the previous month, making a total of 105 during the month. In all stoppages of work in progress in the period there were 52,400 workers involved and a time loss of 167,000 working days was caused.

Of the 87 stoppages which began during July, six arose out of demands for advances in wages; 34 over wage questions; seven on questions as to working hours; eight on questions respecting the employment of particular classes or persons; 30 on the questions respecting working arrangements; and two were on questions of trade union principle.

New Zealand

Figures for the first quarter in the year 1947, show 39 strikes involving 9,161 workers with a time loss of 23,432 working-days.

Prices and Price Control

Further Measures of Decontrol

ON September 14, 1947, the Acting Minister of Finance, the Rt. Hon. L. S. St. Laurent, announced an extensive measure of decontrol which became effective September 15, with the lifting of price ceilings on the majority of goods and services remaining under control. At the same time all subsidies on these decontrolled items were withdrawn and most of the supply and distribution controls respecting them were likewise terminated.

The action of September 15 reduced the list of articles still under the price ceiling to a very small number of key or very scarce items. The principal commodities were sugar, molasses, dried raisins, currants and prunes, meat and meat products except poultry, wheat, feed grains (whether whole or ground), the principal oil-bearing materials (flaxseed, sunflower seeds and rapeseed), the more important fats and oils except corn oil and olive oil, soaps, primary iron and steel products, tin and alloys containing more than 95 per cent tin and used bags and bagging material.

Among services, price control was retained on the supplying of meals with sleeping accommodation for a combined charge (except when supplied by employers to employees), on manufacturing processes performed on a custom or commission basis and entering into the production of goods still under price control and on custom or commission packing charges for goods still under control.

In addition, rent and eviction controls remained in effect, sugar rationing was maintained, the allocation of woodpulp, paperboard and waste paper to the domestic market was continued and export controls were retained on various commodities.

The goods on which ceiling prices were removed at this time included flour and meal, bread, prepared cereal products, rice, barley, corn and corn products, beans, peas, canned pork and beans, jams containing strawberries or raspberries, cotton, jute and sisal fibres and yarns, all remaining articles of clothing (mostly cotton), cotton household furnishings, textile containers and packaging materials, hides, skins and leather, woodpulp, household heating equipment, farm machinery and

equipment, softwood lumber, veneers and plywoods, millwork, all remaining building products, cast iron soil pipe and fittings, nails, wire and fencing. Several services were also decontrolled including warehousing, storage, transportation and related operations such as loading and hauling.

With the release of these items from price control, subsidy payments on them were discontinued. One of the most important of these was the drawback which since 1942 had been paid to maintain the price of wheat to millers and other processors at the basic period level of 77½ cents per bushel, basis No. 1 Northern in store at Fort William. (This price compared with a current ceiling price of \$1.55 per bushel.) Other major subsidies cancelled at this time were those on raw cotton and imported cotton goods. Imported cattlehides, sheepskins and goatskins became ineligible for further subsidy and payments on imported corn for processing and on soya beans for the manufacture of soya bean oil were also terminated.

Various supply and distribution regulations had been associated with price control. Most of these were removed concurrently with the lifting of price ceilings on the commodities affected. Controls withdrawn at this time included restrictions on the quantity of flour which could be milled or processed for domestic consumption, limitations on packs of canned beans, requirements respecting labelling and price-tagging, standardization regulations on packaging, restrictions on the weights and types of book, writing and specialty papers, and on the qualities and varieties of other paper products, restrictions on the number and varieties of bakery products and the prohibition of sliced bread. The manufacture and use of bread wrap continued to be limited to one shade of buff until such time as the white sulphite wrap would be generally available.

In his announcement of September 14, the Acting Minister of Finance stated with reference to commodities still under the price ceiling, that decontrol of these items would proceed in accordance with the general criterion of actual and prospective supplies being sufficient to offer protection against excessive and

disorderly price advances. At the same time he emphasized that rent and eviction controls could be expected to remain after surviving commodity controls had disappeared.

The Acting Minister went on to say that the Wartime Prices and Trade Board had been directed by the Government to keep a careful check of prices of decontrolled items and retained the power to reimpose ceiling prices in cases where unjustified price advances occurred. He also directed attention to the fact that the Wartime Prices and Trade Regulations provide that "no person shall sell or offer for sale or supply any goods or services at a price which is higher than is reasonable and just".

The decontrol undertaken at this time constituted a long step toward the complete withdrawal of wartime stabilization controls. While it was recognized that the readjustment to a free price structure would entail difficulties, these were largely inescapable in the light of the permanent nature of many cost increases and of the substantial gap between the Canadian and external price levels.

In regard to the pace of decontrol, the Hon. Colin Gibson, Secretary of State, in a radio address on September 24, 1947, said

that price and related controls were emergency measures designed to meet the peculiar problems of wartime and the transitional period. Discussing the 'principles' which had guided the Government in its decontrol program he stated: "It was one thing for the Canadian Government, under the stress of a world war in which civilization itself was at stake, to bring the entire economy of the country under rigid control. But it is quite another thing to continue these controls long after hostilities have ceased."

The problem of the emergency nature of controls had two aspects. In the first place Government policy was opposed to "a controlled and regimented economy" and did not wish to perpetuate in peacetime the type of controls which were necessary in wartime. In the second place, the power to control prices was within the jurisdiction of the provinces under the British North America Act and only in a national emergency could the Federal Government secure authority in this field. Mr. Gibson pointed out in his address that the Courts, after the last war, held that analogous legislation passed at that time was beyond the jurisdiction of the Federal Parliament, and was therefore void.

Prices, Retail and Wholesale, in Canada, September, 1947

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics cost-of-living index rose to a new post-war peak of 139.4 on September 2, 1947, for a gain of 2.8 points during the month. It was the highest point touched by the index since February, 1921. Five groups registered advances led by an increase of 6.5 points to 152.0 for the clothing series where firmer prices for men's and women's wear were the principal supporting factors. Substantially higher quotations for butter, eggs, meats, tea, coffee, lemons and oranges outweighed weakness in potatoes to move the food series up 4.7 points to 165.3, while the home furnishings and services group rose 3.7 points to 147.4 due to further advances for furniture, floor coverings and home furnishings. An increase of 2.5 points to 121.1 in the fuel and light series reflected firmer coal and coke quotations while the miscellaneous group moved up 0.3 to 117.5 due to higher prices for items included in the health and personal care subsections. Rentals were unchanged at 117.8.

Cost of Living in Eight Cities

Cost-of-living indexes for eight regional cities, on the base August 1939=100, all moved higher in September due to advances for foods, clothing, home furnishings and services, fuel and light and miscellaneous items. Between August 1 and September 2, 1947, the composite index for Montreal rose 3.7 points to 142.6 followed by the Vancouver series up 2.6 points to 138.2; Saint John 2.5 to 137.4; Toronto 2.3 to 137.3; Winnipeg 2.1 to 134.1; Saskatoon 2.0 to 140.6; Halifax 1.9 to 137.0 and Edmonton 1.8 to 135.8.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada, at the date under review.

The prices of the staple food items included in the table are all used in the calculation

(Continued on page 1556)

(a) The basis of these figures is the record of rents collected in the 1941 census of housing. The movement since then has been determined from reports from real estate agents, the census averages being adjusted in accordance with the changes indicated by these reports.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

(a) First of month. (b) Middle of month. (c) Last week of month. (d) Quarterly. (e) New wartime price series on base December 1942=1000, computed quarterly beginning March, 1943. (f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Revised. (j) From August, 1945, "Consumers Price Index for Moderate-Income Families in Large Cities". (k) Old series dropped, June 17, 1947=203; new series "Index of Retail Prices" base June 17, 1947=100.

of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores, although these are included in the calculation of the index, since the movement of chain store prices agrees closely with the movement of independent store prices.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a \$4 spread centred around each city average.

Table III is designed to show the variation in the retail price of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is included in Table I.

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between \$600 and \$2,800 in 1938. The average expendi-

ture was \$1,413.90 divided as follows: food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.59; clothing (11.7 per cent), \$165.80; home furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not directly represented in the index brought the total family living expenditure to \$1,453.80.

Wholesale Prices, August, 1947

The average level of wholesale prices moved up 1.7 points between July and August, 1947, to an index level of 130.8 (1926-100). Seven of the eight main groups were higher, led by an advance of 2.9 points to 117.3 for the non-metallic minerals series. Higher prices for imported coal, kerosene, salt and building stone supported the increase in this series. A gain of 2.2 points to 131.6 for animal products reflected strength in butter, eggs and halibut which outweighed weakness in live stock and fowl. Textile products advanced 1.9 to 134.1 due to strength in raw wool and woollen cloth. Iron products rose 1.8 to 136.8 due to increases in pig iron, steel plate and steel sheet quotations. Advances for flax, cocoa beans, coffee beans, tea, oranges and lemons outweighed weakness for potatoes, rye and onions to move the vegetable products series up 1.5 to 115.0, while higher prices for hardwood lumber and cedar shingles were responsible for a gain of 0.8 to 165.8 for wood products. Non-ferrous metals rose 0.5 to 133.0 due to an increase in the price of silver. Chemicals and allied products recorded the only decline, a drop of 0.4 to 110.4, reflecting weakness in glycerine, shellac and tartaric acid. These overbalanced a stronger tone for calcium carbide, creosote oil, cyanamid and ammonium nitrate.

Canadian farm product prices at wholesale weakened fractionally between July and August from 120.1 to 120.0. Lower quotations for field products were responsible, a drop of 0.3 to 106.3 in this series reflecting lower prices for potatoes, rye and onions. Flax and hay were moderately stronger in this section. In the animal products group firmer egg quotations outweighed an easier tone for live stock and fowl to advance the index 0.1 to 142.8.

Publications Received in Library of Department of Labour, Ottawa, Quarter Ending September, 1947

THE publications listed below are not for sale by the Department of Labour, but may be obtained on loan, free of charge, upon application to the Librarian, Department of Labour, Ottawa. Inquiries with respect to purchases should be directed to the respective publishers.

Settlement of dispute over vacations with pay for railway employees

A threatened strike of employees of the major Canadian railways has been averted by the completion of an agreement with respect to paid vacations.

Involved in the dispute were the Canadian National Railways and Canadian Pacific Railway Company, their jointly and separately owned subsidiaries and ancillaries, and Pacific Great Eastern Railway; Algoma Central & Hudson Bay Railway; Toronto, Hamilton & Buffalo Railway; Ontario Northland Railway; Sydney & Louisburg Railway; and Essex Terminal Railway and their employees who are members of the Brotherhood of Locomotive Engineers; Brotherhood of Locomotive Firemen & Enginemen; Order of Railway Conductors; Brotherhood of Maintenance of Way Employees; Brotherhood of Railway Signalmen of America; Canadian Pacific Railway System Federation No. 125 (Shop Crafts); Canadian National Railway System Federation No. 11; Division No. 4, Railway Employees' Department (AFL); Canadian Brotherhood of Railway Employees & Other Transport Workers; Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees; Hotel & Restaurant Employees' International Alliance of Bartenders' International League of America; International Brotherhood of Firemen & Oilers, Steam Plant Employees, Roundhouse & Railway Shop Labourers; Brotherhood of Express Em-

ployees; International Brotherhood of Electrical Workers; and International Brotherhood of Blacksmiths, Drop Forgers & Helpers.

The unions had requested that all employees be granted fourteen days' vacation with pay each year, exclusive of legal holidays, effective during the year 1947. A Conciliation Board established by the Minister of Labour to deal with the question delivered a unanimous report (L.G., July, 1947, p. 961) recommending that employees with one year's service receive six days' vacation with pay, those with three years' service to receive nine days, and those with five years' service to receive twelve days. The recommendation of the Board was accepted by the employees but was rejected by the railways on the ground of financial inability. The employees' representatives thereupon reverted to their original request for fourteen days' paid vacation annually and proceeded to conduct a strike vote among the employees concerned.

On October 20 the employees' representatives notified the management of the railways that the employees had voted to go on strike in support of their request and November 3 was set as the date of commencement of the strike.

Representatives of the employers and employees were invited to confer jointly with the Minister of Labour in Ottawa on October 22, but the parties advised the Minister that they would enter into further direct negotiations before requesting the Minister's assistance.

As a result of the further negotiations, the parties arrived at a settlement of the dispute which was reduced to writing on October 25 in the following terms:—

The principle that employees with one year's service shall be entitled to six (6) days' vacation with pay, that those of three (3) years' service shall be entitled to nine (9) days and those of five (5) years to twelve (12) days is accepted as the basis for establishing vacation agreements.

Such principle shall be implemented by applying the conditions contained in the various vacation agreements in such manner as will be consistent with this basis. The necessary modifications of existing agreements or memoranda for this purpose shall be made by further negotiations between the various organizations and the Railways.

The principles so agreed to will be adapted so as to recognize regular seasonal employees.

Existing more favourable practices with respect to vacations with pay shall not be disturbed.

Commenting on the settlement, the Minister of Labour stated:—"I really never expected that there would be a strike in our railways. For years I have been intimately acquainted with leaders of the railway organizations and the officers of the companies, and I never lost hope that an amicable settlement of the differences would be reached. A national tie-up of our railway transportation systems would have been disastrous to this country, not only because of what it would mean to our domestic economy, but also because of the adverse effect it would have on shipments of vitally needed materials to Great Britain. I knew very well that in the minds of the leaders of both sides there was a clear understanding of this situation. I always have had a great deal of admiration for the common sense which has actuated both the leaders of the employees' organizations and the railway companies. Therefore, I am not surprised that a friendly settlement has been reached. This is what I regard as collective bargaining at its very best."

Arrival of domestic workers from displaced persons camps

During October, 416 domestic workers arrived in Canada from displaced persons camps in Europe, as part of the immigration movement under which the admission of 20,000 displaced persons, including 3,000 domestic workers, has been authorized by the Government (L.G., Oct. 1947, p. 1407).

On October 20, the Hon. Humphrey Mitchell, Minister of Labour, stated that reports on the suitability of these women as employees have been most favourable. The Minister said that those to whom these new Canadians have

been assigned speak highly of their willingness, adaptability and general attitude towards their new positions, although there have been some obstacles to overcome arising out of language difficulties and inexperience in certain aspects of their work.

Of the first 416 domestic workers who have arrived, 385 have been assigned to positions in institutions in urgent need of more help. Only 31 have been assigned to homes.

Distribution to institutions by provinces has been as follows: Manitoba, 190; Ontario, 108; Quebec, 65; Alberta, 10; New Brunswick, 7; and Prince Edward Island, 5.

The numbers of institutions which have been assisted by these new workers in each province are as follows: P.E.I., 1; New Brunswick, 3; Quebec, 6; Ontario, 17; Manitoba, 11; and Alberta, 1.

In working out placement details the Labour Department sought and obtained the assistance of the National Council of the Y.M.C.A. and the Catholic Women's League.

In each city to which girls are sent these women's organizations have undertaken to act on committees through which arrangements will be made to make available to the girls the local social and recreational facilities. Educational groups will be organized to give the girls assistance in learning English or French and facts about the country of their adoption.

In applying to come to Canada the girls agreed to remain in domestic work for at least one year and are to be paid the prevailing rate of wages depending upon knowledge and ability.

Employment and industrial statistics

The accompanying table contains the latest available statistics reflecting industrial conditions in Canada. Figures are shown for certain months in the current year as compared with the corresponding period in 1946.

Available indicators continued to reflect a high level of industrial activity. Employment and average weekly earnings were at the highest levels yet recorded. The dollar value of foreign trade for the first nine months of 1947 was at record levels. Railway traffic as indicated by car loadings was also heavy. Wholesale prices and the cost of living continued upward but were still somewhat below the record levels of 1920.

Foreign trade of Canada reached record proportions during the first nine months of this year, being valued at \$3,927,500,000 compared with \$3,043,900,000 in the same period of 1946, an increase of 29 per cent. The previous high for the nine-month period was registered in

STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

NOTE.—Many of the statistical data in this table, with an analysis, are included in the *Monthly Review of Business Statistics* issued by the Dominion Bureau of Statistics.

¹ Base 1926=100. ² Base, June, 1941=100. ³ Base, 1935-1939=100. ⁴ Revised for the years 1935 to present and available in the *Monthly Review of Business Statistics* for May, 1947. ⁵ Figures are for four-week periods.

* Factory shipments.

1944 at \$3,907,000,000. Domestic exports in the first nine months of this year as compared with the corresponding period in 1946 increased 20.5 per cent while the value of imports rose 39 per cent. In the nine months, the balance of merchandise trade with all countries was favourable to Canada to the extent of \$135,000,000 compared with \$322,300,000 in the same period of 1946, and the pre-war five-year average of \$132,200,000.

Employment and Earnings—The index of industrial employment, based on the 1926 average as 100, was 192.9 at September 1.

Employment as indicated by this index during the last two months was at the highest level in the record, exceeding the previous maximum of 190.5 at December 1, 1943.

Within the manufacturing division the general changes as compared with the previous month were rather slight although activity in manufacturing generally was greater than at September 1 in either 1946 or 1945. Declines in the industries engaged mainly in war work produced a falling-off in the group as a whole as compared with the later war years but other branches of manufacturing reported a higher level of employment at the date under review, than at the beginning of any preceding September. Upward movements also occurred in construction and maintenance and trade while declines were indicated in logging, mining, communications, transportation and laundries and dry-cleaning establishments.

Payrolls distributed at September 1 by reporting firms increased 7 per cent while the increase in employment was 2 per cent. The weekly aggregate of salaries and wages was \$73,084,471 as compared with \$72,552,687 at the first of August. The weekly average per employee at September 1 was \$36.74 as compared with \$36.53 at the beginning of August, and \$32.72 at September 1, 1946. The latest per capita figure is the highest in the record of more than 6 years. As compared with September 1, 1946, there was an increase of 9.9 per cent in the general index of employment in eight leading industries, of 23.6 per cent in the index of aggregate payrolls, and of 12.3 per cent in per capita weekly earnings.

Prices—The general index of wholesale prices, based on the 1926 average as 100, rose three points from 130.8 in August to 133.8 in September. All the eight component sub-groups showed increases. The largest occurred in vegetable products, the index of which rose 7.1 points, from 115.0 to 122.1, reflecting increased prices for rye, flour, mill feeds, linseed oil, and corn syrup. Wholesale price decreases of potatoes, onions, and automobile tires were

insufficient to balance the increases. An increase of 4.3 points was indicated in the index of animal products which rose from 131.6 in August to 135.9 in September. Higher wholesale prices for bacon, ham, butter, and leather slightly offset by a decrease in the price of eggs were reflected in this change. Other wholesale price increases ranged from 0.1 for textile products to 2.2 for chemical products. The index of producers' goods rose from 131.4 in August to 135.0 in September, while the index of consumers' goods advanced from 118.9 to 121.6. The index of Canadian farm products rose from 120.0 to 120.4.

The cost-of-living index, based on average prices for the years 1935 to 1939 as 100, rose a further 2.8 points to 142.2 between September 2 and October 1, 1947. The increase continued to reflect price advances associated with the removal of subsidy payments and price control. The rise in the index since October last year was 15.4 points and since April this year, 11.6 points. The advance in the general index since August, 1939, was 41.1 per cent.

The food group rose 6.0 points and accounted for two-thirds of the over-all change. Principal increases were registered for bread, flour, butter, bacon, and fresh pork. Meats were twice their prewar prices.

Homefurnishings and services rose 2.5 points, reflecting higher laundry rates coupled with further increases in the prices of furniture, floor coverings, sheets and towels. An advance of 2.2 points to 154.2 in the clothing index was due to increases throughout the entire list of items. The rental index moved up 2.1 to 119.9. Higher prices for coal and coke, concentrated mainly in the Maritimes and Ontario, moved the fuel and light index up 0.8 points to 121.9, while the miscellaneous items index advanced 0.1 to 117.6.

Geographical distribution of professional openings in Canada

In connection with its survey of professional openings in Canada (L.G. Oct., 1947, p. 1419), the Bureau of Technical Personnel recently reported on the geographical factors affecting

the question.

It was found in the survey that cumulative supply of professional workers was likely to lag behind cumulative demand until at least 1949 in practically all types of activity. "This situation," according to the Bureau's latest report, "has led many employers to institute definite plans of undergraduate employment so that their problem of selecting and securing graduating students will, to some extent, be solved in advance . . .

"On several occasions, however, those conducting the field operations of the survey have noted suggestions that certain needs of a regional, provincial, or local nature are expected to be met from some predetermined source of supply. This natural attitude on the part of some employers stems sometimes from sentiment, sometimes from a natural feeling of responsibility towards certain groups of students and sometimes from a lack of realization that useful candidates for positions may often be found by looking farther afield. Whatever may be the motive underlying any localized point of view, there are certain important considerations which make it necessary, in such a survey as the present one, to deal with the whole problem on national lines . . ."

Quoting from a Bureau of Statistics survey of education in Canada, the report noted that of 40,200 students in Canadian universities in 1944, 3,900 were attending universities and colleges in provinces other than those in which they were ordinarily resident. Students from Prince Edward Island were in attendance as far west as Manitoba and students from British Columbia were attending universities as far east as Nova Scotia. Conversely, universities and colleges in Nova Scotia had enrolled students from all nine provinces and those in British Columbia had students in attendance from as far east as Quebec.

"Some of this movement of students across interprovincial boundaries is no doubt made necessary by the fact that certain professional schools exist in only one or two places," the report comments. "A case in point is the Ontario Veterinary College, which is the only English-speaking school for training in Veterinary Science and which normally numbers among its student body from 30 to 40 per cent of students from outside of Ontario . . ."

"Certain types of university training are available in all nine provinces, but in the matter of professional schools, the majority of the provinces are lacking in one or more types of training . . ."

"This situation is quite understandable if it be remembered that the tendency among universities is to temper any desire for self-sufficiency in respect to variety of courses, with an earnest desire to have only the strongest possible faculties and schools rather than a multiplicity of weaker ones. Then again, in some cases, courses have been introduced with the definite purpose of meeting some known need as it then existed. But the number of students now in attendance bears no relation whatever to local demands for graduates with the particular type of training in question . . ."

"In actual practice, students have been quite free to elect their own course in accordance with their inclinations and aptitudes and usually without the benefit of much authentic information as to prospective supply and demand, either local or national. It is therefore a tribute rather to the soundness of their training than to the wisdom of their choice of course and an evidence rather of wealth of opportunity than of vocational planning that we have, to a large extent, avoided any really serious consequences of over or under supply. From all this it is obvious that an employer, whether a government or corporation desiring to take a graduate on payroll, or a community requiring a private practitioner must, of necessity, often look far afield.

"In a study of this whole problem there can be no attempt to minimize the importance, from the national point of view, of the training which thousands of students are now receiving. Nor can the interest of employers in the availability of this substantial and useful reinforcement for their staffs be overlooked. A primary objective of the survey, however, has been to assess employment possibilities from the point of view of the young graduate seeking opportunity and experience in his chosen field.

"To do this he must necessarily go wherever the work is. For example, if his interest lies in the development and manufacture of electrical apparatus (this phase of production absorbs over one-quarter of all electrical engineering graduates in Canada) he will enter an industry that is almost entirely confined to the provinces of Ontario and Quebec. These same provinces, however, would be of little interest to him if he should be planning a career in coal mining. For those wishing to participate in the scientific exploitation of forest resources, British Columbia would appear to offer a broader field of opportunity than Saskatchewan, whereas in agriculture, the position of these two provinces is largely reversed.

"When considering employment the prospective graduate will often hear of opportunities from employers who do their recruiting on a more or less nation-wide basis. The Federal Government, which is the country's largest employer, will be one of these. It is perhaps not realized how many employers outside of government do their recruiting without geographical limitations. In the case of technical personnel (engineers and scientists) 8 of the 10 largest employers habitually engage graduates from all universities and the other 2 do not confine themselves to any one province.

These 10 employers account for slightly over one-tenth of all the employment available in engineering and scientific fields."

Summing up, the report emphasizes that "there is ample justification for considering the employment of prospective graduates on a national, as well as on a local basis. Only by looking at Canada as a whole can a full picture be obtained of the diversity of opportunity that awaits those who may, in future, complete their studies at universities."

Labour Department Officers of U.S. and Canada meet in annual conference

Problems of labour law administration and of Federal-State relations were discussed at the Thirtieth Convention of the International Association of Governmental Labour Officials of the United States and

Canada. Commissioners of Labour from a substantial number of States and officials of the United States Department of Labour were present at the conference which took place on September 23, 24 and 25 at Asheville, North Carolina. Canadians in attendance were the Honourable S. E. Mooers, Minister of Labour of New Brunswick, Mr. Elliott Wilson, Deputy Minister of Labour for Manitoba, Mr. E. H. Gilbert, Chief Factory Inspector of Ontario, and Mr. A. A. Porter of the Federal Department of Labour.

The IAGLO, which began in 1883, adopted its present name in 1928. Until 1913, there were two organizations, one an association of officials of federal and state Bureaus of Labour, the other an association of American and Canadian factory inspectors. The State and Provincial Departments which are members of the Association pay an annual fee of \$25 and the U.S. Department of Labour bears the cost of printing the proceedings.

Plenary sessions discussed labour inspection and what a Labour Department should be; group sessions were devoted to child labour, wages, hours and industrial home-work; labour statistics, and machine-guarding; and reports were presented on Federal-State co-operation in apprentice training, labour statistics, and enforcement of legal wages and hours.

The nature and functions of a labour department were viewed from different aspects. One speaker stressed the need for co-operation among employers, workers and government, with the latter, as one of its tasks, providing adequate information for those requiring it. Another speaker reminded the meeting of the impetus given by organized labour to the inception of labour departments. It was also pointed out that as the custodian of the public interest, the govern-

ment must encourage production, having regard to the general welfare.

Child labour, wages, hours and home-work are all matters regulated by the federal Fair Labour Standards Act. The discussion revealed the difficulty of enforcing the national minimum of forty cents an hour, which applies to interstate commerce and establishments producing goods for interstate shipment, in States which have lower minimum rates applying to other industries.

The President, Mr. Forrest H. Shuford, Labour Commissioner of North Carolina, declined renomination, and Mr. R. L. Gamble, Labour Commissioner of South Carolina, was elected to this office. Mrs. Clara M. Beyer, Associate Director of the Division of Labour Standards, was re-elected Secretary-Treasurer, Canada is represented on the Executive Committee by the Honourable L. D. Currie, Minister of Mines and Labour of Nova Scotia.

Annual report on Canadian Vocational Training

The Annual Report of the Canadian Vocational Training Branch of the Dominion Department of Labour, for the fiscal year 1946-47, was issued in October.

It states that the year covered heavier responsibilities and a larger volume of work than any other year since the vocational training plan was inaugurated. This was especially true in connection with the training of discharged members of the armed forces, enrolment for which reached its peak early in 1946. The gross enrolment for the fiscal year was 136,704, classified as follows: discharged members of the armed forces, 97,643; supervisors, 27,195; youth, 5,887; apprentices, 3,441; student aid, 2,473; civilians, 65.

An expansion of training facilities was necessary early in the fiscal year. However, as the year advanced and enrolments began to fall off, a number of trade classes in certain occupations were consolidated and a few training centres were closed.

During the year, 76 special CVT centres were operated. In addition, 46 provincial or municipal vocational schools and several hundred private trade schools and business colleges throughout the country were used.

The appropriations administered by the Training Branch for the fiscal year were as follows:

Youth training \$600,000; apprentice training, \$400,000; vocational schools, assistance, \$2,500,000; vocational schools, capital expenditure, \$3,000,000; replacement of depreciated equipment, \$1,250,000; training of civilian workers, \$1,500,000; training of discharged members of the armed forces, \$13,050,000;

administration, \$102,757; advisory council \$5,000; supervisory training \$50,000; war emergency training (carry over only) \$50,000; assistance to universities (carry over only) \$5,000.

The report includes brief accounts of the work carried on under the several categories together with a series of statistical tables.

**Aids for
labour-
management
production
committees.**

With a view to promoting the work of Labour-Management Production Committees, the Industrial Relations Branch of the Dominion Department of

Labour has set up a poster and pay-envelope stuffer service available to those plants having production committees listed with the Labour-Management Co-operation Section.

The basic theme of the series is expressed in the first pay-envelope stuffer: "Production is the basis of prosperity. Co-operation of workers and management is the key to high production. Labour and management working together to achieve full production and employment will set us on the highway to continuing prosperity."

The posters, which are issued monthly, are printed in two colours and display in attractive form various aspects of plant efficiency, such as good housekeeping, morale and safety.

**Scheme for
training juveniles
in skilled trades
in Great Britain**

Grants are to be provided to enable boys and girls who show special aptitude for skilled jobs and for whom no suitable facilities are available in their home district to be trained by employers away from home. A "special interim scheme" of this sort was recently announced by the British Ministry of Labour.

The scheme was recommended by the Committee on the Juvenile Employment Service (L.G. 1946, p. 13) and by the Joint Consultative Committee representing the British Employers' Confederation and the Trades Union Congress, and was adopted after consultation with the National Juvenile Employment Council representing local education authorities, teachers, employers and workpeople.

Designed to give the same chance to young persons to learn skilled trades as is given through scholarships for higher education leading to the professions, the plan is to apply to those who have not yet started work, who are unemployed or are in "dead-end" jobs. Local juvenile employment offices will look out for likely candidates and teachers will bring suitable pupils to their notice. The scheme is to cover only trades for which a recognized period and degree of training are required and in which there are good prospects but it is not to apply to employment for which an apprenticeship premium is required.

Travelling expenses and settling-in grants are to be paid, and a weekly allowance for board and lodging, midday meals, laundry and fares between lodgings and workplace. Employers will be asked to contribute towards the weekly allowances, and parents or guardians may be required to pay, depending on their means. Boys and girls are to be given pocket-money at the rate of 9s. at age 15, 12s. at 16, and 16s. at 17, and, where the return fare is over 7s. 6d., they are to be allowed two railway warrants a year for holiday visits home.

**Union interest
in co-operative
movement in
United States**

A recent article in *Business Week* states that many trade unions in the United States, in an effort to ease the problem of the rising cost of living, have become active in the co-operative movement, particularly in the buying and selling of food.

Many of the new co-operatives have been set up merely as "emergency stores," with a view to bolstering union members' buying power temporarily. Some of these have gone contrary to co-operative principles by such practices as selling at cost and using voluntary labour. Others, however, are working in harmony with established co-operative groups, and are expected to continue on a permanent basis.

Labour co-operatives have recently been established in Detroit, Los Angeles, Chicago, St. Louis, and a number of Atlantic Coast cities, according to the article, with the United Automobile Workers, the Retail, Wholesale and Department Store Employees, and various CIO city councils among the more active sponsors.

Conventions of Labour Organizations

CANADA'S major labour organizations recently held their annual conventions, the Trades and Labour Congress of Canada meeting at Hamilton between September 24 and October 3, the Canadian Congress of Labour at Toronto from October 6 to 10, and the Canadian and Catholic Confederation of

Labour at Saint Hyacinthe from September 14 to 18.

Summaries of the proceedings of these meetings appear below. Also appended is an account of the seventy-ninth annual Trades Union Congress, held at Southport, England, September 1 to 5.

Trades and Labour Congress of Canada

Presidential Address

THE Trades and Labour Congress of Canada held its sixty-second annual convention in the Royal Connaught Hotel, Hamilton, Ontario, commencing Wednesday, September 24, and concluding on October 3, 1947. There were 627 accredited delegates in attendance, representing over 360,000 members organized in 2,637 units. The Chairman of the Credentials Committee reported that 57 international and national unions; 51 federations, provincial organizations and trades and labour councils and 503 local bodies were represented. Four fraternal delegates were present, namely, Lord Dukeston of Warrington, O.B.E., better known as Charles Dukes, a former President of the British Trades Union Congress; Leo George of the American Federation of Labour; R. J. Fahey, President of the Newfoundland Federation of Labour and A. D. Staal, veteran staff member of the International Labour Organization.

The proceedings of the convention were opened by Bruce Docherty, President of the Hamilton and District Trades and Labour Council. Right Reverend L. W. B. Broughall, Anglican Bishop of Niagara and Rev. Father Bernard Harrigan, representing Most Rev. J. F. Ryan, Bishop of the Roman Catholic Diocese of Hamilton, led in brief invocations.

His Worship, Mayor Samuel Lawrence, a trade unionist of long standing, welcomed the delegates on behalf of the city of Hamilton. He drew attention to the fact that some 62,000 citizens of the community—almost one-third of the population—were employed in its more than 500 diversified industries. He referred to the scenic beauties of the Hamilton area and expressed the hope that the combination of beauty and industry would make the sojourn of the delegates one that they would always remember with pleasure.

After expressing appreciation for the welcome given by the City and by the district Trades and Labour Council, Mr. Percy Bengough, in his presidential address, drew attention to the growth of the TLC during the fifteen years since it had held its Annual Convention in Hamilton. He stated that the Trades and Labour Congress "has in affiliation 68 international unions with 1,970 locals, ten national unions with 271 locals, 13 provincial organizations with 140 locals and 201 federal unions." In addition there were "53 trades and labour councils established in the major cities throughout the country."

Mr. Bengough referred to "a few questions that call for some priority of consideration." One of these was "the almost complete elimination of price controls and the resultant continuous increase in commodity costs." He stated that "something must be done now to protect the purchasing power of the Canadian dollar, not only for the organized workers—but also the many thousands of our unorganized citizens not in a position to help themselves, who look to this Congress for some relief from this injustice."

He declared that during the period of rising prices more provincial laws had been enacted with a view to extending the process of negotiation, arbitration and settlement of wage disputes. "In effect," he said, "Labour is required to justify its requests for an increase in the price of its services." He asserted that "we have labour codes but no business codes. We certainly need laws now that will compel business to justify the need of an increase in prices." He urged that the Congress "must press for the establishment of a business code whereby Government Boards will be established for industry and business to appear before and show that in order to get a fair

return on the real money invested—certainly not on the watered stock—that a price increase is justified . . . We must insist upon the Government enacting the necessary laws now," he said.

Telegram from Prime Minister

At the conclusion of his address, Mr. Ben-gough read a telegram from Prime Minister Mackenzie King, who expressed regret that the pressure of urgent public business prevented him attending the convention. He extended the best of wishes for the success of the meeting and expressed the appreciation of his colleagues and himself for the contribution of the TLC to the national welfare.

Address by Minister of Labour

Honourable Humphrey Mitchell, Dominion Minister of Labour, in an address at the opening session of the convention drew attention to the rapid growth of the trade union movement in recent years and pointed out that "in this convention you speak for a large and influential section of our population." "I want to say to you all," he continued, "that your views always will receive the most serious attention of my colleagues of the Government at Ottawa." The Minister referred appreciatively to "the fine collective job" that had been done by labour during the war. Turning to the part to be played by labour in peace time, he said: "Organized labour has become so large numerically that the decisions, actions, and influence of local unions, district councils, provincial federations and national bodies have a great effect on the lives of cities and towns, provinces and the country as a whole." However, "the answer to our problems does not involve the labour unions of Canada alone. It involves management to the same degree." Industrial peace is essential to maximum production and the full development of the country's resources. While admitting that "progress has been made in the building up of confidence through Boards established under Government auspices," he contended that legislation is not a substitute for "collective negotiation in good faith between employees and employer organizations, based on the economics of the industry and willingness to see each other's point of view."

Referring to the matter of wages, the Minister said that "it is important that the highest level of wages be paid, not only because this means a fair return to the workers, but because it also means the maintenance of high purchasing power through which the greater production of goods will be absorbed." "It is a simple fact," he continued, "that no wage scale can

be too high, if it is matched by production. Shorter hours, holidays with pay and other concessions are of little avail in raising the real standard of living unless the volume of goods and services remain constant, or increase, under the new conditions."

Mr. Mitchell, presented an analysis of current statistics covering employment and wages in Canada, comparing them with the figures for 1939 and showing that the net national income in the latter year was "less than half the total for 1946." Similarly, the amount represented in wages, salaries and supplementary labour income (in 1939) was . . . less than half of the corresponding amount for 1946." He forecast an extension of coverage under the Unemployment Insurance Act with a view to "taking care of the lumbering industry in which there is so much seasonal employment" and to bring "stevedoring under the Act."

The Minister outlined the purposes of proposed legislation on labour relations, pointing out that "the main idea is to have an Act through which we will have greater industrial harmony, satisfactory collective bargaining, improved understanding of the problems of labour and the problems of management and, above all, one that will contribute to our national progress." He discussed at some length the problems to be encountered in developing an immigration policy for Canada, commending the attitude of the TLC as being "equally alive to this situation as is the Government." "In my opinion," he said, "we must be prepared as a nation to accept our fair share of immigration in our own self interest." At the same time "it is not, and never has been, the intention of the Government to use immigration to undermine the Fair Wages Statutes of the various provinces, or conditions of employment built up during the years through trade union organizations."

Address by Right Hon. C. D. Howe

Mr. Howe expressed his appreciation for the assistance rendered him by the Executive officers of the TLC during the war years when he was Minister of Munitions and Supply and as Minister of Reconstruction, solicited a similar co-operation in the post-war period. He reported that some progress had been made in solving the housing problem, although the results to date were disappointing. He asserted, however, that Canada had built some 70,000 houses since the end of the war—more per capita than any other country. He stated that Dominion, provincial and municipal authorities must co-operate in order to achieve the solutions that all Canadians desired.

Discussing immigration, he said that the authorities were at the present time, bringing in all that the limited available transportation facilities could handle. He felt that as many immigrants as could be absorbed properly should be admitted to Canada. In conclusion he said that the world is confronted with critical conditions. "We are still in a sellers' market and may soon be in a buyers' market, and the same steadiness shown by the TLC during the war was still needed."

Address by Mr. R. J. Tallon

Mr. R. J. Tallon, Labour's Representative on the Unemployment Insurance Commission addressed the convention briefly on the activities of the Commission. He urged members of the Trades and Labour Congress, especially those representing labour on unemployment insurance Advisory Committees and on Courts of Referees, to take an active interest in the administration of the Act. He contended that every delegate should make a careful study of the Act and its amendments, so that informed guidance could be given to fellow trade unionists and others who might be in ignorance or doubt as to their rights under the law and the procedure to be followed in obtaining them.

Address by Lord Dukeston

The fraternal delegate from the British Trades Union Congress, was Lord Dukeston, a member of the B.T.U.C. for almost 50 years.

After extending fraternal greetings from "the seven million organized workers in the British Isles," Lord Dukeston discussed in passing the relationship that exists between the British Trade Union movement and the present Labour Government of Britain. Although the Labour party in Great Britain had grown out of the trade union movement the latter had remained "independent of and in no sense under an obligation to any government," he said. "I am convinced," he continued, that, "if ever the trade union movement in any country sacrifices its independence, the law of association, the right of combination, the right of workers to organize to win their economic freedom, becomes a scrap of paper."

Prefacing a discussion of the present economic, social and political problems in Britain, Lord Dukeston outlined at some length the expedients tried by the British Trade Union movement between the two world wars to avert threatened "economic privation." Most of these expedients failed, but "we went on rebuilding our unions." With the rise of Hitler and the threat of a second world war,

"we did our best to strengthen the internationalists of the trade unions throughout the world." This too, proved to be "a losing battle." The continental trade unions, notably those of Germany, became instruments of the state.

Referring to the financial sacrifices of war, Lord Dukeston said, "We in Great Britain entered the second conflict with a debt from the first world war of eight thousand million sterling . . . We emerged with a debt of twenty-six thousand million sterling," not to mention bombed houses, factories and workshops. "I need hardly tell you," he said, "the British Trade Union movement has been the spearhead in winning the battle in the field and we are still a spearhead in winning the battle of production that will at least bring some semblance of a civilized standard of life into the homes of our people."

Address by Mr. Leo George

Mr. Leo George, fraternal delegate from the American Federation of Labour said that he deemed it "a signal honour to be received among you so graciously and to convey the sincere, friendly greetings and good wishes of President Green, Secretary Meany and the members of the Executive Council" of the American Federation of Labour.

He asserted that most men wanted peace and security—"security from want, from hunger and from aggression." "We have organized to attain for ourselves collectively the security that is so essential to happiness" . . . The leaders of the nations are at the present time striving to provide security from the ravages and disasters of war, and some are fearful that the obstacles are too great to be overcome; "that the problem cannot be solved without the sacrifice of many of the rights and privileges that have been so dearly won." However, the experience of the United States and Canada has demonstrated that the problem is capable of solution, and he declared that, "the Canadian Trades and Labour Congress and the American Federation of Labour, have gone hand in hand playing an important part in co-operative efforts to solve common problems and achieve common ends."

Mr. George discounted the assertion that increases in wages in the United States were responsible for the abnormal rise in commodity prices during the past two years. He presented comparative analyses of wages and of "corporate profits", to prove his thesis that the latter greatly exceeded the wage and salary increases paid to workers.

After presenting a lengthy analysis of the latest labour legislation passed by the United

States Government (Taft-Hartley Act) which he described as "this nefarious law," Mr. George declared that the American Federation of Labour would make every effort to defeat the Senatorial and Congressional supporters of the legislation at the next election. "We are determined that the law shall be repealed", he declared. In conclusion, he said, "the democratic trade unions must practice democratic procedures, the first of which is to create an informed membership and an informed public.

Address by Mr. R. J. Fahey

The fraternal delegate from the Newfoundland Federation of Labour was Mr. R. J. Fahey, a member of the International Association of Machinists.

After he had conveyed the greetings of the Newfoundland Federation, Mr. Fahey sketched briefly the development of labour unionism in the Island colony. Thirty years ago the ranks of labour had been split because of differences of political opinions, he said. The present federation was fifty years younger than the TLC and had benefited greatly by the advice and assistance that had been given by TLC officials. "There are today", he continued, "58 unions in Newfoundland. Of these, 51 are in the Federation and seven outside. All are working for better conditions." Mr. Fahey referred to the possibility of Newfoundland becoming the tenth Canadian province. He said "that in such a circumstance, Newfoundland would obtain at once such social security benefits as unemployment insurance and mothers' allowances, but he feared that there might be serious unemployment if Canadian manufacturers were permitted to flood the Newfoundland market."

Address by Mr. A. D. Staal

Mr. A. D. Staal, recently retired, but for more than twenty years a member of the staff of the International Labour Organization, and prior to that a staff member of the International Federation of Trade Unions, described the functions and the achievements of the ILO during its history of 25 years.

He referred to the fact that the ILO was the sole surviving body of the League of Nations and that it was now incorporated in the United Nations Organization. "All Trade Unions are members of the ILO, which is financed by the governments of many nations." These governments, together with associations of employers and labour organizations throughout the world send representatives to ILO assemblies, agenda for which are prepared and circulated well in advance. The functions of

the ILO are advisory, rather than legislative, but the member governments recognize a moral obligation to give effect to its decisions, or "conventions." Mr. Staal said that many of the conventions relating, for example, to hours of work, protection of women and children, improved working conditions for seamen, etc. had been adopted in most countries. Particularly in the countries of South America, marked progress had been made, he said. He referred to the difficulties of having ILO conventions adopted in Canada because of the nature of the Canadian constitution which divided power, in many labour and social security matters between the Dominion and the several provinces. This situation may be relieved somewhat, he said, as the Dominion has agreed to submit the conventions to the provinces. It was hoped that in this way both the Dominion and the provinces would implement many of the conventions in so far as their respective jurisdictions were concerned.

Report of Executive Committee

The report of the Executive Committee covered a wide field of activity. During the past year the Executive had been called upon to decide several questions of policy. In some instances, the report stated, decisions were reached "which may quite possibly appear at variance with local union views formulated and arrived at as a result of local conditions." The criterion followed by the Executive, however, had been to consider such problems "in the light of how it favourably or adversely affects, as the case may be, the Trades and Labour Congress of Canada and the majority of its affiliated unions."

The legislative policies had been set up following discussions between the Executive and representatives of International and National unions affiliated to Congress. As a result of these conferences the annual legislative memorandum was drawn up and presented to the Dominion cabinet on March 28, 1947 (L.G. April 1947, p. 494). It covered such points as (a) a national labour code; (b) price control; (c) unemployment insurance; (d) national health insurance; pensions to aged citizens; (e) income tax; (f) housing; (g) cost of living index; (h) selected immigration; (i) forty-hour week and holidays with pay; (j) injunctions in labour disputes; (k) the setting up of a National Maritime Commission and Harbours Board; the appointment of a Royal Commission to investigate industrial conditions in the Maritime provinces and several other requests concerning specific labour classifications.

The report covered a review of the 1947 session of Parliament. Bill 338 to provide for a National Labour Code was reported upon in detail.

While recognizing that the Bill was of a contentious nature, the executive was prepared to accept the provisions of the Bill "as it now stands." The hope was expressed that the Bill would become law during the 1948 session of Parliament. "Undoubtedly weaknesses will be discovered and the Trades and Labour Congress of Canada will not hesitate to seek the necessary amendments," the report stated.

On the problem of immigration the position taken by the Executive was embodied in a brief which was placed before the Senate Committee on Immigration and Labour on May 16, 1947 (L.G., June, 1947, p. 781). The brief recognized the need of "a sound immigration policy that will, at all times adhere to the need of selection and the exclusion of all races that cannot be assimilated properly into the National life of Canada." In conclusion, the brief stated that "public opinion approves a carefully selective immigration in numbers not exceeding from time to time the absorptive capacity of our country, when industrial and economic conditions are favourable. The Government should, in consequence, find some way to provide necessary ocean transportation, the failure of which is the only physical bar now to a successful immigration movement."

Other phases of the Executive report that aroused considerable discussion by the delegates were national health insurance, old age pensions, control of commodity prices, the forty-hour week and unemployment insurance. The report as a whole was approved by the convention and the Executive officers were commended for the able performance of their administrative duties.

Provincial Legislative Reports

Legislative reports were received from the provincial executives of every province except Prince Edward Island. These presented abstracts of the proceedings of the provincial federations and the provincial executives during the year, together with the legislative proposals made to provincial Departments of Labour. They were studied in detail by a committee of Congress, which brought in a report commending the work of the provincial organizations. This was given the unanimous endorsement of the convention.

Financial Report

The report of the Secretary-Treasurer, Mr. J. W. Buckley for the eleven months ended

June 30, 1947, showed total receipts of \$140,575.11 and expenditure of \$122,443.51; leaving a credit balance of \$18,131.60.

In addition, receipts from a special assessment for organization purposes recommended at the 1946 convention, amounted to \$18,306.23.

It was announced that the Congress has eight full-time organizers. In addition, a number of part-time organizers are employed and the policy of assisting voluntary organizers is being followed. The membership at June 30, 1947, was 360,000, an increase of approximately 30,000 during the preceding eleven months.

Racial Discrimination

The report of the Committee to combat racial discrimination appointed at the 1946 convention, was presented by the Committee's Chairman, Mr. Claude Jodoin, of Montreal.

Mr. Jodoin reported that the Committee had met in Montreal last December and had decided upon a plan of campaign that involved setting up local committees in a number of centres across Canada. Several of these had been organized in some of the larger centres and more were planned. A campaign of education was undertaken using motion pictures, the press and personal contacts. Mr. Jodoin stated that many racial and religious groups were collaborating in the work.

The convention unanimously endorsed the activities of Mr. Jodoin and his committee and they were requested to continue their work. Following the adoption of the committee's report the following resolution was presented from the floor of the Convention and approved.

Resolved that this convention condemn the attitude of certain Canadian hospitals in refusing to train Canadian girls in the nursing profession because of their colour, national origin, or religion, and in particular goes on record as vigorously deploring the closed door policy in regard to negro girls.

Address by Mr. Herbert A. Spence

The functions and progress of Labour-Management Production Committees were described in an address by Mr. Herbert A. Spence, of the London, Ontario, office of the Industrial Relations Branch, Department of Labour.

Mr. Spence explained that "the core of a production committee is the joint consultation of management and labour on all matters related to the achievement of efficient low cost production. There must be mutual realization that both have a common interest in the successful operation of the business. . . .

This, of course, does not rule out the possibility of day-to-day differences over such matters as the division of earnings. What it does do is provide a reason for co-operation despite such differences. . . . Its functions are entirely advisory and not executive." He pointed out that long before the need for increased war production led to the trade union movement as a whole endorsing Labour-Management Production Committees, a number of individual unions had effected union management co-operation and had adopted joint committees as a part of their program. He referred specifically to the co-operative movement on the Canadian National Railways and the Mutual Interest Boards in the paper mills as examples of this pre-war development. The success met with in these instances encouraged the Government to promote the forming of such committees in industry during and after the second World War.

Mr. Spence was careful to indicate that "everything about LMPC's is completely voluntary. They are set up by agreement, function by agreement, and may be abandoned when either one of the parties so desires." Then too, "there is one field that a properly functioning LMPC does not encroach upon and that is the one covered by the collective agreement or customarily handled through the established grievance procedure. Because grievances can kill an LMPC more quickly than anything else, our Department does not encourage the formation of LMPC's in unorganized plants," he said. He expressed appreciation that the Trades and Labour Congress of Canada had given active support to the formation of LMP Committees. Of the 530 committees recorded in Canada, 219 are in plants in which affiliates of TLC are the bargaining agents.

Mr. Spence stated that the Industrial Relations Branch of the Department of Labour maintained offices and field staffs in the main Canadian industrial centres to promote the organization and the maintenance of Labour Management Production Committees.

Price Control

From the opening of the convention, the demand for the control of commodity prices to combat the rising cost of living was a live issue. The President in his opening address emphasized its importance and frequent references were made to it from the floor. In all, 17 resolutions on the subject were submitted by subordinate bodies of the Congress. These were reviewed by the Committee on Resolu-

tions. The following substitute resolution was given unanimous endorsement:

Resolved that, this 62nd Convention of The Trades and Labour Congress of Canada declares to the nation that the cause of the present alarming spiralling of prices is due to the selfish profiteering of big business which must be curbed, checked and brought under strict control, and the workers and farmers of Canada are working hard and producing more as a whole, and individually than at any time in our country's history, and are getting less for their labour in real purchasing power and wages than for years past, these truths are self-evident;

And be it further resolved,—That this 62nd Convention of The Trades and Labour Congress of Canada demand that no further price increases on necessities of life be allowed, and that the Federal Government immediately establish a price control board to which all applications for price increases be made and which should also review and examine all 1947 price increases;

And be it further resolved,—That the 62nd Convention of The Trades and Labour Congress of Canada demand that the Federal Government call a *Special Session* of the Dominion Parliament for the direct purpose of taking action to protect the Canadian standard of living by rolling back prices on all essential goods and services to the 1946 levels, by instituting a 100 per cent tax on excess profits, and by specific measures to investigate, and to prosecute all cartels, monopolies and speculators guilty of profiteering;

And be it further resolved,—That this 62nd Convention of The Trades and Labour Congress of Canada declare that it has become urgently necessary, in the face of the price crisis now at hand, to advance and to secure, through the power of our organized strength, substantial wage increases this year in all industries and trades.

Social Security

Implementation of a nation-wide social security plan on a contributory basis for all Canadians came in for considerable discussion. Eleven resolutions on the subject were considered by the Resolutions committee. In the end the Committee presented the following substitute which was given unanimous approval.

Resolved,—That this 62nd Convention of The Trades and Labour Congress of Canada, assembled in Hamilton, Ontario, endorse and request throughout all its branches and affiliates the immediate implementation of a Dominion-wide social security plan on a contributory basis for all citizens of Canada, regardless of income, and that this plan shall include health, accident, and hospitalization benefits, old age pensions, mothers' allowances, widows' allowances, etc., and such other social measures which are necessary.

And be it further resolved,—That the incoming Executive of The Trades and Labour Congress study the various governmental social security measures now in force in other countries, compile definite proposals which shall then become the social security policy of this

Congress and every effort will be made by all concerned to bring these measures into effect as quickly as possible on a national basis.

Political Affiliations of Members

One of the keenest debates of the convention centred around the issue of Communism. The subject was touched off by William Schoenberg, General President, United Cement Lime and Gypsum Workers International Union. In a speech outlining the extension of his union's activity in Canada he said that under no conditions would his union employ organizers identified in any way with the Communist party. Six resolutions relating to the future political action of the Congress, were presented by as many locals in Ontario and British Columbia. The Resolutions committee offered a substitute as follows:

"Be it resolved that it is the considered opinion of this convention that the political beliefs, or the religious beliefs of individual members are the member's own business, so long as such beliefs are not placed before Trade Union principles; and be it further resolved that we condemn the action of any political party or any individual which seeks to use this Congress for their own particular advantage."

Following a lengthy debate, the substitute resolution was adopted.

Labour Unity

The issue of Communism was raised again in the discussion on "Labour Unity". The debate was centred on the following substitute resolution which replaced eight others that had been submitted by locals from Nova Scotia, Ontario, Manitoba and British Columbia.

"Be it resolved,—That while this 62nd Convention is of the definite opinion that unity of action in one body is of paramount importance to the workers of this country; this Congress finds itself in the position that our objectives of unified action must be held in abeyance until a clear concise policy of unity has been worked out between the Executive of this Congress and other Trade Union bodies;

And be it further resolved,—That all efforts of unified action by the various Provincial Executives, Federations of Labour and affiliated organizations of this Congress shall not be entertained until this unified policy has been accomplished."

In closing the debate on "Labour Unity," President Bengough said: "We want unity within our own ranks, instead of going outside to create a situation which could create greater disunity. It was easy enough to talk of unity from the bottom up (commencing with action by local unions) but the executive would continue to work for labour unity."

Wages and Hours of Work

No fewer than 29 resolutions were presented by affiliated unions, relative to wages and hours of work, holidays with pay and working conditions. It was pointed out that the policy of the Congress at former conventions had been to seek legislation to bring about improvement, but it was felt that the desirable plan would be the securing of concessions asked for by direct negotiation rather than legislation. The substitute resolution as finally adopted was as follows:

Be it resolved,—That, this Convention go on record as endorsing the principle of direct negotiation for the betterment of wages and working conditions and set out as our program for the coming year the following:

1. A minimum national wage of 65 cents per hour or such higher minimum as may be needed to purchase the normal requirements for the maintenance and welfare of our people;

2. A maximum working week of 40 hours or such lesser hours as are needed to provide full employment and full income for the needs of our people;

3. A vacation period of at least two weeks in 52 weeks of employment or such additional vacation period as is necessary for the re-building and re-development of our peoples' physical well-being and mental well-being as a protection of future continued employment;

4. The recognition of a minimum of the eight statutory holidays commonly recognized in Canada, by the ceasing of work wherever possible, on these days and the receiving of normal pay on such days, as a recognition that it is a holiday, to develop within our people a recognition of Canadianism as shown by the declaring of such holidays;

5. Where it is necessary for workers to continue their normal work on a statutory holiday, then such services should be recognized by the receipt of double pay or double rests by them and where a worker must work more than the normal hours of work in the working week this fact should be recognized by the receipt of pay at the rate of time and one-half for such hours;

6. The maximum hours needed by workers to compute a regular day's employment of eight hours should not exceed ten hours and any additional hours needed to complete a normal day's work should be compensated for at increased wage rates;

7. It is recognized that employment during the normal hours of rest and sleep of the human body is a physical and mental strain on the human body and therefore hours of work during the evening or night should be compensated for by the receipt of premium earnings.

And be it further resolved, That this Congress urge every affiliated organization to adopt the above program as the very minimum conditions that can be accepted by the workers in the coming year.

Unemployment Insurance

The Unemployment Insurance Act and the regulations surrounding its administration met with criticism from the delegates. The eleven

resolutions, brought in by local and affiliated unions, asking for specific amendments were consolidated by the Resolutions Committee in the following substitute which was finally adopted.

Be it resolved, That this Trades and Labour Congress demand the Unemployment Insurance Act be amended to include the following changes:

- (a) Increase in benefits to \$25 for married men and \$15 for single men per week;
- (b) All categories of industry and occupations to be covered;
- (c) Benefits to be paid for all holidays except Sundays;
- (d) Immediate payment of benefits;
- (e) That the phrase "suitable employment" be more clearly defined;
- (f) That the waiting period of registering for benefits be increased to five years;
- (g) That the time limit for benefits be eliminated in order that they be received for all unemployed time;
- (h) That unemployment insurance benefits be not discontinued during period of illness;
- (i) That a Commission be set up to study the Act with a view to bringing it up to date.

Other Resolutions

Among other resolutions adopted by the convention were the following:

Annuities.—That the Government be requested to set up an annuity scheme to which both employers and employees would be required to contribute, the cost of administration to be borne by the Government.

Broadcasting.—That the Canadian Broadcasting Corporation be maintained as a Government-owned institution, with full control in the issuing of licences for the operation of stations, and that the Federal Government be urged to provide representation for organized labour on the C.B.C. Board.

Extension of franchise.—That the Federal Government be asked to extend the franchise to all citizens who have reached the age of 18 years; that Indians be granted citizenship and voting rights on a par with other Canadians.

Education.—That the Federal, Provincial and municipal governments be urged to set up a fund from which promising students with insufficient funds might draw financial assistance to complete their educations.

Foreign Affairs.—That Canada's representatives in the United Nations Organization strive to create a better understanding among the nations of UNO; that improved trade relations be sought with all democratic countries and that Canadian labour be given representation on all UNO delegations.

Fisheries.—That more rigid government inspection be provided in the packing, labelling and distribution of fish and fish products; that the Canadian government negotiate with the United States to have fishing zones adjacent to the two countries more clearly defined and regulated and that Canada insist on equal status with the United States in the control of offshore fisheries.

That the enactment of a "Fisheries Prices Support Act" be recommended with a view to

guaranteeing fishermen an annual income of \$1,800.

Freight Rates.—Two resolutions opposing increases in rail freight rates and asking for removal of discriminatory differentials were concurred in by the convention, but were referred to the organizations representing the railway brotherhoods.

Health and Safety.—That Dominion legislation be enacted making it mandatory to install dust collection or prevention systems in grain elevators.

That an investigation be urged into conditions of work and salaries paid hospital employees and that steps be taken at once to improve conditions for nurses-in-training.

That immediate action be taken to institute National Health Insurance.

That the Ontario Government be urged to implement the Ontario Health Act concerning hospitalization and medical care in lumber camps and at central points convenient to woodland operations in unorganized territory and that Land Tax revenue and Crown dues, etc., collected by the Ontario government, be used to pay for these services.

That the Federal government be urged to take action to prevent children from operating machines in any factory until they have reached the age of 16.

Housing.—That the Dominion government be called upon to institute a subsidized nation-wide low-rental home building program in co-operation with provincial and municipal governments.

Injunctions.—That the Federal Government be urged to prevent the use of injunctions to curtail trade unions from legal strikes and picketing and also, prohibit the use of strike-breakers.

Shipping Legislation.—That the Dominion Government set up immediately a Parliamentary committee to study the Canada Shipping Act.

That all ships subsidized by Canada should be registered in Canada and operated by Canadian seamen, who would be paid in accordance with regulations governing wages and living standards of Canadian Seamen.

Taxes.—That the Government be requested to raise the minimum exemption for income tax to \$1,200 for single persons and \$2,400 for married persons.

That excess profits taxes be reinstituted immediately.

Cost-of-Living Index.—That the Dominion Government be requested to prepare a new cost of living index, or, failing to do this, to discontinue the present index.

Cancer Clinic.—That the Ontario Government be requested to place at the disposal of the Ontario Cancer Treatment and Research Foundation all means necessary to carry out its program and that the facilities of the Foundation be made available free, to those who cannot afford to pay for them.

Election of Officers

The election of officers resulted as follows:

President: Percy Bengough C.B.E., Ottawa;
 Vice-President: Maritimes, J. A. Whitebone, M.B.E., Saint John, N.B.; Quebec, J. Arthur D'Aoust, O.B.E., Hull, P.Q.; Ontario, William Jenoves, Toronto, Ont.; Prairies, Carl E.

Berg, M.B.E., Edmonton; British Columbia, Alex. Gordon, Vancouver, B.C.; Secretary-Treasurer, J. W. Buckley, Ottawa, Ont.

The following are the Provincial Executive Committees:

Nova Scotia.—George A. Smith, M.B.E., Halifax, Chairman; George W. Betts, Halifax; J. Everet Rafuse, Liverpool; A. D. Williston, Sydney.

Manitoba.—Gordon Wilkinson, Winnipeg, Chairman; Thomas B. Ward, Flin Flon; James McDuffe, Brandon; J. B. Graham, Winnipeg.

Saskatchewan.—F. W. Ingram, Moose Jaw, Chairman; J. Griffiths, Saskatoon; S. J.

Tabbatt, Prince Albert; N. B. Laursen, Regina; Associate member, Thomas B. Ward, Flin Flon.

British Columbia.—R. K. Gergin, Vancouver, Chairman; J. Stevenson, Vancouver; G. Wilkinson, Victoria; H. L. Hanson, Powell River.

Fraternal delegate to British Trades Union Congress, 1948, Mayor Samuel Lawrence, M.B.E., Hamilton, Ont.

Fraternal delegate to American Federation of Labour, 1948, Robert H. Brown, Toronto, Ont.

Victoria, British Columbia, was chosen the convention city for 1948.

Canadian Congress of Labour

REPRESENTING a membership reported to be approximately 360,000, 767 delegates attended the seventh annual Convention of the Canadian Congress of Labour, held at the Royal York Hotel, Toronto, October 6-10, 1947.

The Convention dealt with over 250 resolutions submitted in advance by the Congress affiliates, relating to such matters as wages, prices, housing, and labour and social legislation. The lengthiest debates, however, were conducted on two resolutions dealing with communism and capitalism at home and abroad, and on a third resolution reaffirming the support of the Congress for the C.C.F. party.

Address of Mr. A. R. Mosher

In his presidential address, Mr. A. R. Mosher called for a broad extension of labour's activities and interests.

"Every new problem which arises in the relationships of men and nations demands the attention of a powerful, aggressive, informed and determined labour movement," he said. "No aspect of human affairs can be neglected, and this means that labour must develop agencies in the fields of research, education and publicity. It must study the principles of government, of economics, and every other topic which has an impact upon the common life of the people. It must be in a position to establish and support definite policies and rally public opinion behind them. It must see clearly the possibilities of fulfilling the promise of a better world . . .

"The outstanding obligation which rests upon the workers of Canada at the present time is to take whatever action is possible to

assist in the reconstruction of the devastated countries of Europe, and to make it possible for their people to become re-established. Unless the hunger and distress of Europe and of Asia can be relieved, all efforts to build a community of nations and drive away the spectre of war will be futile."

Within Canada, Mr. Mosher said, the immediate problems were the rising cost of living and the lack of housing. "The increases in wages obtained by the organized workers have not been sufficient to offset price increases, and the workers and the people of Canada generally are forced to accept standards of living far lower than they ought to be in view of the productive capacity of the nation.

"While the primary objective of labour unions is the improvement of wages and working conditions, many workers, as well as other classes of Canadian citizens, are becoming more and more convinced that the natural resources, the productive machinery, and the manpower of the nation are not being utilized in the most effective manner by the economic system under which production and distribution are carried on at the present time in Canada." There was an increasing tendency, Mr. Mosher continued, to believe that economic stability and the maintenance of high standards of living could be obtained only through an extension of public ownership.

Turning to the work of the CCL, Mr. Mosher said that notable advances had been made in the co-ordination of Congress activities, "particularly in the application of uniform wage policies, in opposing reactionary legislation, and in promoting a better understanding of the Congress on the part of the public . . . Because of a more complete

co-ordination of their efforts, many Congress unions have been able to obtain wage increases, paid vacations, and other benefits, including a wider adoption of economic security provisions in collective agreements, without resort to strikes. In this respect there has been a noteworthy improvement in the relationships between employers and organized workers during the past summer, especially in comparison with the very serious strikes which were being carried on when the Congress met a year ago."

He stressed the need for uniting the organized workers in Canada in one national labour body, and the further need of co-ordinated activity to organize the unorganized workers.

Dealing with political activity Mr. Mosher said: "In view of the fact that the only justification for a government is the public service it can render, and the further fact that governments are elected on a basis of political parties, it is essential that labour should develop and exercise political power, rather than permit political power to be controlled by the representatives of a single class made up of the leaders of industry and finance. There is no reason why labour should not get behind its own policies and do its utmost to secure their application in the sphere of politics."

Mr. Mosher commended Congress affiliates for their increased interest in education. He closed by urging the co-operation of labour with other "progressive and humanitarian institutes."

Report of Executive Council

Presented by the Secretary-Treasurer, Mr. Pat Conroy, the Report of the Executive Council outlined the activities of the Congress officers during the year since the last convention.

An important development was the appointment of a Wage-Advisory Committee in December to consider the question of wage policy in view of the abolition of wage control. A statement of policy emanating from this Committee was adopted by the Council in April, deploring the Government's policy of price decontrol, and affirming that "the only means whereby a balance in purchasing power can be restored to the Canadian people, is for all unions in the Congress to pursue a policy of seeking substantial wage increases immediately."

The Executive Council reported that in accordance with this wage policy a large number of affiliated and chartered unions whose wage agreements had expired were successful in

negotiating wage increases. However the Council pointed out that prices had continued to rise "to an alarming extent," and advocated the immediate reintroduction of controls. A memorandum from the Congress was submitted to the Federal Government on March 14, dealing mainly with a national labour code, price control, housing, and immigration.

Policy statements were issued in April urging the establishment of a labour code on a national basis and calling for the adoption of a Bill of Rights. The latter statement protested the operations of the Royal Commission on Espionage, the use of courts to "harass" labour in exercising the right to strike and picket, and the use of excessive bail charges.

Dealing with organization, the Report stated that up to the end of August the Federation of Civic Employees, Winnipeg, had become affiliated with the Congress, and charters had been granted to 4 labour councils and 58 local chartered unions. The Congress now comprised 6 provincial federations of labour, 32 labour councils, 31 national and international affiliated unions with 785 local unions, and 205 chartered local unions, with a total membership of approximately 360,000.

The Report noted that during the summer briefs had been presented to the House of Commons Industrial Relations Committee in regard to Bill 338, and to the Senate Committee on Immigration.

Appended to the Report were submissions outlining the work of the Department of Research and the recently established Department of Public Relations.

Address by Minister of Labour

Addressing the delegates at the Convention banquet, the Honourable Humphrey Mitchell, Minister of Labour, said that the growth in Congress membership was "a remarkable illustration of the confidence which workers all over the country have in your leaders. Part of your strength is derived from the contribution you have made to ensure the survival of our way of life. Part of it is due to such legislative gains as compulsory collective bargaining, first established by the present government over three years ago. Mainly, of course, organized labour has gained ground because of the realization of the importance of union in obtaining an improved standard of living."

Stating that the trade union movement had pioneered in advocating social services, the Minister outlined Dominion Government expenditures on various social measures which, he said, would total over half a billion dollars during the fiscal year, as compared with about

fifty million a year in the depths of the depression.

"Our goal," he declared, "of course, is an increasingly better standard of living—more for all—greater social benefits. We can obtain all we desire under the democratic system which has been tested and proven by time. Exaggerated claims are made for various ideologies but we do not need to worry about them. The rich fruits of democracy are nowhere more in evidence than in Canada. I do not say it is perfect—that it cannot be improved. Of course it can and must be changed for the better to meet the needs of the time.

"To get the best results will require the wholehearted interest and contribution of every Canadian, of every province, every class of people. Labour and management can 'set the table' by getting closer together—finding a formula that will bridge differences and enable us to keep busy and productive—and above all happy and hopeful.

"The establishment of joint production committees in upwards of 500 industries has helped . . .

"The world today suffers from grave instability both in the governmental and economic spheres. The problems confronting us are even more difficult and more complex than during the war itself . . .

"Two sides are being heard from. One, representing the ideology through which the individual is merely an instrument of the state receiving directions in his daily life in the spiritual, social and material sphere; the other, government given to the world by the British people.

"It is my opinion that the British people have made the greatest contribution to the development of free government of any other known civilization. It is based on the rule of law established by the respective legislative bodies after a free election by secret ballot of the people.

"The law as it is written is the very cornerstone of our way of life and must be freely accepted by all individuals and groups in society if our institutions are to endure.

"It is of little avail to go contrary to the established law irrespective of the political party responsible for its enactment. We cannot demand the rights established under the Acts of Parliament unless we, at the same time, are prepared to conform to them under all circumstances."

Other Speakers

The Honourable James Thorn, High Commissioner for New Zealand described the labour and social legislation adopted in his country during the past sixty years.

"We are living in a world," he said, "where the workers are determined to enjoy good conditions at their employment, and to have the advantages of social welfare legislation. They are entitled to these.

"But on the other hand they have responsibilities. They have to remember that only by production of wealth and services can these benefits be made possible. This is the obligation which is on them."

The Honourable Charles Daley, Minister of Labour for Ontario, also spoke briefly at the banquet.

Address of CIO Fraternal Delegate

Mr. Frank Bender, fraternal delegate from the Congress of Industrial Organizations and personal representative of President Philip Murray, told the Convention that labour in the United States had learned the importance of exercising its political as well as its economic arm. The fact that economic gains could be wiped out by legislation had been brought home through the adoption of the Taft-Hartley law, the provisions of which he described. The CIO Political Action Committee was being utilized in an attempt to secure the removal of this legislation.

International Affairs

As a substitute for a number of resolutions dealing with various aspects of international affairs, the Resolutions Committee introduced a lengthy text the main purport of which was to denounce on the one hand "rampant and militant Russian Communistic imperialism, assisted by its 'fifth columns' in all countries," and on the other hand "monopoly capitalist imperialism," and to call for a strengthening of the United Nations.

Debate on this resolution occupied the entire second afternoon of the Convention.

Urging rejection of the motion, such speakers as George Harris and Clarence Jackson of the United Electrical Workers, and Harold Pritchett of the International Woodworkers, said that the resolution would be welcomed everywhere by reactionary forces. They spoke against American foreign policy, and urged the need for friendship with the U.S.S.R. in order to stimulate trade and provide jobs. Mr. Jackson said the resolution was confused in that it opposed American imperialism and yet would tie Canada to U.S. foreign policy.

In support of the resolution, Messrs. Elroy Robson, Canadian Brotherhood of Railway Employees, Harvey Ladd, International Woodworkers, and Murray Cotterill, Toronto Labour Council, called for a rejection of both imperialisms and the following of a third

alternative, which Mr. Ladd described as democratic socialism. They argued that there was a lack of freedom in the Soviet Union. Mr. Pat Conroy said that the Congress Executive was "one hundred per cent behind the resolution" and urged its adoption.

On a roll-call vote the motion was adopted by 546 votes to 165.

The text of the resolution was as follows:

Whereas it is to be remembered that the Canadian Congress of Labour is, first of all, a Canadian organization, and its thinking and actions must be first governed by the interests of Canada and the Canadian people; and

Whereas there is a moral obligation for the Canadian people to see that justice and wisdom prevail in international relationships to the end that peace and freedom be maintained for all peoples, the Congress would be remiss in its duties if it did not express some degree of alarm at the dangerous trend developing in international affairs, and if Canada is to make a constructive contribution, it must look without prejudice on the international situation so that its opinions and activities will be conducted on a plane that will be of help in maintaining peace instead of sowing the seeds for future wars; and

Whereas this Congress is of the opinion that the fears of the people of the world are today brought about by a rampant and militant Russian Communistic imperialism, assisted by its "fifth columns" in all countries on the one hand, and on the other hand by monopoly capitalist imperialism. The peoples of the world are caught between these two predatory forces. The situation in Greece and Indonesia is only incidental evidence of the struggle between these two groups seeking world domination, while in the United Nations Organization the cold hand of the veto paralyzes that great body from functioning fully in behalf of peace and economic rehabilitation of the war-torn countries of the world. The proposals of the Secretary of State Marshall of the United States of America are, in essence, a symbol of the generosity of the people of the United States and Canada in giving so largely of their treasure. The peoples of Canada and the U.S.A. have demonstrated their desire to aid the unfortunate peoples of the world, and as a result their Governments are willing to assist these nations in order to restore the world to a proper balance and provide the basis for a lasting peace and economic security. The peoples of Canada and the United States of America have helped, and will continue to help, all those who are willing to help themselves. In this capacity Canada has played a leading role, and has been generous to an extent whereby a Canadian should not be apologetic, or let his country be subject to criticism in return for their generosity to the needy people of all nations; and

Whereas in view of the present unsettled world situation and the seeming impotency of the United Nations Organization to deal with a situation of this kind at the moment, it is geographically logical that Canada exercise military co-operation with the United States of America. Otherwise, Canada would be remiss in her duty to her citizens if she did not take advantage of all measures for Canada's security; and

Whereas while we seek good relationships with all nations, it should, nevertheless, be explicitly understood that we are not prepared to appease any nation, whether it be the U.S.S.R. or the U.S.A. or any other nation. In the furtherance of good relationships we agree that Canada should negotiate trade treaties with Russia or other countries so desiring such treaties, but it must be made abundantly clear that such a treaty must be governed by the fundamental consideration that Canadian hospitality will not be abused as it has been in the past. A treaty with Soviet Russia will not mean an attempt by Russia, or its agents, to corrupt the citizens of this country, and further, that the basis of friendships and treaties with all nations giving guarantees that we respect the dignities and rights of all countries, and equally important, calling on all countries to respect our dignities and rights as well;

Therefore be it resolved that this Convention of the Canadian Congress of Labour demands, in the interests of world peace, a cessation of the activities of Communistic and capitalistic imperialisms, and goes on record as demanding the enforcement of freedom for all peoples, whether in Greece, Indonesia, or in other countries now under some form of military domination, whether by Soviet Russia, the United States of America, or other countries. In this regard we rest our case on the fundamental principle that people everywhere must be free to exercise their own rights as we are so doing in this Convention, and we therefore call upon the United Nations Organization to put its house in order and become a militant enforcement agency for the peace of the world, as against those whose activities are constituting a menace to it. Further we believe that this position is what the Canadian people are taking at the present time, and this Congress being a Canadian institution must occupy a Canadian position for the welfare of the Canadian people, believing that in so doing it will be making a contribution to the peace and security of the world.

Freedom of Trade Unions

A substitute resolution introduced by the Resolutions Committee dealt with "communist and capitalist attempts to stifle the freedom of workers." An entire afternoon was spent in debate on this resolution which was adopted on division. Its text was as follows:

Whereas the continuous function of the Communist movement is a persistent denunciation and baiting of all individuals who do not agree with the objectives of Communism, and since the function of the trade movement is to increase the liberties and freedom of its members, and since we hold that the attacks of capitalists on the trade union movement, and application of Communist policy, have the same end in view, either the restriction or the abolition of the freedom of trade unionists:

Therefore be it resolved that this Convention of the Canadian Congress of Labour condemn and denounce both Communist and capitalist attempts to stifle the freedom of the workers, and,

Be it further resolved that this Convention go on record as opposing by all legitimate

means any totalitarian philosophy, whether it be Communist, Fascist, or a reflection of either one; the end result of which will be to take away the freedom of the trade unions and the masses of the people in general, and,

Be it further resolved that we call upon the members of our Congress unions to devote their full strength and activity to the end that we will preserve a free trade union movement to enable us to lay a foundation that will maintain the functioning of a free trade union movement, which aims at a better society, bringing economic security, political freedom, and a maintenance of the dignity and decency for all human beings.

Political Action

The debate on a substitute resolution on political action brought in by the Resolutions Committee was opened by President Mosher. He said that the old idea that labour should reward its friends and punish its enemies on an individual basis was wrong: governments were controlled by political parties, and labour must concentrate on a party. While the C.C.F. was not always right it was the only political party behind which labour could rally.

An amendment introduced by Harold Pritchett would have put the support of the Convention behind a "federated labour party based on the trade union movement," and instructed the incoming Executive to "invite all sections of the trade union movement and labour political parties" to join in the establishment of such a party and to seek the co-operation of farmers to elect a farmer-labour government.

After an extensive debate the amendment was defeated, and the main motion carried, as follows:—

Whereas in former years this Congress has endorsed the Co-operative Commonwealth Federation, and in those years the C.C.F. has now become the recognized political medium for labour, farmers and progressive people who are seeking an equitable social order, and because of the apparent bankruptcy of the two old-line parties, and their failure to meet the needs of the people, it is obvious that any attempts at the reconstruction of new political groupings will only undo the progress made by the C.C.F., thereby playing into the hands of the two old-line parties:

Therefore be it resolved that this Congress goes on record as recommending to our unions that they concentrate their political activity through the medium of the C.C.F., and we further recommend that all groups of Canadian citizens who desire to attain the same objectives should co-operate in electing the C.C.F. both federally and provincially.

Price Control

In a debate on price and rent control, a number of delegates emphatically expressed their concern over the rising cost of living.

Opening the debate, Mr. John Wigdor, of the United Electrical Workers, said that a million and a quarter Canadian workers were receiving less in wages than was needed for a decent minimum standard of living. He urged a "fighting policy" against the removal of controls.

Mr. Pat Conroy said that for two years the Congress and its unions had been constantly urging on the Government the need for price stability. He estimated that no less than 90 per cent of the people of Canada had desired the continuation of controls. Yet, he contended, because the other 10 per cent, whose personal incomes were not seriously affected by rises in the prices of consumers goods and whose main concern was profits, were having their way, the country was in for "one of the most miserable periods in Canadian history." Labour, he said, should serve notice on the Government that the Canadian people wanted a special session of Parliament to restore price control.

Mr. C. S. Jackson, United Electrical Workers, urged that a one-day demonstration be conducted to give every worker an opportunity to express opposition to price rises. This suggestion gained some support, but was opposed by a number of delegates, including Mr. J. E. McGuire, Canadian Brotherhood of Railway Employees, who called for pressure on Members of Parliament as a means of obtaining action.

By a unanimous standing vote, the Convention adopted the following resolution on price control:

Whereas in the last few months organized labour in most basic and major Canadian industries has signed wage agreements to run for a period of one year, in the firm hope and with an honesty of purpose as labour's contribution to stabilizing wages and prices in the best interests of our Canadian economy, and

Whereas after the signing of said wage agreements, big business immediately embarked on a policy of price increases to boost their already record profits, and

Whereas our Federal Government has now failed to take advantage of labour's sincere efforts to stabilize the wage-price structure and has removed the subsidies on basic and essential commodities such as wheat, flour, hides, lumber, etc., and removed from price control numerous items that will add to the cost of living, nullify any recent wage increases and so reduce the living standard of Canadians to the extent of imposing real hardship on a large section of our population;

Be it therefore resolved that this Convention go on record as condemning our Federal Government for its recent move towards complete elimination of subsidies and price control to the obvious detriment of Canadian citizens generally; and

Be it further resolved that we demand of the Federal Government that in the interests of the national welfare, a special session of Parliament be called to deal with the question of replacing the subsidies and price controls recently removed on basic foodstuffs, clothing, and other essentials, and that they re-impose the excess profits tax, and investigate all price increases since the elimination of price control, and punish those guilty of profiteering.

A separate resolution urged the retention of rent control and the reimposition of legislation prohibiting evictions.

Wage Policy

On wage policy, the Convention unanimously adopted the following resolution:

Resolved that this Convention endorse the perpetuation of the National Wage Co-ordinating Committee, and in view of the chaotic economic situation facing all of labour that we call upon our affiliates to co-operate in the work and decisions of this committee by pursuing a policy designed to protect the standards of their members.

We also call upon all affiliates to take whatever steps may be necessary to secure wage increases to offset the unwarranted increase in the cost of living.

Conditions of Work

A number of resolutions, which were adopted unanimously without debate, put the Congress on record as favouring various improvements in working conditions through the adoption of legislation or other means.

The first of these resolutions, designed to secure uniformity of labour legislation across the country, called on the Federal Government to hold a conference at least annually at which representatives of the Federal and Provincial Governments and of labour and employers' organizations would meet for the purpose of promoting uniformity and higher standards of social legislation, and the adoption of Conventions approved by the International Labour Organization.

A second resolution endorsed the principle of a 40-hour work week and an 8-hour day without reduction of take-home pay, these objectives to be obtained through legislation and collective bargaining.

The Congress also urged the adoption of legislation whereby all workers in Canada might enjoy two weeks' annual vacation with pay.

The Convention gave its full support to the principle of the guaranteed annual wage.

Taxation

The Congress unanimously adopted resolutions urging: immediate refund of compulsory savings credits; the reimposition of the

excess profits tax; and the raising of income tax exemptions to \$1,500 in the case of single persons and \$2,000 in the case of married persons.

Labour Relations

The Congress unanimously adopted a resolution re-affirming its demand for "an over-all national labour code." The resolution endorsed the Congress brief presented during the summer to the Industrial Relations Committee of the House of Commons (L.G. Aug, 1947, p. 1102) and requested the Executive to prepare a code based on the brief for submission to the Government. It further called for a concentrated campaign on the part of Congress affiliates across the country, directed at provincial governments and local members of Parliament, to secure the adoption of such a code at the next session of Parliament in place of Bill 338.

Recognizing that until the adoption of a federal code, provincial codes would either remain in force or come into being, the Congress urged its affiliated unions to

press their respective provincial governments to have all objectionable features removed from the codes, and to substitute in their place the various features of the Saskatchewan Act which, in the opinion of this Congress, is the fairest and most constructive Act in Canada.

In a subsequent debate, during the course of which several delegates from British Columbia expressed strong disapproval of the provisions of the B.C. Industrial Conciliation and Arbitration Act (commonly known as Bill 39), the Convention unanimously adopted the following resolution:

Be it resolved that this Convention of the Canadian Congress of Labour go on record as being opposed to government interference in the internal affairs of any trade union by government-supervised strike votes; giving comfort and support to company unions in the name of "employees' associations" by legislative enactment of anti-labour laws; fines on local unions and its members for infraction of an employers' code; and

Be it further resolved that this Convention give its unequivocal support to the B.C. Federation of Labour's campaign against Bill 39, which denies true democracy to the trade union movement, and demand that the British Columbia Government repeal Bill 39 and substitute for it a labour code incorporating labour's proposals.

A resolution referring specifically to government employees asked that the Federal and Provincial Governments pass statutes giving such workers the right to organize, bargain collectively, and negotiate and sign collective agreements.

Packinghouse Workers' Strike

A resolution introduced by Fred Dowling, Canadian Director of the United Packinghouse Workers of America, and adopted unanimously, pledged "unqualified financial and moral support" to the union in its industry-wide strike; criticized the "Dominion and some of the Provincial Governments" for having "disregarded the merits of the dispute" and "used the bogey of 'provincial rights' to support the packers;" and urged conciliation on a national basis.

Immigration

A debate occurred on a resolution on immigration which urged: (1) that the Federal Government admit as immigrants a fair proportion of Displaced Persons without regard to their race, colour, creed or nationality; (2) that the admission of these persons be not allowed to interfere with the wage rates, working conditions and union standards of Canadian wage-earners; (3) that the placement of such persons be accomplished in conjunction with the unions operating in the industries concerned; and (4) that the Government regard the Congress and its affiliated unions as advisory agents in regard to immigration.

The resolution was referred back to the Resolutions Committee for rewording and the addition of a clause asking that the war record of prospective immigrants be considered. It was not again considered on the floor of the Convention, but was included among a number of resolutions which were favourably referred to the incoming Executive.

Unemployment Insurance

Important changes in the Unemployment Insurance Act were recommended by the Convention. A Special Committee on the subject had earlier in the year submitted proposals to the Advisory Committee of the Unemployment Insurance Commission. These proposals asked, among other things, that benefit rates for claimants with dependents be increased; that a new class 8 be established for persons earning \$34 or more per week, with contributions for both employers and employees set at 42 cents weekly; that weekly contributions be adjusted so that employer contributions would equal those of employees; that the waiting period be reduced from nine to six days; that coverage be extended; that non-compensable days be eliminated; that all veterans be given credit for military service from 1941 to discharge in class 7 or in class 8 if such a class is created; that workers on strike be permitted to continue to contribute

to the fund; that vacation credits be protected; that the benefit year be extended by the period during which the claimant is ill, in excepted employment or self-employed; that acceptance of referrals at rates less than those provided by provincial minimum wage regulations be prohibited; that claimants be permitted to earn up to \$2 a day (instead of \$1.50) without being disqualified for benefit; that a claimant be permitted to refuse new work if he would thereby be required to join a company union; that a number of specified conditions be included in the basis for determination of "suitable" employment.

These proposals were endorsed by the Convention, which recommended that the Committee continue its work, and also adopted the following resolution:

Resolved that the Congress Committee on Unemployment Insurance be instructed to investigate and report on the feasibility of

- (a) An increase of 50 per cent in unemployment insurance benefits without increase in contributions;
- (b) The elimination of classes 1, 2, 3, and 4 in the unemployment insurance schedule and their replacement by a single class;
- (c) The reduction of the period of disqualification from six to two weeks in cases of discharge for cause;

And be it further resolved that this Convention register its protest at the recent introduction of employment separation forms by the Unemployment Insurance Commission which omit the reason for separation from employment on the employee's copy, but include it on the copies retained by the employer and the Commission; and that the Commission be urged to rectify this unjustifiable and inequitable treatment forthwith.

The Convention also stressed the importance of a wider knowledge of the Act among workers generally, and recommended more active participation by unions before Courts of Referees and the Umpire, and that at least one officer in every local be responsible for knowledge of the Act and able to assist unemployed members.

Other Social Legislation

Resolutions dealing with other social legislation advocated:

that the Federal Government proceed at once with a national health insurance plan; that "adequate old age pensions commensurate with decent living standards" be paid at the age of 60, without a means test;

that Mothers' Allowances be increased to provide "at least a standard of health and decency"; and

that workmen's compensation benefits be increased to 100 per cent of earnings.

The Convention also passed a resolution urging the Federal Government to take the

necessary steps in conjunction with the provinces to institute an overall social security plan.

Housing and Public Works

In regard to housing the Convention favoured a government-subsidized low-rental program, the establishment of a Crown company to manufacture the component parts of houses, and low-cost loans.

As a means to "maintain full employment at trade union rates," The Congress also urged the Government "to immediately plan large-scale public works, such as irrigation, hospitals, low-cost public housing, recreational centres, schools, homes for the aged, rural electrification, and highways." Immediate commencement of the St. Lawrence Waterways development as a national public works scheme to be retained as a self-sustaining public utility was also urged, while the Congress requested the Provincial and Federal Governments to undertake reforestation on a major scale.

Co-operatives

Mr. L. J. Bright, Secretary of the Co-operative Union of Saskatchewan, addressed the Congress and told delegates of the many types of industry the co-operatives had built up in Saskatchewan.

The Congress placed itself whole-heartedly behind the Co-operative Union of Canada, recorded its opposition to "restrictive" tax legislation imposed by the Federal Government, and decided to endeavour to extend relationships between farmer organizations and labour. It also concurred in principle and referred to the incoming Executive a resolution requesting the CCL to organize a co-operative information bureau to provide speakers and literature in order that CCL trade unionists "may actively assist in the organization and development of co-operatives in every section of the country."

Racial and Religious Intolerance

The Congress pledged unqualified assistance in the solution of "the world-problem of human relations, race-hatred and bigotry" in a resolution which also declared:

Recognizing that the labour movement has always been one of the first victims of the pernicious doctrines of race-hate whose disseminators are once again becoming active in Canada, the Congress further pledges itself to combat racial and religious intolerance whenever and wherever they threaten.

The Convention congratulated the Congress Committee to Combat Racial Discrimination

"on its effectiveness during the past year, as shown by its establishment of local committees to combat racial intolerance in Winnipeg, Toronto and Montreal." It also recommended the continuation of the publication *Canadian Labour Reports* which stresses the threat of intolerance to the labour movement.

The subject of discrimination was also introduced into a resolution which asked the Government to undertake a subsidized training program to deal with the shortage of nurses. To this resolution was added an amendment which expressed the Congress' condemnation of hospital boards which refuse admittance to trainees because of race, colour or creed.

Addressing the Convention, Mr. Michael Rubinstein, National Chairman of the Jewish Labour Committee, said in part:

"Let no one harbour the false illusion that racial tolerance is a charitable act towards the victims of intolerance, or at best an act of decency by the majority toward the minority. Such an attitude is indirectly an admission of the right to oppress our fellow men. Tolerance, the recognition of the right of minorities, is an act of self-preservation of our own rights. It is really an act of self-defence on the part of democracy and especially labour, which in itself, is often the victim of legal and political discrimination. . . .

"Trade unionism as such—and I speak to you from personal knowledge as a veteran of the trade union movement—is the greatest factor I know of for racial harmony. For the very existence of a trade union depends on the welcoming into its ranks of everybody in the trade regardless of his origin, colour or belief. To that extent trade unionism is a great democratic force for unity."

Constitutional Questions

Several amendments to the Constitution of the CCL were adopted at the Convention, one of which raised the per capita tax of local chartered unions from 50 to 75 cents a month. The most extensive debate, however, developed over a proposal which failed to carry, which would have altered the voting procedure at the Convention.

Supporters of this proposal declared that under the present constitutional system, unions having a considerable number of small locals were allowed to bring a disproportionately large number of delegates to the Convention, whereas unions having a small number of big locals did not have a voting strength commensurate with their heavy membership. The amendment would have instituted a

voting system whereby each unit would be allotted a number of votes based on its membership.

Opponents of the proposal argued that it would lead to a system of block voting, which they considered undesirable, that the proposed procedure would considerably lengthen the amount of time necessary to take a vote, and that the present system gave a more effective voice to the rank and file.

The motion having been lost by a show of hands, a demand for a roll-call vote was also defeated by a count of 537 to 179.

Labour Unity

That "organic unity is the first requirement to effectively meet the dangers and pitfalls facing Canadian labour" was the keynote of a resolution on labour unity.

Stating that Congress officers had done everything possible to implement the policy laid down at previous Conventions of organic unity with the Trades and Labour Congress, the resolution instructed the incoming Executive to "persist in their efforts to create one large progressive labour organization in Canada," and to "publicly name a standing committee which will be available at any time to enter into such negotiations."

Bill of Rights

The Congress advocated the introduction of a Canadian Bill of Rights at the next session of Parliament, and the preparation of a Congress brief thereon, to be presented to the appropriate Parliamentary Committee.

ILO and WFTU

Reports on the Conferences of the World Federation of Trade Unions and the International Labour Organization, held in Europe during June, were presented by Mr. C. H. Millard, who had attended both meetings.

Mr. Millard's report stated that the WFTU should not be condemned as a Communist organization, with Communist political purposes, but rather "should be judged on its record, its declared and demonstrated purposes, and in the light of the conditions in which it must operate. . . .

"It must be remembered that, just as the United Nations is made up of member states in various stages of development and having widely divergent political systems, so the WFTU is composed of national centres in various stages of political and trade union development. Thus those who remain outside the WFTU simply because they disagree with others who have affiliated, are in the same

position as their country would be if it stayed outside the United Nations. Such national labour centres must assume their full share of responsibility for the success or failure of the WFTU, for there can be no labour isolation in this collective world."

He urged renewed effort to secure the affiliation of the Trades and Labour Congress to the WFTU. He also suggested the establishment of a CCL international department, to provide members with accurate and up-to-date information about the development of the international labour movement and to work with other trade union international offices, especially the secretariat of the WFTU.

Turning to the ILO, Mr. Millard declared that "neither our Government nor labour has attached sufficient importance to our membership in the ILO." Canada's delegation to the Geneva Conference, he said, "besides being numerically inadequate, was not sufficiently representative, especially in the government and workers' sections."

He praised the objectives of the ILO, its tripartite structure, the Conference procedure, and the wealth of informational material that the ILO had accumulated and which was available to member countries.

He criticized the fact that Canada, with its "provincial system of labour legislation", was unable to ratify and apply International Labour Conventions, but must send them to the provinces for ratification. "There is a moral responsibility to accept decisions and discharge obligations. According to the record received at Geneva, Canada's performance is far from perfect. Out of a total of 67 Conventions adopted by the ILO Canada has only ratified 11. She voted for an additional 38, but has not ratified. Again it is claimed that many of these Conventions find practical application in one or more of the provinces, but, aside from the unsatisfactory state of these affairs in Canada, our country in these international organizations finds itself in the rather ridiculous position of not being able to speak or act as a nation."

Mr. Millard's principal recommendations were as follows:—

To insure that at least ILO standards of social and working conditions will be available to all Canadian working men and women, the Canadian Congress of Labour should make every effort to secure:

- (a) If necessary, an amendment to the British North America Act permitting a national labour code and uniform regulations for labour inspection and employment service.
- (b) The development of either joint or tripartite national industrial councils.
- (c) The widest possible distribution of ILO information and news.

Education and Publicity

Appreciation of the CBC for its coverage of labour matters was expressed in the report of the Convention's Committee on Education and Publicity. The report attacked "distortions" in certain newspapers and private radio stations. Various devices were outlined for making union members better informed, assimilating new members and training leaders. Delegates were urged to co-operate with school boards and in the development of adult education.

A resolution, which was referred favourably to the incoming Executive, urged that free education at all levels be made available to all people, and that the Federal Government assume a share of the costs of education through grants-in-aid to the provinces.

Strike Fund

A debate on several resolutions calling for an organized procedure for the handling of money contributed to strike funds evoked general agreement that some sort of policy was desirable both at the Dominion and Provincial levels. It was decided to leave the question to the incoming Executive.

Other Resolutions

Other resolutions adopted at the Convention put the Congress on record as follows:

Pressing for a revision of the present method by which the cost-of-living index is calculated;

Recommending to the Federal Government the permanent organization of a Standards Division to see that the quality of commodities is maintained to the advantage of the consumer;

Urging the Federal Government to adjust sub-standard wage schedules in Government establishments;

Asking the establishment of a Government-owned and controlled banking system;

Requesting the provision of postal-free delivery of all regulation food parcels to the United Kingdom during the present emergency;

Asking that all radio broadcasting in Canada be made a public utility;

Supporting "the legitimate demands of the organized teaching profession in Canada regarding better remuneration, working conditions, etc.;"

Supporting the organized farm movement in their attempt to get a fair price for all their products;

Requesting the Federal Government to set up clinics for research work on such diseases as cancer, polio, arthritis and silicosis;

Commending the Ontario Department of Health for conducting TB X-ray surveys in plants throughout the province, and urging that this program be made permanent;

Calling on the governments having jurisdiction to institute public inquiries into the causes of three recent mining disasters with the purpose of determining responsibility;

Asking Congress unions to do their best to co-operate with the Amalgamated Building and Construction Workers of Canada in widening the influence of this union in the building and construction industry;

Demanding "that the export of raw iron ore be stopped while manufactured steel is being imported," and that "immediate steps be taken to establish sufficient blast furnaces to manufacture our own steel requirements".

Asking the Federal Government in conjunction with the various provinces, to conduct a reorganization of the steel and coal industries "for the purpose of seeing that they are operated in the public interest".

Urging the Federal Government to retain the requirement that 65 per cent of the content of all Canadian-made automobiles be Canadian;

Asking the enactment of legislation preventing Canadian shipping interests from purchasing obsolete vessels, and providing for the inspection and scrapping of unseaworthy craft;

Asking the amendment of Section 239 of the Canada Shipping Act so as to grant unions the right to have their representatives aboard ship;

Urging an increase in the *ad valorem* duty on ship repair and new construction work performed abroad to a rate comparable with that of competitive shipping companies;

Endorsing CARE and recommending it to Canadian workers as a means of sending assistance to friends and brother trade unionists in Europe;

Approving co-operation with veterans' organizations;

Asking amendment of the Veterans' Land Act to enable any veteran to build wherever he may choose;

Asking labour representation on the Board of Directors of the Bank of Canada;

Requesting amendment of the Dominion Elections Act to provide two hours off work during working hours paid for by the employer on election day, and lowering of the eligible voting age to 18 years;

Condemning the Government of Quebec for "its use of force against picket lines, union-smashing tactics, and the jailing of labour leaders".

Asking the incoming Executive to inaugurate a program to encourage members of locals to purchase only union-made merchandise and demand union services.

Resolutions Referred to Incoming Executive

Those resolutions which were before the Convention but not dealt with by the close of its sessions were considered to be non-controversial and were referred to the incoming Executive for necessary action. Some of these advocated: the abolition of the Senate; lifting of the ban on oleomargarine; an expanded program of national parks; amendment of the B.N.A. Act to give the Federal Government power to establish a uniform system of educa-

tion, a national labour code, and a national health scheme; maintenance of freight rates at present levels.

A resolution on shipping asked that all ships primarily engaged in Canadian trade, and all Canadian naval vessels, be built, manned and repaired in Canada. This resolution also called for a tonnage replacement program, and the establishment of a Maritime Commission.

Two resolutions favouring credit arrangements with foreign countries, and specifically "financial and moral support" to the British people, both pointed out that such action would be beneficial to the Canadian economy.

Also referred to the incoming Executive were a number of resolutions deemed to be limited

in scope and not appropriate for action by a national Convention. Special measures by the Federal Government, such as the erection of a bridge across the Strait of Canso and a bridge or tunnel from Halifax to Dartmouth, to develop the economy of the Maritimes and promote full employment.

Election of Officers

The election of officers resulted as follows: President, A. R. Mosher; Secretary-Treasurer, Pat Conroy; Vice-Presidents, Alex McAuslane, Sol Spivak; Executive Committee, C. H. Millard, S. Barrett, J. E. McGuire, T. Prezeau, and T. Brannigan. All positions were contested.

Canadian and Catholic Confederation of Labour

WITH 375 accredited delegates in attendance, the Canadian and Catholic Confederation of Labour held its twenty-sixth annual convention in Saint Hyacinthe, Quebec, from the 14th to the 18th of September.

The report of the general secretary indicated an increase of 7,000 members among the affiliates of the Confederation which included 345 syndicates and 15 professional federations at the convention. The Federation of Municipal Employees, founded the previous April, was reported to have 5,000 members distributed among 27 syndicates. The total membership of the Confederation was reported as now being over 70,000.

Some 200 resolutions were placed before the Convention dealing with problems of labour legislation, political and social economy, and various other matters.

Presidential Address

The principal address of the Convention was presented by Mr. Gerard Picard, president of the Confederation. In commencing his address, Mr. Picard said: "In presenting my first report to the Convention, as general president of the CCCL, I am going to limit myself to making two fundamental claims . . . which, if granted, would mark a considerable advance in our legislation. These two claims of the CCCL are the following: (1) a Labour Code; (2) Labour Courts."

Mr. Picard called for a Labour Code which would include more than legislation regulating collective bargaining or the compilation in one volume of all labour laws. While praising Bill No. 338 as "the most progressive legislation to date" the speaker asserted that it was "not at

all" a Labour Code. A plea was made for a code which would be the expression of social justice and would outline the legal frame of labour relations, social security and assistance, with appropriate standards and definitions.

The plan for a Labour Code could be derived, he stated, from other countries and from conventions adopted by conferences of the International Labour Organization. Part of present provincial legislation could be used. Mr. Picard suggested the following as section headings of the Labour Code: Department of Labour, Labour Regulations, Labour Agreements, Minimum Wages and various laws relating to wages, Conciliation and Arbitration, Social Security, Social Assistance, Strikes and Lockouts, Picketing.

The President of the CCCL expressed the opposition of his organization to a Labour Code "whereby the federal government by absorbing provincial jurisdiction would expand into all branches of economic life." He considered it was easier for the people of a province to make themselves understood by the provincial government. Mr. Picard stated that "no attack on the federal government nor unreserved approval of actual provincial legislation" was intended.

In appealing for Labour Courts, Mr. Picard declared that regular courts were too slow, formal and expensive. While the procedure, he thought, was justified in inheritance cases, it would not do for labour conflicts. Moreover, as certain matters were reserved for special courts, civil, criminal, Admiralty, Exchequer and otherwise, he considered it was logical to have special courts for labour.

The Labour Courts should not, in his opinion, be a division of the Superior Court nor should they receive cases which could be settled by arbitration. The Courts should be asked to rule only in cases where "rights" were involved. Conflicts involving "interests" or claims arising from labour contracts should be left to negotiation, conciliation, arbitration, or strike or lockout. Strikes, he stated, would be prohibited in regard to questions of legal rights but would be permitted in a conflict of claims once the legal procedure was exhausted.

The President of a Labour Court, he said, should be a person with legal training, while the other members should be equally representative of employer associations and labour syndicates. Procedure before the Courts, he contended, should be simple, quick, and inexpensive. Important decisions should be published, and for a time at least should be final and without appeal.

Mr. Picard stated that confronted with "actual social problems" the CCCL would press as firmly for Labour Courts as for a Labour Code.

Address of Mr. J. G. Bisson

Among the other speakers was the Chairman of the Unemployment Insurance Commission, Mr. J. G. Bisson, who brought greetings to the delegates from the federal government, and in particular from the Honourable Humphrey Mitchell, Federal Minister of Labour. He emphasized the Minister's appreciation of the work done by the Catholic syndicates. In closing, Mr. Bisson described the important role that the Unemployment Insurance Commission plays in the field of social security.

Other Speakers

Another speaker was the Hon. H. Delisle, Minister of State in the Province of Quebec, representing the Hon. Antonio Barrette, Provincial Minister of Labour. After expressing regret at Mr. Barrette's absence, he informed the Convention that "Mr. Barrette is always prepared to collaborate with any union and to listen to the claims of the workers." Mr. Delisle then pointed out the importance and necessity of study mainly through the establishment of labour colleges where training could be offered leaders who would defend the interests of labour. Congratulations on the accomplishments of the Syndicates were also offered by the Honourable Adelard Godbout, Leader of the Provincial Opposition.

Resolutions Applicable to Federal Government

In regard to prices the delegates at the Convention asked the federal government to reimpose price controls until production became sufficient for consumer requirements. The recommendation was also made that a commission be formed before which manufacturers would have to justify any increase of their products or services. Each province would have a branch of such a commission with members from the government, employers, labour organizations, co-operatives and consumers.

The CCCL also passed a resolution requesting the federal government to raise income tax exemption to \$3,000 for married people and to \$2,000 for single persons. Claims for additional income tax should be made within 12 months of the filing of the form while repayment by the Department of Finance of excessive income tax returns should also be made within the same period.

A plea was made for continued family allowances to children over 16 who continue their studies. Equal allowances should be granted to all children of a family without regard to their number. Also requested was an increase in family allowances proportionate to the cost of living.

Several suggestions were made in regard to unemployment insurance. The CCCL felt that five representatives should be named for the principal economic regions of the Province; this, it was considered, would decentralize the administration of the law in a practical fashion.

Further suggested amendments were: reduction from 9 to 3 days of the time necessary before an insured person may draw unemployment insurance benefits, increase of benefits in proportion to the cost of living, and benefit payments after 160 instead of 180 days of contributions. Technical training for unemployed workers was also proposed as a help in obtaining work more easily.

Provincial Legislation

A resolution passed by the Convention requested the Provincial Government to amend the Labour Relations Act so as to make legal union security clauses in collective agreements. The CCCL also requested the establishment of a law of family housing credit. Several amendments were proposed for the laws governing accidents at work, syndicates of professional workers, minimum wages and differences between public services and their employees.

The Provincial Government was asked to amend the law of motor vehicles to better protect pedestrians and to reduce the number of highway accidents by the establishment of compulsory insurance for automobilists and regular inspection of motor vehicles.

Other Resolutions

Several other resolutions passed by the convention of the CCCL advocated:

The cessation of immigration until the solution of the problems of housing and unemployment;

Amendment to the national housing regulations to facilitate housing to wage-earners, with special regard to rates of interest, initial payment, and decentralized administration;

Pensions for invalids on the same principle as pensions for the blind;

The adoption of a national flag proposed by *La Ligue du Drapeau national*, and the choice of *O Canada* as a national anthem;

Opposition to conscription for any extra-territorial war and the banning of the Labour-Progressive Party and the Witnesses of Jehovah.

Election of Officers

A new executive was chosen at the closing session of the Convention. Messrs. Gerard Picard, Romeo Ethier and Andre Roy were respectively re-elected by acclamation as general president, secretary-treasurer and general secretary. Other members elected to the Executive were Mr. Emile Tellier, Three Rivers, first vice-president; Mr. Angelo Forte, Montreal, second vice-president; Mr. Alphonse Roberge, Quebec City, third vice-president; Mr. L. P. Boily, Jonquiere, fourth vice-president; Mr. Romeo Vallee, Sherbrooke, fifth vice-president; and Mr. F. X. Legare, Rimouski, sixth vice-president.

British Trades Union Congress

THE seventy-ninth annual Trades Union Congress was held at Southport, England, September 1 to 5, 1947. The President was Mr. G. W. Thomson, the Chairman of the General Council. There were 837 delegates representing 187 organizations having an approximate membership of 7,540,000, including 1,217,000 female members, an increase of 869,000 as compared with the total represented at the Congress in 1946.

Among the leading speakers who addressed the Congress were Right Hon. George Isaacs, Minister of Labour and National Service; Right Hon. Ernest Bevin, Foreign Secretary; Mr. G. J. Richardson, and Mr. G. S. Zander, fraternal delegates from the American Federation of Labour; Mr. E. Kupers, Vice-President of the World Federation of Trade Unions; and Mr. P. J. Noel-Baker, fraternal delegate from the Labour Party.

Presidential Address

The President, Mr. G. W. Thomson, in his address at the opening of the Congress, dealt at length with the economic problems that confronted Great Britain and the difficulties of the task of rebuilding and re-shaping work economy. These difficulties, he said, may tax the powers of leadership in the unions and in the Congress, but "overcome they must be, if we are to save ourselves by our own exertions in the dark days that are upon us". He asserted that efforts were being made to build

up a new international order which would lead to concord and co-operation in place of national rivalries and discords. He declared that stable prosperity cannot be achieved until the economic organization throughout the world was treated as a whole.

Turning to the activities of the General Council of the Congress during the past year, the President said that the time had come when ways and means should be found to permit greater participation of the workers in the field of management and when the problem of the training which would allow this to be done most effectively must be thought out. He referred to the fuel and power shortage of the winter of 1946-47 as emphasizing the shortage and mal-distribution of manpower for securing the maximum production in essential industries and services. He declared that the trade union movement is willing and able to assist in overcoming the difficulties of achieving a stable economy, but that all other sections of the community had responsibilities also. He said that trade unionists felt that there were still people in comparative idleness or in unessential occupations who could be transferred to seriously undermanned industries. He claimed that "much could be done to increase the efficiency of management in various ways and the development and use of joint production committees and similar machinery could be very helpful".

The President concluded by saying that it was "as a nation and by our own exertions that we must solve our problem . . . The situation demanded the conscious effort of every man and woman in the country".

Address by Minister of Labour

Right Hon. George Isaacs, Minister of Labour and National Services outlined the Government's proposal for the direction of labour. He said that while it was necessary to insure that the proposed "control of Engagement Order" was made effective, "the power of direction would be used with reason and sympathy. The aim would be to offer a choice of important work and to obtain agreement by persuasion rather than direction".

Direction of Labour

The General Council in its report accepted the view of the Government that to be effective, the Control of Engagement Order should involve a limited direction of labour in order to secure the better distribution of manpower. Although subjected to considerable criticism, the action of the Council was approved by a large majority.

International Policy

The Foreign Secretary, Right Hon. Ernest Bevin, in his address to the Congress made certain "informal suggestions" with respect to the gold reserves held by the United States and the formation of a British Commonwealth customs union. The debate on international policy centred on the following resolution:

"In view of the importance of preventing any division among the countries of Europe, which might result in a separatist, instead of a united policy being pursued, this Congress pays tribute to the work of the Foreign Secretary, and asks him to continue his efforts to unify and solidify the democratic countries of Europe to enable them, and us, to rebuild our economic structure which is of vital importance to the peace of the world."

Following a lengthy discussion in which amendments were presented asking that the foreign policy be directed towards establishing trade and commercial relationships with all European democracies and Russia, and also for a reduction in the armed forces, the amendments were defeated and the resolution adopted.

Iron and Steel Industry

The Congress defeated a resolution criticizing the Government for failure to introduce legislation providing for the nationalization of

the iron and steel industry and urging the General Council to press for such legislation. It was pointed out that the Government's policy had not been changed, and that it was intended to nationalize the industry during the life of the present Parliament. The matter of timing had to be considered, however, and the Government was unable to give assurance that a bill would be introduced in Parliament during the forthcoming session.

Other Resolutions

Among other resolutions passed by the Congress were the following:

Profits and Prices—Urging that the Government create immediately more effective machinery for the investigation of costs of production and distribution and of the level of profits and take such action as is found necessary to protect the interests of the consumer and the purchasing power of wages.

Production—Approving the setting up by the Government of an economic planning board and suggesting that such a plan (a) should clearly indicate priorities and production targets for the next two years; (b) promote maximum home production of food and give practical assistance to agriculture; (c) eliminate imperialistic commitments and insure that import and export trade is firmly linked with all other democratic countries.

Building Program—That the Government initiate a public inquiry into the building industry.

That the General Council appoint a committee to cover the planning and allocation of raw materials, fuel, machinery, productive space and labour for the production of building materials, fittings and equipment and the relation of this production to the achievement of a comprehensive building program.

Equality of Pay and Opportunity—That the General Council continue to press for the implementation of the Congress policy of equal pay for equal work and equal opportunities for women.

Factories Act—That the General Council study the Factories Act with a view to suggesting amendments to bring it up to date, the appointment and training of more inspectors, including strengthening of specialist branches, especially the medical and chemical branches.

Workers' Participation in Management—That affiliated organizations consider (a) the best ways and means of securing the fullest productive capacity in national and non-nationalized industries; (b) examine the machinery operating in their respective industries with a view to insuring the success of labour's economic plans.

Overseas Trading—Approving the Government's action in endeavouring to extend and increase trading relations with U.S.S.R. and other European countries.

Miss Florence Hancock, Chief Woman Officer of the Transport and General Workers' Union was elected President for the year 1947-48.

Index Numbers of Wage Rates in Canada, 1939 to 1946

WAGE rates in 1946 were 9.4 per cent higher than in 1945, according to the latest annual survey of wages and hours in Canada by the Research and Statistics Branch of the Department of Labour.

The accompanying table contains index numbers of wage rates by industries, and by main groups of industries, for the period 1939 to 1946. As the index is based on rates in the year 1939 as 100 the percentage increase in any of the years compared with 1939 may be determined by subtracting 100 from the index number for any industry or group shown in the table.

The general index or average for all industries was 55.2 per cent higher in 1946 than in 1939, and 9.4 per cent higher than in 1945. This compares with an increase from 1944 to 1945 of 2.8 per cent, of 3.1 per cent in 1944

over 1943, of 9.1 per cent in 1943 over 1942, of 8 to 9 per cent in each of the two preceding years, and of 3.9 per cent from 1939 to 1940.

In the main industrial groups the largest percentage increase in 1946 over 1945 was 11.4 per cent in Transportation and Communication. In the same comparison, the index for Manufacturing was higher by 10.2 per cent, the Construction index increased 9.8 per cent, Logging 9.2 per cent, Service (Laundries) 8.9 per cent and Mining 3.0 per cent.

Report No. 29, "Wage Rates and Hours of Labour in Canada, 1946", which contains average wage rates for the main occupations in many industries in addition to tables of index numbers, will be available in the near future as a supplement to the *LABOUR GAZETTE*.

INDEX NUMBERS OF WAGE RATES IN CANADA, BY INDUSTRY, 1939-1946

(Rates in 1939 = 100)

International Labour Organization

Thirtieth Session of International Labour Conference

FOR its Thirtieth Session¹ held during June and July, 1947, the International Labour Conference for the first time since 1939 returned to the pre-war headquarters of the International Labour Organization at Geneva, Switzerland.

Delegates from forty-eight member states of the ILO took part in the work of the Conference. The majority of the delegations were tripartite, consisting of workers', employers', and government representatives.

The principal subjects under discussion were freedom of association and industrial relations, labour inspection, employment service organization, and social policy in dependent territories. The decisions of the Conference on these subjects were embodied in the form of six International Labour Conventions, two Recommendations, and a number of Resolutions. The Conference also debated the Report of the Director-General of the ILO, studied the way in which previously-adopted Conventions are being applied in the various member countries, considered financial and budgetary questions relating to the ILO, and reviewed its Standing Orders.

Canadian Delegation

The Canadian Government Delegates were Messrs. Paul-Emile Renaud, Charge d'Affaires *ad interim*, Berne, and Harry Hereford, Special Assistant to the Deputy Minister of Labour, assisted by Messrs. V. C. Phelan and J. A. McClelland of the Department of Labour as technical advisers.

Mr. Harry Taylor, Canadian National Carbon Co. Ltd., Toronto, was the Employers' Delegate, his advisers being Messrs. H. W. Macdonnell, Canadian Manufacturers' Association, G. V. V. Nicholls, Chamber of Commerce, and Allan C. Ross, Canadian Construction Association.

The Workers' Delegate was Mr. Carl E. Berg, Vice-President, Trades and Labour Congress of Canada, and his advisers were Messrs. William Page, United Brotherhood of Carpenters and Joiners, C. H. Millard, United

Steelworkers of America, and Alphonse Roberge, Canadian and Catholic Confederation of Labour.

The Hon. C. C. Williams, Minister of Labour, Saskatchewan, Mr. A. A. Heaps, Unemployment Insurance Commission, and Mr. W. L. Best, Railway Transportation Brotherhoods, who had been named to attend the Conference, were unable to be present.

Freedom of Association

The placing of "freedom of association and industrial relations" on the agenda of the Conference arose in an unusual fashion. The subject had been placed before the Economic and Social Council of the United Nations at its fourth session last March, by the World Federation of Trade Unions. At the same time, the American Federation of Labour had laid a memorandum on the question before the Council.

The Council's decision was to request the ILO to consider the question at its Conference in June, and to report back to the Council's fifth session.

In spite of the fact that the Council's request to the ILO was received only on April 18, the Office was able in a very brief period to prepare an excellent report on the whole problem of the right of workers and employers to organize and also to draft comprehensive and detailed texts for consideration by the Conference.

It was the general opinion of the Conference that freedom of association was perhaps the most important of the agenda items, for not only does the right of workers and employers to freely organize and to be represented in industrial matters by unfettered associations underlie the very principles of the International Labour Organization, but this was the first occasion upon which the United Nations had referred a question to the ILO as provided for in the agreement entered into by the two organizations less than one year previously.

The subject was referred to a Committee of the Conference, the main points developed during the deliberations being briefly as follows:

(1) Although all agreed upon the essential principle of freedom of association and more

¹ The Report of the Canadian Government Delegates on this meeting will be issued shortly as a supplement to the *LABOUR GAZETTE*. This article comprises a brief summary of the work of the Conference.

specifically, the rights of trade unions, there were many sharp differences as to the detailed significance of that principle, on its practical application, and on the wording to be used to express the views of the International Labour Organization. These differences invariably were between workers and employers with government members taking somewhat of a middle course.

(2) It was pointed out by more than one government member (including Canada's) that "freedom of association" was to be understood as being subject always to ordinary domestic laws in relation to public order. Government members, while admitting the desirability of not including this point at all appropriate locations in the text, insisted that this was the understood background—a view accepted by the Committee.

(3) It was stated before the Committee that in some countries today, legislative and administrative action hampers and interferes with the free right to organize. (The memorandum from the World Federation of Trade Unions speaks in the same vein.) No country or countries were specified however.

(4) The question of whether the "closed shop" agreement between employers and employees (or any other form of union security) is in violation of the principle of freedom of association, arose more than once in the discussions. Employers took the position emphatically that the "closed shop" is a species of coercion, and hence denies the right of a free choice to the individual. The workers strongly opposed this view, submitting that union security is a necessity to promote stability in industrial relations, and as well to protect the workers' organization from dissident minorities. In the outcome the majority of the government members supported the view that some degree of union membership security, when arrived at by free collective bargaining between representatives of workers and employers, is not in violation of the spirit of freedom of association, and this view finally prevailed.

(5) One further point pressed by the workers related to the setting up of some form of international machinery to supervise the establishment and maintenance of freedom of association in the various countries. This, it was admitted, raised issues of "great complexity and difficulty," involving for example, the sovereignty of states. A compromise proposal, advanced by the British Government member, was finally adopted. Specifically the British proposal was for a Resolution to be adopted by the Conference, requesting the Governing Body to study in all its aspects the question of international

machinery to supervise freedom of association, any such machinery to be under the International Labour Organization.

As a result of its discussions the Committee recommended that the Conference embark on a program under which the various questions will be considered at future Conferences, with a view to the adoption of a series of Conventions.

In accordance with the Committee's report, the Conference adopted a resolution setting forth general principles as to (1) freedom of association; and (2) protection of the right to organize and bargain collectively. It was considered that at the 1948 Conference one or several Conventions might be adopted embodying some of the principles in the resolution. However it was felt that questions of detail as to the application of the principles would require much fuller consideration. Accordingly it was agreed that the 1948 Conference would hold a "first discussion" of these questions of detail under the ILO's "double discussion" procedure, with a view to the possible adoption of Conventions at a future date.

The "double discussion" procedure was also invoked for the questions of collective agreements, conciliation and arbitration, and co-operation between the public authorities and employers' and workers' organizations.

As stated above, it was decided to refer the question of international machinery for safeguarding freedom of association to the Governing Body to examine its implications and to report back to the 1948 Conference.

Labour Inspection

On the subject of labour inspection the Conference adopted a Convention and two Recommendations. The Convention provides for a system of labour inspection in industry and commerce, the purpose of which, as defined by the Convention, is to enforce labour legislation relating to conditions of work and the protection of workers, to supply technical information and advice to employers and workers concerning the application of such legislation, and to report to the competent authority defects or abuses not specifically covered by existing law.

While stating that labour inspection should be under the supervision and control of a central authority, the Convention provides that "in the case of a federal state, the term 'central authority' may mean either a federal authority or a central authority of a federated unit".

Inspectors should have a status as public officials such as to be "independent of changes

of government and of improper external influences", according to the Convention. There should be a sufficient number of inspectors, adequately trained, and including the necessary number of technical experts. Workplaces should be inspected "as often and as thoroughly as is necessary to ensure the effective application of the relevant legal provisions". Inspectors should be free to enter a workplace without notice; to carry out necessary inquiries; to interrogate alone or in the presence of witnesses the employer or staff; to require the production of documents the keeping of which is required by law; to enforce the posting of notices; and to remove for purposes of analysis samples of materials used or handled, subject to notification. "On the occasion of an inspection visit, inspectors shall notify the employer or his representative of their presence, unless they consider that such a notification may be prejudicial to the performance of their duties."

In regard to enforcement, the Convention provides that inspectors (or the competent authorities) should be empowered to issue orders, subject to any right of appeal which may be provided by law, with a view to remedying defects observed in plant, layout or working methods which constitute a threat to health or safety. Violations would be punishable by legal proceedings.

The Convention specifies that inspectors should be bound not to reveal manufacturing or commercial secrets.

A member state which ratifies the Convention may by declaration exclude commerce from its application of the text.

The two Recommendations on labour inspection supplement the Convention. The first suggests the inspection of plans for new industrial and commercial undertakings, the collaboration of employers and workers on health and safety measures, and the standardization of annual inspection reports. The other recommends that governments extend the system of labour inspection to the mining and transport industries.

Several of the points in the Convention evoked considerable disagreement and close votes in the Conference Committee which dealt with labour inspection. The texts were finally adopted, however, by a record vote of 135 to 0.

Employment Service Organization

The subject of Employment Service Organization was given first discussion, and will again be on the agenda at the 1948 Conference.

The Conference adopted lists of points considered suitable for inclusion in a Convention and a Recommendation at the next session. These texts deal with the object, structure and functions of a national employment service, and make provision for international co-operation among employment services.

Briefly, the functions of the employment service are stated to be: assisting workers to find suitable jobs and employers to find suitable workers, with special note as to qualifications and training; facilitating occupational and geographical mobility; providing information on the employment market and its probable evolution, both nationally and in different industries and areas; co-operating in the administration of unemployment insurance; and assisting in social and economic planning aimed at ensuring a favourable employment situation.

Social Policy in Non-Metropolitan Territories

Five Conventions having to do with social conditions in dependent territories were adopted by the Conference. These dealt with social policy, the right of association and the settlement of labour disputes, labour inspectorates, the application of international labour standards, and the maximum length of contracts of employment of indigenous workers.

Budget

A budget for 1948 of \$4,449,295 was adopted. During the debate on this question, several speakers called attention to the fact that the Organization had its staff divided between Montreal and Geneva, and expressed the hope that a decision as to the permanent headquarters of the ILO would shortly be reached. This question was also discussed in the debate on the Director-General's report.

Re-admission of Austria

Austria, which had ceased to be a member of the ILO in 1938 following its incorporation into Germany, was re-admitted by the Conference by unanimous vote. Austria thus became the 53rd member country of the ILO.

The Director-General announced that El Salvador and the Philippine Republic had indicated their intention of joining the Organization.

He also informed the Conference that Yugoslavia had given the statutory two years' notice of its intention to withdraw from membership on the ground that "in the opinion of the Yugoslav Government the constitutional provisions and the structure of

the International Labour Organization have become incompatible with the economic and social conditions of the Federal People's Republic of Yugoslavia and do not reflect the general trends of development in those fields of development in the post-war world."

Relations with WFTU

The Director-General announced that a few weeks before the opening of the Conference the World Federation of Trade Unions had asked its Executive Committee "to study the conditions under which official relations may be established between the WFTU and the International Labour Organization."

Characterizing this as "a most welcome development," Mr. Phelan described the functions of the two organizations as follows: "The ILO and the WFTU are organizations which differ in character. The ILO is an organization of states. It makes no claim to be the spokesman of the labour movements of the world. It is for the trade unions themselves to organize the machinery through which they can make such collective representations to governments as they may deem desirable. The ILO is an official international instrument in which they have representation

and through which they can pursue the active realization of many of their aims.

"Thus, each has its own sphere of action; there can be neither rivalry nor conflict between them; but in many respects they have common aims and can strengthen one another. I am confident therefore that the discussions which are to take place will lead to a close and fruitful collaboration between them."

Economic and Social Council Approves ILO Report

A report embodying the decisions of the Conference on freedom of association was presented to the fifth session of the Economic and Social Council on August 8.

The Council, noting the report, decided to recognize the principles it contained and to request ILO to continue its efforts in order that one or several international conventions may be quickly adopted. The Council further resolved to transmit the report to the General Assembly, and stated that it awaited further reports on the subject from ILO and also in due course the report of the Commission on Human Rights regarding those aspects of the subject which might appropriately form part of the Bill or Declaration of Human Rights.

Sixth International Conference of Labour Statisticians, Montreal, August, 1947

AMONG the duties of the International Labour Office is one concerning "the collection and distribution of information on all subjects relating to the international adjustment of conditions of industrial life and labour". In this connection with the object of facilitating international comparisons in the field of labour statistics, the Office, working through its Governing Body, has convened six conferences of official statisticians engaged in the compilation of labour statistics in the member countries. The first five of these were held in 1923, 1925, 1926, 1931 and 1937. Among the topics placed on the agenda of these conferences were such subjects as: the classification of industries and occupations; statistics of wages and hours of work; statistics of industrial accidents; cost-of-living index numbers; unemployment statistics; international comparisons of real wages; methods of family budget inquiries; statistics of collective agreements; and statistics of industrial disputes. In each case resolutions were adopted embodying the conclusions of

the conference, and these serve as international standards for the guidance of national statisticians.

The Sixth International Conference of Labour Statisticians, held in Montreal, August 4-12, 1947, was attended by delegates from 23 countries, by representatives of the Governing Body of the International Labour Office and by representatives of the United Nations, the Food and Agricultural Organization of the United Nations, the International Civil Aviation Organization and the International Monetary Fund. Mr. Herbert Marshall (Canada) was elected Chairman of the Conference and Mr. Leon Delsinne (Belgium), Vice-Chairman.

In his opening remarks to the Conference, Mr. Jef Rens, Assistant Director-General, International Labour Office, pointed out that ten years had elapsed since the preceding conference. At no time since such sessions were inaugurated had such a long period elapsed between conferences. The past ten years had witnessed a major world war and the beginnings of its aftermath. Emphasis

upon problems of labour supply, the maintenance of full employment and the measurement of living costs, had never been so great. At the same time significant developments in collection and compilation techniques in the field of labour statistics had taken place in a number of countries. For these and other reasons the Sixth International Conference had before it a large and important agenda.

The main items on the agenda were: statistics of employment, unemployment and the labour force; statistics of cost of living; and statistics of industrial injuries. After the first plenary session, at which the election of officers and other preliminary business was conducted, the Conference continued its work in committee, the three main committees being concerned with the three chief items mentioned above.

The Committee on Employment, Unemployment and the Labour Force submitted a resolution (comprising 57 separate items) covering such topics as: sources of information, statistical methods (including principal definitions) types of statistics, methods and techniques and publication. Account was taken of the varying needs and resources of the different countries and a distinction drawn between those recommendations which were directed to all countries for immediate application, those which were directed specifically to the more industrially developed countries or to the less industrially developed countries, and those that were directed to all countries to be undertaken "as resources and facilities permit".

The Committee on Cost of Living submitted a main resolution (made up of 15 separate items) concerning such topics as: the objectives of a cost-of-living index; methods and techniques to be used; the possibility of providing separate index numbers for different economic and social groups, geographical areas and different family types; and a recommendation that, in order to promote understanding of the nature and uses of indices of retail prices charged a particular group, the term "cost-of-living index" should be replaced, in appropriate circumstances, by the term "price-of-living index", "cost-of-living-price index" or "consumer-price index".

The Committee on Statistics of Industrial Injuries dealt particularly with the method of measuring frequency and severity rates for industrial injury statistics. In particular agreement was reached on a standard definition of injury and standard methods of computation for frequency and severity rates in order to promote international comparability of these statistics. The main resolution dealing with these matters was made up of 11 separate items.

The Conference in final plenary session adopted, with very minor amendment, the resolutions worked out in committee. In addition, the Conference adopted sixteen other resolutions, most of them addressed to the Governing Body of the International Labour Office and relating to the future program of the Office in the field of labour statistics.

Standard Hours in Australia Reduced to Forty Award of Commonwealth Court of Conciliation and Arbitration

THE 40-hour week will be the standard work-week in a large part of Australian industry beginning January 1 next. This was the decision of the Commonwealth Court of Conciliation and Arbitration on September 8. The Full Bench of three Members agreed that the standard weekly hours should be reduced to 40 from the 44 granted by the Court in 1927.

The Commonwealth Court is empowered to deal with any labour dispute, or any situation likely to give rise to a dispute, which extends beyond the bounds of any one State. In order to prevent or settle a dispute, the Court may make an award determining the standard hours of work, the basic wage or the principles on which it is to be computed, the period of annual holidays with pay, or the minimum rate of wages for adult women.

During the war, the Court was given power to declare, after hearings, an award, or any term of an award, which applied to part of an industry, to be a common rule throughout the industry.

An increase in the basic wage was asked for by the Commonwealth Government on October 31, 1946, and on December 13 the Court awarded an interim increase of 7s. per week. On March 19, 1947, it was decided to proceed with the Standard Hours case alone, leaving the final award on the Basic Wage for later consideration.

The Court held 158 sittings, heard 225 witnesses, and received almost 500 exhibits. The transcript of proceedings totalled 8,875 pages.

The 40-hour-week award applies to all industries which had awards or disputes before

the Court but it does not affect rural industries. Neither, the Court pointed out, will the award affect production in many industries such as coal, pig iron, steel, electric industries and others already operating on a 40-hour week. In New South Wales, there has been a general statutory 40-hour week since July 1, 1947.

All awards affected by the new decision must be amended to empower an employer to require "reasonable overtime at overtime rates", to forbid any organization, which is party to an award, to be a party to or concerned in any limitation on such overtime working, and to stipulate that these provisions are to remain in effect until otherwise determined by another award or order under the Act.

Beginning with an application by the Printing Industry Employees' Union in October, 1945, for a variation of the Commercial Printing award in respect of standard hours of work, proceedings before the Commonwealth Court were given a wider import by the intervention in the public interest of the Commonwealth Attorney-General, the subsequent application for a 40-hour week by the Australasian Council of Trade Unions on behalf of 37 unions, the Australian Workers' Union and by many other unions, and by the fact that, in addition to the Commonwealth Government, the Governments of four States, New South Wales, Victoria, Queensland and Tasmania, became parties to the proceedings and pressed the Court to grant a 40-hour week. Western Australia left the matter to the Court but expressed disapproval of the introduction of the measure at the present time; South Australia approved the principle of greater leisure but opposed its immediate application.

As regards the Commonwealth Government, its spokesman reported to the Court—

after full consideration of all the material which has been placed before the Court, the Commonwealth's view is that the evidence given warrants the granting of a 40-hour week.

On behalf of the Governments of Victoria, New South Wales and Tasmania, it was stated:

Their duty is to their citizens whose well-being appears to them to demand their active support of the application of a 40-hour week, which in their considered view is a desirable social reform, which can and should be introduced immediately.

For Queensland, it was declared:

That the national economy, the buoyancy of national revenue, the high level of productivity, the favourable export trade and

markets, and the present and prospective prosperity of the nation are favourable to the immediate granting by the Commonwealth Court of Conciliation and Arbitration of a standard working week of 40 hours; and

That the introduction of a 40-hour week should be granted in the interests of the community and of industrial contentment and security.

As to the employers' case, the judgment refers to their "historic role" of opposing the workers' claims to increased leisure but—

history has invariably proved the forebodings of employers to be unfounded. . . . The gravamen of the employers' case is that circumstances are not appropriate and the time not proper for any reduction in present standards of working hours.

Approval of the principle of the 40-hour week by the four Judges of the Court then sitting was announced on October 30, 1946. The Court normally has five Members, but the death of one and illness of another left only three Members to continue the case.

In its judgment, the Court pointed out that it had to consult the interests of the parties and the national welfare:

The problem includes social, economic, political (in the wide sense) and international matters, and the factors involved include production and productivity, costs and prices, the state of the internal economy, the economic relationship of classes, the relative validity of the claims for leisure and for goods, the right of the people to determine these issues democratically, the relative position of the States and Commonwealth, and the development of the national undertakings . . . we are required to weigh the imponderable, to compare incomparables, to measure what has no measure, and to reduce to certainty what is basically a matter of assumption, hypothesis and speculation.

Further,

It is a commonplace of Australian industrial law that the limit of the constitutional power of the Court is to settle these disputes each within its ambit, and the ultimate judgment will in fact settle these particular disputes, and do no more. But we know, as a matter of practical fact, that it will in the long run lead to uniform standard hours throughout Australia. The responsibility of this onerous task does not properly belong to this Court. It is bound only to settle the dispute. It is something additional that State Legislatures and State industrial tribunals make its decisions in these disputes the bases of industrial determinations. . . .

The evolution of this Court from an industrial tribunal limited to the particular task in each case, to an institution having in effect wide legislative powers, is an interesting one which some one will one day explore. This legislative power is so great indeed as to occupy a field from which the Federal Parliament is excluded; so paramount as to override in appropriate cases

the State legislation, and so vital as to make the law for Australians in that realm which touches them most closely and intimately, viz., their industrial relations filling half the waking hours of their working days. It is a matter of striking comment that in a democracy so much responsibility and so much legislative power should be imposed on and entrusted to three men appointed for life and beyond the reach of the popular will.

It is clear, however, that the popular will if it could be ascertained is, in a fundamental question of this kind, a matter which this Court should not ignore, if for no other reason than that any vital frustration of it might quite well work out in lowered industrial effort and a falling productivity and production, while on the other hand . . . the fulfilment of that will might operate as a stimulus to better effort. The facts therefore that four States (i.e. New South Wales, Victoria, Queensland and Tasmania which include the greatest both in population and economic activity) and the Commonwealth have become parties to these proceedings and have pressed the Court to settle all these disputes by granting forthwith a forty-hour week in each case are matters of the greatest import. . . .

No Government, State or Federal, either in its capacity as Government or as employer respondent opposed the claim for shorter hours . . . it is of course very obvious that the New South Wales Act [1947] did alter very materially economic and political factors and did, during the hearing of the case, present this Court with a *fait accompli* in relation to a substantial section of its industry and to that extent did affect the freedom with which the Court might otherwise have acted. We have, as is proper, weighed these facts and they form part of the bases of our judgment.

The Court is pressed by the workers and the four Governments to apply the principle enunciated by it on 30th October last fully and forthwith on the ground that this is the only adequate way of settling these disputes. For this working class claim has been and is the basis of industrial dispute and unrest and will go on being so. No realist for a minute thinks that a rejection by the Court in these cases would bring about industrial harmony or would abate for an instant the demand for the shorter week. History has shown how persistent in the past have been such claims. There is no reason to suspect that the future will differ. The claim is expressive of a world movement sanctioned by the International Labour Organization* and already achieved in some countries. It is, we are assured by responsible leaders of the claimants, a claim justified at this moment by hopes held by the workers based, they say, on promises given during the war when workers ungrudgingly worked long hours; that when the war ended this desirable social reform would be achieved.

Considering the scarcity of commodities and the need for production, the Court reviewed

the evidence, including favourable opinions of Commonwealth economists and statisticians:

We are told there are shortages of almost all commodities. . . . There is a huge building lag. Repairs, replacements, renovations and all kinds of depreciation of public and private buildings are gravely in arrear. There is a great shortage of houses. There is, and perhaps more significantly, a substantial shortage of labour power in almost all industries. There are markets internal and external crying out for satisfaction and providing Australia with an undreamed of opportunity for laying the basis of a wide profitable foreign trade.

This then, it is said, is a time for lower costs, not higher. The peoples of the old world and elsewhere too are starving and short of clothes and shelter. Hence this is not a time when we should look on at that mass distress and enjoy an added leisure. Particularly as the present hours do not, generally speaking, involve any damage to health or well-being. We are further told that production and productivity are down, that our material standards are in jeopardy, that with a huge purchasing power in their hands consumers are frustrated when supplies are denied. In short, it is urged this is no time to let up. It is the time par excellence for more and more production . . .

A formidable list, and to many minds an unanswerable one, but answers have been made and must be weighed—a wrong word perhaps since many of them are imponderables but at least they must be considered and adjudged. For example, how shall we estimate the economic value of industrial contentment? How shall we measure the human value of it? How far is the shorter week a step on the road to that co-operation of the forces of production which is so desirable? How shall we set the family aspects of this increased leisure against a foreign trade or the claims of our people against those of other countries? Yet all these are factors which do enter into the fabric of one's mind and ultimately issue forth in judgment.

Most if not all of the opponents to the granting of the forty hours immediately, based their opposition on these "shortages." Employers do not fear the increased prices—they will be passed on—as for the investor, he will still get his dividends . . .

It is clear that this is the real problem at this moment, and has given us of all the matters raised in this long hearing, the greatest concern.

Explanations of these shortages are easy enough; the war and the diversion of our resources to that supremely wasteful enterprise, the accumulated housing shortage never overtaken since the 1930 depression, progress in the conception of what constitutes adequate housing, the fall in the birth rate during the depression which now results in fewer young people of employable age which aggravates the labour shortage. The enormous increase in purchasing power in the hands of the community . . . The disorganization of the economy due to the transition from war to peace. The unsettlement of the workers after a war. The loss of six years in training of our labour force. The greatly increased marriage rate which took many women out of industry and

* Reference is to 1935 International Labour Convention approving the principle of 40-hour week and appropriate measures to apply it.

put them in the market for homes. The fact that shortages are a relative matter—a relation between supply and demand—and there has been a greatly enhanced demand without a corresponding increase in supply. The wasteful results of bottle-necks and uneven flow of goods. Many other explanations of a general character were offered while each industry had its own special explanations.

There will always be shortages in the relative sense if we maintain full employment which of necessary implication postulates demands still unsatisfied, and so shortages . . .

It is a matter of some significance that responsible governments covering most of Australia do not regard the shortages, even housing, as a reason for either refusing or postponing this claim, and our order will be found to make provision which amongst other things will enable existing hours in housing production to be maintained so long as is necessary.

Many of the shortages discussed in employer evidence are traceable back in the last analyses to the shortage of coal. Nothing we do in this judgment will affect coal production. The miners do not work forty hours a week and the New South Wales employees not covered by Federal awards are already working forty hours.

As to the timing of the hours reduction, it seemed to this Court,—

as it seemed to this Court when it dealt with this problem before in 1926 so clear as to be beyond any cavil that the appropriate time to add burdens to industry or, from another angle, to give ourselves added benefits, is when industry is booming and when nature is bountiful. All the economists of both sides agree that never in our history have all the factors been so favourable, nor is it easy to conceive them ever being more favourable.

Business interests are not worse off because there continues to be an unsatisfied demand both internally and overseas, however much they may feel aggrieved by the inability to meet this demand, and when pressed in cross-examination managers agreed that they could better cope with an added burden when business was booming than when curtailment was necessary in an incipient depression.

Some comment was made on the waste of time and lack of discipline in industry as a result of the war:

Wartime conditions had very great physical and psychological effects upon industry; both management and workers were affected. Managerial laxity arose out of cost-plus methods, the continued existence of a sellers' market and the necessity of production "at all costs." Easy profits and such factors greatly affected factory discipline for which management is responsible. And the Manpower Regulations under which labour was controlled and directed, the security of jobs, the long hours and high wages which resulted from much overtime and full family work, tended also to affect the output per man-hour of the workers. Laxities then permitted are now grown into habits, but they can be overcome. It is easy to believe that the minutes lost by late arrival and early knocking off; by early stopping and late starting at the morn-

ing, midday and afternoon breaks, by unnecessary absences, by lax work and inattention at machines, might, if recovered by a mutual determination to do better, very substantially mitigate and perhaps even obviate loss of production. Forty hours work might easily equal 44 hours of the kind of work and management we have in our actual experience witnessed. Reasonable discipline therefore is essential and unions and employers owe a duty to the community to secure it.

The Court's order in this case establishes a new industrial relation and implies that a full 40 hours should be worked in every case, less only prescribed or agreed upon remissions. Awards should be drawn to give full effect to this and to make clear that *pro rata* reductions of pay may be made for unauthorized omissions.

The resiliency of industry was noted, the gains made in mechanization, equipment, technical knowledge and skill, and for the first time in the history of capitalism,

full employment and, what is more important, the promise that it will be continued indefinitely. . . .

So that we conclude that the loss of production may quite well be less than anticipated, might easily be mitigated, and might be rapidly caught up as indeed New Zealand's experience confirms when, after a 40-hour week was implemented in 1936, its production and productivity both increased.

As regards the added burden on State undertakings, particularly railways, the judgment states:

in fact the price and wage rises which have taken place have already done so, and to such extent that in some cases the added costs have been taken up in increased charges for the services provided. Some of these undertakings had passed through a period of financial prosperity during the war, but were now showing substantial deficits which would not be overcome without an adjustment of freights and fares. Nor should it be overlooked that the depreciation of money in effect amounted to a reduction of freights and fares, so that an increase of them is in fact restoring their real level.

It is clear that whether or not 40 hours is granted, most if not all will have to fall into line or show balance sheet losses. On the other hand, some of these undertakings such as the Victorian State Electricity Commission; Melbourne and Metropolitan Tramways Board; Victorian Country Roads Board, Melbourne Harbour Trust, Melbourne and Metropolitan Board of Works, and others, indicated that they would be able to handle the financial burden without undue difficulty. . . .

If we are satisfied that the national economy can stand the burden, then it seems to us proper that the States and Commonwealth should be left to work out their own financial policy.

If on the other hand the added costs lead to greater efficiency and economy then the community is advantaged.

We were, at one stage in these proceedings, before the attitude of the Commonwealth

was made as clear as it is now, gravely concerned about the burden which a 40-hour week would impose upon all these Governmental and *quasi* Governmental undertakings, but the position has been greatly eased by the final statement made . . . for the Commonwealth.

Foreign competition presented a difficult problem. But the opinion was that

having regard to our rate of exchange and the relative international value of our money it may be desirable to increase prices in Australia.

We have noticed the disparity of working hours in other countries, shorter in United States of America and New Zealand and at least nominally shorter in France; falling steadily in England; longer in Sweden and Denmark, Holland, Belgium, with Russia almost an unknown quantity. Nothing that we have concluded from our study of these matters has suggested to us that we should refuse to make the order which follows.

Australia has a huge unsatisfied internal market for most commodities and is not with its present shortage of manpower able yet to undertake both the satisfaction of its internal market and a full foreign trade. While the great expansion of our industrial undertakings already referred to makes it clear that foreign competition is not thought by industrialists to be a present menace.

Other factors weighed by the Court were those affecting the balance of trade, distribution of the national income, savings, the rigidity of the Australian wage system, and the effect of the decision. It concluded thus:

What the Court has done in this decision is, as the employers have indicated, to make

a major social judgment which will have very great and important consequences. A decision the other way would also be an important social judgment. It has involved tremendous preparation. We have had all the assistance with which the best minds could provide us. For the use we make of it, ours is the responsibility, and it is trite to admit that we feel it very heavily. One comfort however remains, that is, if experience shows that we have erred, and contrary to our best judgment the economy does suffer, or, if because of unforeseen world conditions unanticipated results threaten us, then the Court can take such necessary steps as will best protect and preserve our community against any such untoward possibilities.

Nothing in this judgment is to be taken as a reason or an argument for the reduction of standard hours in industries where the weekly hours are already forty or less per week. These industries call for special consideration which has not been undertaken in these proceedings.

Our task is finished; the future will be watched with concern and interest; the economy is in a period of transition and of major change and development. This Court has, in its recent decision on wages and conditions, varied greatly the benefits and burdens of wage-payers and wage-receivers and the play of economic forces. Perhaps this decision completes what can safely be done for the time being and for the immediate future; the economy must now be allowed to digest and assimilate all these changes and will of course be closely and continuously under observation by the Court and by the Office of Economic and Industrial Research to be set up in terms of Section 81AA of the Commonwealth Conciliation and Arbitration Act 1904-47.

Incidence of Neurosis among Factory Workers

A REPORT entitled *The Incidence of Neurosis Among Factory Workers*, prepared by the Industrial Health Research Board of the United Kingdom Medical Research Board of the United Kingdom Medical Research Council, has been issued by His Majesty's Stationery Office, London.

Containing the findings of a team of research workers headed by Dr. Russell Fraser, which studied over 3,000 male and female workers selected at random from a number of light and medium engineering factories in and around Birmingham, the report indicates that neurotic illness is responsible for a considerable amount of absence from work.

The survey found that 10 per cent of the workers studied (9 per cent of the men and 13 per cent of the women) had suffered from "definite and disabling neurotic illness," and a further 20 per cent (19 per cent of the men and 23 per cent of the women) from "minor forms of neurosis" during the course of six months. "Neurotic illness caused between a

quarter and a third of all absence from work due to illness," being responsible for "a loss equivalent to an annual absence of three working days by every man studied and of six days by every woman."

The term "neurosis" is used in the report to cover "any psychological or mental illness . . . it includes anxiety states, mild depressive states, obsessional states, hysteria, and also the few instances of psychosis which were discovered." The term "definite neurosis" includes "only those disorders which were clearly illnesses both in the doctor's and in the patient's opinion, and which were clearly neurotic in nature and also disabling—nearly always they had caused absence from work." Psychosomatic illnesses, and neurotic disorders of less degree, are included under the term "minor neurosis."

Each individual studied underwent intelligence tests, an interview by a social worker and a full psychiatric assessment by one of the three physicians taking part in the sur-

vey; also a number of special investigations and, where necessary, a full physical examination.

Circumstances Associated with Neurosis

"Workers who had considerable domestic responsibility without excessive hours of duty at the factory or elsewhere (under 75 hours a week), experience less than the average amount of neurosis," the report found; "the same was true of those with a wide range of human contacts, and of those with a job that they liked. This is understandable since they were satisfying some common human aspirations and needs. Mere freedom from any source of worry appeared by comparison to be of little moment; though the small group with considerable sources of worry, such as those due to separation from close friends or to illness among relatives, had more neurosis than the rest. . . .

"A decrease in social contacts was the circumstances most commonly associated with neurosis. Those whose leisure was usually spent alone, or only with their immediate family, suffered more than average neurosis, whether their contacts were reduced because of solitary interests, restrictions imposed by home duties, or other reasons. To a lesser degree, those with diminished recreation and leisure interests, also suffered from a higher incidence of neurosis than the average.

"Neurosis was more frequent among groups whose domestic circumstances could be regarded as unsatisfactory, for example, those widowed or separated, and married women with partial home duties (i.e. with either housework or the care of children, but not both). This group of married women had poorer health, probably because it included most of those whose homes had been disrupted by the war. On the other hand, the married women with full home duties (both housework and the care of children) had experienced better health than the other married women and as good health as the single women, though they had been more frequently absent from work. Evidently wartime factory hours are unsuitable for married women with full home duties, but with shortened hours such women may be efficient and healthy factory workers.

"It is clear, therefore, that the circumstances outside the factory, which were associated with a high incidence of neurosis, are characterized by unsatisfactory human relationships. The more obviously unsatisfactory the human relationships, the closer the association.

"There were also some indications that fatigue may contribute to the development of neurosis. Neurotic illness (unlike physical illness) was more frequent among those

usually working long hours of duty (over 75 hours a week). Complaints of excessive fatigue were also more common among those suffering from other types of illness. Those whose diet had been least adequate had also suffered more neurosis, possibly because, *inter alia*, they had lessened resistance to the prevailing causes of fatigue. Only among the men did some of the work demand heavy exertion, and, in them, the heaviest work was associated with more physical illness. In other types of work, such as heavy engineering, purely physical fatigue may be more important.

Nature of Worker's Job

"The nature of the worker's job was found—as might be expected—to be relevant to the incidence of neurosis. Neurosis was more frequent among those who disliked their jobs or found them boring. While in some instances these attitudes may have arisen from a neurosis due to other causes, it is improbable that this was the whole explanation. Evidence was obtained which indicated some of the factors underlying these attitudes. Boredom and dissatisfaction with the job were more frequent among those whose work required less skill than that appropriate to their intelligence.

"From analysis of the workers' opinions concerning the main strain of their jobs, it emerged that unsatisfactory working conditions, boredom or monotony, and eye-strain were the most common factors mentioned—and these may well have contributed to the development of neurosis. Neurosis was also more frequent in association with certain types of job, mainly those which would tend to produce a trying monotony and those involving very light or sedentary work.

"The association between the incidence of neurosis and the type of work was examined among workers with a good record of previous health (i.e.) those whose jobs had not been chosen because of health reasons). Those on assembly, bench, inspection or toolroom work suffered more neurosis than those on other types of work. This was probably due to the degree of close attention required, for neurosis was also more frequent than usual among all those on jobs assessed as requiring constant attention, particularly when little scope was offered for initiative or technical responsibility. Neurosis was also more frequent among those whose job program involved little variety."

"It would, however, be an error to suppose that all repetition work need be monotonous. Indeed, neurosis was not more frequent among those on machine work or on repetition work

than among the rest; there may, therefore, be no reason to expect detrimental effects on mental health from the further extension of such types of work, provided care is taken in the design of jobs. Many of the tasks in engineering factories have been sufficiently mechanized to eliminate undue physical effort, but less attention has been paid to making them satisfying and manageable in other respects. It may be less important to make jobs 'fool-proof' than to design them so that they will not be disliked, found boring, nor demand long periods of close attention to unvarying detail. The period during which constant and unvarying attention is required might be broken up by further mechanization of some of these trying aspects, or by a more flexible distribution of tasks. More variety, and scope for initiative and interest, could be introduced without any fundamental alteration of production programs."

"Clearly, many other aspects of the working environment, as well as the nature of the job, may determine whether work is found satisfying and interesting, and so affect the development of neurosis. Thus, poor lighting, which tends to make the task a strain and its environment gloomy, was associated with an increase of neurosis. Further, since unsatisfactory human relationships outside the factory are associated with a high incidence of neurosis, it is probable that the nature of the human environment within the factory may influence the amount of neurosis. The

human relations within a factory can have an important influence on output (*Roethlisberger and Dickson*, 1939), and they are likely to have at least an equal influence on the health of the worker. . . .

Conclusions

"It was not the purpose, nor the outcome, of this inquiry to show how neurotic illness can best be alleviated. It is, however, implicit in many of the findings that measures tantamount to good welfare and social work, both within and outside the factory, would be beneficial in alleviating and preventing neurosis, as would also, presumably, more extensive facilities for the medical treatment of neurotic illness than were available during the war. The main findings of the inquiry are, however, clear: 10 per cent of the workers studied suffered from definite or disabling neurotic illness; neurosis caused between a quarter and a third of the absence from work due to illness; and certain features in the individual workers or in their environment were associated with a varying incidence of neurosis. Although the sample was probably as representative as practicable in such a study, the sampling limitations leave uncertain the extent to which these findings may be generally applicable."

The report contains a full statement of the methods used in the survey, a detailed analysis of the results, and a number of illustrative case histories.

Paid Vacations and Sick Leave in United States

RAPID growth in the practice of granting paid vacations in United States industry is noted in an article in the September issue of the *Monthly Labour Review* of the United States Department of Labour, entitled "Paid Vacations and Sick Leave, 1945-1946."

The article, prepared by the Bureau of Labour Statistics, states that about 3 out of 4 manufacturing establishments, by 1945-46, had formal paid vacation plans for plant workers after a year's service, and almost 9 out of 10 provided paid vacations for office workers with similar length of service. Formal plans for paid sick leave were, however, uncommon for both classes of workers.

Typically, plant workers received one-week vacations with pay after a year's employment; office workers were allowed two-week vacations in more than two-fifths of the establishments with vacation plans. For the machinery industries, available information showed that after

5 years' service, two-week vacations were most common for plant as well as office workers.

Progress Since 1937

In 1937, paid vacations for plant workers were provided by only 1 in 4 manufacturing establishments. The report notes that "even at that time, however, about 8 out of 10 establishments granted vacations with pay to office and other salaried workers." Rapid expansion of paid vacation plans was made during the war years. Under wartime wage stabilization, the National War Labour Board developed a paid vacation policy under which virtually automatic approval was given to the voluntary introduction of paid vacations, limited to 1 week after a year's employment and 2 weeks after 5 years.

There has been a rapid increase in the number of collective agreements providing vaca-

tions. In 1944, 85 per cent of all workers under union agreement were entitled to paid vacations, as compared with about 25 per cent in 1940.

Data for the analysis of paid vacations in industry were collected as part of the Bureau of Labour Statistics' general wage surveys of 56 manufacturing and 7 non-manufacturing industries. Reports were received from 34,000 establishments in manufacturing which together employed 5½ million workers, more than a third of the entire manufacturing labour force in the country. The non-manufacturing industries included 19,000 establishments with 1,300,000 employees.

Although the coverage of manufacturing industries is sufficiently large and representative to provide a rough picture of vacation and sick-leave practices in manufacturing as a whole, the article notes that the individual studies were made primarily to provide data for individual industries. Such important manufacturing industries as basic iron and steel, lumber, printing, meat packing, and rubber were not studied. The small coverage of non-manufacturing industries does not permit any generalization for non-manufacturing as a whole.

Plans by Industry

Formal vacation plans tended to be most common in industries with large operation units and high wage rates. Within the individual industries, paid vacations were most frequently provided in large unionized establishments.

Among the major manufacturing groups, the available data indicated that the chemical industries provided vacations most commonly after 1 year's service and also tended to furnish the longest vacations. The metal-working industries granted vacations somewhat less

frequently than other industry groups but there was considerable variation among the separate industries within this group. The apparel trades ranked high in paid vacations for plant workers but provided somewhat shorter vacations for office employees than did the other industries studied.

Available data showed that among the non-manufacturing industries vacations for both plant and office workers after 1 year's service were provided by almost all department, clothing, and limited-price variety stores and electric light and power systems. On the other hand, less than half of the power laundries and under three-fourths of the warehousing firms reported such plans for plant workers.

Office workers were granted paid vacations by 7 out of 10 power laundries and 9 out of 10 warehouse establishments.

Electric light and power was the only industry in which a two-week vacation after a year's service was more common than one week for plant workers. Among office workers, the two-week period was more frequent than one week in the chemical industries and the electric utility industries.

Sick Leave

Less than 3 per cent of the manufacturing establishments studied had formal plans for paid sick leave. More than 8 per cent, however, granted sick leave for office workers. Chemical industries led the manufacturing group in sick-leave plans and also differed in providing such leave more frequently for plant than for office workers. Sick leave was provided more frequently in non-manufacturing than in manufacturing. More than half of the electric light and power systems and a third of all retail stores studied had plans in operation in 1945 and 1946.

Regulation of Industrial Homework in New York State

THE ultimate purpose of all homework regulations in New York State is to abolish the practice and replace homeworkers by factory workers. An outline of the conditions of labour and economics of homework in the State, as well as its regulation, is contained in the New York Department of Labour's *Industrial Bulletin*, July, 1947.

Homework, the Department believes, has resulted in low wages, long hours, child labour, and unhygienic homes. It constitutes, too, in its opinion, a form of unfair competition with

factory work. Although the latter is considerably more efficient, homework has persisted because of the lower wages paid.

State legislation has been in force since 1921. A 1934 law followed the regulation of homework under the National Industrial Recovery Act, 1933. In 1935 a new Homework Law was passed, requiring permits for firms distributing homework and certificates allowing work to be done in the home. The Act empowers the State Industrial Commissioner to determine the industries in which homework

may be permitted. In all other industries homework is forbidden unless expressly permitted in writing by the Commissioner. In 1945 a General Homework Order held the number of homeworkers allowed to the 1945 level. Special Orders apply to Men's and Boy's Outer Clothing, Neckwear, Artificial Flowers and Feathers, and Gloves.

Under the General Order no firm is permitted to have more homeworkers than it legally employed in 1945, and, in order to distribute homework the firm has to maintain a factory in which one or more persons are employed. In the industries covered by special Orders, a permit for homework can be given only to a person unable to work in a factory because of physical disability, old age or the necessity of caring for an invalid. The State Commissioner reports that a considerable increase in the earnings of homeworkers has been achieved by requiring the same rate to be paid for similar work, whether done at home or in the factory.

During the 18-month period ending December, 1946, there was a drop of 55 per cent in the number of persons authorized to work in their homes and a simultaneous decrease of 33 per cent in the number of firms distributing homework.

The first anti-homework Bill passed in New York State went on the statute books in 1884. It was declared unconstitutional on the ground that "it was not a public health measure, that it was discriminatory, and that, in passing it, the Legislature had exceeded its police power and interfered unduly with the use of private property." No further direct legislative measures were attempted for nearly fifty years. Successive amendments to the Factory Act, however, achieved the abolition of tenement sweatshops maintained in living quarters and, later, the regulation of homework in any other part of tenements or dwelling houses. This was part of the anti-sweating legislation which aimed at adequate sanitation standards and the protection of the consuming public, stressing the improvement of physical surroundings more than actual working conditions. By 1906 the manufacture of 41 articles by homeworkers living in tenement houses had been regulated in this way. In 1923 the responsibility for homework regulation was transferred to the Bureau of Women in Industry of the Department of Labour since most homeworkers were women and children.

From the beginning of the century, certain collective agreements, for example in the clothing industry, have prohibited homework. The regulation of homework in Europe has been carried on largely through minimum-wage

legislation; wage boards have set homeworkers' wages which have raised earnings to the factory level.

In the United States, a direct control was exercised through the codes of fair competition adopted by 118 of the 556 industries which drew up codes under the National Industrial Recovery Act, 1933. Eighty-six per cent of these 118 codes prohibited homework entirely. This set a pattern for the State Legislatures, and six of them passed acts between 1935 and 1940 based on a "Model Bill" recommended by the International Association of Governmental Labour Officials of the United States and Canada.

The IAGLO recommended a legislative program for the regulation of homework in 1926. Ten years later the Association drew up a draft State law. Under this draft Bill, homework would be prohibited in the manufacture of articles of food or drink, wearing apparel for infants or children ten years of age or under, toys and dolls, tobacco, drugs and poisons, sanitary goods, explosives and articles which are dangerous to handle. An investigation might be conducted by the State Commissioner into any industry to determine whether the wages and working conditions were injurious to the health and welfare of the workers and whether they were likely to render unduly difficult the observance and enforcement of legally established labour standards. If such should be the case, the Commissioner was to order the discontinuance of all homework in the industry, but only after public hearings at which interested parties would be heard. An investigation was to be conducted on petition for such action by fifty or more residents of the State. Every employer and employer's agent in the State would be required to procure from the Commissioner an employer's permit for letting out homework. Every contractor would have to procure from the same source a contractor's permit. Every industrial homeworker must possess a homeworker's certificate, and no certificate would be issued to persons under the statutory minimum age for factory employment or persons suffering from a communicable or infectious disease. Each employer and employer's agent in the State were to be required to pay quarterly an excise tax for each homeworker to whom materials have been sent during the preceding quarter. This would tend to equalize what is regarded as the unfair financial advantage of employers of industrial homeworkers. It would also provide a fund for payment of the costs of inspection, etc.

A later development in the regulation of homework was through the federal Fair Labour Standards Act, 1938. This Act applies to homeworkers exactly as it applies to all other workers engaged in interstate commerce or in the production of goods for shipment across State boundaries. Homeworkers must be paid at the present minimum rate of 40 cents an hour with time and one-half for all hours over 40 in a week, and children under 16 may not perform such work.

Since homeworkers are outside the direct supervision of the employer, they must each maintain records of time spent and work done for the employer in the homework hand-books

which must be secured for them by the employer from the federal administrator. From the data thus obtained, the employer secures the information he must maintain available for inspection in his payroll and other records covering homeworkers.

Of the Industry Committees established under this Act to make wage-orders for their industries, at least seven prohibited homework except in special circumstances where unusual hardship would result to the work. These were for jewellery, women's apparel, gloves and mittens, knitted outerwear, buttons and buckles, handkerchiefs, and embroideries.

Belgian National Conference of Labour

A RECENT issue of *Review de Travail* of the Belgian Department of Labour and Social Insurance describes a meeting held in June of the National Conference of Labour, an organization comprising representatives of management, labour and government which in the post-war period has dealt with a number of urgent problems.

Among the resolutions taken at the meeting were several dealing with price control. The Conference re-affirmed its support of the price policy practised since the liberation and stated that "payment of work can be evaluated only by a decrease in the cost-of-living." An appeal was made to the patriotism of the nation in co-operating with the government directives concerning price control. The government was commended for its decision not to authorize any price increases without previously conferring with the commission regulating prices.

Notice was taken of research carried on to establish a cost-of-living index which would take into consideration the needs of workers. Other Conference decisions were that the government should publish a detailed index of the cost price and a parallel index of the selling price in retail trade and should concentrate its efforts on reducing the price of certain household articles and services. An increase in production was called for as a means of improving the standard of living.

Agreement was voiced to the inauguration of a central economic council, labour-management councils in industry, and industry councils. Another important result, states the article, was the signing of "an agreement dealing with the status of unions in industry" by the representatives of management and labour.

The preamble of this agreement states: "Labour recognizes the necessity of the authority of management and promises to work conscientiously, while employers recognize the dignity of labour and will not interfere in its free association and development." The employer organizations promised to recommend to their members not to interfere with the organizing of their workers and not to grant non-organized workers benefits not given to organized labour. The principle of union recognition was also established.

The representatives of Belgian labour at the Conference promised to request their affiliated bodies to exclude from trade union literature "any matter not conforming to the present agreement." The right of labour representatives to see the employer in regard to trade union rights, collective agreements, rates of salary and rules of classification, and the application of social legislation and regulations within the establishment, was also affirmed.

Finally, the Conference requested the industry Councils to specify as soon as possible the method of election and number of members of a union delegation, the duration of the mandate and under what conditions it may be terminated, and measures to prevent strikes and lockouts.

The present agreement can be terminated only with six months' notice.

Since the liberation in Belgium there have also been Conferences of Trade and of Agriculture. At the beginning of March a National Economic Conference was called, comprising members of the Conferences of Labour, Trade and Agriculture. Also invited were representatives of co-operatives, benefit societies, and physicians.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles concerning proceedings under the *Wartime Labour Relations Regulations, P.C. 1003*, and under the *Conciliation and Labour Act*.

During the war and its aftermath, the Dominion Wartime Labour Relations Regulations (P.C. 1003) of February 13, 1944 (which suspended the Industrial Disputes Investigation Act, enacted first in 1907), have required employers to negotiate with the representatives of their employees and provided machinery for the settlement of disputes.

At the present time the Regulations apply only to industries within the legislative authority of Parliament, including navigation and shipping, lines of steam or other ships, railways, airlines, canals, telegraph, telephone and radio communication, ferries, and works situated in a province but which have been or may be declared by Parliament to be for the general advantage of Canada or two or more provinces. Jurisdiction over war industries and industries within the scope of certain provinces which entered into wartime agreements with the Dominion, has now reverted to the provinces. (A summary of the present position with respect to labour relations legislation in Canada appears in the July issue of the *LABOUR GAZETTE*, pp. 940-43.)

The Regulations, which were issued under the authority of the War Measures Act, are continued in effect under the continuation of the Transitional Measures Act, 1947. A bill incorporating many of the features of the Regulations, with modifications and additions, was introduced in the House of Commons on June 17, 1947, but was allowed to stand over until the next session of Parliament (L.G., July, 1947, p. 923, Aug., p. 1102).

The Regulations are administered by the *Wartime Labour Relations Board (National)* in respect of those provisions relating to:

The certification of bargaining representatives, the intervention of the Board for the purpose of obtaining conciliation services from the Minister of Labour, the establishment of procedures for the final settlement of disputes concerning the interpretation or violation of collective agreements, and the institution of prosecution proceedings.

The provisions of the Regulations relating to conciliation services are under the administration of the Minister of Labour and are provided to parties desiring to negotiate agreements through the formal intervention of the Board.

The Board, with the approval of the Minister of Labour, has adopted rules or regulations which govern procedure in making the various types of applications invoking the provisions of the Regulations and the services of the Board. Copies of these procedural regulations and of the *Wartime Labour Relations Regulations, P.C. 1003*, may be obtained from the Department of Labour, Ottawa.

Proceedings under the Regulations are here described in two separate articles. The first deals with applications made to the Board for the certification of bargaining representatives and other services, and records the decisions reached in such matters; the second describes conciliation proceedings under the Regulations and includes the reports of Boards of Conciliation.

Conciliation proceedings are also provided through the Industrial Relations Branch of the Department of Labour under the provisions of the *Conciliation and Labour Act*. This Act empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together and to appoint a conciliator or arbitrator when requested by the parties concerned.

Applications for Certification under Wartime Labour Relations Regulations

THE Wartime Labour Relations Board (National) met for two days during the month of October. During the month the Board received seven applications, held seven hearings, issued six certificates designating bargaining representatives, rejected five applications, ordered three representation votes, and allowed the withdrawal of one application.

Applications for Certification Granted

1. *The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees* and certain of its officers for the red cap porters on the payroll of the *Canadian Pacific Railway Company* employed in the Quebec district at Montreal Windsor Station, Montreal West Station, Place Viger Station, Park Avenue Station, Westmount Station, Trois Rivières Station, and Quebec Palais Station.*

2. *Seafarers' International Union of North America* and certain of its officers for the unlicensed personnel employed by *Britamerican Limited, Vancouver, B.C.*, in the deck, engine-room and stewards' departments of the SS. *Britamerica*.*

3. *The National Association of Marine Engineers of Canada, Inc.*, and certain of its officers for engineer officers below the rank of chief engineer in the employ of SS. *Texaco Brave Limited, Toronto, Ont.***

4. *The National Association of Marine Engineers of Canada, Inc.*, and certain of its officers for engineer officers below the rank of chief engineer in the employ of SS. *Texaco Chief Limited, Toronto, Ont.***

5. *The National Association of Marine Engineers of Canada, Inc.*, and certain of its officers for engineer officers below the rank of chief engineer in the employ of SS. *Texaco Warrior Limited, Toronto, Ont.***

6. *The National Association of Marine Engineers, Inc.*, and certain of its officers for engineer officers below the rank of chief engineer in the employ of *Shell Canadian Tankers Limited, Toronto, Ont.***

Representation Votes Ordered

1. *Canadian Seamen's Union*, applicants, and *Branch Lines, Limited, Sorel, P.Q.* (L.G. August, 1947, p. 1133). Following an investigation

of the application and a public hearing, the Board ordered a representation vote of the unlicensed personnel employed by *Branch Lines Limited, Sorel, P.Q.* Mr. L. Pepin, Industrial Relations Officer, Montreal, P.Q. was appointed by the Board to conduct the vote.

2. *Canadian Seamen's Union*, applicants, and *Northumberland Ferries Limited, Charlottetown, P.E.I.* (L.G. August, 1947, p. 1134). Following an investigation of the application and a public hearing, the Board ordered a representation vote of the unlicensed personnel employed by *Northumberland Ferries Limited, Charlottetown, P.E.I.* Mr. H. R. Pettigrove, Industrial Relations Officer, Fredericton, N.B., was appointed by the Board to conduct the vote.

3. *Canadian Seamen's Union*, applicants, and *Anticosti Shipping Company, Montreal, P.Q.* (L.G. October, 1947, p. 1450). Following an investigation of the application and a public hearing, the Board ordered a representation vote of the unlicensed personnel employed by *Anticosti Shipping Company, Montreal, P.Q.* Mr. L. Pepin, Industrial Relations Officer, Montreal, P.Q., was appointed by the Board to conduct the vote.

Applications for Certification Rejected

1. *Canadian Lake Seamen's Union* and *Sincennes-McNaughton Line Limited, Montreal, P.Q.* (L.G. July, 1947, p. 959). Following an investigation of the application and a public hearing the Board decided to reject the application. Reasons for Judgment will be issued by the Board at a later date.

2. *Canadian Seamen's Union* and *Lakeland Tankers Limited, Toronto, Ont.* (L.G. August, 1947, p. 1133). Following an investigation of the application and a public hearing, the Board rejected the application for the reason that it was not supported by a majority of the employees affected.

3. *Canadian Seamen's Union* and *Sincennes-McNaughton Line Limited, Montreal, P.Q.* (L.G. August, 1947, p. 1134). Following an investigation of the application and a public hearing, the Board decided to reject the application. Reasons for Judgment will be issued by the Board at a later date.

4. *Yellowknife District Miners' Union Local 802, International Union of Mine, Mill and Smelter Workers* and *Northern Construction Company* and *J. W. Stewart Limited, Yellow-*

* Following an investigation of the application.

** Following an investigation of the application and a public hearing.

knife, *N.W.T.* (L.G. August, 1947, p. 1134). Following an investigation of the application and a public hearing, the Board rejected the application for the reason that there are no employees presently affected but without prejudice to the making of a further application when employees are again employed on the project.

5. *Canadian Navigators Federation and Davie Transportation Company Limited, Lauzon, Levis, P.Q.* (L.G. September, 1947, p. 1273). Following an investigation of the application, the Board decided to exclude masters and chief engineers of Davie Transportation Company Limited, Lauzon, Levis, P.Q., from the proposed bargaining unit because of their confidential and supervisory duties and rejected the application for the reason that it did not have the support of the remaining employees affected in the classifications of mates and second engineers.

Applications Withdrawn

Canadian Seamen's Union and Pelee Shipping Company Limited, St. Thomas, Ont. (L.G. September, 1947, p. 1273). On the request of the National Director of Organization of the Canadian Seamen's Union, the application was withdrawn.

Applications for Certification Received During the Month of October, 1947

1. *Transport Drivers, Warehousemen and Helpers' Union, Local 106, International Bro-*

therhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of certain employees of *J. B. Baillargeon Express Limited, Montreal, P.Q.*

2. *National Association of Marine Engineers of Canada, Inc.*, on behalf of marine engineers employed on tugs of *Canadian Dredge and Dock Company, Toronto, Ontario.*

3. *National Association of Marine Engineers of Canada, Inc.*, on behalf of marine engineers on tugs of the *United Towing and Salvage Company Limited, Montreal, P.Q.*

4. *Canadian Brotherhood of Railway Employees and Other Transport Workers* on behalf of certain employees employed in the restaurant of the *Central Station, Canadian National Railways, Montreal, P.Q.*

5. *Canadian Association of Maritime Transport Workers, Local No. 8*, on behalf of the unlicensed personnel on ss. *Terra Nova* of the *Terra Nova Steamship Company Limited, Montreal, P.Q.*

6. *Canadian Brotherhood of Railway Employees and Other Transport Workers, Division 277*, on behalf of employees of the beverage department, excepting the manager, of the *Chateau Frontenac Hotel, Canadian Pacific Railway Company, Quebec, P.Q.*

7. *Quebec Longshoremen's Union (C.C.C.L.)* on behalf of longshoremen employed by various shipping companies of Quebec and Levis and represented by the *Shipping Federation of Canada, Montreal, P.Q.*

Conciliation Proceedings Under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Regulations provide conciliation machinery to attempt settlement of disputes where negotiations for an agreement following certification of bargaining representatives, or negotiations for the renewal of an existing agreement, have been unsuccessfully continued for thirty days. Disputes of this nature are referred to the Minister of Labour by the Wartime Labour Relations Board (National), and, until May 15, 1947, such disputes in certain provinces were also referred to the Minister by the Provincial Board in their respective jurisdictions. The Minister then appoints a Conciliation Officer to confer with the parties and endeavour to effect an agreement. If the Conciliation Officer is unable to bring about settlement of the matters in dispute

and reports that in his view an agreement might be facilitated by the appointment of a Conciliation Board, a Board is then established by the Minister. The duty of such a Board is to endeavour to effect an agreement between the parties on the matters in dispute and to report its findings and recommendations to the Minister.

I. Assignment of Conciliation Officers

During October, 1947, Conciliation Officers were assigned to confer with the parties in an attempt to effect an agreement in the following cases:—

Canadian Air Express Ltd. (ground crew personnel at Dorval, P.Q., and Ottawa, Ont.)

and International Association of Machinists (TLC). L. Pepin, Conciliation Officer.

Newfoundland Railway (clerical staff, North Sydney, N.S.) and Canadian Brotherhood of Railway Employees & Other Transport Workers (CCL). H. R. Pettigrove, Conciliation Officer.

II. Agreements Facilitated by Conciliation Officers or Cases Withdrawn

In the following cases, reports were received during October, 1947, from Conciliation Officers indicating the successful completion of negotiations with the signing of an agreement or the withdrawal of the application for intervention:—

Alberta Wheat Pool, Vancouver, B.C., and Local 501, Retail, Wholesale & Department Store Union (CIO-CCL). G. R. Currie, Conciliation Officer. (L.G., July, 1947, p. 959.)

Canadian Pacific Railway Co. (coal dock employees, Britt, Ont.) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). F. J. Ainsborough, Conciliation Officer. (L.G., October, 1947, p. 1451.)

Canadian Pacific Railway Co. (coal dock employees, Little Current, Ont.) and Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC). F. J. Ainsborough, Conciliation Officer. (L.G., October, 1947, p. 1451.)

United Grain Growers' Terminals Ltd., Vancouver, B.C., and Local 501, Retail, Wholesale & Department Store Union (CIO-CCL). G. R. Currie, Conciliation Officer. (L.G., July, 1947, p. 960.)

III. Boards Fully Constituted

Canada Steamship Lines Ltd. (Waterfront freight handlers at various points in Quebec and Ontario). The Conciliation Board established to deal with a dispute between the Canada Steamship Lines Ltd. (waterfront freight handlers at various points in Quebec and Ontario) and the Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees (AFL-TLC) was fully constituted on October 11, 1947, with the appointment of Dr. Alexander Brady, Toronto, as Chairman of the Board, on the joint recommendation of the other two members of the Board. C. G. Quinlan, Montreal, and M. W. Wright, Ottawa, who had been appointed on the recommendation of the employer and employees respectively. (L.G., October, 1947, p. 1451.)

Canadian National Steamships (Pacific), Canadian Pacific Railway Co. (B.C. Coast Steamship Service) and Union Steamships Ltd. The Conciliation Board established to deal with a dispute between the Canadian National Steamships (Pacific), Canadian Pacific Railway Co. (B.C. Coast Steamship Service) and Union Steamships Ltd., and the Seafarers' International Union of North America (AFL) was fully constituted on October 4, 1947, with the appointment of T. G. Norris, K.C., Vancouver, as Chairman of the Board, on the joint recommendation of the other two members of the Board, J. A. Lindsay and Herbert Gargrave, both of Vancouver, who had been appointed on the recommendation of the employers and employees respectively. (L.G., October, 1947, p. 1451.)

United Towing & Salvage Co. Ltd., Montreal, P.Q. The Conciliation Board established to deal with a dispute between the United Towing & Salvage Co. Ltd., Montreal, P.Q., and the Canadian Seamen's Union (TLC) was fully constituted on October 29, 1947, with the appointment of His Honour Judge Honore Achim, Montreal, as Chairman of the Board, in the absence of a joint recommendation by the other two members of the Board, C. G. Quinlan and Alex Gauld, both of Montreal, who had been appointed on the recommendation of the employer and employees respectively. (L.G., October, 1947, p. 1451.)

IV. Board Reports Received

During the month, Board reports were received in the following cases:—

Broulan Porcupine Mines Ltd., Pamour, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 800.)

Buffalo Ankerite Gold Mines Ltd., South Porcupine, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 800.)

Canada Cycle & Motor Co. Ltd., Weston, Ont., and International Union, United Automobile, Aircraft & Agricultural Implement Workers of America (CIO-CCL). (L.G., June, 1947, p. 800.)

Canadian National Railways (sleeping, dining and parlour car department) and Canadian Brotherhood of Railway Employees & Other Transport Workers (CCL). (L.G., September, 1947, p. 1276.)

Canadian National Steamships (Pacific), Canadian National Railways (B.C. Coast &

Lakes Barge & Ferry Service), Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Union Steamships Ltd., and Frank Waterhouse & Co. of Canada Ltd., and Canadian Merchant Service Guild (TLC). (L.G., October, 1947, p. 1451.)

Coniaurum Mines Ltd., Schumacher, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 800.)

Delnite Mines Ltd., Timmins, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 801.)

Hollinger Consolidated Gold Mines Ltd., Timmins, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 801.)

Macassa Mines Ltd., Kirkland Lake, Ont., and Local 240, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 801.)

McIntyre Porcupine Mines Ltd., Schumacher, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 801.)

Paymaster Consolidated Mines Ltd., South Porcupine, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 802.)

Preston East Dome Mines Ltd., South Porcupine, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 802.)

Stovel Co. Ltd., Winnipeg, Man., and Local 59, Stereotypers' & Electrotypers' Union (AFL-TLC). (L.G., April, 1947, p. 538.)

Upper Canada Mines Ltd., Dobie, Ont., and Local 240, International Union of Mine, Mill & Smelter Workers (CIO-CCL). (L.G., June, 1947, p. 802.)

V. Settlements Following Board Procedure

During the month, advice was received that matters in dispute between the following parties have been settled as a result of further negotiations following the receipt by the parties of the Conciliation Board reports:—

Canadian National Railways and Canadian Pacific Railway Co., their jointly and sepa-

ately owned subsidiaries and ancillaries; and Pacific Great Eastern Railway; Algoma Central & Hudson Bay Railway; Toronto, Hamilton & Buffalo Railway; Ontario Northland Railway; Sydney & Louisburg Railway; and Essex Terminal Railway; and their employees, members of the Brotherhood of Locomotive Engineers; Brotherhood of Locomotive Firemen and Enginemen; Order of Railway Conductors; Brotherhood of Maintenance of Way Employees; Brotherhood of Railway Signalmen of America; Canadian Pacific Railway System Federation No. 125 (Shop Crafts); Canadian National Railway System Federation No. 11; Division No. 4, Railway Employees' Department (AFL); Canadian Brotherhood of Railway Employees & Other Transport Workers; Brotherhood of Railway & Steamship Clerks, Freight Handlers, Express & Station Employees; Hotel & Restaurant Employees' International Alliance & Bartenders' International League of America; International Brotherhood of Firemen & Oilers, Steam Plant Employees, Roundhouse & Railway Shop Labourers; Brotherhood of Express Employees; International Brotherhood of Electrical Workers; and International Brotherhood of Blacksmiths, Drop Forgers & Helpers. (L.G., July, 1947, pp. 960-961.)

Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Canadian National Railways (B.C. Coast & Lakes Barge & Ferry Service), Canadian National Railways (B.C. Coast Service), Union Steamships Ltd., and Frank Waterhouse & Co. Ltd., and National Association of Marine Engineers of Canada, Inc. (TLC). (L.G., October, 1947, p. 1451.)

VI. Strikes After Award

On October 27, 1947, the employees of the Canada Cycle & Motor Co. Ltd., Weston, Ont., members of Local 28, International Union, United Automobile, Aircraft & Agricultural Implement Workers of America (CIO-CCL), went on strike following the breakdown of negotiations subsequent to the receipt of the report of the Conciliation Board established to deal with matters in dispute between the parties. (See p. 1451.)

Report of Conciliation Board in Dispute between Broulan Mines Ltd., Pamour, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL)

On October 6, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in

the absence of a joint recommendation from the other two members of the Board, J. Beattie, Timmins, and G. M. Desaulniers, Montreal, appointed on the nomination of the employer and employees respectively.

Report of Board

3. STATUTORY HOLIDAYS

To the Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.
Sir:—

Your Conciliation Board now begs leave to report.

The Sittings of this Conciliation Board were held at Timmins, Ontario, on the 7th day of July, 1947.

The Chairman and Messrs. G. M. Desaulniers and J. Beattie, members of the Board, were all present at the Sittings.

The Union was represented by Messrs. L. A. Behie (International Representative), Ivan Vachon, D. Protutifac, F. Dokman, P. Gustafsson and J. R. Carlin.

The Collective Bargaining Agreement between the Company and the Union was dated the 14th of December, 1945, and terminated at the expiration of one year from that date.

A number of meetings were held up to and including the 5th of March, 1947, but the Union and the Company were unable to agree on five articles as follows:

1. No Discrimination Clause.
2. Adjustment of Complaints and Grievances.
3. Statutory Holidays.
4. Wages.
5. Union Security or Check-off.

The proposals of the Union which had been submitted to the Company during negotiations were filed with the Board.

The items in dispute will be dealt with in the order in which they are above set out.

1. NO DISCRIMINATION CLAUSE

The Union asked for a change in this clause as set out in Exhibit "A" of the proposals which were filed with the Board. The Company were satisfied with the clause as contained in the old agreement.

There appears to be no objection to the clause contained in the old agreement and the Board is therefore not prepared to recommend in favour of the change as requested by the Union.

2. ADJUSTMENT OF COMPLAINTS AND GRIEVANCES

There does not appear to be a great deal of difficulty in connection with this matter and it appears to the Board that the difficulty might be got around by a clause providing that stewards shall be paid for time spent on grievances under the grievance procedure at the option of the Company.

During the Sittings it was intimated on behalf of the Company that the Company would increase the Statutory Holidays from three to four with time and a half if worked. The Union asked for six Statutory Holidays with pay at double time if worked and straight time if not worked.

The Board recommends that the offer of the Company be accepted as we are unable to recommend in favour of the proposal of the Union.

4. WAGES

The Union asked for a general increase of 16 cents per hour to all employees and also asked for certain shift premiums as set out in Exhibit "D" of the Union proposals.

During the negotiations between the Company and the Union an increase of 10 cents an hour was granted by the Company and put into effect in the month of December last. The demand for an additional 6 cents per hour has not been abandoned by the Union but under the conditions which presently exist in the Gold Mining Industry the Board is not prepared to recommend any change in the wage scale at the present time; neither can the Board recommend in favour of payment of the shift premiums as asked by the Union.

The Board, however, is prepared to recommend in favour of a Wage Opening Clause by either party on thirty days' written notice.

5. UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances any form of Check-off or collection of Union dues by pay deductions through the books of the Company. The Chairman of the Board would like to make it clear that he is not opposed on principle to certain forms of the Check-off, but feels that he is unable to recommend in favour of the Check-off in this instance.

Dated at Brampton, Ontario, this 25th day of September, A.D. 1947.

(Sgd.) A. COCHRANE.

(Sgd.) J. BEATTIE.

Minority Report

To the Honourable HUMPHREY MITCHELL
Minister of Labour,
Ottawa, Canada.
Sir:—

1. *No discrimination clause:* I recommend a change in this clause as set out in Exhibit "A" of the proposals of the Union which were filed with the Board.

2. *Adjustment of complaints and grievances:* I recommend that the company pay the Union's stewards for time spent ending grievances within working hours.

3. *Statutory holidays:* I would recommend payment of double time if worked and of straight time if not worked for the following statutory holidays: Good Friday, Dominion Day, Labour Day, Thanksgiving Day, New Year's Day, Christmas Day.

4. *Wages:* The Union has made an original demand of \$0.16 an hour increase in the case of all hourly-rated employees. As of the 1st

of December, 1946, the company granted and put into effect, after the demand of the Union, an increase of \$0.10 an hour. Since the first of December, 1946, the cost of living has risen many points and it is just and reasonable that the additional \$0.06 per hour be granted and it is my recommendation.

5. *Union security and check-off:* There is no reason why the company should refuse the check-off and I would strongly recommend it for this mining industry.

Respectfully submitted,

(Sgd.) GUY M. DESAULNIERS.

Report of Conciliation Board in Dispute between Buffalo Ankerite Gold Mines Ltd., South Porcupine, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers

On October 6, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Alex Harris, Kirkland Lake, and G. M. Desaulniers, Montreal, appointed on the nomination of the employer and employees respectively.

Report of Board

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

Your Conciliation Board now begs leave to report.

The Sittings of this Conciliation Board were held at Timmins, Ontario, on the 20th day of June, 1947.

The Chairman and Messrs. Alex Harris and G. M. Desaulniers, members of the Board, were all present at the Sittings.

The Union was represented by Messrs. W. Kennedy (International Representative), J. R. Carlin, Ivan Vachon and Mr. McPherson and the Company was represented by Messrs. R. P. Kinkel (Plant Manager), Charles Brown and Claude Bowker.

The Collective Bargaining Agreement between the Company and the Union was dated the Fifth day of November, 1945. Negotiations for a renewal were commenced on the Tenth day of October, 1946, and the Agreement was extended for a period of one month but the Agreement has now expired.

During the hearing it was stated by the International Representative on behalf of the Union that it was felt that there would be

little or no difficulty in agreeing upon minor points if an agreement could be reached on the major differences.

There were some ten issues in dispute as follows:—

1. Management.
2. No Discrimination Clause.
3. Representation.
4. Wages.
5. Hours of Work and Overtime.
6. Statutory Holidays.
7. Vacations with Pay.
8. Union Security or Check-off.
9. Temporary Employees.
10. Job Posting.

The proposals of the Union which had been submitted to the Company were filed during the Sittings and the Brief filed by the Company dealt at length with the various proposals.

The items in dispute will be dealt with in the order in which they are set out above.

1. MANAGEMENT

There appears to be little difference between the parties in connection with the Management Clause and it is suggested therefore that the parties get together and discuss this clause with a view to arriving at a solution which would be mutually satisfactory.

2. NO DISCRIMINATION CLAUSE

The Board is of the opinion that this clause is one which might well be settled by negotiation between the parties.

3. REPRESENTATION

This would appear to be a minor point and there should not be much difficulty between the parties in arriving at a settlement. There

appears to be no objection to the Union's suggestion as set out in their proposals and the Board recommends in favour of it.

4. WAGES

The Union's request or original proposal was for an increase of 16 cents per hour. During negotiations the Company advised the Union that they were not in a financial position to pay an increase but on the 10th of December, 1946, a general wage increase of 10 cents per hour was granted to all employees retroactive to the First of December. The present annual demand is now for a further increase of 6 cents per hour and the Union feel that this increase must be considered in connection with an Open End Wage Clause which is also asked for and which was not included in the old Agreement.

Under the conditions which presently exist in the Gold Mining Industry, the Board is not prepared to recommend any change in the wage scale at the present time.

So far as the Open End Wage Clause is concerned, the Board recommends such a clause providing for the opening of the wage question by either party on thirty days' written notice.

5. HOURS OF WORK AND OVERTIME

The question of hours of work was not seriously pressed by the Union. Generally speaking, in the first negotiations the Union asked for a forty-hour week but subsequently their demands were modified and the Union Representatives stated that they were prepared to accept the forty-eight hour week, but asked for payment of time and a half for overtime in excess of eight hours in any one working day and for all time in excess of the forty-eight hour week.

It seems that the Union's demand in connection with overtime is reasonable and the Board therefore recommends in favour of it.

It would be necessary, however, to draft a suitable clause to cover the case of those employees who, by arrangement, work eight and a half hours every day in order to obtain a half day off.

6. STATUTORY HOLIDAYS

The Board is unable to recommend any change in the plan as set out in the former Agreement.

7. VACATIONS WITH PAY

The Union asked for two weeks' vacation with pay for all employees who have completed one or more years' continuous employ-

ment with the Company. The Company proposed vacations as provided for in Article 13 of the former Agreement.

The Board recommends one week's vacation with pay after one year's service, pay to be on the basis of two per cent of the employer's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of four per cent of the employee's previous year's earnings.

8. UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances any form of Check-off or collection of Union dues by pay deductions through the books of the Company. The Chairman of the Board would like to make it clear that he is not opposed on principle to certain forms of the Check-off, but feels that he is unable to recommend in favour of the Check-off in this instance.

9. TEMPORARY EMPLOYEES

This comes under Article 10 of the former Agreement and the Union took the position that the six months' period of probation is too long and expressed the opinion that there should be no time limit for an employee to be allowed to use all sections of the provisions of the Agreement.

The Board is of the opinion that the six months is somewhat too long but on the other hand is also of the opinion that there should be a period of probation and therefore recommends reduction of the time from six months to three months.

10. JOB POSTING

This is an Article which it is always difficult to settle and the Board recommends that the parties get together and discuss and settle the various questions which arise under this heading.

Dated at Brampton, Ontario, this 25th day of September, A.D. 1947.

(Sgd.) A. COCHRANE.

(Sgd.) ALEX HARRIS.

Minority Report

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

1. Management

I recommend that the word "sole" be deleted from the proposed clause.

2. *No discrimination clause*

I would recommend the clause proposed by the Union as set out in Exhibit "A" of the proposals of the Union which were filed with the Board.

3. *Representation*

I see no objection to the Union's suggestion and I would recommend in favour of it as set out in their proposals.

4. *Wages*

The Union has made an original demand for \$0.16 an hour increase in the case of all hourly rated employees. As of the 1st of December, 1946, the company granted and put into effect after the demand of the Union, an increase of \$0.10 an hour. Since the 1st of December, 1946, the cost of living has risen many points and it is just and reasonable that the additional \$0.06 per hour be granted and it is my recommendation.

5. *Hours of work and overtime*

I recommend that time and one-half be paid for all time worked in excess of eight hours in a working day and for all time worked in excess of forty-eight hours a week.

6. *Statutory Holidays*

I would recommend double time if worked and straight time if not worked for the

following statutory holidays: Good Friday, Dominion Day, Labour Day, Thanksgiving Day, New Year's Day, Christmas Day.

7. *Vacations with pay*

I would recommend one week's vacation with pay after one year's service, pay to be on the basis of 2 per cent of the employee's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of 4 per cent of the employee's previous year's earnings.

8. *Union security or check-off*

There is no reason why the company should refuse the check-off and I would strongly recommend it for this mining industry.

9. *Temporary employees*

I would recommend the clause of the company, subject to the condition that the temporary employees shall have the right to use the grievance procedure.

10. *Job posting*

This question was suspended. The Union and the Company are discussing it.

Yours respectfully submitted,

(Sgd.) GUY M. DESAULNIERS.

Report of Conciliation Board in dispute between Canada Cycle & Motor Co. Ltd., Weston, Ont., and International Union, United Automobile, Aircraft & Agricultural Implement Workers of America (CIO—CCL).

On October 2, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: J. D. McNish, K.C., Chairman, and E. Macaulay Dillon, K.C., and C. L. Dubin, appointed on the nomination of the employer and employees respectively, all of Toronto. Mr. McNish was appointed Chairman of the Board on June 18, 1947, replacing the original Chairman, His Honour Judge Samuel Factor, also of Toronto (LABOUR GAZETTE, June, 1947, Page 800), Judge Factor having been obliged to resign from the Board because of the pressure of previous engagements.

Report of Board

To The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Ontario.

A Board of Conciliation was established to deal with the above dispute under the Chairmanship of His Honour Judge Samuel Factor. Judge Factor resigned his Chairmanship on the 12th of June, 1947, and the present Chairman was appointed in his place. The

Board as now constituted begs to submit its report herewith.

The Board met the parties in Toronto on the 14th and 15th of July, the 5th of August and the 11th of September, 1947. The Company was represented by: R. Flavelle, Executive Assistant to the President; A. E. Jagger, Plant Superintendent; S. T. Garside, Central Ontario Industrial Relations Institute and the Union was represented by: Paul Siren, H. H. McIntyre, International Representatives; Drummond Wren, Reginal Screen, President Local 28; A. McLean, Vice-President Local 28; George Argo, Bert Silk, Tim Gallagher, Members of the Bargaining Committee.

The Union was certified on the 8th of January, 1947, as the Bargaining Agent for all hourly rated and piece work rated employees of the Company save and except assistant foremen other than lead hands, foremen, persons above the rank of foremen, office staff, time and record clerks, medical staff and plant guards.

The parties met first on the 27th of January, 1947, for the purpose of negotiating an agreement and at this meeting the Union presented a draft agreement. Negotiations continued during the month of February. During the course of these negotiations the Company submitted an alternative agreement, a number of clauses of which were agreed to by the parties subject to agreement on all clauses. Negotiations, however, broke down and a conciliation officer was appointed by the Ontario Minister of Labour. This conciliation officer, Mr. James Hutcheon, reported to the Ontario Minister of Labour under date of the 8th of April, 1947, setting forth the items then in dispute and recommended the appointment of a Conciliation Board. The matters referred to by Mr. Hutcheon in his report were as follows:

- (a) Union Security
- (b) Hours of work
- (c) Overtime payments
- (d) Off-shift premiums
- (e) No-strike clause
- (f) Payment for statutory holidays
- (g) Wage rates
- (h) The schedules to be annexed and form part of the agreement
- (i) Termination and modification of agreement
- (j) Other clauses of a less contentious nature which may have to be amended providing agreement is reached on the above clauses.

On their first appearance before this Board, the parties agreed that these items were still in dispute and required to be conciliated. At the hearings on the dates above mentioned considerable material was filed by the parties with respect to these matters and there is no doubt that all of the items were thoroughly discussed.

As in all of such disputes, the major items are, of course, the question of wage rates and union security. However, it is now proposed to deal with these two matters later in the report and to deal at the moment with the other items *seriatim*.

Hours of Work and Overtime Payments—(b) and (c)

It appeared from the information given to the Board that this Company works a twenty-four hour day with three shifts. The hours of work are divided into three categories:

- (1) the regular week is forty-five hours divided into nine hours a day for a five-day week;
- (2) some 20 to 30 men on the night shift work forty-seven and a half hours;

- (3) maintenance men work a forty-eight hour week.

At present the Company bases overtime at the rate of time and a half for all overtime after forty-eight hours. The Union originally requested a forty-hour week throughout the plant with time and a half for overtime after forty hours. During the hearings before the Board, however, the Union agreed to the continuance of the present hours of employment conditional upon being paid overtime at the rate of time and a half after forty-five hours and time and a half after nine hours on the eight-hour shift. The Company agreed to pay overtime at the rate of time and a half on a daily basis after the normal working day, i.e., an employee on a forty-five hour week would be paid time and a half for any hours worked above nine on any day—employees working a forty-seven and a half hour week would be paid time and a half for all time worked beyond forty-seven and a half hours—and the man on the forty-eight hour week would be paid overtime at time and a half for all hours worked beyond forty-eight on a daily basis. The Board concurs in this arrangement and recommends accordingly.

Off-shift Premiums—(d)

At the present time the Company pays a premium of 3½ cents per hour for all night shift employees. The Union has requested a premium of 5 cents per hour for both the night shift and the evening or swing shift. The Company agreed to pay the 5 cents per hour for the night shift but no premium at all for the swing shift. The Board, having regard to the practices in similar plants, recommends that 3½ cents per hour premium be paid to the employees working on both shifts.

No-strike Clause—(e)

In the draft agreement submitted by the Company the following clause was proposed—
“The Company agrees that it will not cause or direct any lock-out of its employees.

“The Union agrees that there will be no strikes or other collective action which will stop or interfere with production and that if any such collective action should be taken it will instruct its members to carry out the provisions of this agreement and to return to or resume work and perform their duties in the required manner.”

The Union stated that it had no objection to such a clause provided that there was some measure of security given to the Union. The Company on the other hand argued that this was a proper clause and should not be made conditional upon any union security clause. In view of what is said subsequently in this

report under the heading of union security, the Board recommends that the above-mentioned clause be inserted into the agreement.

Payment for Statutory Holidays—(f)

The Company has heretofore paid their employees, both hourly rated and piece work, for Christmas day only. During negotiations and before the Board they stated that this was as far as they were prepared to go on this point. This question has arisen and arises frequently in negotiations between the companies and unions and before Boards of Conciliation. On the one hand it is asserted that either hourly-rated or piece work employees should not be paid for work which they do not do. On the other hand when plants close down on certain statutory holidays, as is the case with this Company, the employee could not work even if he wished to do so. However, the Board is of the opinion that the allowing of statutory holidays to workers is a beneficial step in our social progress. The Board, therefore, recommends that the employees of this Company be given four statutory holidays in the year and be paid for them on the same basis as they are at present being paid for Christmas day. While the Board recommends the granting of four statutory holidays, it leaves it to the parties to choose the particular statutory holidays to be included in the agreement.

The Schedules to be Annexed and Form Part of the Agreement—(h)

Under this heading there were two items in dispute between the parties. The first matter was the method of final determination of any disputes arising out of piece work rates. The Company proposed a clause providing for arbitration on any such dispute following the grievance procedure laid down in the agreement. This arbitration clause provides for each party nominating an arbitrator and provides further for the chairman to be chosen from two firms of industrial engineers, namely—

Stevenson & Kellogg Limited
J. D. Woods & Gordon Limited

The Union objected to the choice of chairman being limited to these firms of industrial engineers feeling that industrial engineers were generally engaged by companies and accordingly they might be biased. On the other hand the Company feels that in a technical matter such as adjusting piece work rates only a person properly qualified and experienced would be capable of adjudicating on such disputes. The Company further stated that there had never been any reduction in piece work rates and irrespective of whatever

method was chosen as a final means of the determination of these rates, they stated that their previous policy with respect to these rates would remain. The Board is inclined to agree with the contention of the Company and feels satisfied that any professional man sitting as chairman of an arbitration board would give an unbiased decision. The Board is of the opinion that in view of the past record of the Company in adjusting piece work rates there is little likelihood of many, if any, such disputes reaching a Board of Arbitration. The Board therefore recommends the insertion in the agreement of the clause proposed by the Company.

The second matter under this heading was with regard to effective dates for any adjustments of pay or earnings following an arbitration. The Company proposes the following clause: "Any decision affecting rates of pay or earnings will become effective not earlier than the next succeeding pay period after the decision has been made." The Union pointed out that some time might elapse between the lodging of the grievance and the final determination of a Board of Arbitration and that in cases where the Company was at fault by error or otherwise the employee or employees affected would be penalized if the above clause were operative in such cases. The Board is of the opinion that the fairest method to deal with this situation is to leave the question of the effective date of any pay or earning adjustment to the Board of Arbitration and recommends accordingly.

Termination of Agreement—(i)

Negotiations between the parties were commenced on the 27th of January, 1947, and were broken off certainly by the 12th of March, 1947, when the Union petitioned the Ontario Labour Relations Board for a conciliator. The present Board was established on the 19th of April, 1947. It has been suggested that the agreement should terminate one year from the date of its actual signing and also that the agreement should terminate one year from some prior date. Many considerations enter into this question, such as retroactivity of pay increases, etc. The Board is of the opinion that having regard to all of the considerations involved, the matter of termination of agreement might well be left to be settled by the parties. If, however, the parties are unable to agree on this point, the majority of the Board, consisting of the Chairman and Mr. Dubin, recommends that the date of termination be the 1st of June, 1948.

Other clauses of a Less Contentious Nature Which May Have to be Amended Providing Agreement Is Reached on the Above Clauses.—(j)

Under this heading the Union brought up two points. First, the description of bargaining unit. In the draft agreement submitted by the Company, Clause 2 states—"This agreement applies to all hourly-rated and piece work rated employees of the Company save and except assistant foremen, etc." The certification of the union as bargaining unit covers all employees of the Company save and except assistant foremen, etc. The Union had agreed during negotiations to the first mentioned clause but at the hearings before this Board requested a change in the wording to coincide with the certification. The second item under this heading was with respect to the seniority preferential treatment for union stewards. The clause covering this in the agreement submitted by the Company had been agreed to by the union but again before this Board they wanted to extend the provisions covering this matter. In both these matters it was apparent that the Union wanted the proposed agreement changed by reason of fear, engendered during the proceedings subsequent to the negotiations, that the Company would take some technical and unfair advantage in the working out of any agreement. The Board is of the opinion that the Union is sufficiently protected in both of these clauses unless the Company did take an unfair advantage of the language in these clauses. The Board feels that particularly with the first agreement between the Union and the Company their relations should not commence with a feeling of suspicion on the part of either party but should start its course in an atmosphere of mutual confidence and trust. Were the Board to agree with the later submission of the Union it would be putting itself in the position of finding that the Union had justification for its later fears. This the Board is unprepared to do and recommends that the clauses as originally drafted and agreed upon should be included in the new agreement. In any event, should it later be found that the suspicions of the Union were well founded, these clauses may be dealt with either by arbitration or during negotiations for a subsequent agreement.

Wage Rates—(g)

As in all such matters, the main question between the parties is the question of wage rates. In this case members of the Board are agreed that more difficulties in the way of arriving at a satisfactory solution were present

than in most cases. Canada Cycle & Motor Company is a subsidiary of Russell Industries, Limited, which was incorporated in the year 1899. Another subsidiary of this Company is the Canadian Acme Screw & Gear, Limited. The Company manufactures bicycles, skates, children's vehicles, hockey equipment, tennis rackets, skis, etc., under the "C.C.M." trademark. Prior to the war one-third of its production was exported to thirty-nine countries outside Canada. Since the War this export business has ceased. At the present time all of the production of the Company on a twenty-four hour basis is insufficient to meet the domestic demand and while the Company occupies a commanding position in the production of certain articles it must face the possibility of increased competition from imports. For these reasons production costs are a matter of particular concern to this Company. For example, when they are again in the position to compete in the markets of the world the cost of their articles will undoubtedly be a governing factor. It appears that approximately two thirds of the production workers in this plant are employed on a piece work basis and the other third on an hourly-rated basis. Considerable evidence was furnished by the Company as to the manner in which wage rates, both piece work and hourly, are arrived at. Considerable thought and effort is given to a process of job evaluation by experts in that particular line and these rates, particularly those of piece workers, are reviewed from time to time and adjustments made. From the information supplied by the Company it would appear that the wages and earnings of the employees of this Company are comparable and in many cases higher than many of the industries in the Toronto area. It is also true that the piece work rates are fixed with a sufficient incentive margin to enable the workers to increase their earnings. According to the information supplied by the Company (Exhibit 1) showing a comparative earning statement between four weeks in January, 1947, and June, 1947, in the great majority of cases the piece workers' earnings had increased from 1-15c. The Company's position before the Board was that—

(a) it was paying higher wages and earnings than were generally prevailing in the Toronto area and that that should be the yardstick used by the Board in considering any demands for increased wages;

(b) that the piece work rates were so adjusted that by increased effort an employee might substantially increase his earnings and in this connection they were prepared to consider

with the Union any agreements with respect to any piece work rate;

(c) that any increase of wages "across the board" would under their system of cost accounting and bookkeeping interfere with the proper determination of the cost of the articles manufactured by them and that such a method of increase was impracticable. The Company further contended that an across-the-board increase would distort the relationship between the various job classifications and between the earnings of piece rate workers and day workers, both of which the company regards as now properly in balance.

The Company did submit in (Exhibit 1, above) details of all wages and earnings and requested the Union to discuss each particular job and each particular classification. The Union declined to accept this latter suggestion on the ground that it would require the services of experts employed by them and would in any event take considerable time to follow this suggestion of the Company. The Union based its claim for the increase demanded of 15c per hour solely on the ground of the increased cost of living during the past twelve months. They did not deny that the wages paid by the Company before commencement of negotiations in January were reasonable and fair. In reply to the Company's statement that it was impracticable to put into effect any across-the-board increase, particularly with respect to piece workers, they point out that they had agreements with Massey Harris, Acme Screw & Gear and McKinnon Industries, Limited, in all of which cases the employees were also paid on both hourly and piece work basis and in these three cases in the previous twelve months across-the-board increases had been put into effect.

Having perused all of the material submitted by the parties and having given most careful consideration to their conflicting views, the Board finds that as of the 1st of January, 1947, the wage rates and piece work rates in force in this plant were fair and reasonable rates. As a matter of fact, this fact was not questioned by the Union. The Board, however, could not but be affected by the serious increase in the cost of living since the 1st of January, 1947, nor could the Board help but be affected by its knowledge of the pattern of wage increases that have taken place throughout the country during the past nine months, either by negotiations between unions or employers or as a result of the findings of conciliation boards during that period. If it is assumed that the rates being paid by this Company on the 1st of January, 1947, were the proper rates, having regard

not only to the cost of producing the various articles manufactured by the Company, but also having regard to providing a proper standard of living for the employees of this Company, then the Board finds that in view of the increased cost of living the rates being paid on the 1st of January, 1947, should now be supplemented. While giving due regard to the contentions of the Company with respect to the difficulties involved in their job relationship, cost accounting, and bookkeeping generally the Board considers that these are not insurmountable difficulties and that the standard of living of the employees outweighs any difficulties that may be involved. The majority of the Board, consisting of the Chairman and Mr. Dubin, therefore, recommends that an increase of ten cents per hour be paid to both hourly-rates and piecework employees and that this increase be effective from the 1st day of June, 1947. With respect to piecework employees the same members of the Board recommend that the parties endeavour to arrive at a formula to work the proposed wage increase into their piecework structure. If this cannot be done then the increase should be paid to piecework employees on the basis of the hours of work. The retroactive pay increase, of course, should be paid on the basis of the number of hours worked since the 1st of June, 1947. On the 13th of June, 1947, the Company did increase the wages of certain hourly-rated employees. The increases then made will apply against the increase now recommended. Mr. Dillon, who does not concur in this recommendation, has written a separate report on this question.

Union Security (a)

The Union in its original demands requested a union shop clause and the Union presented to the Board the arguments in favour of some measure of union security. All of these arguments were quite familiar to the members of the Board and need not be dealt with at any length in this report. The Company has been adamant throughout all negotiations including the hearings before the Board that it was not prepared to concede any measure of union security. The furthest that they were prepared to go was to permit the Union to place collection tables at the plant entrance on pay days. In arriving at whether or not there should be any provisions in the agreement for Union security and if so what that measure should be, certain factors have to be taken into consideration. The Union in this case had now established a record of agreements throughout the country including many of the major industrial plants in the Province of Ontario. Its strike record has been good

and it is headed by experienced and responsible representatives. On the other hand, as this is a first agreement, it is understandable that the Company before conceding any measure of union security should want to have this Union prove itself in this particular plant. The Company no doubt is fearful of the Union on account of the International Union policy to get rid of piecework and filed with the Board a copy of this part of the Union's policy.

The Board is of the opinion that the Company is unduly fearful in this particular case of this avowed policy because the proposed agreement and the clause therein agreed upon by the Union with regard to piecework employees would seem to be in conflict with the apparently avowed principles of the Union. This apparent confliction, the Board feels, may be explained by this Union endeavouring to combat unfair piecework conditions while at the same time subscribing to piecework in such factories as C.C.M. and the other plants with which the Union has an agreement. The majority of the Board, consisting of the Chairman and Mr. Dubin, is of the opinion that better industrial relations and more lasting industrial peace are achieved and the public interest better served when the position of the Union is secured. Then the Union's officers can become in fact a permanent business agent for the employees and their efforts concentrated on this alone rather than have their efforts concentrated in combating delinquent members and possibly competing unions.

At the time the vote was taken during the certification proceedings, the vote was 259 for the Union to 139 against. It is generally agreed that it is not right for those employees who have voted for the Union to take whatever advantages the Union may obtain for them and this having been done then to retire from the Union. It is also true that those who did not vote in favour of the Union obtain whatever advantages the Union may obtain for all of the employees. The majority of the Board, consisting of the Chairman and Mr. Dubin, therefore recommends that there be inserted into the agreement a maintenance of membership clause providing that all employees who are now members of the Union must retain their membership and those employees who are not now members but who afterwards become members of the Union must then retain their membership, and that a voluntary check-off of union dues be put into effect.

The recommendations made in this report do not of necessity represent the convictions of the individual members of the Board on each

particular item. The members of the Board, who are not without experience in such matters, have endeavoured to reach a compromise basis on which an agreement might be reached. It is to be hoped that as a result of these recommendations the parties will be able to reach a common ground in the same spirit of compromise that actuated the members of the Board.

The Board feels that this should not be difficult. It is true that during negotiations for a first agreement, a spirit of suspicion may develop and many things be said and done that had been better left unsaid and undone. The Board, however, feels that in the present case there is little ground for suspicion and many reasons for mutual confidence. The Company has a long and enviable record as one of Canada's leading manufacturers serving the needs not only of Canadians but of people all over the world. In this respect, it is not an unimportant factor in our Canadian economy. Its plant—which the members of the Board visited—evidences a desire on the part of the management not only to turn out good products at a reasonable cost but also the desire that the working conditions for its employees should be of the best. As previously stated, the wage rates paid compared favourably with those paid by other industries in this area. It may be safely said that this Company could not be in its present position today if the management had not given consideration to the welfare of its employees. The Board is satisfied that this management would not stoop to practices that in the result would redound to the detriment of its employees.

On the other hand, the Union, as stated before, has now some history as a responsible trade union and its anticipated actions may be determined by that history. It has negotiated and has in effect agreements with many of the large industries in Ontario. Its leaders are capable and experienced and its large membership relies upon these leaders for guidance in all matters pertaining to wages and working conditions. For this reason it too is an important and permanent factor in our Canadian economy. The Board is satisfied that this Union would not stoop to any unfair or improper practices.

In brief, we have here not a chiselling employer and an irresponsible union; instead we have a leader in the manufacturing industry and a responsible union. For that reason the Board is satisfied that an agreement between the parties can and will be reached and that when this has been done, in view of the leadership on both sides, their relations will be

harmonious and that both the employees and the Company will benefit.

All of which is respectfully submitted.

(Sgd.) J. D. McNISH.

(Sgd.) E. MACAULAY DILLON.

(Sgd.) C. L. DUBIN.

Minority Report

To the Honourable HUMPHREY MITCHELL
Minister of Labour,
Ottawa, Ontario.

SIR: In this matter I have signed the report of the Board to evidence my agreement to its recommendations in respect to several of the items referred to this Board in the report of the Conciliation Officer, James Hutcheon, namely, (b) hours of work, (c) overtime payments, (d) off-shift premiums, (e) no-strike clause, (f) payment for statutory holidays, (h) the schedules to be annexed and form part of the agreement and (j) other clauses of less contentious nature.

In respect to the foregoing items I agree that the facts as set forth in the report are accurate. Furthermore I am in substantial agreement with much of the reasoning upon which the recommendations rest. I have, therefore, concurred in the recommendations concerning these matters in the hope that the parties will promptly accept them and thus narrow the area of disagreement, in which area they will each ultimately make some compromise to reach agreement.

I cannot, however, agree to the recommendations of the majority of the Board regarding three of the items referred to the Board by Mr. Hutcheon. They are:—

(a) Union security

(g) Wage rates

(i) Termination date of agreement.

It follows, therefore, that I cannot adopt some of the reasoning underlying the recommendations of the majority of the Board. I propose, therefore, to express my views in respect to these matters in some detail, beginning with (g) wage rates and (i) termination date of agreement. I propose to deal with these two matters together because it is my firm belief that no agreement will be reached on either of them separately for the simple reason that both parties are, or should be, interested in the period of time during which the wage structure will remain relatively stable, and that period will have a definite bearing on the amount of any wage increase to which they may ultimately agree.

I believe there should be some increase in wages in this plant, but I do not agree with the amount recommended by the majority

(10 cents per hour), nor with the method of applying the increase to piece rate workers (a flat hourly increase across the board) nor with the necessity for making any increase retroactive. The frequency with which retroactive wage increases are now being agreed to or awarded by boards of conciliation or arbitrators, while no doubt justified by the circumstances in the majority of cases, will tend to make industrial harmony and good relations between labour and management in general much more difficult to achieve. It enables the less responsible elements in organized labour to be quite unreasonable in all their other demands, as any wage increase they ultimately achieve will be dated back to some arbitrary date and has no reference whatever to the date on which the final compromises on such demands are effected. I am happy to be able to agree with the majority of the Board in its statement that "this union has now some history as a responsible trade union." Nevertheless, the negotiating members of this local and the international officers assisting them flatly refused to discuss the piece-rate structure and the job evaluation which is an integral part of that structure and maintained that the only adjustment they would consider was a flat hourly increase of fifteen cents applicable to both piece rate and hourly paid employees. I am satisfied that had the union been willing to discuss piece rates and job evaluation, agreement would have been reached long ere now.

Piece Workers

The earnings in this plant of employees on piece work as of January 1, 1947, were not only fair and reasonable, as the majority report states, but were well above the general community level at that time. This was adequately established in the graphs and material furnished by the company and not, in fact, questioned by the union. Since January the average hourly earnings of piece workers has increased from one to fifteen cents per hour, as established by Exhibit 1 filed by the company at the request of this Board. It is fair to state that the underlying causes of this actual increase in earnings could not be ascribed to any one factor. They were undoubtedly achieved by the continual adjustment of piece work rates which goes on in this plant, and no doubt to some extent by increased effort. Whatever the cause, the increased earnings of piece workers since January is a fact (with some minor exceptions) and has quite adequately taken care of the rise in the cost of living index since that time. It is to be remembered that the union based its demands for increase *solely* on the increased cost of living. For these reasons I

am opposed to any *retroactive* increase for piece workers and feel that the increase which I am about to recommend (or any increase ultimately agreed upon) should date from the next pay period after it is agreed upon, but in any event not earlier than the date of this report.

As the union based its demands for increases solely on the increased cost of living, it is necessary to examine that increase by the only statistical record available, namely, the D.B.S. cost of living index. This index stood in June, 1946 (six months prior to last January, when the Board agrees that piece work earnings in this plant were at least adequate)

at	127.1 points
In August, 1947, it stood at	136.6 "
A rise of	9.5 "

On a basis of 25 cents per week per point this means \$2.25 per week and for a 45-hour week 5 cents per hour. This amount was realized in the increased earnings of the piece workers above referred to. However, it cannot be ignored that there have been increases in the cost of living since August, 1947, and that this increase should in fairness to the piece workers be provided for as far as possible. A further increase in the earnings of piece workers to provide them with the equivalent of 5 cents per hour would take care of an additional rise in the cost of living index of a further 9.5 points since August, 1947.

I, therefore, recommend that an adjustment be made on a percentage basis in the guaranteed hourly base rates of piece workers in each of the three grades of jobs in this plant, set forth in the company's brief on job evaluation and piece work rates. This percentage should be an appropriate percentage in each grade which when applied to the minimum hourly guaranteed basic rates (and thereby reflected in the piece rates) will give the workers, without any increased effort on their part, the equivalent of 5 cents per hour additional earnings. It is obvious that any piece workers at present earning more than the minimum hourly guaranteed base rate will, of course, net more than the 5 cents per hour.

For clarity I give a formula:—

	Base Rate	Cents per hour
Grade 1—		
63 cents add 7 per cent.....		4.41
Add 20 per cent of 4.41.....		.88
		5.29

(Note, 20 per cent is always added to base rate in calculation of piece rates.)

	Base Rate	Cents per hour
Grade 2—		
72 cents add 6 per cent.....		4.32
Add 20 per cent of 4.68.....		.86
		5.18
Grade 3—		
82 cents add 5 per cent.....		4.10
Add 20 per cent of 4.92.....		.82
		4.92

The above is merely a formula to demonstrate how the actual increase of 5 cents per hour in earnings which I have recommended for piece workers could be arrived at without disturbing the relationship of the various jobs in the plant one to another or making it impossible for the company to properly cost the innumerable small parts which go into most of its products and which parts are separately supplied for service purposes to and through a large dealer organization throughout the world.

Hourly-rated Employees.—In respect to this class of employees, as stated in the majority report, the company put into effect on June 13, 1947, certain increases (set forth in Exhibit 1) designed to do these things:—

- (a) Bring into balance the earnings of hourly rated employees, *inter se*;
- (b) To compensate for the increased cost of living to that date; and
- (c) Make some provision for anticipated rises in the cost of living.

These increases ranged from 2 cents to 10 cents per hour.

In view of what I have said in discussing increases for piece workers, it would perhaps be fair to supplement the existing hourly rates by an across the board increase on the existing rates. In my view, the amount need not necessarily be the same as the 5 cents recommended for piece workers, but nevertheless some allowance should be made for the increasing cost of living. Furthermore, there is a limit to an across the board increase for hourly paid employees beyond which distortion in the relationship between the jobs themselves and between hourly-rated and piece work rated employees would develop.

If one examines the cost of living index, one finds that it stood as follows:—

As of January, 1947.....	134.9
As of August, 1947.....	136.6
A rise of.....	1.7

On the basis of 25 cents per point it gives 42½ cents per week or about 1 cent per hour.

I therefore feel that the increase to hourly paid workers should be 2 cents per hour to date from the signing of the agreement, but in any event not earlier than the date of this report.

Termination of Agreement.—This is a first agreement between the parties. In such case it is my view that unless the employer has not negotiated in good faith (which is not the case here) there should be no back-dating of the agreement. Furthermore, predictability and stability of its wage structure is peculiarly important to the company and will be vital as soon as it is in a position to re-enter the export market.

For these reasons, while I agree with the majority that this is a matter which might

be left to the parties to settle themselves, if they are unable to agree, I recommend that the agreement terminate one year from the day it is reached and signed.

Union Security.—In this case, after giving serious consideration to this matter, I feel that good relations will in the long run be best served if the union stands on its own feet until it establishes itself in the affections of a larger majority of the employees and has won the confidence of the company, which happy result, being a responsible union, it will no doubt achieve within a reasonable time.

All of which is respectfully submitted.

(Sgd.) E. MACAULAY DILLON.

Report of Conciliation Board in Dispute between Canadian National Railways (Sleeping, Dining and Parlour Car Department) and Canadian Brotherhood of Railway Employees and Other Transport Workers

On October 29, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: Honourable Mr. Justice G. B. O'Connor, Edmonton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, C. W. Johnston, Montreal, and Professor J. E. L. Graham, Winnipeg, appointed on the nomination of the employer and employees respectively.

Report of Board

To
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

The Board sat at Montreal on Monday the 8th, Wednesday the 10th and Thursday the 11th days of September, 1947, when oral and written submissions were made by representatives of the Brotherhood and the Company. At the Board's request the parties agreed to extend the time for delivery of the Board's report to the Minister of Labour for Canada until the 25th day of October, 1947. The Board met again at Winnipeg on Saturday the 11th day of October, 1947, and considered the report. It was agreed that the Chairman should forward this report duly sealed, to the Minister of Labour requesting him to hold it unopened until October 25 when he will open and distribute it unless in the meantime both parties agree to extend the time for the delivery of the report until the report of Chief Justice Williams' Board is also filed, in which latter event both reports shall be released together.

The Brotherhood expressly disavows any claim for higher wages. Mr. Eighteen withdrew the Brotherhood's request for such an increase. It had been one of the items submitted to the Conciliation Officer as being in dispute. Mr. McGregor emphatically stated that no question of higher pay was at issue. The Board must assume, therefore, that the present rate of pay is satisfactory to both parties at least for the time being.

1. The chief question at issue is the Brotherhood's claim that each employee should work only 208 hours a month instead of working the present road service assignments fixed to meet the exigencies of travel and under which the hours of work may be summarized as follows:—

152 employees work less than 208 hours a month but are paid for a full month;

575 employees work less than 240 hours but more than 208 hours a month and are paid for one month;

262 employees work more than 240 hours a month and are paid for one month and pro rata for the excess over 240 hours.

The 240 hour month is not 8 hours a day for 30 days, since each employee has at least 4 clear days off duty at home terminal each month. It is the nearest even number to 239.5, which is the average number of hours per month worked on August 8, 1944, when the Brotherhood made a similar application to the National War Labour Board.

The Brotherhood point out that their "request is based on a simple and elementary principle of Industrial Relations, viz., that no employee should be required to work in excess

of a 48-hour week, or, in terms of a monthly period of service, for a period exceeding 26 working days of 8 hours per day," that is, 208 hours a month. They say that the railway company recognizes this principle by paying other employees on this basis.

The railway company replies that the service performed by Sleeping, Dining and Parlour Car Road Service employees is not such as to bring them in the same category as employees in industry, where 8 hours is regarded as the measure of a standard day's work and 208 hours equivalent to 26 calendar working days at a standard month's work; that the basis of a maximum work day of eight hours for Sleeping, Dining and Parlour Car service employees is neither feasible nor workable; that these employees have frequent periods of relaxation and rest when they are not required to serve the travelling public; for example, they are even paid for their own meal times.

The railway company asserted, and the Brotherhood did not deny, that no other railway pays this class of employees on the basis of 208 hours a month. The railway company estimates the cost to it of the additional employees required to limit the work of all these employees to 208 hours a month at \$425,800.

These two contentions represent the usual approach to the problem of shorter hours by labour and industry respectively.

Labor wages a continual battle for shorter hours and higher wages. Thus, they have achieved the eight hour day, the forty-four hour week, the forty hour week, and now the United States printing trades demand the thirty-six hour week.

Industry, on the other hand, yields grudgingly to shorter hours and endeavours to confine them to those who labor continuously during their hours of employment and who may be said to be exhausted by long hours, such as employees on an assembly line, or those in employments where the customers can be served in shorter hours without loss of profit to the employer.

Many of these employees have now seven or eight days a month at home on the 240 hour basis and would have twelve to fifteen days per month at home on the 208 hour basis.

A dining car waiter serves the travelling public during three meals, cleans silver and glass, sweeps, dusts and has the remainder of the twenty-four hours for rest and relaxation.

A sleeping car porter pulls down 20 to 24 berths, receives and discharges his passengers, changes linen, puts up the berths, sweeps, dusts, etc. During the remainder of the twenty-four hours, he may rest and relax subject to the requests of his passengers for

information, etc. All these road service employees are paid for twenty and one-half (20½) hours' service a day.

I am unable to accept the contention of the Brotherhood that these road service employees should be on duty only 208 hours a month.

2. The Brotherhood also ask that overtime work be paid for at one and one half times the pro rata rate instead of at the pro rata rate, such overtime rates to be paid after 208 hours work in any month. They describe this as 'punitive' overtime intended to induce the railway company to limit the work of each employee to 208 hours. Their purpose is not to get more pay for any employee but to decrease the hours worked by all employees. All passenger road service employees are paid overtime on a pro rata basis only.

No evidence was submitted to show that the road service assignments unfairly penalized any employee. Some 152 employees work less than 208 hours but are paid for the full month and all assignments are allotted on a seniority basis. The railway officials are, in my opinion, doing their best to allot the work fairly and there is no need of any 'punitive' provision.

3. The Brotherhood further asks that employees be credited with continuous time less rest periods (3 to 3½ hours in 24) while dead-heading on railway business; held at away-from-home terminals beyond regular time, held out of service en route; and detained at away-from-home points on special movements instead of the present twelve hours for each 24 hour period while dead-heading and eight hours for each 24 hour period under the circumstances above mentioned.

This loss of time is incidental to the employment. It is not caused by the fault of the railway company. It seems to me that the present fifty-fifty arrangement under which the employee is paid for twelve hours without work out of twenty-four idle hours is fair and reasonable but it should apply in all circumstances. This is the practice of the Canadian Pacific Railway Company.

I would recommend that the employees be credited with twelve hours time for each twenty-four (24) hour period while held at away-from-home terminals beyond regular time, held out of service en route, and detained at away-from-home points on special movements, as well as while dead-heading.

4. The Brotherhood ask that work performed on statutory holidays shall be paid for at one and one half times the regular pro rata rate and not at pro rata rate as at present. In industry the employer can close his plant on statutory holidays and avoid overtime. The railways must run on statutory

holidays as on other days. The loss of the holiday is incidental to the employment on a railway. I do not recommend this change.

5. The Brotherhood asked that there should be no graded rates for length of service for dining car steward, dining car chef, cafe car steward, cafe car chef, second cook, sleeping and parlour car conductors and sleeping and parlour car porters. I can see no objection to higher remuneration for more experienced employees.

6. The Brotherhood asked that the hourly rate of pay be determined by dividing the monthly rate by 208 instead of 240. I have dealt with this in paragraph No. 1 above.

All of which is respectfully submitted.

Dated at Winnipeg, this eleventh day of October, 1947.

(Sgd.) G. B. O'CONNOR,
Chairman.

I concur in the result of this report in order to make it a report of the majority of the members of the Board.

(Sgd.) C. W. JOHNSTON,
Member.

Minority Report

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

I regret that I am unable to concur in the result of the majority report with respect to the issues treated in paragraphs 1, 2, and 6.

1. The primary question in dispute is the basic work-month that may be appropriate, under existing working conditions and practice, for the classifications of employees concerned.

The railway denies the Brotherhood's contention that the present standard work-month of 240 hours governing these employees should be reduced to 208 hours. Both parties appear to accept 26 calendar work-days as a computing expression for the standard work-month. And both parties appear to accept eight hours as being in general a measure of a standard work-day. They differ, however, as to the relevance of a standard work-day as a computing unit to determine the equivalent of 26 calendar work-days in terms of hours. The issue involves two fundamentally different approaches. But while this difference of approach may, indeed, be representative of "the usual approach to the problem of shorter hours by labour and industry respectively," this does not justify its uncritical dismissal as such.

The work-day is usually considered to be that proportion of each 24-hour period during

which the employee is actively and directly engaged in the performance of service for his employer. Where active employment must extend over a major portion or even beyond the 24-hour period, and where such employment is to be computed in work-days, the reduction of aggregate hours worked to work-days presupposes the stipulation of a standard work-day. On the other hand, given the standard work-month in terms of work-days, a determinate equivalent in hours is usually assumed, and varies with the definition of the standard work-day in terms of hours. In either case, the concept and measure of a standard work-day is essential, and, for a variety of reasons, has been generally accepted.

The Brotherhood contends that the standard work-month should be computed from a standard work-day of eight hours. Having regard to the general acceptance of eight hours (or less) as the measure of a standard work-day in industry, and, indeed, its application by the railway itself in other classifications, this contention might well be allowed.

The railway, however, appears to be of at least two "minds" with respect to the use both of a standard work-day, and a standard work-day of eight hours. For while denying its application in the determination of a standard work-month for these employees, the railway apparently does find it expedient to have some reference to the standard in other matters affecting their compensation.

Where, for example, these employees are held at away-from-home terminals beyond the established off-duty period, or detained out of service at a point en route, or detained at away-from-home points on special movements having no established off-duty periods, the railway credits them with eight hours for each 24 hours involved under such circumstances. This compensation for loss of time, held to be incidental to the employment, and to be distinguished from compensation for continuous time in active service, is recognition at least of the "passive" employment of the individuals concerned. And such "passive" employment over each 24-hour period is apparently reducible to, and held to be the equivalent of eight hours of regular active employment.

This practice suggests that while the railway may consider a standard work-day of eight hours inapplicable as a measure of the active employment of this group of employees, it does find it convenient to apply such a measure to their "passive" employment. But if a work-day as such, and one equivalent to eight hours, is admissible for each 24-hour period of "passive" employment, it should at least be possible to envisage work-day equivalents for

each 24-hour period of active employment. And from this treatment of "passive" employment, the work-day for active employment could scarcely exceed eight hours.

Again the railway no doubt finds in the decisions of the National War Labour Board once governing this matter, authoritative encouragement in its own position. However, the fact that the Board may have had occasion in 1944 to deny the Brotherhood's request for a basic month of 208 hours, did not prevent it from ordering at the same time upward adjustments in rates of pay which, for these monthly rated employees, were based on the assumption of an eight-hour day and a 208-hour month. While 240 hours served to define the hours equivalent of the basic month, 240 hours are, in effect, assumed to be 208 hours for the purpose of defining increases in the monthly rate of pay. Reference to the decisions of the National War Labour Board in the matter will scarcely lend consistency to the railway's position.

The railway, however, also contends that the service performed by these employees is not of the same category as that performed by employees where eight hours may be regarded as the measure of a standard work-day, and 208 hours a standard work-month. This is only to say that the nature of the service required of these employees differs from that of other occupations. The implication intended is that the service performed is not as arduous or continuous during the period of its performance as in other occupations.

However, because of the very circumstances which in fact do differentiate this type of service from others, it cannot be said that its performance is any less arduous or, for that matter, less continuous. And any significant difference in such matters as qualifications or responsibilities is largely a question of wage differentials.

In view particularly of the operating conditions and the protracted periods of duty during the complete cycle of an assignment from departure to arrival at home terminal, it cannot be inferred even from a cursory description of the duties involved that the service performed is essentially casual and intermittent with "the remainder of the twenty-four hours for rest and relaxation." If the allowances specified in the present Agreement are any indication of the maximum time which the railway feels it can allow for off-duty rest en route, they would also indicate a very substantial remainder of on-duty hours. And it is reasonable to assume that the extent of these hours of duty must have some relation

to the extent of the demands upon the service of these employees.

The degree of continuity in the actual performance of the services involved will vary. But as far as the railway or the travelling public is concerned, availability for the performance of service is also a performance of service. And under the operating conditions of a railway service, availability for the performance of service cannot be identified with freedom for rest and relaxation.

It is also the railway's contention that a maximum work-day of eight hours for these employees is "neither feasible nor workable." The real issue appears to lie in this contention. For the Brotherhood does not request that a day's work in road service be limited to eight hours. It requests that a work-day in the service be defined as eight hours, and that on the basis of a 26 calendar work-day month, this be the initial unit from which the basic monthly equivalent of hours be derived. The railway's objection to this appears to be that the present practice of defining the work-month directly in terms of aggregate hours is more feasible and more appropriate to the nature of the service; and further, that this monthly aggregate should be the average of the hours actually worked per month by all the employees concerned, as it now in fact is.

Thus the fundamental issue dividing both parties appears to lie in the choice of the appropriate criterion by which the basic month is to be determined. The criterion advanced by the Brotherhood is the eight hour work-day now generally accepted as a standard work-day; that of the railway appears to be the exigencies of the railway road service as reflected in the prevailing average of actual hours worked over the month on the assignments in question.

To the extent that the Brotherhood's contention may be premised upon an external principle, now generally accepted, the railway's contention may be said to stem from an expediency internal to the operating conditions of its system. But where the strength of principle and the limitation of practice appear to conflict, it is usual to expect their mutual adjustment first in terms of practice rather than principle. And this would certainly be the case where, as in this instance, the conflict seems to be more apparent than real. Here the technical difficulty of establishing precisely an actual basic work-month of 208 hours is not so great as to preclude its establishment as the criterion of the basic work-month. In constructing its estimates of the cost of a 208-hour basic work-month, the railway has shown that it is quite possible to organize assignments

having a reasonably close reference to this or other criteria of a basic work-month. In fact, the criterion of a basic work-month of 208 hours is both feasible and workable.

A further and perhaps equally important aspect of the Brotherhood's request for a shorter basic work-month is its contention that the away-from-home hours of the employees concerned are usually disproportionate to the remaining hours at home. In one case cited it was shown that for a typical assignment of a sleeping car porter between Montreal and Winnipeg, the time spent away from home was 442 hours and 40 minutes compared with 325 hours and 20 minutes at home during a 32-day period. The objection is apparently two-fold: not only is the time at home an unduly small proportion of the given working period, but also, as such time at home necessarily cannot be related directly to work time away from home in the usual sense of being contained within the normal working day, it is even less adequate than its quantitative disproportion would suggest.

The fact that time away from home includes hours off duty as well as on duty does not alter the fact that it is time away from home, and all that is implied in terms of the domestic leisure and enjoyment that any employee is presumably justified in regarding as an essential product of his labour.

The relation between work and leisure may not be a usual or explicit aspect of the evaluation of most occupations, but it is implicit in all cases, and in this instance appears to be of more than usual significance. It is true that the nature of the service requires a disproportionate time spent away from home as compared with other occupations. Yet for this very reason, and given the technical possibilities governing assignments, the basic work-month should be such as to minimize the disproportion. From this point of view, a standard work-month of 208 hours may again be recommended as both justifiable and feasible.

It is pointed out that many of these employees have now seven or eight days a month at home on the 240-hour basis and would have twelve to fifteen days per month at home on the 208-hour basis. This might suggest that seven or eight days a month at home represents a reasonable proportion of the month for time at home; and there could be the further implication that the definition of the basic month should therefore be governed by what is deemed an appropriate number of days for leisure at home.

The normal circumstances of other occupations could easily give the impression that twelve to fifteen days per month at home is

unusual. But however unusual, this would not therefore be unreasonable when considered, as it should be, in terms of the unusual circumstances of the railway road service. As a measure of the aggregate work performed, the work-month for any occupation is considerably less than the calendar month. And if from the nature of this occupation the work-month extends over less working days than may be usual, it is still reasonable and equally legitimate to allow as leisure time the remaining days off work. Moreover, given the technical possibilities governing assignments, the conditions of work and rest periods peculiar to the railway service would suggest that a maximum of these days off work should be available for leisure at home, however unusual may be their number or distribution over the month.

2. The Brotherhood's request for an overtime rate of one and one-half times the *pro rata* rate is also apparently premised upon the generally accepted practice in industries having a standard work-day. The intention is to insure that the actual work-month will conform as closely as possible with the standard work-month.

To pay the same rate for time worked beyond the basic month as for time worked during the basic month is to deny the existence of overtime in the accepted sense of the term, and, in effect, to rob the measure of a basic month of its intent and practical significance. The basic work-month becomes the actual work-month of each individual employee. Considering that almost one-third of the assignments are in excess of the present basic month of 240 hours, there is some justice to the Brotherhood's request.

But again, as in the case of the basic month, the issue arises out of the problem of reconciling accepted principle with the apparent limitation of practice. And in this case the practical limitations may be given greater weight. It must be admitted that in this instance the technical impossibility of organizing assignments to conform precisely with a given basic month has greater significance; and further, that being a difficulty inherent in the nature of the service, it is a difficulty beyond the railway's control.

The fact that assignments necessarily vary in the degree to which they conform to the basic month means that both railway and employees are penalized. For those assignments of less than the basic month yet paid the monthly rate, the railway in paying for hours not actually worked is paying a premium rate for hours actually worked. In this case the railway is penalized, and the employees concerned are in a sense bonused to the extent

of the premium in the rate paid per hour worked.

On the other hand, for those assignments of more than the basic month and paid the monthly rate plus overtime at a *pro rata* rate, the employee is penalized in the sense that the basic month has, in effect, no application in his case. The aggregate earnings of such an employee will be greater than the basic monthly rate, but as the difference is computed at a *pro rata* rate, there is no change, as is usually the case with overtime, in the rate of increase in his aggregate earnings to compensate for the fact that he works beyond the basic month.

For the stipulation of a basic month to have any significance for an employee working overtime, his aggregate earnings should increase at a greater rate for the overtime worked. Otherwise, the employee is penalized, and particularly in such an extreme case as the "seven day trip" required of some dining car crews operating between Halifax and Montreal and working approximately 273 hours a month. Such an employee will also be penalized if working overtime at *pro rata* rates when other employees working less than the basic month are in consequence earning premium rates for time worked.

To say that this apparent penalization of the employee is mitigated by the fact that assignments are allotted on a seniority basis, is to suggest that such employees while working overtime at *pro rata* rates will eventually through increasing seniority gain access to assignments yielding premium rates, and thus through the course of employment will earn indirectly the premium rate normally paid directly with overtime.

This may be a possibility for the average employee taken as a member of the entire group of employees. It is, however, only a possibility on the assumption that his increasing seniority does in fact give him access to assignments having premium rates, and on the further assumption that it is practical and even desirable to have relatively homogeneous seniority for any given assignment. Both assumptions are questionable, and particularly the seniority assumption where, indeed, it is likely that the more normal tendency for mobility to vary inversely with seniority will prevail.

However, some consideration must be given to the fact that the individual employee working overtime is also a member of the group within which some employees work less than the basic month and hence are paid for premium time. Given a basic month which applies to all employees and for which a monthly rate is paid, the variation in indi-

vidual assignments above and below the basic month will mean that the group can, and in fact does, work less aggregate hours than the basic group aggregate of hours required. This group deficiency in hours worked will be the excess of group premium time over group overtime.

But at the same time, the groups aggregate earnings will include earnings for total premium time not worked and earnings for overtime worked. Thus for the group as a whole, the ratio of the total premium time component plus the overtime component of aggregate earnings to the group aggregate of overtime worked could measure the group premium rate for group overtime worked within the group. And it can be shown, given the variations in individual assignments arising with the establishment of a basic month of 208 hours, that in theory, for the group as a whole the rate for overtime within the group could be over twice the *pro rata* rate.

To the extent, therefore, that the railway must consider its operations as a whole, it will be justified in holding that the appropriate rate for group overtime worked is more than paid, being paid indirectly through its payment of group premium time.

In practice, however, the position of the individual employee working overtime is to be distinguished from the position of the group as a whole within which overtime is worked. The indirect accumulation of premium time for overtime worked which may be possible for the group as a whole, is by no means as certain, automatic, or as proportionate for a given individual working overtime. And to this extent some provision of a premium rate to be paid directly for overtime is justifiable.

The railway may already be more than appropriately penalized for the overtime of the group, but this is not to say that the individual employee is thereby sufficiently compensated for his overtime worked. And yet just as it may be reasonable to expect the railway to be concerned with the individual employee as well as with the group as a whole, so the individual employee must be expected to have some reference to his status as a member of the group as well as to his personal status as an individual employee. Thus if the railway may be expected to pay a premium rate directly for overtime worked by the individual employee, the individual employee in turn may be expected to qualify his claim to an immediate and direct premium rate for his individual overtime. Whatever additional penalization this may imply for both would, in a sense, cancel out.

Accordingly, since from the point of view of the railway the group is already paid indirectly group premium time for group overtime, the payment directly of a premium rate for individual overtime should not begin until the group as a whole has, in a sense, at least partly "worked off" the group premium time for which the group is indirectly paid. This is merely to apply the individual-group relationship, this time giving due weight to the claims of the individual employee working overtime; and accordingly, to imply that to the same extent that any individual who happens to work overtime may be assumed to participate eventually in group premium time, it should also be assumed that any individual in the group should be considered eligible to bear an equal share of the group premium to be "worked off".

Nor is this to assume that the group premium time will in fact be worked off from the point of view of the railway; it is merely to use the extent of group premium time as

an index of the individual overtime to be worked before the direct payment of a premium overtime rate to the individual may be justified. It is an attempt to reconcile the fact of individual penalty with individual overtime with the railway's penalty because of group premium time.

Thus for the individual working beyond the basic month of 208 hours, overtime should be paid at one and one-half times the *pro rata* rate when the overtime worked exceeds the individual's share of the total group premium time when distributed equally over the group. From data submitted by the railway based upon a ten per cent sample of the group, it may be suggested that such premium rate for overtime be paid when the employee has worked something in the neighbourhood of 220 hours.

All of which is respectfully submitted.

(Sgd.) JOHN E. L. GRAHAM,
Member.

Report of Conciliation Board in Dispute between Canadian National Steamships (Pacific), Canadian National Railways (B.C. Coast & Lakes Barge & Ferry Service), Canadian Pacific Railway Co. (B.C. Coast Steamship Service), Union Steamships Ltd., and Frank Waterhouse & Co. Ltd., and Canadian Merchant Service Guild (TLC)

On October 11, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: H. A. Beckwith, Victoria, Chairman, appointed by the Minister of Labour on the joint recommendation of the other two members of the Board, W. H. M. Haldane, Victoria, and S. M. Jamieson, Ph.D., Vancouver, appointed on the nomination of the employer and employees respectively.

Report of Board

The Conciliation Board appointed by the Minister of Labour on the 7th day of August, 1947, with reference to a dispute between the above-named Companies and their Masters and Deck Officers represented by the Canadian Merchant Service Guild has held sittings with the Parties on September 19, 22, 23, 24, 25 and 26, and since that time has sat as a Board for consideration of this report on the 4th and 5th days of October, 1947.

The Parties were represented as follows:

Canadian Merchant Service Guild—G. F. Bullock, Secretary; N. A. MacDonald, Business Agent.

Canadian Pacific Railway Company—Capt. J. T. Hamilton, Marine Superintendent; S. M. Gossage, Assistant Manager of Personnel.

Canadian National Railways and Canadian National Steamship Company, Limited—G. A. MacMillan, Superintendent; P. E. Ayrhart, Assistant to Director of Labour Relations.

Union Steamships Limited and Frank Waterhouse & Company, Limited—G. O. McBean, Managing Director; Capt. E. Suffield, Marine Superintendent; P. W. Lawrey, Personnel Officer.

The subject matter of the dispute included ten items affecting all Companies concerned, and in addition to these ten items, there was in the case of each Company a number of issues which were referred to as Domestic Issues, i.e., affecting only that particular Company.

Evidence was presented and all issues thoroughly discussed and argued before us, with the exception of some of the Domestic Issues which affected Canadian National, Union Steamships and Waterhouse. On September 26, as it had become apparent that some of the Domestic Issues and some of the other working condition issues might perhaps be settled by direct negotiation, the Board allowed the Parties to meet informally during the day for this purpose. The result proved that this was a fortunate move, as when the Board met again for its evening session, we were very pleased to receive a report that all of the Domestic Issues had been disposed of, together

with seven of the major issues. Full particulars of the issues in question and manner in which they were disposed of follow:

GENERAL ISSUES

1. **STATUTORY HOLIDAYS:** Masters and Mates do not receive any compensation for working on legal holidays. Guild requested one leave day with pay for each Statutory Holiday worked. Leave days to be accumulated and granted at some other time, as mutually arranged.

Result: No Agreement, and this item was left for the Board.

2. **EIGHT-HOUR DAY:** The eight-hour day shall be recognized as the basis for working conditions under this Agreement.

Result: Understanding arrived at. Item withdrawn from consideration.

3. **EXCESSIVE HOURS ON DUTY:** When it is necessary on any occasion for a Deck Officer, during his off watch hours, to be on duty as an Officer, he shall, in cases of this nature, receive additional time off to compensate for such time worked on the basis of one day's extra leave with pay for every six hours work so performed. Minimum overtime period—one hour.

Result: Understanding arrived at and item withdrawn from Board.

4. **OVERTIME:** If a Deck Officer performs duties other than his regular duties as an Officer, such as driving winches or tractors, tending hatch or working cargo, whether it is his watch on deck or his watch below, he shall be paid overtime at the rate of \$1.25 per hour. Minimum overtime period—one hour.

Result: Understanding arrived at and withdrawn from Board.

5. **SICK LEAVE:** That Masters and Deck Officers be granted fourteen (14) days' sick leave with pay in any calendar year. This sick leave period with pay to be increased according to length of service.

Result: No agreement. Item left for Board.

6. **LEAVE DAYS:** Present Agreement calls for one day off in every seven (i.e., work six days then one day off with pay). The Guild requests that a leave day or the first leave day of several accumulated days, shall commence after an eight-hour watch below. This permits a rest period when coming off watch before commencing a day off.

Result: Understanding arrived at. Item withdrawn from Board.

7. **MASTER'S LEAVE:** That all Masters be granted a minimum of seven (7) leave days each calendar month, and that no Master shall receive a lesser number of leave days than his Deck Officers.

Result: Understanding arrived at. Withdrawn from Board.

8. **PORT WATCHES:** That on any route, port watches may be broken at the discretion of the Master. This permits Deck Officers to relieve one another when ship is in Port.

Result: Understanding arrived at. Withdrawn from Board.

9. **UNIFORMS:** That Masters and Deck Officers required to wear a uniform be granted one complete uniform each calendar year and one bridge coat every five years.

Result: Withdrawn from Board by Agreement.

10. **RATES OF PAY:** The Guild requests that all present rates of pay for Masters and Deck Officers be increased by 15 per cent.

Result: No agreement arrived at. This item left for the Board.

DOMESTIC ISSUES

B.C. Coast Steamship Service—Passenger Services

PRINCESS MARY: That the rates paid the Master on the *Princess Mary*, while on the Powell River-Gulf Islands Route, be the same as those paid on the *Princess Elaine* on the Nanaimo Route.

Result: Withdrawn—to be handled by direct negotiation.

MOTOR PRINCESS: That this ship carry two Deck Officers namely, a First and Second Mate, at all times when in commission.

Result: Understanding arrived at. Withdrawn from Board.

RANK STRIPES: That all uniforms carry the standard rank stripes.

Result: Understanding arrived at. Withdrawn from Board.

B.C. Coast Steamship Service—Towboats

UNIFORMS: Item 9 of requests: Towboat Masters and Mates should be granted a Cap, Pea Jacket and a clothing allowance of \$25.00 per year.

Result: Understanding arrived at. Withdrawn from Board.

LEAVE: That the minimum leave allowance for C.P.R. Towboat Masters and Mates shall be a minimum of seven leave days with pay each month as now called for in the B.C. Coast Towboat Agreement.

Result: Withdrawn from consideration by the Board.

DANGER MONEY: That Masters, Mates and Barge Masters shall be paid danger money while loading explosives and acids. During these periods the overtime rate shall be \$1.60 per hour. Minimum overtime period one hour. No car barge to carry acids and powder at the same time.

Result: Withdrawn by Mr. Bullock.

Canadian National Barge and Ferry Service

Three issues referred to in report of Conciliation Officer and headed "Shorthanded," "Disputes and Appeals," "Annual Leave," together with eight items headed "Working Conditions" and a further item headed "Termination."

Result: All of these issues were settled by negotiation and withdrawn from consideration by the Board.

Union Steamships, Limited

Three items headed "Pensions," "Subsistence" and "Appeals."

Result: All withdrawn from consideration by the Board, the parties having arrived at an understanding satisfactory to both sides. This is subject to the suggestion, with which the Board gladly agrees, that we recommend to the Guild and to the Company that they consider together the possibility of establishing some form of pension scheme, and that we feel that it is desirable that something of the kind should be established when possible and to the extent possible.

Frank Waterhouse & Company

Five issues headed "Leave," "Seniority," "Disputes and Appeals," "Subsistence" and "Termination."

Result: On all of these items an understanding was arrived at and the items were withdrawn from the Board's consideration.

In connection with the items upon which agreement was reached, I refer to the transcript of the proceedings, pages 430 and 434, from which it will be seen that both parties agreed that the Board should not take these settlements into consideration as representing concessions made by either side.

It will be seen that a very substantial part of the dispute was settled to the satisfaction of the parties and I feel that I should comment not only that the Board were very gratified at the result, but that I think it proves the value of the method followed by us in assisting the parties to discuss the items fully in an open sitting and then to talk privately about them. As to many of the items which were settled in this way, it appeared during argument that the parties were very far apart, but the fact that they had talked out fully and had heard the other side fully talked out apparently had the necessary result.

In consequence of the above disposition of items there remained for consideration by the Board Items 1, 5, and 10. I propose to deal with these items in order and make my observations and recommendations with reference thereto.

STATUTORY HOLIDAYS—ITEM 1

At first thought, the argument presented by the Guild is rather appealing, namely, that if an Officer is called upon to be on duty on a Statutory Holiday he should be compensated by having a day off at some other time. On reflection, I have come to the conclusion, however, that the question is not quite so simple. The fact that a Master or Deck Officer will be quite likely to have to be on duty on Statutory Holidays is inherent in the nature of the service, and is what he faced when he decided to follow that occupation. From the evidence, it seems to me quite clear that to compensate for this disadvantage in the occupation there are many advantages, and, viewing the evidence as a whole, I am impressed with the fact that when you consider leave days in the technical sense and the other periods of time free of the ship which are not included in the calculation of leave days, and the additional leisure time which is enjoyed from time to time by Master or Deck Officer, the men in question have no serious ground for complaining of their situa-

tion. I feel, therefore, that no ground has been established for the inclusion of this item in any agreement.

SICK LEAVE—ITEM 5

As in the previous item, the first reaction is one of sympathy, for it is quite a plausible argument to say that if a man is compelled by sickness to be absent from work he should not lose pay by reason thereof. I feel, however, that the case for the Guild has not been made out because no cases of actual hardship were cited to us and no figures were given as to the incidence of illness. In fact, apart from the testimony of one officer who said that in twenty years he had been absent for a day or so at a time on two occasions, the only direct evidence with regard to the situation was given by Captain Caldwell and the effect of his evidence was that in the ordinary practice, if a man were taken sick while on the way between Prince Rupert and Vancouver, provision would be made for taking care of his watches, and if he had to leave the ship at Rupert and miss the trip, a general adjusting of personnel would be arranged and apparently the difference would be absorbed. The answer of the Companies was that while individual cases might be sympathetically dealt with, it would be unwise and unfair to place in the agreement a clause under which these men would be entitled to take a minimum of fourteen days each year rising to considerably more according to length of service, and that this would be so for two reasons:

(a) that it would be only human nature for the men concerned to take time off on account of their sick leave on very slight excuse, so long as they were not losing wages, and

(b) that granting of this concession to one branch of the service would make it necessary for the same concession to be made throughout, and the cost would be prohibitive. I am also mindful of the fact that in the case of the Masters and Deck Officers, concessions are made either in the way of compensating leave or special pay whenever they go beyond their hours of duty or perform services beyond the scope of their position; there is some merit at least in the argument that if they are to be compensated whenever they give more than full measure they should not expect to give any less than full measure on their part. Once again I also comment that the compensating advantages of the situation appear to me to balance the absence of a sick leave allowance. I would therefore not be in favour of allowing this item.

WAGE INCREASE—ITEM 10

In connection with this item, I am quite in sympathy with the argument based on the increased cost of living, but at the same time my sympathy has always been, in such situations, with those in the lower brackets who suffer a real hardship when the cost of living rises. When the situation of these applicants is fully considered I cannot be convinced that they are justified in classing themselves as in the lower brackets to that extent. It is worthy of comment that when the cost-of-living bonus was introduced as a wartime measure, it only applied to those whose income was less than \$2,500.

In considering the situation of these applicants, it should be borne in mind that the monetary value of their positions is very substantially beyond the actual amount of their monthly wage. In addition, thereto, a Master or Deck Officer in the C.P.R. service has the following incidental benefits:

(a) Leave with pay, which amounts, according to the schedule filed with us as an exhibit, to a minimum of 64 days, which is very substantially increased indeed in the case of a great many officers, and which in practically every case must be increased by adding time free of the ship, which is not technically counted as leave; as an instance of this, I refer to the current C.P.R. agreement under which an officer whose time for leave arrives when he is in Vancouver is entitled to be transported to his home town of Victoria, if he happens to live here, and his leave does not actually commence until he reaches port in Victoria. In this same connection there are periods of leisure from time to time during watches which are not enjoyed in many other occupations.

(b) There is an assurance of comparatively continuous employment; there may be an occasional step-down in rank, but there is nothing to compare to the periodical lay-off which is experienced in many other occupations.

(c) There is the advantage of a pension scheme to which the Company contributes very materially.

(d) These men receive free board with lodging while on their ships, and board alone has, in my opinion, a value in excess of \$26 per month, assuming twenty-six working days, to which should be added a saving in laundry expense and in household expense consequent upon the fact that the man is only in his home a portion of the time. Mr. Bullock was not prepared to concede that this item had any value, but I am afraid that I must disagree

with him and point out, as I did at the hearing, that it actually represents so many eggs, so many pounds of meat, so many potatoes, and so much milk and butter every week which the housewife does not have to purchase because it is being furnished by the employer.

(e) Transportation privileges which were explained at length by Mr. Gossage and Mr. Tyson on pages 447 and 449.

(f) There are allowances for excessive hours on duty and pay in the form of a bonus when an officer is called upon to do work that does not fall within his scope. I checked with the representative of the Canadian National and ascertained that their provisions corresponded and in some respects were slightly more generous. The Union and Waterhouse have no pension scheme, but they have provisions in connection with life insurance and sickness and accident insurance which are of benefit to the employee, and other concessions which the evidence showed were made by these two Companies balance the scale so that roughly their employees are in substantially as favourable a situation. In connection with these items, it should not be overlooked that one substantial feature of the increased cost of living is the increased cost of food, and for this reason much weight attaches to the fact that these men get most of their meals on board ship. I am also impressed with the fact that the Companies have not been making money and that the operating surplus shown by the Canadian Pacific was calculated without taking into account depreciation or other ordinary capital charges. In this connection, it cannot be forgotten that the shareholders of the Canadian National are the people of Canada, and that the shareholders of the Canadian Pacific include a substantial percentage of people who have put part of their life savings into the stock of that company and are in many cases much worse off than many applicants. These circumstances would not justify a refusal to raise a man beyond the point where his wages would not enable him to live consistently well with his station in life; but they do represent a ground for proceeding with caution. I have in mind in that connection the fact also that two of these Companies are parts of a nationwide transportation system involving rail and water, and there is a good deal of merit in the suggestion by them that any increase would have to be made general. I have also in mind the fact that these men received a wartime cost-of-living bonus and a further increase which became effective in June of last year, which had the effect of raising (in terms of percentage) the lower officers very substan-

tially in the scale and made a very definite difference even in the pay of masters. I feel, therefore, that although the present agreement should perhaps include some adjustment upward in wages, the increase of 15 per cent requested by the Guild is not justified, and after careful thought I have come to the conclusion that the greatest increase I can recommend will be 6 per cent.

In conclusion, I should like to refer to the fact that considerable was said to the Board about another Board having recommended an increase of 15 per cent in the case of the engineers in the service of the same Companies. We were informed that this recommendation has not been accepted by the Companies and it is common knowledge, of which I think this Board is entitled to take notice, that the matter is still the subject of controversy. I cannot feel that the finding of another Board of Conciliation, based upon evidence of which I know nothing, should affect my decision.

I should like to add a word by way of comment with reference to the friendly attitude adopted by all parties to this dispute in the course of our proceedings. All the discussions were conducted without any show of heat and even the testimony of the witnesses was given in the same way and in many instances it was noteworthy that a spokesman or a witness, when faced with a troublesome question, gave frankly and without hesitation an answer which involved a concession on his part. Many instances of this could be quoted, but it is sufficient for me to say that the proceedings were, as one member of our Board remarked, in a true sense a conciliation meeting.

Transmitted herewith are:

- (a) Minutes of the first meeting.
- (b) Typewritten transcript of subsequent proceedings.
- (c) Briefs filed by the parties.
- (d) Original exhibits.

In view of the report of Mr. Haldane, which is attached hereto, it follows that the foregoing may be regarded as the majority report of the Board. Dr. Jamieson, the third member of the Board, presents a minority report, which is likewise attached.

Dated at Victoria, B.C. this 9th day of October, 1947.

(Sgd.) H. A. BECKWITH,
Chairman

Report of Mr. Haldane

I have had the advantage of reading the report made herein by Mr. H. A. Beckwith.

During the course of the proceedings, including the meetings held by the Board itself on the 5th and 6th instant, I was not impressed that a case had been made out by the Guild for any one or more of the contentions advanced by the Guild, and which were ultimately left for consideration by the Board, namely:—

Item 1—Statutory Holidays

Item 5—Sick Leave

Item 10—Wage Increases

However, with regard to Item 10, Wage Increases, I feel I should give some consideration to increased costs of living, despite the evidence submitted by the Companies as to operating losses and/or decreased and apparently decreasing net operating revenues. Accordingly, I have decided to agree with the over-all wage increase of six per cent suggested by Mr. Beckwith.

It follows that I am in full agreement with the report made by Mr. Beckwith.

I think I should add, for what it is worth, that in my opinion the whole tariff structure, both for passenger and freight, should be revised upward, to the end that ultimately a fair return may be received by the Companies, permitting possibly the ability on the part of the Companies to make the whole or some part of the concessions requested by the Guild, and not recommended in Mr. Beckwith's report.

Dated at Victoria, British Columbia, this 7th day of October, 1947.

(Sgd.) W. H. M. HALDANE
Employer Member.

Minority Report

Evidence brought out in the hearings of this Conciliation Board indicates that while deck officers employed by the above companies continue to enjoy, as they have in the past, certain traditional perquisites (such as subsistence and travel benefits) which employees of most other industries do not, these benefits appear to be in the category of partial compensations for the special disadvantages inherent in maritime occupations—particularly the fact that most of the employees' leave has to be spent aboard ship, with the consequent limited opportunities for home life.

As regards rates of pay, hours of work and leave on holidays—the main issues coming

before this Board—the available evidence indicates, to me at least, that masters and deck officers have suffered a relative decline in status in recent years. In this connection, labour standards enforced by legislation or union agreements in industries and occupations of similar status in British Columbia would seem to be the proper basis for comparison, rather than the railway industry in Canada as a whole, as representatives of the employing companies contend in this case. Coast shipping is essentially provincial or regional in its operations, and the employees are permanent residents of this Province. Where the 44-hour week, statutory holidays and overtime pay now apply to all but a few industries and occupations in British Columbia, masters and deck officers employed by the above four shipping companies work a 48-hour week, receive extra leave on a pro-rata basis for working extra hours beyond forty-eight, and receive no allowances for working on statutory holidays except in a few special circumstances. Rates of pay for deck officers appear to have fallen behind those for comparable occupations ashore, while the cost-of-living has risen by 15 per cent or more since June, 1946, the date on which masters and deck officers received their last adjustment in pay.

In the light of these developments the Merchant Guild's demands for a 15 per cent increase in pay and allowances for statutory holidays and sick leave would seem reasonable. Two other recent developments would appear to further justify their demands: *viz.* (1) the 30 per cent increase in freight rates recently applied by the employing companies to their B.C. coast shipping operations; and (2) the majority report of a recent Conciliation Board recommending, for marine engineers employed by the same four coast shipping companies, a 15 per cent wage increase, a 44-hour week as soon as practicable, and in principle a contributory system of sick leave insurance. These marine engineers now have almost identical status, hours of work and rates of pay graded according to rank as have the deck officers belonging to the Merchant Service Guild.

In view of these developments, the officers and members of the Guild do not appear to be amenable to any substantial reduction in their demands. On the other hand, evidence presented by the employing companies clearly indicates that they have been operating at a deficit, or at best a precariously slim margin

of return on their investment. For this reason in particular they have made it clear that they are unwilling to grant such increases in pay and holiday allowances as representatives of the Guild feel to be the minima acceptable to their members.

In this situation the members of the Conciliation Board were agreed, I believe, that the only basis for settling the dispute is a compromise arrangement, though as far as one can judge the present moods of the contending parties, any such compromise or compromises that members of the Board might recommend would be unacceptable to one or the other or both. For my part, I felt that the discussions among the members of the Conciliation Board were carried on in the friendliest possible terms. We failed, however, to agree on just what compromise arrangement should be recommended. Specifically, the minimum gains in rates of pay and holidays that I felt should be recommended as a compromise for settling the dispute were somewhat higher than those which the Chairman and the employer's nominee on the Board felt that they could recommend, and we were thus unable to reach unanimous agreement.

After serious consideration and discussion with the other members of the Board, as a suitable compromise I beg to submit the following *recommendations*:

1. An increase in rates of pay of 10 per cent to masters and certificated deck officers.
2. Leave days equivalent to the (seven) statutory holidays on which masters and deck officers are called upon to work.

No definite recommendations are made as regards sick leave with pay, as a sufficient case has not been made for it.

While beyond the scope or powers of a Conciliation Board of this kind, I should nevertheless like to recommend that the rates allowed by the Federal Government for carrying of passengers and freight on the Pacific Coast be established, as far as possible, on a basis that will enable the employing companies to meet the labour standards of British Columbia as regards rates of pay, hours of work and holidays and at the same time to earn a reasonable return on their investment.

Respectfully submitted,

(Sgd.) STUART M. JAMIESON
Employee Member

Report of Conciliation Board in Dispute between Coniaurum Mines Ltd., Schumacher, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCCL)

On October 6, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, K. C. Gray, Kirkland Lake, and G. M. Desaulniers, Montreal, appointed on the nomination of the employer and employees respectively.

Report of Board

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

Your Conciliation Board now begs leave to report.

The Sittings of this Board were held at Timmins, Ontario, on the 8th of July, 1947.

The Chairman and Messrs. G. M. Desaulniers and K. C. Gray, members of the Board, were present at the Sittings.

The Company was represented by Messrs. W. Omar Lafontaine, J. C. Kirkland and O. F. Carter and the Union was represented by Messrs. L. A. Behie (International Representative), Ivan Vachon, J. R. Carlin and G. Andrews.

The Collective Bargaining Agreement between the Union and the Company was entered into on the 18th of December, 1945, and on the expiration of the Agreement there were negotiations for renewal which failed and the Agreement has now lapsed.

In this Conciliation there are seven issues outstanding as follows:—

1. No Discrimination Clause.
2. Adjustment of Complaints and Grievance Procedure.
3. Hours of work and Overtime, and Statutory Holidays.
4. Wages and Shift Differentials.
5. Vacations with Pay.
6. Union Security or Check-off.
7. Opening Wage Clause.

The issues in dispute will be dealt with in the order in which they are above set out.

1. NO DISCRIMINATION CLAUSE

The Union filed a copy of the proposals which were made by the Union to the Company. Attached to these proposals is an

Exhibit marked "A" setting forth the "No Discrimination Clause" which they asked for instead of the clause as contained in the former Agreement.

The Board is not prepared to recommend in favour of the new clause as proposed by the Union. We are of the opinion that the former clause, which was Article 4 in the Agreement dated the 18th of December, 1945, is a reasonable one and sufficient to protect the interests of all parties and therefore recommend the adoption of that clause.

2. ADJUSTMENT OF COMPLAINTS AND GRIEVANCE PROCEDURE

The Union asked that the Company pay for time lost by the stewards in connection with the adjustment of grievances and suggested that this payment be "at the discretion" of the Company. There appears to be no objection to this suggestion as the clause is worded in such a manner as would prevent abuses and the Board therefore recommends in favour of the Union's proposal.

3. HOURS OF WORK, OVERTIME AND STATUTORY HOLIDAYS

The original request of the Union was for a forty-hour week but this was not seriously pressed and it was apparent that a forty-eight-hour week is satisfactory to all concerned.

In addition the Union asked for time and a half for all time in excess of the eight-hour working day and for time and a half for all time in excess of the forty-eight-hour week.

It seems that the Union's demand in connection with request for payment of overtime is reasonable and the Board therefore recommends in favour of it.

A suitable clause would, however, have to be drafted to cover the case of those employees who, by arrangement, work eight and a half hours a day in order to obtain a half day off.

A minor detail in connection with this was the request by the Union for the insertion of a clause to the effect that an employee working on a one or two shift operation should not be required to lay off work on a week day so as to work on Sunday. It is suggested that a clause reading "No employee shall be expected to take time off to absorb overtime" would meet the difficulty.

On the question of Statutory Holidays, the Board is unable to recommend any change in the plan as set out in the former Agreement.

4. WAGES AND SHIFT DIFFERENTIALS

The original demand of the Union was for a general increase of 16 cents per hour to all employees. In December last the Company granted an increase of 10 cents per hour to all employees and this increase was put into effect. The Union now proposed a further increase of 6 cents per hour plus off shift premiums. The Union takes the position that this 6 cents an hour is in the nature of an adjustment at the present time and also asked for a wage opening clause which will be referred to later. The Company have refused to grant the additional 6 cents per hour and the off shift premiums and under the conditions which presently exist in the Gold Mining Industry the Board is not prepared to recommend a change in the wage scale at the present time nor is the Board prepared to recommend payment of shift premiums as asked by the Union.

5. VACATIONS WITH PAY

The Union asked for two weeks' vacation with pay for all employees who have completed one or more years of continuous employment with the Company. The Company took the position that they could not grant an additional vacation week without effecting its position as a "provider of jobs".

The Board recommends one week's vacation with pay after one year's service, pay to be on the basis of two per cent of the employee's previous year's earnings and two weeks' vacation with pay after five years' service, pay to be on the basis of four per cent of the employee's previous year's earnings.

6. UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances any form of Check-off or collection of Union dues by pay deductions through the books of the Company. The Chairman of the Board would like to make it clear that he is not opposed on principle to certain forms of the Check-off but feels that he cannot recommend in favour of the Check-off in this instance.

7. OPENING WAGE CLAUSE

The Union asked for a Wage Opening Clause and the Board recommends such a clause providing for the Opening of the wage

question by either party on thirty days' written notice.

Dated at Brampton, Ontario, this 27th day of September, A.D. 1947.

(Sgd.) A. COCHRANE.

(Sgd.) K. C. GRAY.

Minority Report

To:

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

1. *Discrimination clause*

I would recommend the clause proposed by the union as set out in Exhibit "A" of the proposals of the union which were filed with the Board.

2. *Adjustment of complaints and grievance procedure*

I would recommend that the company pay the stewards for time spent for settling grievances during working hours.

3. *Hours of work and overtime and statutory holidays*

I would recommend that time and a half should be paid for all time worked in excess of eight hours in any working day and for all time worked in excess of forty-eight hours a week.

I would recommend payment of double time if worked and payment of straight time if not worked for the following statutory holidays: Good Friday, Dominion Day, Labour Day, Thanksgiving Day, New Year's Day, Christmas Day.

4. *Wages and shift differentials*

The union have made an original demand for a \$0.16 an hour increase in the case of all hourly rated employees. As of the 1st of December, 1946, the company granted and put into effect, after the demand of the union, an increase of \$0.10 an hour. Since the 1st of December, 1946, the cost of living has risen many points and it is just and reasonable that the additional \$0.06 per hour be granted and it is my recommendation.

On account of this recommendation, but only if the \$0.06 is paid, I recommend that the union accept the company's offer in connection with the off shift differentials.

5. *Vacations with pay*

I would recommend one week's vacation with pay after one year's service, pay to be

on the basis of 2 per cent of the employee's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of 4 per cent of the employee's previous year's earnings.

6. *Union security or check-off*

There is no reason why the company should

refuse the check-off and I would strongly recommend it for this mining industry.

7. *Opening wage clause*

I would recommend a wage opening clause by either party on 30 days' written notice.

Respectfully submitted,

(Sgd.) GUY M. DESAULNIERS.

Report of Conciliation Board in Dispute between Delnite Mines Ltd., Timmins, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL)

On October 6, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, R. J. Henry, Dobie, and G. M. Desaulniers, Montreal, appointed on the nomination of the employer and employees respectively.

Report of Board

To
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Sir:—

Your Conciliation Board now begs leave to report.

The Sittings of this Conciliation Board were held at Timmins, Ontario, on the 19th day of June, 1947.

The Chairman and Messrs. R. J. Henry and G. M. Desaulniers, members of the Board, were all present at the Sittings.

The Union was represented by Messrs. W. Kennedy (International Representative), J. R. Carlin, Ivan Vachon, Daniel Nee and Tom Klewchuk and the Company was represented by Messrs. J. Beattie (Plant Manager), C. Stevens and K. C. Gray.

The Collective Bargaining Agreement between the Company and the Union was dated the twenty-third of August, 1945, and has now expired.

During the hearing it was stated by the Union Representatives that a number of minor details had been agreed upon between the Company and the Union and it was felt that if an agreement could be reached on the major differences there would be little or no trouble in settling the minor items.

There are some nine major issues in dispute as follows:—

1. No Discrimination Clause.
2. Management.

3. Adjustment of Grievances.

4. Hours of Work and Overtime.

5. Statutory Holidays.

6. Vacations with Pay.

7. Union Security or Check-Off.

8. Outside Employment.

9. Wages.

The proposals of the Union which had been submitted to the Company are filed during the Sittings and the items in dispute will be dealt with in the order in which they are above set out.

1. NO DISCRIMINATION

During the hearing the Union agreed to accept the "No Discrimination" clause as set out in the former Agreement, and it was stated that the Union representatives were of the opinion that it was satisfactory and had worked out well. The Company representatives stated that this suggestion would be considered.

Under the circumstances the Board recommends the same "No Discrimination" clause as had been contained in the previous Agreement.

2. MANAGEMENT

There does not appear to be much difference of opinion in connection with this clause and the Board recommends in favour of the same "Management" clause as is contained in the former Agreement.

3. GRIEVANCE PROCEDURE

There are some minor details in connection with the "Grievance Procedure" which it is apparent could be worked out between the representatives of the Union and the Company. The Board therefore feels that it is not necessary to make any specific recommendation in connection with this matter.

4. HOURS OF WORK AND OVERTIME

The question of hours of work was not seriously pressed by the Union. Generally speaking, in the first negotiations the Union asked

for a forty-hour week but subsequently the demands were modified and the Union representatives stated that they were prepared to accept the forty-eight hour week but asked for payment of time and a half for overtime in excess of eight hours in any one working day and for all time in excess of the forty-eight hour week.

It seems that the Union's demand in connection with payment for overtime is reasonable and the Board therefore recommends in favour of it.

It would be necessary, however, to draft a suitable clause to cover the case of those employees who, by arrangement, work eight and a half hours every day in order to obtain a half day off.

5. STATUTORY HOLIDAYS

The Board is unable to recommend any change in the plan as set out in the former Agreement.

6. VACATIONS WITH PAY

The Union asked for two weeks' vacation with pay for all employees who have completed one or more years' continuous employment with the Company. The Company proposed that the "National War Labour Board Directive" of October 6, 1943, remain in effect, that is, six days' holidays with a minimum of 300 days worked per year.

The Board recommends one week's vacation with pay after one year's service, pay to be on the basis of two per cent of the employee's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of four per cent of the employee's previous year's earnings.

7. UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances any form of Check-off or collection of Union dues by pay deductions through the books of the Company. The Chairman of the Board would like to make it clear that he is not opposed on principle to certain forms of the Check-off, but feels that he is unable to recommend in favour of the Check-off in this instance.

8. OUTSIDE EMPLOYMENT

The Company proposed a clause which would prohibit an employee from accepting temporary or permanent employment of any kind while remaining an employee of the Company except by arrangement with the Company.

The Union representatives stated that they are opposed to this clause being written into an Agreement.

The Board is quite unable to recommend in favour of any such clause ~~if~~ for no other reason than that it would be difficult to enforce and quite likely to promote dissatisfaction and possibly trouble.

9. WAGES

The question of wages was not raised in the memorandum of articles in disagreement which was filed by the Union but the same demands for wages have been made in connection with this Conciliation as were made in other matters, namely, a general increase of 16 cents an hour. An increase of 10 cents an hour was granted by the Company in or about the month of December, 1946, and it would appear that the demand for an additional 6 cents per hour has not been abandoned by the Union. Under the conditions which presently exist in the Gold Mining Industry the Board is not prepared to recommend any change in the wage scale at the present time.

In connection with the question of wages the matter of "Off Shift Premiums" was also brought up by the Union and for the same reason the Board is not prepared to recommend payment of the shift premiums as asked by the Union.

The question of payment for "Call Out" time was raised by the Union and the Board recommends payment be made for four hours instead of three hours as provided for in the former Agreement.

An Open End Wage Clause was asked for by the Union during the Sittings of this Board, although apparently it had not previously been requested by the Union. The Board recommends in favour of such a Wage Opening Clause by either party on thirty days' written notice.

Dated at Brampton, Ontario, this 25th day of September, A.D. 1947.

(Sgd.) A. COCHRANE

(Sgd.) R. J. HENRY

Minority Report

To the Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Sir:—

1. *Discrimination clause:* I would recommend a clause similar to the one proposed by the union in the Exhibit "A" of its proposals.

2. *Management*: I recommend that the word "sole" be deleted from the proposed clause.

3. *Adjustment of grievances*: I would recommend that the company pay the union stewards for time lost settling grievances during working hours.

4. *Hours of work and overtime*: I would recommend that time and one-half be paid for all time worked in excess of eight hours in any working day and for all time worked in excess of forty-eight hours a week.

5. *Statutory holidays*: I would recommend payment of double time if worked and straight time if not worked for the following statutory holidays: Good Friday, Dominion Day, Labour Day, Thanksgiving Day, New Year's Day, Christmas Day.

6. *Vacations with pay*: I would recommend one week's vacation with pay after one year's service, pay to be on the basis of 2 per cent of the employee's previous year's earnings, and

two weeks' vacation with pay after five years' service, pay to be on the basis of 4 per cent of the employee's previous year's earnings.

7. *Union security or check-off*: There is no reason why the company should refuse the check-off and I would strongly recommend it in the case of this mining industry.

8. *Outside employment*: I am strongly opposed to such clause being included into the agreement.

9. *Wages*: The union has made an original demand of \$0.16 an hour increase in the case of all hourly-rated employees. As of the 1st of December, 1946, the company granted and put into effect, after the union's demand, an increase of \$0.10 an hour. Since the 1st of December, 1946, the cost of living has risen many points and it is just and reasonable that the additional \$0.06 per hour be granted and it is my recommendation.

Respectfully submitted,

(Sgd.) GUY M. DESAULNIERS.

Report of Conciliation Board in Dispute between Hollinger Consolidated Gold Mines, Ltd., Timmins, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL)

On October 6, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Col. Alan Cockeram, M.P., Toronto, and G. M. Desaulniers, Montreal, appointed on the nomination of the employer and employees respectively.

Report of Board

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

Your Conciliation Board now begs leave to report.

Sittings of this Conciliation Board were held at Timmins, Ontario, on the 16th and 17th days of June, 1947.

The Chairman and Colonel Alan Cockeram were present on the 16th of June and all members of the Board were present on the 17th of June.

The Company was represented by Messrs. E. L. Longmore, Plant Manager, T. E. Hawkins, M. E. Williams and J. M. Douglas and the Union was represented by Messrs. T. F. McGuire (International Representative),

Ivan Vachon, T. MacNeil, Joe Corliss and J. R. Carlin.

The Collective Bargaining Agreement between the Company and the Union was dated the 14th day of November, 1945, and negotiations for renewal of the Agreement were commenced in October of 1946 but these negotiations were unsuccessful and the Agreement was not renewed.

Six major issues were in dispute as follows:—

1. Hours of Work and Overtime.
2. Wages.
3. Vacations.
4. Statutory Holidays.
5. Union Security or Check-off.
6. Shift premiums, which are combined with wage demands.

The proposals of the Union which were submitted to the Company were filed during the Sittings.

As has been stated, the above are the principal items in dispute but there are also some minor ones which will be referred to later in this Report. The principal items will be dealt with in the order in which they are above set out.

1. HOURS OF WORK AND OVERTIME

The question of hours of work was not seriously in dispute as the Union in the first

instance demanded a forty-hour week but the demand was not pressed and it is apparent the forty-eight hour a week is satisfactory to the Union.

On the question of Overtime. The Union pressed for recognition of its demands for time and a half in excess of the eight hours in any working day and for all time in excess of the forty-eight hour week although it was made clear that the demand for overtime was not cumulative. It was made clear by the Union Representative that they did not expect to get the overtime both ways. It seems to the Board that the Union demand in connection with payment for overtime is reasonable and the Board therefore recommends in favour of it. A suitable clause would, however, have to be drafted to cover the case of those employees who, by arrangement, work eight and a half hours every day in order to obtain a half day off.

2. WAGES

The original demand of the Union was for 16 cents an hour increase in the case of all hourly rated employees. As of the 1st of December, 1946, the Company granted and put into effect an increase of 10 cents an hour. The negotiation committee of the Union was called in by the Management and were advised of the increase and were asked to sign an agreement but there were no direct negotiations on this wage increase. The Union pressed their demand for the additional 6 cents per hour and hinted that further demands might be made. Under the conditions which presently exist in the Gold Mining Industry the Board is not prepared to recommend any change in the wage scale at the present time.

3. VACATIONS WITH PAY

The Union asked for two weeks' vacation with pay for all employees who have completed one or more years' continuous employment with the Company. The Company proposed one week's vacation with pay after one year's service and two weeks with pay after five years' service.

The Board recommends one week's vacation with pay after one year's service, pay to be on the basis of two per cent of the employee's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of four per cent of the employee's previous year's earnings.

4. STATUTORY HOLIDAYS

The Board is unable to recommend any change in the plan as set out in the former Agreement.

5. UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances any form of Check-off or collection of Union dues by pay deductions through the books of the Company. The Chairman of the Board would like to make it clear that he is not opposed on principle to certain forms of the Check-off, but feels that he is unable to recommend in favour of the Check-off in this instance.

6. SHIFT PREMIUMS

In connection with its wage demands the Union asked for certain shift premiums as follows: 6 cents per hour for work performed by an employee during afternoon shifts and not within his scheduled day or night working hours; 10 cents per hour for work performed by an employee during night shift hours and not within his scheduled day or afternoon working hours; and 8 cents per hour for the intermediate shift.

Shift premiums as asked by the Union would increase the cost of the production of gold and under the conditions which presently exist in the Gold Mining Industry we are not prepared to recommend payment of the Shift Premiums as asked by the Union. The Company made an offer in connection with Shift Premiums and we recommend that the offer of the Company be accepted.

In addition to the above major items in dispute there were several other questions which were raised before the Board and which are of lesser importance. These are as follows:—

(a) *Wage Opening Clause.*—The Board recommends a Wage Opening Clause by either party on thirty days' written notice.

(b) *No Discrimination.*—The Board recommends a clause similar to that contained in the former Agreement.

(c) *No Cessation of Work.*—The Board recommends a clause similar to that contained in the former Agreement.

(d) *Arbitration.*—The Board recommends the substitution of the name of Professor C. A. Curtis for that of the Honourable Mr. Justice J. G. Gillanders (deceased).

(e) *Grievance Procedure.*—There is only a very slight difference between the parties in connection with Grievance Procedure which we believe can be readily settled by negotiations and we therefore make no recommendations.

(f) *Temporary Employees.*—The Board recommends the clause as suggested by the Company in its proposals.

(g) *Job Posting*.—This question was suspended. It is understood that the Union and the Company are discussing it.

(h) *Union Committees*.—The Union in its proposals indicated that the former Article 21 dealing with Union Committees is satisfactory except that the Union desired to make provision for a Committee to meet not more than once a month to discuss and suggest changes in the bonus contract system.

This suggestion on the part of the Union appears to be reasonable and the Board therefore recommends in favour of it and suggests that the Company and the Union get together and work out the details.

Dated at Brampton, Ontario, this 25th day of September, 1947.

(Sgd.) A. COCHRANE.

Report of Alan Cockeram

To:

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

I concur in the report and recommendations of the Chairman, dated September 25, 1947, except with respect to—

1. Overtime.
2. Wage Opening Clause.
3. Union Committees.

It is my understanding that the Company and the Union are in agreement on the question of overtime, and that no purpose will be served by my making any report thereon.

I am not in accord with the insertion of a wage opening clause in the agreement. I am of the opinion that it is to the best interests of both parties that wherein agreement is entered into it should be for a period of one year. If the question of wages under the agreement can be opened up by either party on thirty days' notice, the agreement can only be considered as a thirty day agreement which would lead to unstable labour relations.

The Chairman has also recommended that a Committee be set up to meet not more than once a month to discuss and suggest changes in the bonus contract system. In my opinion this is not a proper subject for collective bargaining. It is the right of management to fix the amount of any bonus to be paid and the conditions under which same will be paid. It is my understanding that the Company is, at the present time, reviewing the bonus contract system.

Dated at Toronto, Ontario, this 30th day of September, 1947.

(Sgd.) ALAN COCKERAM.

Minority Report

To:

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

1. Hours of work and overtime

It seems to me that the union's demands in connection with payment of overtime are reasonable and I would therefore recommend in favour of them.

2. Wages

The union have made an original demand for a \$0.16 an hour increase in the case of all hourly rated employees. As of the 1st of December, 1946, the company granted and put into effect, after the demand of the union, an increase of \$0.10 an hour. Since the 1st of December, 1946, the cost of living has risen many points up and it is just and reasonable that the additional \$0.06 per hour be granted and it is my recommendation.

3. Vacations with pay

I would recommend one week's vacation with pay after one year's service, pay to be on the basis of 2 per cent of the employee's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of 4 per cent of the employee's previous year's earnings.

4. Statutory holidays

I would recommend double time if worked and straight time if not worked for the following statutory holidays: Good Friday, Dominion Day, Labour Day, Thanksgiving Day, New Year's Day, Christmas Day.

5. Union security or check-off

There is no reason why the Company should refuse the check-off and I would strongly recommend it for this mining industry.

6. Shift premiums

On account of my recommendation that the \$0.06 increase should be paid to all hourly rated employees, I would recommend, but only if the \$0.06 is paid, that the union should accept the company's offer in connection with shift premiums.

On the other questions raised before the board, my recommendations are as follows:—

(a) *Wage opening clause*.—I recommend a wage opening clause by either party on 30 days' written notice;

(b) *No discrimination*.—I would recommend a clause similar to the one offered by the union in the Exhibit "A" of its proposals;

(c) *No cessation of work.*—I would recommend a clause similar to that contained in the former agreement;

(d) *Arbitration.*—I would recommend the substitution of the name of Professor C. A. Curtis for that of the Honourable Mr. Justice J. G. Gillanders (deceased).

(e) *Grievance procedure.*—I would recommend that the company pay stewards for time spent ending grievances within working hours;

(f) *Temporary employees.*—I would recommend the clause of the company subject to the condition that the temporary employees should have the right to use the grievance procedure;

(g) *Job posting.*—This question was suspended. The Union and the Company are discussing it;

(h) *Union committees.*—The Union in its proposals indicated that the former article 21 dealing with Union committees is satisfactory except that the Union desired to make provision for a committee to meet not more than once a month to discuss and suggest changes in the bonus contract system. The suggestion on the part of the Union appears to be reasonable and I would recommend in favour of it and suggest that the company and the Union get together and work out the details.

Respectfully submitted,

(Sgd.) GUY M. DESAULNIERS.

Report of Conciliation Board in Dispute between Macassa Mines Ltd., Kirkland Lake, Ont., and Local 240, International Union of Mine, Mill & Smelter Workers (CIO-CCL)

On October 20, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, W. O. Lafontaine, Schumacher, and George Harris, Toronto, appointed on the nomination of the employer and employees respectively.

Report of Board

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

Your Conciliation Board herein now begs leave to Report.

The sittings of the Board were held at Kirkland Lake on the ninth and tenth days of June, 1947.

The Chairman and Messrs. W. O. Lafontaine and George Harris, members of the Board, were all present at the Sittings.

The Union was represented by Messrs. T. F. McGuire (International Representative), H. Hutt and J. Ayotte, and the Company was represented by Messrs. G. A. Howes (Mine Manager), Alex. Harris, J. D. Bryce and J. C. Cliff.

A Collective Bargaining Agreement between the Union and the Company was entered into on the 18th of December, 1945, and the agreement expired on the 18th of December, 1946. Negotiations for renewal were commenced but

the parties failed to reach an agreement and the agreement has not been renewed.

In this conciliation there are the following major issues to be considered and are still in dispute:—

1. Wage Increases.
2. Shift Premiums.
3. Union Security.
4. Hours of Work and Overtime.
5. Statutory Holidays.
6. Vacations with Pay.

The major items in dispute will be dealt with in the order in which they are above set out.

1. WAGE INCREASES AND 2. SHIFT PREMIUMS

The original demand of the Union was for a wage increase of 16 cents per hour to all employees, and also for certain shift premiums. The Company granted and put into effect a general increase of 10 cents per hour and the Union is still pressing for the additional six cents per hour and also for the shift premiums. Under the conditions which presently exist in the Gold Mining Industry in Canada, the Board is not prepared to recommend in favour of any change in the wage scale, nor is it prepared to recommend payment of the shift premiums asked for by the Union.

3, UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances, any form of Check-off or collection of Union dues through the books of the Company.

The Chairman would like to make it clear that he is not opposed on principle to certain forms of the Check-off but feels that he is unable to recommend the Check-off in this instance.

4. HOURS OF WORK AND OVERTIME

The question of hours of work was not seriously pressed by the Union, although in the first place the forty-hour week was asked for, and it now appears that the Union is satisfied to accept the forty-eight hour week. The request for overtime pay at the rate of time and a half for all work in excess of the eight-hour day and the forty-eight hour week was pressed by the Union. The request of the Union in this respect appears to be reasonable, and we therefore recommend in favour of it.

It would be necessary, however, when drafting an agreement to prepare a suitable clause to cover the case of those employees who, by arrangement, work eight and one-half hours per day in order to obtain a half day off.

5. STATUTORY HOLIDAYS

The Board is unable to recommend any change in the plan as set out in the former agreement between the parties.

6. VACATIONS WITH PAY

The plan for annual vacations contained in the former agreement is very generous, and better than most, and we recommend therefore that it be accepted by the Union. We are unable to recommend in favour of the plan asked for by the Union.

It is to be noted that in its proposals to the Company the Union asked for a wage opening clause by the Union on thirty days' notice in writing to the Company. The Company is opposed to such a clause.

Because of the conditions which presently exist in the Gold Mining Industry the Board recommends in favour of a Wage Opening Clause providing for the opening of the wage question by either party on thirty days' written notice.

There are one or two minor matters still outstanding as between the Company and the Union which we feel can be readily settled by negotiation between the parties and we therefore make no recommendations in connection with them.

Dated this 26th day of September, A.D. 1947.

(Sgd.) A. COCHRANE.

(Sgd.) W. O. LAFONTAINE.

Minority Report

I have had the privilege of reading the report of the Chairman of the Board of Conciliation and while I can agree with some of his recommendations there are others that I disagree with and therefore find it necessary to submit a minority report.

Matters in dispute as stated in the Chairman's report were:—

1. Wage increases and open end wage clause.
2. Shift premiums.
3. Union security.
4. Hours of work and overtime.
5. Paid statutory holidays.
6. Vacations with pay.

Taking the points in dispute in the order above I contend:—

1. Wage increases and open end wage clause

The Union's demand for a general wage increase of 16 cents per hour is indeed very conservative considering the tremendous increase in the cost of living and the much higher wage increases obtained in such industries as rubber, electrical, lumber and metal mining other than gold, during the years 1946-47.

An increase of 10 cents an hour was made effective by the Company in December of 1946. My recommendation is that there be an additional 6 cents per hour increase and that this 6 cents per hour be retroactive to December 1, 1946.

In my opinion the miners are at this time entitled to a much greater increase than that which is asked.

I base this opinion on example taken from the electrical industry with which I am familiar. During the 1946-47 period wage increases were obtained with the following companies amounting to:—

	Cents
Canadian Westinghouse Company	29
Canadian General Electric Company..	27
Electro-Metallurgical Company	30
English Electric	30
Page-Hersey Tubes Ltd.	33

I agree with the report of the Chairman with respect to the open end wage clause except that it should only be opened, on thirty days' notice, on the request of the Union for upward wage adjustments.

2. Shift premiums

Payment of shift premiums are common-place in most industries and there does not seem to be any real reason why employees

in the mining industry should not be paid such premiums. The Union's demand is for a 5, 7½ and 10 cent per hour premium dependent on the shift being worked.

3. *Union security*

The Union's demand for a form of Union Security is:—

The Company shall during the life of this Agreement deduct, as a condition of employment, the sum of not more than One Dollar and Fifty Cents (\$1.50) from the first pay cheque due in each calendar month to each such employee and remit the same prior to the 10th day of the month following the month in which such deduction is made, to the Financial Secretary of the Union.

The Company refused to consider this demand or for that matter to give any consideration to even a voluntary revocable check-off.

It is my contention that this attitude on the part of the Company gives real point and meaning to the Union demand for Union Security and it should be acceded to.

Rather than go into long argument in this report on the matter of Union Security I would refer anyone interested to a report I made as a Board member in the dispute between this Union and Lakeshore Mines Limited. This report is dated May 12, 1947, and appears in the *LABOUR GAZETTE* for June, 1947.

4. *Hours of works and overtime*

There was substantial agreement between the parties on this question when they

appeared before the Board and I believe that full agreement can be arrived at without a recommendation from this Board. I therefore concur with the Chairman on this point.

5. *Paid statutory holidays*

This demand to me highlights the fact that it is high time that the mine operators recognized that the claims of their employees for equal treatment with other industrial workers is a just claim.

The Union's claim for 6 Statutory Holidays which shall be paid for at straight time when not worked if no work is available and paid for at double time when worked is one that should be readily granted by the Company in view of many industries, through agreements with the Unions, having put into effect 8 paid Statutory Holidays. In the electrical industry, for example, there are 13,750 employees enjoying 8 paid holidays through their union contracts.

6. *Vacation with pay*

While it is recognized that Macassa has a more liberal paid vacation plan than other mines in the area this does not take away from the justice and reasonable basis of the Union's demand for two weeks' paid vacation after one year's service with the Company. The nature of the mining industry gives point and force to the Union's demand and I would urge that it be agreed to by the Company.

(Sgd.) GEO. HARRIS,
Board Member.

Report of Conciliation Board in Dispute between McIntyre Porcupine Mines Ltd., Schumacher, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL)

On October 6, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, Alex Harris, Kirkland Lake, and G. M. Desaulniers, Montreal, appointed on the nomination of the employer and employees respectively.

Report of Board

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

Your Conciliation Board now begs leave to Report.

Sittings of this Conciliation Board commenced at Timmins, Ontario, on the 21st day of May and continued on the 22nd and 23rd days of the same month.

All members of the Board were present at the Sittings.

The Company was represented by Messrs. A. D. Campbell, M. Cooke, S. A. Wookey and J. M. Carter, and the Union was represented by Messrs. L. A. Behie, J. R. Carlin, Ivan Vachon, David Weston and C. Fournier.

The Collective Bargaining Agreement between the Company and the Union is dated the 10th day of October, 1945; it expired on the 10th of December, 1946, and was not renewed.

Among the Exhibits filed by the Union were the "Proposals" of the Union and also

a Statement of "Articles in Disagreement", both of which refer to the following:—

1. No Discrimination.
2. Statutory Holidays.
3. Wages.
4. Hours of Work and Overtime.
5. Vacations with Pay.
6. Union Security.

The above are the principal items in dispute, but there are some minor ones which will be referred to later in this Report. Dealing with the principal items in the order in which they are above set out:—

1. NO DISCRIMINATION

Both the Union and the Company desired certain changes in the clause contained in the expired agreement. The Company desired to add to the former Article Two, the following sentence "It is understood that in Canada, Communism is neither a religious creed nor a political belief". The Board is not prepared to recommend in favour of the clause as proposed by the Company, which in our opinion could only cause trouble between the parties; but on the other hand we are not prepared to recommend in favour of the clause as proposed by the Union. As a compromise we would recommend in favour of the clause as set forth in the original agreement.

2. STATUTORY HOLIDAYS

The Board is unable to recommend any change in the present plan as set out in the former agreement.

3. WAGES

The original demand of the Union was for 16 cents per hour increase. As of the first of December, 1946, the Company granted and put into effect an increase of 10 cents per hour, and posted a Notice to that effect on the Company's Bulletin Board. Strenuous objection was taken by the Union representatives during the Sitzings to the manner in which this increase was granted, and the Union also pressed its demand for the additional six cents per hour. It was also hinted that further demands might be made. We are not prepared to recommend any change in the wage scale under the conditions which presently exist in the Gold Mining Industry.

4. HOURS OF WORK AND OVERTIME

In the beginning, the Union asked for a forty-hour week and time and a half for all

overtime, and they also asked for the eight-hour day. Subsequently the demands of the Union were modified and it appears that the Union representatives are now satisfied with the forty-eight hour week. The demand for time and a half for all time in excess of the eight hours in any working day, and for all time in excess of the forty-eight hour week, was pressed by the Union, although it was made clear that the demand for overtime was not cumulative. The Union Representative put it that they did not expect to get the overtime both ways. It seems to us that the Union demand is reasonable, and we therefore recommend in favour of it. A suitable clause would, however, have to be drafted to cover the case of those employees who, by arrangement, work eight hours and a half per day to obtain a half day off.

5. VACATIONS WITH PAY

The Union asked for two weeks' vacation with pay for all employees after one year's service. The Company offered two weeks' vacation with pay after five years' service if the Union would accept the Company's proposed No Discrimination Clause.

We recommend one week's vacation with pay after one year's service, pay to be on the basis of 2 per cent of the employee's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of 4 per cent of the employee's previous year's earnings.

6. UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances any form of Check-off or collection of Union dues by pay deductions through the books of the Company. The Chairman of the Board would like to make it clear that he is not opposed on principle to certain forms of the Check-off, but feels that he is unable to recommend in favour of the Check-off in this instance.

In addition to the above major items in dispute there were several other questions which were raised before the Board and which are of somewhat lesser importance. These are as follows:—

(A) Bonus System

We are not convinced on what is before us that there is any great dissatisfaction on the part of the men who participate in the bonus system, or as it is sometimes called, the Contract system. It may be significant that during the hearings in connection with this matter, not one man was called to indicate

his own personal dissatisfaction with the system, or the rewards for his labour, which he obtained by reason of the system. If there be any dissatisfaction with the system in effect at this time, or with the payments received by the men who share in it, it would appear that it is a matter for discussion between the employees and the Company, or perhaps the Union and the Company. In any event, there is not sufficient evidence before us to justify making any recommendations in connection with the system.

(B) *Wage Opening Clause*

The Board is prepared to recommend a Wage Opening Clause by either party on thirty days' written notice.

(C) *Grievance Procedure*

This question was not discussed during the Sittings of the Board, but subsequently thereto the Union filed with us a Memorandum concerning their proposals. There do not appear to be many serious difficulties in the way of a settlement of this matter and we therefore suggest that the parties get together and settle the matter by negotiation. We make no further recommendation in connection with this matter.

(D) *Relief for Gold Industry*

Subsequent to our Sittings it was suggested by the Union that the Board should make representations to the Dominion Government regarding relief for the Gold Mining Industry. The relief suggested it the removal of the restrictions on the sale of gold. It should be noted that this is a matter of Government policy, and it should also be noted that this sort of thing does not, in our opinion, come within the jurisdiction of a Board such as this. We are therefore unable to recommend that we should comply with the request of the Union.

All of which is respectfully submitted.

(Sgd.) A. COCHRANE.

(Sgd.) ALEX HARRIS.

Minority Report

To:

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

1. *No discrimination*

I would recommend the clause proposed by the Union on page 1 of Exhibit 3.

2. *Statutory holidays*

I would recommend double time if worked and payment of straight time if not worked

for the following statutory holidays: Good Friday, Dominion Day, Labour Day, Thanksgiving Day, New Year's Day, Christmas Day.

3. *Wages*

The union have made an original demand for \$0.16 an hour increase in the case of all hourly rated employees. As of the 1st of December, 1946, the company granted and put into effect, after the demand of the union, an increase of \$0.10 an hour. Since the 1st of December, 1946, the cost of living has risen many points up and it is just and reasonable that the additional \$0.06 per hour be granted and it is my recommendation.

4. *Hours of work and overtime*

I would recommend that time and one-half should be paid for all time worked in excess of eight hours in any working day, and for all time in excess of forty-eight hours a week.

5. *Vacations with pay*

I would recommend one week's vacation with pay after one year's service, pay to be on the basis of 2 per cent of the employee's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of 4 per cent of the employee's previous year's earnings.

6. *Union security or check-off*

There is no reason why the Company should refuse the check-off and I would strongly recommend it for this mining industry.

7. On the other questions raised before the the Board, my recommendations are as follows:—

(a) *Bonus system*

I would recommend that a joint committee formed of representatives of the company and representatives of the union meet every month to discuss the bonus system;

(b) *Wage opening clause*

I recommend a wage opening clause by either party on 30 days' written notice;

(c) *Grievance procedure*

I would recommend that the company pay stewards for time spent ending grievances within hours of work;

(d) *Relief for gold industry*

I recommend that the gold mining companies and the union form a committee to discuss with the government the situation of the gold industry.

Respectfully submitted,

(Sgd.) GUY M. DESAULNIERS.

Report of Conciliation Board in Dispute between Paymaster Consolidated Mines Ltd., South Porcupine, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL)

On October 9, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, R. G. McKelvey, Geraldton, Ont., and G. M. Desaulniers, Montreal, appointed on the nomination of the employer and employees respectively.

Report of Board

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

SIR:—

Your Conciliation Board now begs leave to report.

The sittings of this Board were held at Timmins, Ontario, on the 9th day of July, 1947.

The Chairman and Messrs. G. M. Desaulniers and R. G. McKelvey, members of the Board, were present at the sittings.

The Union was represented by Messrs. L. A. Behie (International Representative), Ivan Vachon, S. Jermain and M. O'Brien and the Company was represented by Messrs. Frank Newman, W. G. Brissenden, J. C. Silver, G. W. Banning and R. Stoddard.

The Collective Bargaining Agreement between the Company and the Union was entered into on the 1st day of October, 1945. Negotiations for a renewal of the Agreement commenced on the 27th day of September, 1946, and after a number of meetings between the Company and the Union representative negotiations were discontinued and the Agreement is not now in effect.

In this Conciliation there are the following articles in dispute:—

1. Management (Article 3).
2. No Discrimination Clause.
3. Adjustment of Complaints and Grievances.
4. Hours of Work and Overtime.
5. Statutory Holidays.
6. Wages and Shift Differentials.
7. Union Security or Check-off.
8. Wage Opening Clause.

The matters in dispute will be dealt with in the order in which they are above set out.

1. MANAGEMENT

The parties did not appear to be very far apart in connection with this clause but the Union felt that one word should be deleted from the clause as proposed in Exhibit 3 of the Brief filed by the Company. The Union felt that the use of the word "sole" in Clause B might deprive an employee of the right to go to arbitration on the question of the qualifications of an employee.

The Board is of the opinion that the position taken by the Union is reasonable and would recommend that the word "sole" be deleted from the proposed clause.

2. NO DISCRIMINATION CLAUSE

The Board recommends in favour of the No Discrimination Clause as contained in Article 4 of the former Agreement dated the 1st of October, 1945.

3. ADJUSTMENT OF COMPLAINTS AND GRIEVANCES

The Union asked that the Company pay for time lost by the stewards in connection with the adjustment of grievances and suggested that this payment be "at the discretion" of the Company. The Board can see no objection to this suggestion, as the clause is worded in such a manner as would prevent abuses and therefore recommends in favour of the Union's proposal.

4. HOURS OF WORK AND OVERTIME

The question of hours of work was not seriously in dispute and it appears that the Union is satisfied to accept the forty-eight hour week.

On the question of overtime the Union pressed for payment at the rate of time and a half for all time in excess of eight hours in any one working day and for time and a half for all time in excess of the forty-eight hour week. It seems that the Union's demand in connection with payment for overtime is reasonable and the Board therefore recommends in favour of it.

A suitable clause would, however, have to be drafted to cover the case of those employees who, by arrangement, work eight and a half hours every day in order to obtain a half day off.

5. STATUTORY HOLIDAYS

The Board is unable to recommend any change in the plan as set out in the former Agreement.

6. WAGES AND SHIFT DIFFERENTIALS

The original demand of the Union was for a general increase of 16 cents per hour to all employees. In December of 1946 an increase of 10 cents an hour was granted by the Company and put into effect and has since been paid. The Union now proposes a further increase of 6 cents per hour plus shift premiums or differentials as set out in their demands. The Company have refused to grant the additional 6 cents per hour and have also refused to grant the wage shift premiums or differentials.

Under the conditions which presently exist in the Gold Mining Industry, the Board is not prepared to recommend any change in the wage scale nor is the Board prepared to recommend payment of the shift premiums which have been asked for by the Union.

7. UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances any form of check-off or collection of Union dues by pay deductions through the books of the Company. The Chairman of the Board would like to make it clear that he is not opposed on principle to certain forms of the Check-off, but feels that he is unable to recommend in favour of the Check-off in this instance.

8. WAGE OPENING CLAUSE

The Union asked for a Wage Opening Clause and the Board recommends such a clause providing for the opening of the wage question by either party on thirty days' written notice.

Dated at Brampton, Ontario, this 25th day of September, A.D. 1947.

(Sgd.) A. COCHRANE.

(Sgd.) R. G. MCKELVEY.

Minority Report

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.
SIR:—

1. Management

I recommend that the word "sole" be deleted from the proposed clause.

2. No discrimination clause

I would recommend the clause proposed by the Union as set out in Exhibit "A" of the proposals of the Union which were filed with the Board.

3. Adjustment of complaints and grievances

I recommend that the company pay the union stewards for time lost while settling grievances during working hours.

4. Hours of work and overtime

The Union's demands with respect to payment of overtime are reasonable and I would therefore recommend in favour of them.

5. Statutory holidays

I would recommend payment of double time if worked and straight time if not worked for the following statutory holidays: Good Friday, Dominion Day, Labour Day, Thanksgiving Day, New Year's Day, Christmas Day.

6. Wages and shift differentials

The union has made an original demand for a \$0.16 an hour increase in the case of all hourly rated employees. As of the 1st of December, 1946, the company granted and put into effect, after the demand of the union, an increase of \$0.10 an hour. Since the 1st of December, 1946, the cost of living has risen many points and it is just and reasonable that the additional \$0.06 per hour be granted and it is my recommendation.

On account of this recommendation, but only if the \$0.06 is paid, I recommend that the Union accept the company's offer in connection with the off shift differentials.

7. Union security or check-off

There is no reason why the company should refuse the check-off and I would strongly recommend it for this mining industry.

8. Wage opening clause

I would recommend a wage opening clause by either party on 30 days' written notice.

Respectfully submitted,

(Sgd.) GUY M. DESAULNIERS.

Report of Conciliation Board in Dispute between Preston East Dome Mines Ltd., South Porcupine, Ont., and Local 241, International Union of Mine, Mill & Smelter Workers (CIO-CCL)

On October 6, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His

Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from

the other two members of the Board, J. Adamson, Kirkland Lake, and G. M. Desaulniers, Montreal, appointed on the nomination of the employer and the employees respectively.

Report of Board

To

The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Sir:—

Your Conciliation Board now begs leave to report.

Sittings of this Board were held at Timmins, Ontario, on the 18th day of June, 1947.

The Chairman and Messrs. G. M. Desaulniers and J. C. Adamson, members of the Board, were present at the Sittings.

The Union was represented by Messrs. W. Kennedy (International Representative), Ralph Carlin, Ivan Vachon, Alcide Brunette and Thomas O'Meara and the Company was represented by W. Hutchison, E. Magnusson, R. Lord, R. Hart and G. Burch.

A Collective Bargaining Agreement between the Company and the Union was entered into on the 7th day of December, 1945, and negotiations for a renewal of the Agreement were commenced on the 28th of October, 1946; by the 17th of December, 1946, it was felt that no further progress could be made and an application was made for intervention.

In this Conciliation there are five major issues outstanding:—

1. Hours of Work and Overtime.
2. Statutory Holidays.
3. Vacations with Pay.
4. Wages.
5. Union Security or Check-Off.

In addition to the above principal items there were two minor things still outstanding to which reference will be made later in this Report. The principal items will be dealt with first in the order in which they are above set out.

1. HOURS OF WORK AND OVERTIME

The question of hours of work was not seriously in dispute and it now appears that the Union is satisfied to accept the forty-eight hour week.

On the question of Overtime, the Union pressed for payment at the rate of time and a half for all time in excess of eight hours in any one working day and for time and a half for all time in excess of the forty-eight hour week. The Company offered the same hours

of work and overtime clause as was contained in the previous Agreement.

The Union demand in connection with payment for overtime is reasonable and the Board therefore recommends in favour of it. A suitable clause would, however, have to be drafted to cover the case of those employees who, by arrangement, work eight and one-half hours every day in order to obtain a half day off.

The Union also asked for insertion of a clause in Article 13 as follows: "An employee working on a one or two shift operation shall not be required to lay off work on a week day so as to work on Sunday."

This is a somewhat difficult minor detail to work out in a way satisfactory to both parties. It has been suggested that a clause reading as follows, "No employee shall be expected to take time off to absorb overtime" would be satisfactory and the Board recommends in favour of this clause although it seems that this is a matter for negotiation and adjustment between the parties.

2. STATUTORY HOLIDAYS

The Board is unable to recommend any change in the plan as set out in the former Agreement.

3. VACATIONS WITH PAY

The Union asked for two weeks' vacation with pay for all employees who have completed one or more years' continuous employment with the Company. The Company offered one week's vacation with pay for all employees with one year's service and two weeks' vacation with pay for all employees with five years' or more continuous service.

The Board recommends one week's vacation with pay after one year's service, pay to be on the basis of two per cent of the employee's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of four per cent of the employee's previous year's earnings.

4. WAGES

The original demand of the Union was for a general increase of 16 cents per hour to all employees. As of the first of December, 1946, or thereabouts the Company called in the Negotiating Committee of the Union and advised them that an increase of 10 cents an hour had been granted by the Company, the increase was refused by the Union but was put into effect by the Company, and has since been paid. The Union now proposes a further increase of 6 cents per hours plus off shift

premiums and the Union takes the position that this 6 cents is in the nature of an adjustment at the present time. The Company have refused to grant the additional 6 cents per hour and under the conditions which presently exist in the Gold Mining Industry the Board is not prepared to recommend any change in the wage scale at the present time nor can the Board recommend payment of the shift premiums which have been asked for by the Union.

5. UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances any form of Check-off or collection of Union dues by pay deductions through the books of the Company. The Chairman of the Board would like to make it clear that he is not opposed on principle to certain forms of the Check-off, but feels that he is unable to recommend in favour of the Check-off in this instance.

In addition to the above major items in dispute there were two other items in dispute which were mentioned during the Sittings.

The Union asked for a "Wage Opening Clause" and the Board is prepared to recommend such a clause providing for the opening of the wage question by either party on thirty days' written notice.

The Union asked for deletion of the words "or attributable to an act of God" from Clause "C" of Article 13 and it was intimated on behalf of the Company during the Sittings that the Company is prepared to delete this clause.

Dated at Brampton, Ontario, this 25th day of September, A.D. 1947.

(Sgd.) A. COCHRANE

(Sgd.) J. C. ADAMSON

Minority Report

To the Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Sir:—

1. *Hours of work and overtime:* The union's demands in connection with payment of overtime are reasonable and I recommend in favour of them.

2. *Statutory holidays:* I would recommend payment of double time if worked and payment of straight time if not worked for the following statutory holidays: Good Friday, Dominion Day, Labour Day, Thanksgiving Day, New Year's Day, Christmas Day.

3. *Vacations with pay:* I would recommend one week's vacation with pay after one year's service, pay to be on the basis of 2 per cent of the employee's previous year's earnings, and two weeks' vacation with pay after five years' service, pay to be on the basis of 4 per cent of the employee's previous year's earnings.

4. *Wages:* The union has made an original demand of \$0.16 an hour increase in the case of all hourly rated employees. As of the 1st of December, 1946, the company granted and put into effect, after the demand of the union, an increase of \$0.10 an hour. Since the 1st of December, 1946, the cost of living has risen many points and it is just and reasonable that the additional \$0.06 per hour be granted and it is my recommendation.

5. *Union security or check-off:* There is no reason why the Company should refuse the check-off and I would strongly recommend it for this mining industry.

Respectfully submitted,

(Sgd.) GUY M. DESAULNIERS.

Report of Conciliation Board in Dispute between The Stovel Co. Ltd., Winnipeg, Man., and Stereotypers' & Electrotypers' Union, Local 59 (AFL-TLC)

On October 16, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge W. J. Lindal, Chairman, Winnipeg, appointed by the Minister of Labour on the joint recommendation of the other two members of the Board, T. W. Laidlaw, K.C., and A. Murphy, both of Winnipeg, appointed on the nomination of the employer and employees respectively.

Report of Board

To:
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa.

Sir:

Report on a dispute between the Stovel Company Limited, Winnipeg, Manitoba, hereinafter referred to as the Company, and Local 59, Stereotypers and Electrotypers Union (AFL-TLC), hereinafter referred to as the Union.

On February 24, 1947, the Minister of Labour appointed a Conciliation Board to endeavour to effect a conciliation of a dispute between the Company and the Union on the matters on which they had not been able to agree.

By letter dated March 18, 1947, the chairman was informed by the Director of Industrial Relations that the members of the Board of Conciliation were constituted as follows:—

His Honour Judge W. J. Lindal, Chairman,
Mr. T. W. Laidlaw, K.C.,
Mr. A. Murphy,
all of Winnipeg, in Manitoba.

After some preliminary negotiations with representatives of the Company and the Union, a meeting of the Board was held on March 24, 1947. H. B. Monk, K.C., and R. R. Goodwin represented the Company and Patrick Landsley, Chairman of the Bargaining Committee of Local No. 59, represented the Union.

Representations were made on behalf of the Union and a formal brief was read and copies left with each member of the Board. An adjournment was requested by the Company and the sitting was adjourned to March 28. At that meeting representations were made on behalf of the Company and a formal brief read and copies left with each member of the Board.

Members of the Board felt that, in view of the stand taken by the Company that their employees were in a different position to others performing similar work, the plant should be visited and the Board did go through the plant on March 31. The following day the chairman had a long conversation with Mr. L. Stovel, Manager of the Company. Information was given to the effect that the Company was on the point

of selling out and that little could be done pending those negotiations.

On May 15 a majority of the Board met, primarily for the purpose of obtaining up-to-date information on the progress of the sale of the Company's business.

The full Board met on July 2 and the Chairman made a report to Mr. M. M. Maclean, the Director of Industrial Relations. An extension of time for a final report from the Board was granted, first to August 31 then to September 30; and finally to October 15, 1947.

On October 10, the Chairman of the Board received a letter from the solicitor for the Company wherein he states that the business of the Company has been transferred to a new company, incorporated as Stovel Press Limited, and that in the opinion of the Company the removal of one of the parties to the conciliation proceedings makes it unnecessary to proceed any further. The Board was convened and met this day.

It appears that the position taken by the Company is sound and the correct one. This becomes obvious when it is considered that there is no one on the Board representing the present employer which is a new company with different shareholders and directorate to that of the former employer, the Company in these conciliation proceedings.

The Board of Conciliation is of the opinion that there is nothing before it on which it can make a recommendation to the Minister and it accordingly reports its deliberations at an end.

(Sgd.) W. J. LINDAL,
Chairman.

Member.

(Sgd.) A. MURPHY,
Member.

Report of Conciliation Board in Dispute between Upper Canada Mines Ltd., Dobie, Ont., and Local 240, International Union of Mine, Mill & Smelter Workers (CIO-CCL)

On October 20, 1947, the Minister of Labour received the report of the Conciliation Board, the personnel of which was as follows: His Honour Judge A. Cochrane, Brampton, Chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other two members of the Board, P. N. Tapley, Toronto, and George Harris, Toronto, appointed on the nomination of the employer and employees respectively.

Report of Board

To
The Honourable HUMPHREY MITCHELL,
Minister of Labour,
Ottawa, Canada.

Sir:—

Your Conciliation Board herein now begs leave to report.

The Sitzings of this Conciliation Board were held at Kirkland Lake on the 11th day of June, 1947.

The Chairman and Messrs. P. N. Tapley and George Harris, members of the Board, were all present at the Sittings.

The Union was represented by Messrs. T. F. McGuire (International Representative), H. Wildman and A. J. McMillan and the Company was represented by Messrs. R. J. Henry, Alex Harris and J. H. Botsford.

The Collective Bargaining Agreement between the Union and the Company was entered into on the 18th day of October, 1945, and expired on the 18th day of October, 1946. Negotiations for renewal were commenced on the 4th day of October, 1946, and continued into January of this year, but the agreement has not been renewed.

In this Conciliation there are the following major issues in dispute:—

1. Vacations with Pay.
2. Hours of Work, Overtime and Statutory Holidays.
3. Union Security or Check-Off.
4. Shift Premiums.
5. Transportation.
6. Wage Increases and Open End Wage Clause.
7. Bonus Ceilings.

The matters in dispute will be dealt with in the order in which they are above set out.

1. VACATIONS WITH PAY

The Union asked for 2 weeks' vacation for all employees who have completed one year's service with the Company. The Company offers no change in the provisions or scheme of the former Agreement.

The Board recommends one week's vacation with pay after one year's service, pay to be on the basis of two per cent of the employee's total earnings for the previous year, and two weeks' vacation with pay after five years' service, pay to be on the basis of four per cent of the employee's total earnings for the previous year.

2. HOURS OF WORK, OVERTIME AND STATUTORY HOLIDAYS

The question of hours of work was not seriously pressed by the Union although in the first instance the forty-hour week was asked for and it now appears that the Union is satisfied with the forty-eight-hour week. The request for overtime pay for all work in excess of the eight-hour day or the forty-eight hour week was, however, pressed by the Union. The Union request in this respect appears to be reasonable and payment at the rate of time and a half for all time worked over the eight-

hour day, and for all time worked in excess of the forty-eight hour week is therefore recommended.

It would be necessary, however, to draft a suitable clause to cover the case of those employees who, by arrangement, work eight and one-half hours per day in order to obtain a half day off.

The Board is unable to recommend any change in the plan as set out in the former Agreement, with regard to Statutory Holidays.

3. UNION SECURITY OR CHECK-OFF

The Board is unable to recommend at the present time and under existing circumstances any form of Check-Off or collection of Union dues by pay deductions through the books of the Company. The Chairman of the Board would like to make it clear that he is not opposed on principle to certain forms of the Check-Off but feels that he cannot recommend in favour of the Check-Off in this instance.

4. SHIFT PREMIUMS AND WAGE INCREASES (6) CAN PERHAPS BE DEALT WITH TOGETHER

The original demand of the Union was for a general wage increase of 16 cents per hour to all employees and for certain shift premiums as outlined in the Union's proposals. Effective December first, 1946, an increase of 10 cents per hour was granted by the Company and put into effect, the Company called in the negotiating Committee of the Union and advised them that this increase was being put into effect. The Union now proposes a further increase of 6 cents per hour plus the shift premiums above referred to.

Under the circumstances which presently exist in the Gold Mining Industry in Canada the Board is not prepared to recommend any change in the wage scale, nor is it prepared to recommend payment of the shift premiums which have been asked for.

5. TRANSPORTATION

The Union proposed that the Company shall pay transportation for all workers. This is a somewhat difficult question to deal with because of the fact that some of the employees of the Company live at Kirkland Lake, some at King Kirkland and many at Dobie. The mine is about 11 miles from Kirkland Lake, King Kirkland is three miles nearer to the mine, and Dobie is adjacent to the mine property. In order to maintain the service the Company, as a temporary expedient, subsidizes the Bus Company in a substantial sum and if this had not been done the Bus Company would have either raised their rates or perhaps

have discontinued the service to the detriment of both the men concerned and the Mining Company as well.

The Board after careful consideration has decided that it cannot recommend in favour of the Union proposal in this regard.

6. OPEN END WAGE CLAUSE

The Board recommends in favour of a Wage Opening Clause providing for opening of the wage question by either party on thirty days' written notice.

7. BONUS CEILING

Subsequent to the meetings of this Board this matter was taken up by the Company and the Union, a meeting was held with a Committee of the Union and the Chairman has been advised by the Resident General Manager of the Company that at the conclusion of the meeting the Committee expressed themselves as satisfied with the outcome. As the matter has been settled between the parties, it is not necessary for us to deal with it further.

The question of holidays with pay is mentioned in the proposals of the Union which were submitted to the Company and it is presumed that, strictly speaking, it should come under the head of "Hours of Work and Overtime."

The Board is unable to recommend any change in the plan as set forth in the former agreement between the Union and the Company.

There are one or two minor matters which still appear to be outstanding as between the Union and the Company but they are such that they could be settled between the Company and the Union, and we therefore make no recommendations in connection with them.

Dated at Brampton this 27th day of September, A.D. 1947.

(Sgd.) A. COCHRANE

(Sgd.) P. N. TAPLEY

Minority Report

I have had the privilege of reading the report of the Chairman of the Board of Conciliation but find that I am in disagreement with some of his findings and therefore submit a minority report.

Matters in dispute between the Union and the Company were, as stated in the Chairman's report:—

1. Vacations with pay.
2. Hours of work, overtime and statutory holidays.
3. Union security and check-off.

4. Shift premiums.

5. Transportation.

6. Wage increases and the open end wage clause.

7. Bonus ceilings.

The matter of bonus ceilings was settled between the Company and the Union on June 14 last and has been accepted by the Union membership. Therefore no recommendation on this is required.

With respect to paid vacations I feel that the Union's original request of two weeks after one year's service is a reasonable one and certainly desirable in the mining industry. I therefore recommend that this should be agreed to by the Company.

On hours of work and overtime, I agree with the report of the Chairman inasmuch as there was substantial agreement between the parties at the time the Board met and I believe that full agreement can be arrived at between the parties without a recommendation from the Board.

The Union's claim for 6 statutory holidays which shall be paid for at straight time when not worked if no work is available and paid at double time when worked is one that should be readily granted by the Company in view of many industries, through agreements with the Unions, putting into effect 8 paid statutory holidays. In the electrical industry, for example, there are 13,750 employees enjoying 8 paid holidays.

It is high time that the mine operators recognized that the claims of their employees for equal treatment with other industrial workers.

The Union's demand for a form of Union Security was:—

The Company shall during the life of this Agreement deduct, as a condition of employment, the sum of not more than One Dollar and Fifty Cents (\$1.50) from the first pay cheque due in each calendar month to each such employee and remit the same prior to the 10th day of the month following the month in which such deduction is made, to the Financial Secretary of the Union.

The Company took a rigid position with respect to this demand and refused to give any consideration to even a voluntary revocable check-off; in fact, they made it clear that under no circumstances would they agree to a check-off.

This to my mind indicates very clearly that the Company is very much opposed to the Union and, at the first favourable opportunity, will try to rid itself of the Union.

If this is the case, and there is every indication that it is, then the Union most certainly

needs a form of Union security and the original request of the Union should, in my opinion, be acceded to.

Shift premiums are commonplace in most industries and there seems to be no real reason why employees in the mining industry should not be paid such premiums. The Union's demand is for a 5-, 7½- and 10-cent per hour premium dependent on the shift being worked.

The question of transportation arises because the mine is situated at Dobie, some eleven miles from Kirkland Lake, where a large number of the employees reside.

During the Board hearing the Company stated they intended embarking on a home-building program at Dobie. Until such time as housing is available at Dobie, I would recommend that the Company assume the costs of transportation for the miners involved.

The Union's demand for a general wage increase of 16 cents per hour is indeed very conservative considering the tremendous increase in the cost of living and the much higher wage increases obtained in such industries as rubber, electrical, lumber, etc., during the years 1946-47.

An increase of 10 cents per hour was made effective by the Company in December of 1946. My recommendation is that there be an additional 6 cents per hour increase and that this 6 cents per hour be retroactive to December 1, 1946.

In my opinion the miners are at this time entitled to a much greater increase than that which is asked.

I base this opinion on examples taken from the electrical industry, with which I am familiar. During the 1946-47 period wage increases were obtained with the following companies amounting to:—

	cents
Canadian Westinghouse Company ...	29
Canadian General Electric Company..	27
Electro-Metallurgical Company	20
English Electric	30
Page-Hersey Tubes Ltd.	33

A great deal more could be said in this report on the wage question, union security and the other matters in dispute. However, rather than indulge in repetition I would refer to the report I made as a Board member in the dispute between Local 240, I.U.M.M. & S.W., and Lakeshore Mines Limited. This report is dated May 12, 1947, and appears in the LABOUR GAZETTE for June, 1947.

I agree with the Chairman of the Board that there should be an open end wage clause on thirty days' notice. However, I contend that it should be only opened on the request of the Union for upward wage adjustments.

(Sgd.) GEO. HARRIS,
Board Member.

Appointment of Industrial Disputes Inquiry Commissions Under Wartime Labour Relations Regulations, P.C. 1003

Canadian Pacific Railway Company

REFERENCE was made in the October issue of the LABOUR GAZETTE to the appointment of the Honourable Mr. Justice W. F. Schroeder, of Toronto, as an Industrial Disputes Inquiry Commission to investigate a dispute between the Canadian Pacific Railway Company and the Brotherhood of Sleeping Car Porters. The matter arose out of the terms of a finding and direction of the National War Labour Board issued on October 30, 1946, in connection with an application made by the Canadian Pacific Railway Company and the Hamilton and Buffalo Railway Company, as employers, for permission to increase basic wage rates of certain occupational classifications of employees, and also involved consideration of other findings and directions of the National War Labour Board affecting various other railway companies and trade unions. It was claimed by the Sleeping Car

Porters that, under a proper interpretation of the award of the National War Labour Board, they were entitled to an increase of 10 cents per hour. The Company, on the other hand, maintained that sleeping car porters were monthly-rated employees and, as such, were entitled to an increase of \$20.80 per month.

In his report to the Minister of Labour, the Commissioner examined in detail the terms of the pertinent findings and directions of the National War Labour Board and the provisions of the existing collective agreement between the Canadian Pacific Railway Company and the Brotherhood of Sleeping Car Porters. The conclusions arrived at by the Commissioner are contained in the following excerpts quoted from his report:—

"Going back to 1927 and considering the terms of the agreement then in force and considering the terms of the agreement in force

in 1945, I cannot escape the conclusion that the fundamental basis of the agreement is to provide a monthly rate of pay for the employees affected. The setting up of a constructive month limited to two hundred and forty hours with a provision for overtime in respect of hours worked beyond that number, while for certain limited purposes putting such employees on an hourly basis, does not have the effect, in my opinion, of altering what I regard to be in substance and in fact the fundamental agreement between the company and the employees concerned to provide for a monthly rate of pay. In determining what the hourly rate of each employee is, the method pursued in practice is to divide the monthly rate by two hundred and forty in the case of men engaged on either assigned or unassigned runs. If some such method were not adopted, it would be impossible to give effect to the two-hundred-and-forty-hour month and to the arrangement for payment of overtime, but how that can be said to constitute these men hourly-rated instead of monthly-rated employees I fail to apprehend. It was argued

very forcibly that, in any event, the employees engaged on unassigned runs, or 'extras' as they have been described, have every right to claim that they, at least, are hourly rated employees. I do not think that this follows, however, because their hourly rate of pay (and they are only paid for the hours actually worked by them) is determined in the same way as is the hourly rate of those porters who operate on assigned runs, namely by dividing the basic monthly rate of pay to which they are entitled by two hundred and forty. The monthly rate is, therefore, the unit which is taken for estimating the overtime pay, or pay at the hourly rate, to be made to all the employees engaged in this service . . .

"I am, therefore, of the opinion that the employees of the company represented by the Brotherhood of Sleeping Car Porters are properly to be regarded as monthly-rated employees and that they are entitled to add \$20.80 per month to the existing basic rate of pay under the terms of the finding and direction above referred to and of which clarification is sought in the proceedings before me."

Canada Coach Lines, Limited

It was reported in the October issue of the LABOUR GAZETTE, that the Minister of Labour had appointed His Honour Judge Samuel Factor, of Toronto, as an Industrial Disputes Inquiry Commission to investigate a complaint that Canada Coach Lines, Limited, Hamilton, Ontario, had dismissed two employees because of their membership in, or activity on behalf of, the Canadian Brotherhood of Railway Employees and Other Transport Workers.

A hearing of the case took place at Toronto on October 16, 1947, at which testimony was given by nine witnesses. In his report to the Minister of Labour, after carefully analyzing the evidence, the Commissioner found that assuming that the action of the company officials in checking the cash and tickets of the two bus drivers in question shortly before their dismissal created an impression or suspicion

in their minds that the company was trying to "get them" for union activity, there was not sufficient evidence that such was the case. He also found that the failure of the company to discharge four other employees who were fined for speeding might have created a suspicion that the men involved were being discriminated against, but that he could not make a finding of discrimination upon suspicion alone, and there was no circumstantial evidence in the case such as to show a preponderance of probability of this having occurred. In conclusion the Commissioner found that the two employees were dismissed for breaches of company regulations in connection with the operation of their busses; that this was the principal reason for their discharge; and that they were not dismissed or otherwise discriminated against because of their union affiliation.

Conciliation Work of the Industrial Relations Branch During October, 1947, Under the Conciliation and Labour Act

OFFICERS of the Industrial Relations Branch dealt with 3 industrial disputes during the month of October, involving 6,002 workpeople employed in 29 separate establishments. Of these, two were new disputes which originated during the month and 1 was a situation which had been untermiated as of September 30, and received further attention in

October. These disputes were dealt with under the provisions of the Conciliation and Labour Act. They were thus distinct from and in addition to the conciliation proceedings described on previous pages, which developed under the Wartime Labour Relations Regulations.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Fredericton, N.B. The territory of the officer resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation Service; two officers in Montreal are assigned to the Province of Quebec and the officer resident in Fredericton, N.B., represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of the Industrial Relations and staff are situated in Ottawa.

Brief summaries of the cases of chief interest are given below:—

Deepsea Shipping Employees, East and West Coasts.—Disputes between deepsea shipping operators and four maritime unions engaged the serious attention of officers of the Department of Labour during October, and, at the end of the period under review, the threat of a strike which would tie up the movement of Canada's merchant fleet between home ports and foreign harbours had not been removed.

Collective agreements between 27 companies operating deepsea cargo vessels from Atlantic and Pacific ports and the unions representing their licensed and unlicensed employees were expiring and negotiations for their renewal had been scheduled to take place at Vancouver. The shipping operators were represented, for

the most part, by officials of the Shipping Federation of Canada, Montreal, P.Q., and the Shipowners' Association (Deepsea) of Vancouver, B.C. The unions involved were the Canadian Merchant Service Guild (T.L.C.C.), representing deck officers (Masters and Mates); the National Association of Marine Engineers of Canada, Inc. (T.L.C.C.), representing engineer officers, the Canadian Communications Association, Marine Department (C.I.O. and C.C.L.), representing radio officers; and the Canadian Seamen's Union (T.L.C.C.), representing unlicensed employees.

Following a preliminary meeting on October 6, dates were fixed to negotiate, in turn, with regard to the three groups of licensed officers. At each of these meetings a joint committee chosen by the three officers' unions presented itself as the accredited bargaining committee and insisted that it be accepted as the bargaining agency in dealing with each of the collective agreements affecting deck officers, engineer officers and radio officers. The ship owners strongly opposed this departure from former practices, and contended that separate bargaining committees should function.

Negotiations commenced on October 15 between the employers and the Canadian Seamen's Union, but the impasse continued between the other groups, and their discussions were confined to the method of bargaining rather than the issues relating to the terms of new collective agreements. On October 17, the Canadian Merchant Service Guild put forward a proposal to the ship owners that there be a meeting between the employers' groups and representatives of the three officers' unions, each representing their own organization, at which joint discussion would take place on the matters affecting all officers. It was also proposed that when the common problems had been cleared away, the problems affecting each group could be dealt with separately by the representatives directly affected. This suggestion was accepted by the employers. The principal representatives of the engineer officers and radio officers also indicated that they were satisfied with such a procedure.

Further negotiations then took place separately with regard to the three groups of officers and the unlicensed employees respectively, although it was reported that the representatives of all four unions had formed a joint "Marine Council."

The demands of the employees' representatives included substantial wage increases (15 cents per hour) and radical changes in hours of work and other working conditions. On the question of wages, the employers made an offer of a five per cent increase.

On October 25 the four unions jointly notified the operators' Federations that the employers' counter proposals were "unacceptable and completely inadequate." When a complete collapse of the negotiations appeared unavoidable, the Vancouver officer of the Industrial Relations Branch, arranged a meeting in the offices of the Department of Labour on October 27 which was attended by all parties. On behalf of the Minister of Labour, the Industrial Relations Officer (who had kept closely in touch with all previous negotiations) announced the Department's readiness to appoint at once an Industrial Disputes Inquiry Commission to conciliate the dispute, or if preferred by the parties, the Minister would appoint a Board of Conciliation and have it constituted at the earliest possible moment.

The employers' representatives stated that they would agree to either suggestion, but the union's spokesman said that more time would be needed to consider the Department's proposals, and that any further proceedings would likely take place in Montreal or Ottawa.

Later the heads of all four unions notified the Minister of Labour that they would welcome any proposal which would expedite a

satisfactory settlement and, to that end, representatives of all the unions would come to Ottawa for consultation with him on November 7.

Harbour Workers, Halifax, N.S.—Upon the joint request of the parties, the Minister of Labour on October 14 appointed His Honour Judge K. L. Crowell, of Bridgetown, N.S., as Chairman of a five-man Board of Arbitration to deal with a dispute between the National Harbours Board, Halifax, N.S. and Local No. 231, Canadian Brotherhood of Railway Employees and Other Transport Workers. The issue arose out of the temporary appointment by the National Harbours Board of one of its employees to the position of Maintainer General when the union claimed that another man should have been appointed because of seniority in employment. In a majority decision, the chairman and the representatives of management on the Board of Arbitration found that, under the terms of the collective agreement between the parties, the National Harbours Board had been within its rights and had not violated any of the terms of the written agreement.

Collective Agreements and Wage Schedules

Recent Collective Agreements

A FILE of collective agreements is maintained in the Research and Statistics Branch of the Department of Labour. These are obtained directly from the parties involved and from the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec and schedules under Industrial Standards Acts are summarized in separate articles following this.

Mining: Metal Mining

KIRKLAND LAKE, ONT.—LAKE SHORE MINES LTD. AND INTERNATIONAL UNION OF MINE, MILL AND SMELTER WORKERS, LOCAL 240.

Agreement to be in effect from June 1, 1947, to June 1, 1948, and thereafter from year to year subject to notice. This agreement is similar to the one previously in effect and summarized in the *LABOUR GAZETTE* for January, 1946, p. 48, with the following changes—

Vacation: one week (6 days) with pay for all employees with one year's seniority. An additional week with pay for all employees with 5 or more years' seniority shall be granted as from January 1, 1947. Union rights: The union reserves the right to open negotiations with the company on 30 days' written notice in respect to wage increases, shift premium, and classification adjustments during the life of the agreement.

YELLOWKNIFE, N.W.T. — THE CONSOLIDATED MINING AND SMELTING COMPANY OF CANADA, LIMITED AND THE INTERNATIONAL UNION OF MINE, MILL AND SMELTER WORKERS, LOCAL 802.

Agreement to be in effect from April 1, 1947, to March 31, 1948, and thereafter from year to year subject to notice. The Company recognizes the union as the exclusive bargaining agent for all eligible employees. There will be no intimidation or discrimination either by the company or the union because of membership or non-membership in the union. Check-off: The company agrees to deduct the initiation fee and monthly dues from the pay of employees who so authorize and to remit same to the union.

Hours of work: 8 per day (for underground workers 8 hours from collar to collar) 6 days per week a 48-hour week. Overtime: time and one-half for all work in excess of these hours and for 6 specified holidays when worked.

Vacation: one week with pay to employees with one year's service with the company, 2 weeks with pay to those with 5 or more years' service. Employees with less than one year of service but more than 2 months' shall receive one half day with pay for each month of service. For each period of 30 consecutive days during the year an employee is absent from work, with-

out proper cause, there shall be deducted from the vacation pay to which he otherwise would be entitled one-twelfth or one-half day's pay as the case may be.

Hourly wage rates for certain classes: Mine—shaft miner \$1.18; timbermen, raise and drift miners, diamond drillers, steel sharpeners \$1.13; stoep miners, skip tenders \$1.08; motormen \$1.04; handmuckers, trackmen, miner's helpers, samplers, timber helpers, nippers \$1.01; steel sharpener's helpers, trammers, deckmen, underground labour 98 cents; surface—hand steelers, tractor drivers, truck drivers \$1.01; buckers, firemen 98 cents; labourers 92 cents; mill—repairmen, roastermen \$1.13; flotation operators, solution men \$1.08; crushermen, ball mill operators \$1.04; oilers, ore sorters and helpers 98 cents; tradesmen—dragline operators \$1.43; bulldozer operators, machinists, plumbers or steamfitters \$1.18; mechanics, pipefitters, welders \$1.08 to \$1.13; blacksmiths, electricians, carpenters \$1.08 to \$1.18; painters \$1.03 to \$1.13.

In the event that a general wage increase is granted by the Ontario Gold Mining Industry the wage scale shall be subject to renegotiation upon 30 days' notice. A premium of 3 cents per hour shall be paid for hours worked on the afternoon shift and 4 cents per hour extra for hours worked on the night shift and 5 cents per hour extra for hours worked on the graveyard shift.

The company agrees to provide transportation to the property in accordance with its present regulations. The charge for board and lodging shall remain constant at \$2 per day for the life of the agreement.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Tobacco and Liquors

CORRECTION

HAMILTON, ONT.—THE TUCKETT TOBACCO COMPANY LIMITED AND THE TOBACCO WORKERS INTERNATIONAL UNION, LOCAL 269.

In the agreement which was summarized in the *LABOUR GAZETTE*, September, 1947, p. 1304 in the sentence on "Vacation", the sixth line states—"while those who have 10 years' service are allowed an extra 2 days with pay, etc." This should read, "while *salaried* employees who have 10 years' service are allowed an extra 2 days with pay, etc."

The correct summary is:—

Vacation: one week with pay for employees with 12 months' continuous service with the company (salaried employees receive 2 weeks with pay), employees with 7 years' continuous service receive an additional week with pay; while salaried employees who have 10 years' service are allowed an extra 2 days with pay, those with 15 years' service an extra 4 days with pay and those with 20 years' service an extra week.

Manufacturing: Textiles and Clothing

GUELPH, ONT.—THE GUELPH CARPET AND WORSTED SPINNING MILLS LIMITED AND THE TEXTILE WORKERS' UNION OF AMERICA, LOCAL 741.

Agreement to be in effect from February 1, 1947, to January 31, 1948, and thereafter from year to year subject to notice. The company agrees to accept the union as the sole collective bargaining agency for all eligible employees. Union shop: all present and future employees after their probationary period shall become and remain members of the union in good standing. Check-off: the company agrees to deduct monthly from the pay of all eligible employees union dues not in excess of \$1.50 and to remit same to the union.

Hours of work: 9 per day, 5 days per week, a 45-hour week (hours for engineers, firemen and watchmen to be as mutually agreed upon). Overtime: time and one-half for work in excess of the above regular hours, for all work on Sundays or seventh day and for work on 8 specified holidays, in addition to regular rates of wages for these holidays when they fall on a normal working day for employees working the work days immediately preceding and following the holiday.

Vacation: those with 3 months' continuous service receive a vacation with 2 per cent of earnings during previous year. Those with 5 years' or more continuous service shall receive 4 per cent of earnings during previous year. If the company elects to close down the plant, employees with less than 3 months' service with the company shall receive one week's vacation without pay. Organized shifts, not occurring during regular working hours, special short shifts, and night shifts are to be paid regular rates plus 10 per cent for all hours up to and including 45 in one week.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Metal Products

TORONTO, ONT.—ALUMINUM GOODS LIMITED (TORONTO WORKS) AND UNITED STEELWORKERS OF AMERICA, LOCAL 2858.

Agreement, following conciliation of dispute (L.G., June, 1947, p. 803), to be in effect from June 5, 1947, to June 5, 1948, and thereafter from year to year subject to notice. Neither the company nor the union will discriminate against any employee by reason of race, colour, creed, nationality, religious or political beliefs or of union affiliation or non-union affiliation or union activities.

Hours of work: average weekly hours not to exceed 44 per week nor 48 in any one week. Overtime: time and one-quarter for all work on Sundays and 8 specified holidays, 4 of which are paid holidays.

Vacation: hourly paid employees shall be entitled to one week with pay equal to 2 per cent of previous year's earnings after one year of service and to 2 weeks with pay after 5 years' service. Continuous shift workers normally reporting 8 hours on their clock cards and who are expected to work straight through the shift, will be allowed 21 minutes on company time for a lunch period.

Hourly wage rates effective March 11, 1947: minimum rate for men 70 cents, for women 52½ cents. It is understood that the rate for new employees shall be increased to 75 cents

and 58½ cents respectively within 6 weeks or their employment terminated. Minimum and maximum rates for certain experienced classes in the various departments follow: Alumilting—operator "A" 87½ and 95 cents, operator "B" 75 and 87½ cents; Die Casting—machine operators 75 and 95 cents and 80 cents to \$1.05, trimmers 75 and 80 cents; Foil Finishing—interleavers 80 and 85 cents, shear and square shear operators 80 and 90 cents, machine helpers 75 and 80 cents; Foil Rolling—doublers 80 and 90 cents, finish rollers 95 cents and \$1, breakdown rollers 75 and 90 cents; Holloware—press operators 80 and 85 cents, machine operators 70 to 80 cents and 75 to 85 cents, toolsetters 90 to 95 cents and 95 cents to \$1, welders 80 to 90 cents and 90 cents to \$1; Job Shop—sheet metal workers 97½ cents to \$1.07½ and \$1.02½ to \$1.17½; Machine Shop—machinists 85 cents to \$1.02½ and \$1.02½ to \$1.07½, toolmakers \$1.05 to \$1.15 and \$1.15 to \$1.30; Maintenance—electricians 80 to 90 cents and 95 cents to \$1.15, carpenters 80 to 95 cents and 95 cents to \$1.05, plumbers 80 to 95 cents and 95 cents to \$1.15, apprentices 57½ to 92½ cents; Service—blacksmiths 90 cents and \$1, engineers (second to fourth class) 75 to 95 cents and 82½ cents to \$1.05; Shipping—packers 75 to 80 cents and 80 to 85 cents. Inexperienced job rates for women and youths—(minimum and maximum) improvers 64 to 80 cents and 75 to 90 cents, beginners 52½ to 58½ cents and 58½ to 72½ cents. Supervisors receive a premium of from 5 to 12½ cents, depending upon the number of employees supervised, on top of the rate supervised.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Metal Products

LEASIDE (TORONTO), ONT.—SANGAMO COMPANY LIMITED AND INTERNATIONAL ASSOCIATION OF MACHINISTS, LOCAL 235 and 1755.

Agreement to be in effect from May 21, 1947, to May 20, 1948, and thereafter from year to year subject to notice. The Company recognizes the union as the sole and exclusive collective bargaining agency for all eligible employees. Eligible employees may or may not become members of the union. There will be no discrimination, interference, restraint or coercion because of membership or non-membership in the union. There is a joint labour management production Committee as well as a plant Committee.

Hours of work: day and night shifts each to be 43½ hours per week. Overtime: time and one-half for work in excess of the regular daily or weekly hours and for all work on Sundays and on 2 specified statutory holidays. Two additional holidays are paid holidays for employees working on the work days immediately preceding and following the holiday. Work performed on these days will be paid for at straight time in addition to regular rates. All work in excess of 60 hours in any one pay week will be paid for at double time.

Vacation: one week with pay for employees with one year's continuous service with the company, 2 weeks with pay for those with 5 years' service, to those with 15 years' service 2 weeks with pay equal to 5 per cent of previous year's earnings, those with 25 years' service receive 3 weeks with pay, employees with 6 months' service but less than one year receive one week with pay equal to 2 per cent of earnings during previous year.

Hourly wage rates: day work minimum and maximum grade 1, \$1.18 to \$1.35; grade 2, \$1.10 to \$1.26; grade 3, \$1.03 to \$1.18; grade 4, 96 cents to \$1.10; grade 5, 90 cents to \$1.03; grade 6, 84 to 96 cents; grade 7, 78 to 89 cents; grade 8, 73 to 83 cents; grade 9, 68 to 78 cents; grade 10, 63 to 72 cents; grade 11, 59 to 67 cents; grade 12, 55 to 63 cents. A bonus of 5 cents per hour shall be paid to all factory employees for night shift work.

Apprentices shall serve a 4-year apprenticeship with an additional year as an improver before qualifying as a journeyman. Apprenticeship hourly wage scale: first 6 months 44 cents, second 6 months 50 cents, third 6 months 55 cents, then 61 cents, 66 cents, 72 cents, 77 cents to eighth 6 months 83 cents, improver ninth 6 months 90 cents, tenth 6 months 99 cents, toolmaker \$1.10.

The above wages represent increases of from 9 to 31 cents per hour over the rates in effect in January, 1945.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Non-Metallic Minerals and Chemicals

TORONTO, ONT.—BAKELITE COMPANY (CANADA) LIMITED AND UNITED ELECTRICAL, RADIO AND MACHINE WORKERS OF AMERICA, LOCAL 512.

Agreement to be in effect from May 19, 1947, to May 18, 1948, and thereafter from year to year subject to notice. The Company recognizes the union as the sole and exclusive collective bargaining agency for all eligible employees. There will be no discrimination, interference, restraint or coercion either by the company or the union because of membership or non-membership in the union. Check-off: the company agrees to deduct union dues monthly from the pay of employees, who so authorize, and to remit same to the union.

Hours of work: 8 per day or shift and 44 per week. Overtime: time and one-half for work in excess of the regularly scheduled daily or weekly hours. Eight specified holidays will be paid holidays if they fall on normal working days for employees who are available for work on the regularly scheduled working days immediately preceding and following the holiday.

Vacation: one week with pay for employees with one year's service with the Company, 2 weeks with pay for those with 2 years' service, 3 weeks with pay for those with 15 years' service and 4 weeks with pay for those with 25 years' service.

Hourly wage rates: (effective April 23, 1947) the parties to the contract agree that the wage schedule may be reviewed by collective bargaining at any time after 6 months from the effective date on 15 days' notice from either party. It is agreed that only one such negotiation on the wage schedule may be undertaken during the term of the contract by either party. This does not preclude the right of the other party to also open negotiations once on the question of wages during the term of the contract. Minimum rates for certain classes (maximum rate is 5 cents per hour higher) millwrights, electricians (grade 1) \$1.22½; steamfitters, leading operators (grade 1), millwrights (grade 2) \$1.12½; steamfitters (grade 2), stationary engineers (third class) \$1.07½; stationary engineers (fourth class), chief shipping clerk \$1.02½; press operators, laminators, 97½ cents; receiving clerks, auto truck drivers, oilers, ball mill grinder operators 92½ cents; trimmers, cutting machine operators 87½ cents; production helpers, records clerks, janitors 82½ cents. A premium of 3 cents per hour will be paid employees who work on the "evening shift" and 5 cents per hour to employees who work on the "night shift". (The above rates are reported in the press to be an increase of 9½ cents per hour.)

Provision is made for seniority rights and grievance procedure.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN QUEBEC, the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application, with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agree-

ment is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the *LABOUR GAZETTE*, January, 1943, p. 86. Proceedings under this act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Recent proceedings under the Act include the extension of 2 new agreements, the amendment of 9 others and the correction of 2 agreements. These include the amendment of the agreements for clockmakers at Montreal published in the *Quebec Official Gazette* of October 4, and for building trades at Chicoutimi in the issue of October 11, and of the agreement for retail stores at St. Hyacinthe and the correction of the agreement for building trades at Sorel in the issue of October 18. The others are summarized below.

Requests for the amendment of the agreement for wholesale food stores at Quebec and for a new agreement for the uncorrugated paper box industry for the province were gazetted September 20. Requests for the amendment of the agreements for building trades at Chicoutimi and for garages and service stations at Montreal were published on October 4. Requests for the amendment of the agreements for the corrugated paper box industry for the province and for building trades at Sorel were published on October 11. A request for the amendment of the agreement covering bakers and deliverymen at Three Rivers was gazetted October 18.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties.

Mining: Non-Ferrous Smelting and Quarrying

BUILDING MATERIALS, PROVINCE OF QUEBEC

See below under "Manufacturing: Non-Metallic Minerals, Chemicals, etc."

Manufacturing: Printing and Publishing

PRINTING TRADES, QUEBEC

An Order in Council, dated September 23, and gazetted October 4, extends the term of the previous Orders in Council for this industry (L.G., May, 1946, p. 628, and previous issues) to November 1, 1947.

Manufacturing: Miscellaneous Wood Products

SASH AND DOOR INDUSTRY, QUEBEC

A correction of an Order in Council relating to this industry (L.G., March, 1945, p. 349; April, 1946, p. 498; May, p. 628, Aug., p. 1093; May, 1947, p. 690) was published in the *Quebec Official Gazette* of October 4, 1947. This correction provides that employees are to be paid double time for work performed on 8 specified holidays instead of 6, as previously stated.

Manufacturing: Metal Products

SHEET METAL INDUSTRY, MONTREAL

An Order in Council, dated October 8, and gazetted October 18, makes obligatory the terms of a new agreement between The Builders Exchange Inc., of Montreal (Sheet Metal Fabricating Section) and The Sheet Metal Workers International Association, Local No. 116. Agreement to be in effect from October 18, 1947, to September 1, 1948, and for an additional period of one month pending the adoption of a new agreement. Territorial jurisdiction comprises the Island of Montreal and within 15 miles from its limits.

Hours: 9 per day, 45 per week. Overtime is payable at time and one-half, double time on Sundays and specified holidays.

Minimum hourly wage rates: journeymen sheet metal mechanics \$1.05, sub-foremen \$1.17, charge hands \$1.12, welders—class A \$1.12,

class B \$1.01, class C 90 cents, production welders from 68 cents in first 6 months to 84 cents in fourth 6 months, machinists, assemblers and specialists 90 cents, toolmakers \$1.06, painters 99 cents, spray painters 85 cents, blacksmiths \$1.01, machine operators 84 cents, production workers 68 cents, helpers 62 cents, apprentices and boys under 18 years start at 46 cents with an increase of 5 cents an hour every 6 months, truck drivers, store keepers, shipping and receiving 68 cents, female workers 48 cents to 57 cents after 6 months. (These rates are increases of 5 cents over the rates paid from November 9, 1946). Employees working on night shifts receive 5 cents an hour in excess of above rates. One apprentice is allowed for every 2 journeymen employed.

Manufacturing: Non-Metallic Minerals, Chemicals, etc.

BUILDING MATERIALS INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated September 9, and gazetted September 20, amends the previous Orders in Council for this industry (L.G., Sept., 1944, p. 1141; July, 1946, p. 930; Dec., p. 1772).

Hours of work in the stone industry: hours remain unchanged at 44 per week for stone cutters, apprentice stone cutters and artificial stone dressers and 50 hours for other trades. Overtime is payable at time and one-quarter, with time and one-half for Sunday work. Minimum hourly wage rates: stone cutters 90 cents, planemen, stone turners, blacksmiths 70 cents, carborundum machine operators 60 cents, sawymen (all kinds) 50 and 60 cents, cranemen 60 cents, helpers and labourers 45 cents, ramblers and moulders 62 cents, artificial stone dressers 90 cents, modellers \$1, apprentice stone cutters from 40 cents per hour in first year to 60 cents during third year, apprentice planemen 51 cents during first 9 months to 61 cents during second nine months. (These increases range from 3 to 18 cents per hour). Vacation: one week with pay after one year's service, one half day's vacation-pay per month after 3 months' service. The number of years' apprenticeship in the stone cutting industry is reduced from 4 to 3 years.

Hours of work in the marble industry: 44 per week for marble cutters and apprentice marble cutters and 55 per week for all other classifications of labour. Overtime is payable at time and one-quarter, with time and one-half for work on Sundays. Minimum hourly wage rates: marble cutters 90 cents, compressors, saw setters, carborundum machine operators, bed rubber face, cranemen 60 cents, helpers and labourers 45 cents, sawymen on gang saws 50 cents during first 3 months and 60 cents thereafter, bed rubber end 50 cents, machine polishers (marble and terrazzo) first 3 months 55 cents, thereafter 65 cents, hand polisher 51 cents, terrazzo casters 70 cents, apprentice marble cutters from 40 in first year to 60 cents in third year, apprentice carborundum machine operators from 45 cents during first 6 months to 55 cents during third 6 months. (These increases vary from 8 to 28 cents per hour over the previous rates.)

Vacation: one week with pay after one year's service, one half-day's vacation-pay per month after 3 months' service. The number of years' apprenticeship in the marble-cutting industry is reduced from 4 to 3 years.

Another Order in Council, dated October 2, and gazetted October 11, amends the previous Orders in Council for this industry by providing that in the granite, stone and marble industries no apprentice may begin his apprenticeship indenture before 16 years of age or after 25.

Construction

BUILDING TRADES, SHERBROOKE

An Order in Council, dated September 18, and gazetted September 27, makes obligatory the terms of a new agreement between "L'Association des Constructeurs des Cantons de l'Est" and "Le Conseil national catholique des Métiers de la Construction des Cantons de l'Est". Agreement to be in effect from September 27, 1947, to March 31, 1948, and thereafter from year to year, subject to notice. Territorial jurisdiction comprises the counties of Sherbrooke, Compton, Frontenac, Stanstead,

Sheffort, Brôme, Missisquoi, Richmond, Wolfe, Drummond and Arthabaska and is divided as follows: zone I, the cities or towns of Sherbrooke, Farnham, Cowansville, Granby and within 5 miles from their limits; zone II, the cities or towns of Drummondville, Magog, Asbestos, Coaticook, Megantic, Victoriaville, Windsor, Arthabaska and within 5 miles from their limits; zone III, the remainder of the territorial jurisdiction.

Hours: 48 per week. Overtime is payable at time and one-half the minimum rate, even if the employee receives a higher wage than that set by the agreement. All work on Sundays and specified holidays is payable at double time, except for electricians, who are paid time and one-half.

Minimum hourly wage rates: there is an increase of 10 cents per hour in most of the trades. The new wage rates are shown in the accompanying table.

MINIMUM HOURLY WAGE RATES FOR BUILDING TRADES, SHERBROOKE

Trades	Hourly rates Zones		
	I	II	III
Bricklayer, mason, plasterer	\$1.10	\$1.05	\$1.00
Mason (foundation rough masonry)	1.00	0.95	0.90
Block layer	1.00	0.95	0.90
Cement finisher: wage rate set for the trade of the employee committed to that operation			
Painter, paper hanger	0.80	0.75	0.70
Sprayman	0.85	0.80	0.75
Painter work carried out outside a building at more than 45 ft. high	..	0.95	0.95
Carpenter-joiner	0.90	0.85	0.80
Pipe mechanic and steamfitter	0.90	0.85	0.80
Pipe welder	0.90	0.85	0.80
Junior journeyman—1st year	0.75	0.70	0.65
Tinsmith or sheet metal worker and roofer	0.90	0.85	0.80
Electrician	0.85	0.80	0.75
Stationary or portable steam engine man: cranes and mixers	0.85	0.80	0.75
Steam boiler fireman	0.75	0.70	0.65
Stationary or portable gasoline engine operator: cranes and mixers	0.70	0.65	0.60
Tractor and compressor operator	0.80	0.75	0.70
Tile layer	1.00	0.95	0.90
Ornamental iron erector	0.75	0.70	0.65
Terrazzo polisher (dry process)	0.75	0.70	0.65
Terrazzo polisher (wet process)	0.75	0.70	0.65
Driller and dynamite firer	0.80	0.75	0.70
Truck driver	0.70	0.65	0.60
Carter	0.70	0.65	0.60
Labourer (common worker)	0.70	0.65	0.60
Night watchman—60-hr. week	0.35	0.30	0.25
Operator—stationary or portable electric machines and electric cranes and mixers	0.70	0.65	0.60
Marble and terrazzo layer	0.70	0.65	0.60
Elevator operator	0.85	0.80	0.80
Blacksmith	0.80	0.75	0.75
Fireman (mechanical shovels)	0.75	0.70	0.65
Water carrier	0.45	0.45	0.45
Mechanical shovel operator (48 hours)	48.00	48.00	43.00
Painters (structural iron)	1.00	1.00	1.00
Structural iron workers (all categories)	1.11	1.11	1.11
Boiler-maker, erector and steam generator mechanic	1.11	1.11	1.11
Boiler-makers', erectors' and steam generator mechanics' helpers..	0.84	0.84	0.84

The wage rate for the installation of portable boilers and tanks under 2 tons is increased from 70 to 78 cents; for the installation of stokers in furnaces with a heating surface of 20 feet or less, the rates are increased from 80 to 89 cents and from 60 to 70 cents for helpers, for a 55-hour week. For maintenance men, wage rates for a 48-hour week are \$26.40 in zone I, \$24.40 in zone II, \$22.40 in zone III for

journeymen; and \$22.40 in zone I, \$20.40 in zone II and \$18.40 in zone III for labourers. Overtime for maintenance men is payable at the hourly rates specified for their particular trade.

Provisions are made for apprenticeship regulations and for board and travelling expenses for certain classes of employees working out of town.

BUILDING TRADES, QUEBEC

An Order in Council, dated September 18, and gazetted September 27, extends the term of the previous Orders in Council for this industry (L.G., Aug., 1944, p. 1007; March, 1946, p. 317, Aug., p. 1094; Oct., p. 1445; Aug., 1947, p. 1175, and previous issues) to November 1, 1947.

BUILDING TRADES, THREE RIVERS

An Order in Council, dated September 18, and gazetted September 27, amends the previous Orders in Council for this industry (L.G., March, 1944, p. 359; Aug., 1945, p. 1198; March, 1946, p. 317; Oct., p. 1444; March, 1947, p. 370, and previous issues). "L'Association des Constructeurs de la Mauricie Inc." is accepted as contracting party to the agreement.

Hours: 8 per day. However, on certain occasions employees may work a maximum of 10 hours per day at regular rates, provided hours do not exceed 48 per week. Mortar makers, plaster pourers, hod carriers, celanite mixers and labourers employed by bricklayers, masons and plasterers may work a maximum of 11 hours per day at regular rates, provided not more than 54 hours are worked per week. Minimum hourly wage rates, effective June 30, 1947: bricklayers, masons and plasterers—senior journeymen \$1.10 in zone I, \$1 in zone II, junior journeymen 75 cents in both zones; carpenters-joiners—senior journeymen 85 cents in zone I, 75 cents in zone II, junior journeymen 75 cents in zone I, 65 cents in zone II; painters—senior journeymen 80 cents in zone I, 75 cents in zone II, junior journeymen 70 cents in zone I, 60 cents in zone II; painters (spraying) 95 cents in both zones; paper hangers 80 cents in zone I, 75 cents in zone II; electricians (senior journeymen), roofers (slate and tile) 85 cents in zone I, 75 cents in zone II; electricians (junior journeymen), terrazzo polishers (dry process) 75 cents in both zones; labourers (common workers), mortar makers, plaster pourers, hod carriers, celanite mixers, truck drivers 65 cents in zone I, 60 cents in zone II; boiler firemen, roofers (composition) 75 cents in zone I, 65 cents in zone II; stationary enginemen, compressor operators, mixer operators (with certificates), cement finishers, joint pointers 80 cents in zone I, 70 cents in zone II; steam crane and elevator operators 90 cents in zone I, 80 cents in zone II; gasoline or electric crane and elevator operators, mixer operators (without certificates) 70 cents in zone I, 65 cents in zone II; millwrights, machinists, blacksmiths 85 cents in zone I, 70 cents in zone II; marble layers \$1 in both zones; tile layers 90 cents in both zones; terrazzo layers 80 cents in both zones; terrazzo polishers (wet process) 70 cents in both zones; lathers (wood or metal) 75 cents in zone I, 70 cents in zone II; lathers

(wood) per thousand \$3 in zone I, \$2.25 in zone II; drillers, riggers 70 cents in zone I, 60 cents in zone II; whitewashers 65 cents in zone I, 55 cents in zone II; horse drivers 60 cents in zone I, 55 cents in zone II. Minimum wage rates for apprentices: apprentice bricklayers, masons and plasterers from 45 cents per hour during first year to 70 cents in third year in both zones; apprentice electricians from 40 cents during first year to 55 cents during fourth year in both zones; apprentice carpenters-joiners from 35 cents to 65 cents in zone I and from 30 cents to 45 cents during third year in zone II; apprentice painters, paperhangers, millwrights, machinists, blacksmiths, marble, terrazzo, tile and mosaic setters, cement finishers, joiners and whitewashers from 35 cents in both zones to 55 cents in zone I and to 50 cents in zone II during third year. These are increases of 10 cents per hour in some cases, 5 cents in others, and no change in certain other occupations.

BUILDING TRADES, MONTREAL

An Order in Council, dated September 9, and gazetted September 20, amends the previous Orders in Council for this industry (L.G., Sept., 1946, p. 1252, Oct., p. 1447, Dec., p. 1774; March, 1947, p. 371, May, p. 690, July, p. 1003, Sept., p. 1308). Hourly wage rates for the elevator construction industry in the Montreal region only: mechanics \$1.35 per hour (an increase of 12 cents per hour over the previous rate, helpers 95 cents per hour, instead of the former 86 cents).

BUILDING TRADES, HULL

An Order in Council, dated October 8, and gazetted October 18, amends the previous Orders in Council for this industry (L.G., May, 1943, p. 639; April, 1945, p. 517; May, 1946, p. 629, Aug., p. 1094; Feb., 1947, p. 186, and previous issues). Other amendments to this agreement were published in the *Quebec Official Gazette* of March 29, April 19, June 7, and Aug. 2, 1947. Territorial jurisdiction comprises the counties of Hull, Gatineau, Papineau, Pontiac, Labelle and Temiscamingue and is divided as follows: zone I, the city of Hull and within 10 miles from its limits; zone II, the counties of Hull (with the exception of zone I), Gatineau, Papineau, Pontiac, Labelle and Temiscamingue.

Hours: in zone II, 55 hours per week ending on Saturday noon. Minimum wage rates: in zone II, the wage rate for carpenters, joiners and millwrights is increased from 80 to 95 cents per hour, for labourers and common workers from 50 to 60 cents per hour and for specialized workers from 55 to 70 cents per hour.

*Industrial Standards Acts, Etc.***Schedules of Wages and Hours Recently Approved by Provincial Orders in Council in Ontario, Saskatchewan and Alberta**

IN six provinces—Ontario, Alberta, Nova Scotia, Saskatchewan, New Brunswick and Manitoba—legislation provides that, following a petition from representatives of employers or employees in any (or specified) industries, the provincial Minister charged with the

administration of the Act may himself, or through a government official delegated by him, call a conference of representatives of employers and employees. This conference is for the purpose of investigating and considering the conditions of labour in the industry

and of negotiating minimum rates of wages and maximum hours of work. A schedule of wages and hours of labour drawn up at such a conference, if the Minister considers that it has been agreed to by a proper and sufficient representation of employers and employees, may on his recommendation be made binding by Order in Council in all the zones designated by the Minister. The Minister may also establish an advisory committee for

every zone to which a schedule applies to assist in carrying out the provisions of the Act and the regulations. References to the summaries of these Acts and to amendments to them are given in the *LABOUR GAZETTE*, October, 1940, p. 1077. Schedules of wages and hours recently made binding by Orders in Council under these Acts are summarized below.

Ontario

Construction

CARPENTERS, OTTAWA

An Order in Council, dated September 24, and gazetted October 11, making binding the terms of a new schedule for carpenters in Ottawa, to be in effect from October 21, 1947, during pleasure.

Hours: 8 per day, Monday to Friday, a 40-hour week. Overtime is payable at double time, except that 4 hours' overtime may be added to any regular working day at time and one-half. Work on Saturday between 8 a.m. and 12 noon is also payable at time and one-half. Minimum hourly wage rate \$1.18 per hour. Employees working on night shifts receive 8 hours' pay for 7 hours' work; 8 hours' work may be performed during the night at regular rates where the work is of such a nature that it cannot be performed during the regular working day.

PLASTERERS, OTTAWA

An Order in Council, dated September 24, and gazetted October 11, makes binding the

terms of a new schedule for plasterers at Ottawa, to be in effect from October 21, 1947, during pleasure.

Hours: 8 per day, Monday to Friday, a 40-hour week. Overtime: time and one-half for overtime work up to 12 midnight from Monday to Friday and on Saturday morning; double time for all other overtime work. Minimum wage rate: \$1.28 per hour. Employees working on night shifts receive 8 hours' pay for 7 hours' work; 8 hours' work may be performed during the night at regular rates where the work is of such a nature that it cannot be performed during the regular working day.

PLUMBERS, OTTAWA

An Order in Council, dated September 27, and published in the *Ontario Gazette* of October 11, amends the previous Order in Council for this industry (L.G., Oct., 1947, p. 1476). This amendment does not affect the summary already given.

Saskatchewan

Construction

CARPENTERS, MOOSE JAW

An Order in Council, dated September 16, and gazetted September 27, makes binding the terms of a new schedule for carpenters at Moose Jaw, to be in effect from October 4, 1947, during pleasure.

Hours: 8 per day, 40 per week. Overtime is payable at time and one-half. Employees working on any of the specified holidays shall be paid, in addition to one day's wages at the regular rate, time and one-half their regular rate of wages for every hour or part of an hour during which they work on such holiday. Minimum wage rate: \$1.20 per hour. Employees

working on night shifts shall receive 8 hours' pay for 7½ hours' work. A carpenter in charge of 3 or more carpenters shall be paid an additional 10 cents per hour. Apprentices are governed by the terms of The Apprenticeship Act.

Service: Business and Personal

BARBERS, PROVINCE OF SASKATCHEWAN

An Order in Council, dated September 3, and gazetted September 13, amends the previous Order in Council for this industry (L.G., Oct., 1947, p. 1476). This amendment does not affect the summary already given.

Alberta

Manufacturing: Vegetable Foods, etc.

BAKERS, EDMONTON

An Order in Council, dated September 12, and gazetted September 30, makes binding the terms of a new schedule for bakers at Edmonton, to be in effect from October 10, 1947, to October 9, 1948, or thereafter during pleasure.

Hours: 8 per day, 48 per week for all employees (male or female). Overtime: all work in excess of the maximum hours of labour,

as well as work performed on specified statutory holidays, is considered overtime, the rate for which is not given in the schedule. Minimum weekly wage rates: bread and cake bakers—doughmen, ovenmen, cake bakers \$38, dividermen, moulder men, table or bench hands \$35.50, baker's helpers or assistants from \$25 to \$30, bread packers (male) from \$25 to \$28; shipping department—head shipper (male) \$31, shipper's assistants (male) from \$26 to \$28; wrapping department—

machine operator in charge (male, 21 years and over) from \$25 to \$28, machine operator's assistants (male, 21 years and over) from \$25 to \$26; other departments (male)—mechanics \$33, maintenance men \$30, janitors, cleaners, pan washers \$25; female help employed in bread or cake shop from \$18 to \$25. Any employee who works a minimum of 42 hours per week shall be paid the full weekly rate; temporary or part-time employees 5 cents per hour over the regular rate. Apprentices (16 to 21 years) are paid from \$18 per week during first 6 months to \$32 during eighth 6 months, thereafter \$35.50; apprentices (21 to 30 years) from \$22 during first 6 months to \$33.50 during sixth 6 months, thereafter \$35.50. Vacation: one week with pay after one year's service, 2 weeks with pay after 2 years' service.

Provision is made for apprenticeship regulations.

Construction

CARPENTERS. GRANDE PRAIRIE

An Order in Council, published July 15, makes binding the terms of a new schedule for carpenters in the Grande Prairie district, to be in effect from July 25, 1947, to July 25, 1948, or thereafter during pleasure.

Hours: 9 per day, 3 on Saturday, a 48-hour week. Overtime is payable at time and one-half, double time on Sundays and 4 specified holidays. Work on Labour Day is prohibited. When time has been lost due to stormy weather or for any other uncontrollable cause, a maximum of 9 hours may be worked at straight time on Saturday. Men working on night shifts shall receive 8 hours' pay for 7½ hours' work. Minimum hourly wage rates: first class carpenters \$1.10, second class carpenters 85 cents, labourers 70 cents. Apprentices are governed by the terms of the Apprenticeship Act of Alberta.

Industrial Hygiene in Quebec, 1941-43

The annual report of the Director of the Division of Industrial Hygiene in the Province of Quebec for the years 1941-3, contained in the second report of the Department of Health and Social Welfare, summarizes the work done by the Division to check specific hazards and promote healthful working conditions in industry.

Activities of the Division include inspection of factories and of lumber and other industrial camps to ensure the application of the statutory regulations (L.G. 1944, p. 793) and the provision of satisfactory conditions, laboratory research, technical and medical consultations, lectures and distribution of literature.

The Division maintains close contact with the Workmen's Compensation Commission. Claims for compensation for industrial diseases were reported to the Division and led to investigation of working conditions in the plants concerned.

From 1941 to 1943 inspections were mainly concerned with war plants, and were carried out in co-operation with the Department of Pensions and National Health, Ottawa. In 1943, 67 industrial plants were inspected in which were employed 80,000 workers, or nearly 20 per cent of all the workers in the Province.

The industries inspected included foundries, aeroplane plants, mines and quarries, clothing, footwear, asbestos, electro-chemical, paint, metallurgy, pulp and paper, munitions, paints, dye-works, ship-building yards, garages, potteries and textiles, and the investigations dealt

mainly with the dangers involved in exposure to lead, asbestos, silica, chlorine, phosphine, hydrochloric gas, phosphorus, benzol, trinitrotoluol, hydrogen sulphide, acid vapours, carbon monoxide and trichlorethylene.

About 3,000 lumber and other industrial camps were inspected in 1942. In that year inspectors of industrial camps numbered 27. In 1943, 300 more inspections were made than in 1942 and the proportion of approved camps continued to show a considerable increase.

Laboratory work included sampling the air in factories for gases, vapours and dusts, and analysis of atmospheric conditions, temperature, relative humidity, air velocity, etc. Specific tests were made to determine the concentration of mercurial vapours and carbon monoxide gas.

In 1942, a study was made to establish the degree of concentration of silica and lead dust to which workmen in a pottery plant were exposed. Another study attempted to determine the efficiency of a system of recovery of the asbestos dust in a mining plant. In 1943, a haematological service was organized to permit early diagnosis of lead or benzol poisoning.

In November, 1943, the Minister of Labour for Quebec appointed a commission to investigate working conditions of the potmen employed by the Aluminum Co. of Canada. The report of this commission was summarized in the LABOUR GAZETTE in 1944, p. 724.

Fair Wages Conditions in Dominion Government Contracts

THE Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from

the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During August and September

(1) *Works of Construction, Remodelling, Repair or Demolition*

During the months of August and September the Department of Labour prepared, on request, 64 and 69 fair wages schedules respectively for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period, the various Government Departments reported a total of 48 construction contracts awarded during August, and 46 during September. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wage schedules are available to trade unions or other *bona fide* interested parties on request.

Note: The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then

only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "*minimum* rates only" and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation".

(2) *Contracts for the Manufacture of Supplies and Equipment*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:

<i>August 1947</i>		
Department	No. of Contracts	Aggregate Amount
Canadian Commercial Corporation	3,113	\$3,136,392 00
Post Office	13	68,909 93
<i>September 1947</i>		
Canadian Commercial Corporation	3,633	8,340,337 00
Post Office	11	88,001 58

Vocational Training

Conference of Vocational Training Advisory Council

THE ninth meeting of the Vocational Training Advisory Council was held in the Confederation Building, Ottawa, October 28 and 29, 1947.

The following members of the Council were present:—

Dr. G. Fred McNally (Chairman) Edmonton, Alberta, Lt.-Col. F. T. Fairé, Deputy Minister of Education, Victoria, B.C.; Mr. J. S. Herwig, General Secretary, Canadian Legion, B.E.S.L.; Mr. D. S. Lyons, General Vice-President, International Association of Machinists, Montreal; Mr. N. C. McKay, Director of Extension, Department of Agriculture, Winnipeg; Dr. Fletcher Peacock, Director of Educational Services for New Brunswick, Fredericton; Mrs. R. J. Marshall, President, National Council of Women, Agincourt, Ontario; Miss B. Oxner, Director of Women's Work for Saskatchewan, Saskatoon; Mr. F. S. Rutherford, Deputy Minister of Education for Ontario, Toronto; Dr. F. H. Sexton, Wolfville, N.S.; Mr. C. B. C. Scott, General Personnel Manager, Massey-Harris Co., Toronto; Captain H. S. Gonthier, President, Provincial Command, Canadian Legion, St. Lambert, P.Q.

Others present were:—

Mr. Gustave Poisson, Deputy Minister, Department of Youth and Social Welfare, Quebec, P.Q.; Mr. L. W. Shaw, Director of Education for Prince Edward Island, Charlottetown; Mr. J. W. McNutt, Regional Director, CVT, New Brunswick; Lt.-Col. M. Archambault, Acting Regional Director, CVT, Quebec; Mr. H. H. Kerr, Regional Director, CVT, Ontario; Col. J. Neish, Regional Director, CVT, Manitoba; Mr. W. A. Ross, Regional Director, CVT, Saskatchewan; Mr. J. H. Ross, Regional Director, CVT, Alberta; Mr. H. Hill, Regional Director, CVT, British Columbia; Mr. A. W. Crawford, Director of Training, DVA, Ottawa; Mr. B. G. Pentland, Superintendent of Vocational Training, DVA, Ottawa; Mr. A. H. Brown, Solicitor, Department of Labour, Ottawa; Mr. E. N. Mitchell, Vocational Training Division, UIC, Ottawa; Mr. R. F. Thompson, Director of Training, Department of Labour, Ottawa; Brig. J. E. Lyon, Assistant Director of Training, Department of Labour, Ottawa (Secretary); Mr. J.

Lengelier, Director of Youth Training, Montreal, P.Q.; Mr. S. H. McLaren, Chief Executive Officer, UIC, Ottawa; Mr. H. W. Jamieson, Superintendent of Educational Training, DVA, Ottawa; Mr. H. C. Hudson, Special Placements Division, UIC, Ottawa.

On opening the conference, Dr. McNally introduced Mr. Gustave Poisson, Deputy Minister of Social Welfare and Youth, who attended the Conference in the place of Major P. A. Milette, Inspector of Arts and Crafts schools for Quebec. Dr. McNally pointed out that although there was some curtailment in the number of veterans receiving vocational training, there were many other aspects of training that required study. This was notably true of apprenticeship training where unification of standards and methods in the several provinces was desirable.

The Chairman also made brief reference to the new consolidated agreements between the Dominion and the several provinces which were designed to provide training for "practically every type of individual."

Minister of Labour Addresses Conference

Hon. Humphrey Mitchell, Minister of Labour in a brief address stressed the need for uniformity of standards in apprentice training. The Federal Government, the Minister said, is anxious to work with, but not to interfere with, the provinces in carrying out their responsibilities in connection with education. He felt that the Vocational Training Branch should be something more than an organization for the distribution of Federal funds and should be in a position to offer constructive leadership, particularly in regard to apprenticeship standards and training. He felt, too, that the exchange of information on vocational training between the Dominion and the provinces would be mutually beneficial and that CVT might act as an agency for the compilation of statistics.

Deputy Minister's Remarks

Dr. A. MacNamara, Deputy Minister of Labour spoke approvingly of the members in attendance at the meeting, asserting that in

his opinion, well-attended meetings were an indication of purposeful activity. The results achieved by CVT in the past were evidence that the Advisory Council was a live organization, he said.

Director's Report

The Director of CVT, Mr. R. F. Thompson, stated that the chief problem of Canadian Vocational Training in 1947 was the contraction of its activities in the training of war veterans. The staff in the different regions on October 1, 1947, numbered about 1,050 as compared with some 3,500 in June, 1946.

The rapid decline in enrolments of discharged members of the armed forces, presented problems in the consolidation of classes and the closing of centres. It is now certain, the Director stated, that the training of veterans will be practically over by the summer of 1948—a much earlier date than was anticipated three years ago. He pointed out that—"the dead-line date for new applicants for training remains fixed at December 31, 1947." The peak enrolment of 40,000 had been reached in the late spring of 1946 and this had declined to 16,747 at August 31, 1947.

Some 25 training centres and three residential training centres have been closed since May, 1947. At the end of October, 1947, there were 34 centres still operating throughout Canada, in addition to certain regular provincial schools in Quebec, he said. Arrangements have been continued for the training of veterans from Newfoundland, but the numbers now enrolled are very small. Similar arrangements have been made in recent months for training of American veterans resident in Canada. However, very few have taken advantage of this plan.

Apprenticeship Syllabi.—Mr. Thompson reported progress in the preparation of uniform syllabi for the training of apprentices in the seven provinces having agreements with the Federal Government. Trade syllabi have been circulated among the provincial officials concerned with apprenticeship regulations, and the Joint Conference Board of the Construction Industry with a view to the establishment of a syllabus common to all the provinces. The Director stated that there had been a substantial increase in the number of apprentices registered in designated trades in most of the provinces, and that in all provinces the class training of apprentices, either in full-time or part-time classes was being emphasized.

It was announced too, that an extension of time up to March 31, 1949, had been granted by the Dominion Government for Dominion

contributions to expenditures of a capital nature incurred by the provinces for vocational training schools and equipment. The greatest expansion in vocational facilities has been taking place in Quebec. The total amount approved by the Dominion up to October 4, 1947 was \$8,344,942.

Civilian Training.—With regard to the training of civilian workers, the Director stated that a limited number of training projects for women had been carried out in Saskatchewan and Alberta, and a beginning has also been made in New Brunswick. Difficulties in the selection of trainees and in reaching decisions as to types of classes had been met with.

The Re-establishment Training Agreement covering Schedules "L" and "M" (Schedule "L" for the training of discharged members of the Armed Forces and Schedule "M" for the training or retraining of civilian workers who are unemployed) was due to expire on March 31, 1948. The Director reported that the Minister of Labour had suggested to the provinces that the agreement be renewed on a consolidated basis to provide for (1) the training of veterans; (2) training of unemployed civilians; (3) youth training and assistance to students; with the costs of veterans training to be borne as heretofore, by the Dominion, and the costs of the other types of training to be shared on a 50-50 basis between the Dominion and the provinces.

Director's Report Discussed

CVT co-operates with CEA.—The Chairman of the Advisory Council, Dr. McNally, outlined a project by which it was proposed that the Council would co-operate with the Canadian Educational Association, to provide correspondence courses. Progress had already been made and such courses were now available in four provinces. Approval was given to the action taken so far by the CEA and a committee of three was named to co-operate with the CEA.

Transfer of Training from CVT to DVA.—Messrs. A. W. Crawford, H. W. Jamieson and B. G. Pentland of the Department of Veterans Affairs, at the request of Dr. McNally, made brief statements regarding the current status of veterans' training. Mr. Crawford stated that there was now only one problem requiring joint study by DVA and CVT. This concerned the transfer of responsibility for placement and supervision of veterans training-on-the-job, in correspondence schools and in private trade and commercial schools. He held that it was important that

there should be no duplication of effort and that it was necessary to keep a careful watch on various aspects of veterans' training as the number still to be trained declines. He stated further that DVA had carried on 90 correspondence courses which had been prepared by the Canadian Legion Educational Services.

Brigadier J. E. Lyon, Assistant Director of Training, Department of Labour, reported that district officials of CVT and DVA agreed that supervision and placement in private and in correspondence schools could be taken over by DVA at the end of 1947. The Council approved the action taken by CVT officials. Subject to safe-guarding the interests of veterans, the transfer to DVA was left to the discretion of the CVT headquarters staff.

Mr. Jamieson expressed appreciation of the work done by CVT in preparing veterans for university. He pointed out that the number of veterans at present had been reduced to about 600 and that it was unlikely that more than another 300 will be approved for this type of training. Mr. Pentland also commended the work done by CVT schools and mentioned that public announcements had been made that the acceptance of applicants for vocational training would be discontinued after December 31, 1947, except in unusual circumstances. He disclosed that 683 veterans are now taking specialized training in some dozen of the more popular types of training at schools in the United States.

Civilian Training.—At the outset of the discussion on civilian training Mr. H. C. Hudson presented a brief on behalf of the Unemployment Insurance Commission setting forth the Commission's position in the matter of civilian training. He pointed out that, in the first place, the Unemployment Insurance Act empowered the Commission to refer "any person who is drawing unemployment insurance benefit to a suitable course of training for the purpose of becoming, or keeping, fit for entry into, or return to employment." In the second place, by the terms and conditions of Schedule M of the Re-establishment Training Agreement "the UIC is designated as the agency responsible for referring persons who are employed to suitable courses of training operated under the direction of Canadian Vocational Training."

Mr. Hudson pointed out that, under the Unemployment Insurance Act the Commission operates the National Employment Service and that it is one of the duties of UIC to endeavour to find employment for any unemployed person who is registered at a local office of the National Employment

Service. If, however, the skills of applicants for jobs do not match available openings for work the Commission is empowered to recommend a course of training to qualify an applicant, or applicants, for specific job openings. The brief presented by Mr. Hudson indicated that "a considerable number" of unemployed men and women had been selected and approval granted for them to proceed with courses in a wide range of occupations. "All of these persons who have completed their training are now in gainful employment, some of them at very good wages," it was stated. There were 400 males and 194 females selected and referred to training courses by local offices of the UIC for the first half of the current fiscal year. Of these, 498 were persons between the ages of 16 and 30; 85 were between the ages of 31 and 45; and only 11 were over 45 years of age. It was shown also that the local offices throughout the Dominion had, during the same period, uncovered 557 training-on-the-job opportunities. During the preceding fiscal year 2,663 such opportunities were presented to CVT by the local offices.

Occupational Information Service.—At the request of the Chairman of Council, Dr. McNally, Mr. Harry Hereford, Director of Research and Statistics, Department of Labour and Mr. H. O. Gudgin formerly of DVA presented a brief regarding the Occupational Information Service set up by DVA to assist veterans in selecting training for civilian occupations. It was stated that "the earliest publications were issued in bulletin form and stressed the training aspect of particular occupations." Later these bulletins were expanded to give a more detailed coverage. Some 70 skilled occupations were surveyed "with the co-operation of the National Employment Service and other government departments, with a view to estimating the proper annual intake to each trade and the current training requirements. This service, recently transferred to the Department of Labour, now has access to more complete information and is in a position to serve a wider public, such as counsellors in schools and colleges, teachers and individual students and NES officers dealing with the placement of youth, it was stated. Following a full discussion the Council recommended that the publication and distribution of the monographs should be undertaken in a dual form, one issue of a general nature for ordinary distribution and the other providing detailed information for the use of vocational guidance councillors.

Assistance to Vocational Schools.—Mr. R. F. Thompson, Director of CVT drew special attention to the progress which had been made in the province of Quebec under the Vocational Schools Assistance Agreement. Since the agreement was signed in December, 1945, the Quebec Department of Youth and Welfare has drafted a program in order to make use of the contributions common to the governments of the Dominion and Quebec in connection with the regular provincial budget. With certain modifications in the program found necessary as the work proceeded the following construction has been completed.

(1) The Central Arts and Crafts Schools at Montreal, Cap-de-la-Madeleine and Rouyn, \$490,000.

(2) Work is in progress in various centres throughout the province on four technical schools, five arts and crafts schools, one commercial school, one saw mill school, one forest protection school, one forest rangers' school, one domestic science school and one paper-making school. The total estimated cost of these will be \$2,363,300.

(3) Plans and specifications have been approved and construction will commence at an early date on one technical school and eight arts and crafts schools, to cost a total of \$1,991,000.

(4) Schools for which plans are under consideration: One technical school, one furniture school, one graphic arts school, one arts and crafts school and two schools of fine arts, at an estimated total cost of \$1,580,000. The grand total cost of all the above projects will be \$6,424,300.

The Quebec program also takes into account the industrial-economic status of the province. With that in view the contributions common to the Dominion and the province are being assigned so as to encourage the training of new technicians in the main industries as follows:—

Agriculture	\$ 400,000
Commerce	500,000
Manufacturing	3,000,000
Maritime fisheries	100,000
Printing	300,000
Pulp and Paper.....	600,000
Textiles	600,000
Transportation	300,000
Prevention	50,000
Miscellaneous	400,000

It was pointed out that the above-mentioned contributions, added to the amount of more than \$2,250,000 voted annually by the province, will permit the schools to accept and maintain, within the next few years, about 9,000 pupils in the regular day courses and about 15,000 in the evening refresher courses. It is expected that nearly 4,000 pupils will finish their courses each year.

The Advisory Council passed a resolution requesting the CVT head office to communicate with the responsible officials in each of the other provinces, with a view to the compilation of information along the lines of that submitted by the province of Quebec.

It was decided that the next meeting of the Advisory Council will be held in Ottawa on April 28, 1948.

Conference of Regional Directors

THE eighth conference of the Regional Directors, Canadian Vocational Training was held in Room 148, Confederation Buildings, Ottawa, Thursday, October 30, 1947. All the Regional Directors were present with the exception of Mr. R. H. McCuish of Halifax, who was represented by Mr. A. E. MacWilliam, Superintendent of Rehabilitation Training for Nova Scotia.

Among others present were:—

Mr. A. W. Crawford, Director of Training, Department of Veterans Affairs; Mr. B. G. Pentland, Superintendent of Vocational Training, DVA; Mr. H. C. Hudson, Special Placements Division, UIC; Mr. E. N. Mitchell, Vocational Training Division, UIC; Mr. R. F. Thompson, Director of Training, Department of Labour (Chairman); Brigadier J. E. Lyon, Assistant Director of Training, Department of Labour.

Consolidation of Classes and Closing of Schools

The conference discussed at some length the problems arising from the consolidation of classes and the closing of many of the schools that are no longer required, as the training of veterans was nearing completion. It was decided that the following procedure would be observed: (a) where a class is now closed it will not be re-opened; (b) duplication of vocational classes in each province, where it now exists will be eliminated as soon as possible; (c) arrangements are to be made with DVA to refer all new trainees to the continuing classes; (d) early attempts will be made to amalgamate classes in the four western provinces; (e) small classes to which a province proposes to refer trainees under schedule M may be continued with payments being made on a proportional basis.

Pre-Matriculation Classes

The Chairman, Mr. R. F. Thompson, expressed the hope that there would be no more veterans referred to CVT pre-matriculation classes after the end of December, 1947. He felt that even in the case of referrals made prior to that date there might be difficulties to encounter, inasmuch as there was not a large number of teachers and it was now virtually impossible to give individual instruction, as had been given a year earlier. The conference felt that DVA should send all pre-matriculation students to private schools after December 31. Mention was made of the CLES courses as being suitable for veterans who require to complete only one or two subjects. It was eventually decided that CVT pre-matriculation schools in all provinces would close not later than August, 1948; the actual date of closing was left to the decision of the Regional Directors and will depend on local conditions.

Training-on-the-job

It was announced that supervision of training-on-the-job, correspondence and private schools was in process of transference to DVA in certain areas of the Maritime provinces and will be completed there not later than the close of the present fiscal year. Similarly, in many of the outlying districts in Quebec, transference of supervision is almost completed, while in Quebec City and Montreal transfer will likely be feasible by March 31, 1948.

In Ontario, arrangements have been made to transfer responsibility in the Ottawa, Kingston and North Bay districts on December 31, 1947. In London, transfer will take place on March 31, 1948 and tentative provisions have been made for the transfer at Toronto on the same date. The anticipated date of transfer at Hamilton is January 1, 1948.

In Manitoba transference, except in the case of Greater Winnipeg, will take place at the end of the year and in Greater Winnipeg three months later. In Saskatchewan and Alberta, DVA will assume responsibility for training-on-the-job at the end of the fiscal year and in Alberta, all new cases will be handled by DVA after January 1, 1948.

In British Columbia, DVA officials were stated to be at work in the CVT offices at Vancouver, familiarizing themselves with the details of the work. Supervision in the rural areas was transferred at the end of October, 1947. Vancouver Island cases will be taken over at the end of the present year and

those at Greater Vancouver on March 31, 1948.

Supervision and placement of veterans in private and correspondence schools throughout Canada will be taken over by DVA on December 31, 1947, unless contrary instructions covering particular districts are issued in the meantime.

Apprentices

In regard to the supervision of apprentices, the Chairman pointed out that CVT will continue to pay the salaries of Apprenticeship Field Supervisors up to March 31, 1948, after which it will be necessary for DVA to make necessary arrangements with the apprenticeship authorities. It is hoped that supervision of all apprentices will have been arranged by that time, with the costs of supervision shared by the Dominion and the provinces. It was announced by the Chairman that trade testing of veterans by individuals would stop on December 31, 1947. After that date, all testing would be done in CVT schools. Brigadier Lyon drew attention to the rising costs of apprenticeship in some of the provinces, notably in Alberta.

Training of Linesmen

It was reported to the Conference that Alberta and New Brunswick had operated short courses from time to time, for the training of linesmen. In both of these provinces applicants had ceased to come forward. Saskatchewan had one course for a sponsored group. The Ontario Hydro-Electric Commission conducts its own courses for training its linesmen. In British Columbia the courses, which extended over ten months, had "a very good placement record, and it was stated that there are over 40 vacancies for qualified linesmen." Trainees had been selected by DVA.

Future of CVT Program

The Conference discussed fully the desirability and feasibility of retaining the CVT program as a permanent feature of education in Canada. Representatives of most of the provinces felt that there would be a need for the retention of CVT, with necessary adjustments to meet peacetime conditions. The Chairman of the Conference, Mr. R. F. Thompson, after summarizing the opinions expressed by the several Regional Directors, stated that "so far as the retention of CVT organization is concerned, a great deal depends on the attitude which is adopted by the various provinces in connection with further training of unemployed persons."

*Activities of Unemployment Insurance Commission**

Statistical Analysis of Claims and Benefit—Registrations—The Fund— Decisions of Umpire—Refunds of Unemployment Insurance Contributions

DURING September, 25,847 initial, renewal and revised claims were filed in local offices of the Unemployment Insurance Commission. Initial and renewal claims totalled 20,883 compared with 17,281 in August and 28,555 during September last year. A revised claim arises out of any reconsideration of an existing claim (i.e. a change in dependency status, refusal of an offer of suitable employment, etc.) Thus, only initial and renewal claims represent new cases of unemployment. In the Maritime Provinces, Manitoba and British Columbia initial and renewal claims filed during September this year showed a slight increase over those registered in the same month last year. Significant decreases occurred in Ontario and Quebec.

Ordinary claims on the live unemployment register numbered 36,666 (23,401 males and 13,265 females) on September 30, compared with 37,350 (23,817 males and 13,533 females) on August 30, and 57,682 (41,022 males and 16,660 females) at September 30, 1946. Thus, the number of cases of recorded unemployment as at a particular day continues to decline and has reached a new post-war low point. At the end of September, live claims in the Maritime Provinces remained at about the same level as at the end of August, but slightly higher than a year ago. In all other provinces decreases of varying magnitudes were recorded compared with September 30, 1946. Other claimants (largely short-time claimants) numbered 2,157 (1,629 males and 528 females) at the end of September, com-

pared with 1,720 (1,368 males and 352 females) at the end of August.

The number of days that those with live claims on September 30 have been continuously on the live unemployment register since the last initial or renewal claim is presented in Table 6. Improving employment conditions in Canada as a whole are reflected in a slight decrease, compared with August 30, in the percentage on the register 49 days or more with a corresponding increase in the percentage six days and less.

Total claims disposed of during September numbered 22,199 of which 994 were referred to courts of referees, 59 represented special requests not granted (i.e. requests for a change of dependency status, ante-dating and an extension of the two-year period), 13,862 were considered entitled to benefit and 7,284 were considered not entitled to benefit. Table 3 has been altered somewhat from the corresponding table for previous months in accordance with a new reporting form introduced coincidentally with a decentralization of adjudication procedure.

Chief reasons for non-entitlement to benefit were: "insufficient contributions while in insurable employment" (2,353 cases), "voluntarily left employment without just cause" (1,863 cases), "refused an offer of work" and "neglected an opportunity to work" (1,503 cases), "not capable of and not available for work" (460 cases).

A total of 39,541 persons were paid one or more benefit payments during September (table 5) aggregating \$1,512,096 for 798,873 compensated unemployed days compared with 42,756 persons paid \$1,515,868 for 791,850 days.

*Statistics (including tables) are based on returns supplied by the Unemployment Insurance Commission and the Dominion Bureau of Statistics.

The column for "Bulk" includes Miscellaneous \$1,756.89 and Contributions for Armed Service \$15,108,386.71.

The column "Interest on Investments and Profit on Sale of Securities" represents:

(a) The exact amount of interest earned for each completed fiscal year and the approximate amount for each month in the current year;

(b) Profit on sale of securities taken into account at the end of each year only.

* April receipts for Stamps and Meter and the proportionate Government Contributions for these items were included with figures for March 1947.

in August and 74,762 persons paid \$3,402,460 for 1,725,426 days in September 1946. Thus, the average duration of the unemployment compensated was 20.2 days in September, 18.5 days in August and 23.1 days in September last year; the average amount of benefit paid per beneficiary was \$38.24 in September, \$35.45 in August and \$45.51 in September 1946; the average amount of benefit paid per compensated day of unemployment was \$1.89 in September, \$1.91 in August and \$1.97 in September a year ago.

Refunds of Unemployment Insurance Contributions

Under the Unemployment Insurance Act, provision is made for the return of contributions made in error. Such errors may arise in a number of ways. For example, an insured person may have been contributing in a wrong class. The number of contribution days may not have been correctly calculated. An employee may have been insured while working in non-insurable employment, or continue to be insured when earnings exceed the ceiling of insurability. The only basis for refund is error, and it is quite incorrect to consider that an employed worker is entitled to refund because no benefit has been paid to him or her over a period of time. Unemployment Insurance contributions are in the nature of premiums paid for protection against loss arising from a chance event. The fact that the event has not occurred does not warrant return of the contributions.

Prescribed Form of Application

The prescribed manner of applying for refund is the completion of an application form referred to as Form UIC 439. It must be made out in triplicate and submitted to an Unemployment Insurance Auditor or a Local Office of the Commission, together with the contribution records involved. Should the period of application for refund extend back beyond the commencement of the current insurance record this fact should be noted on the face of the form. The date when the error commenced should also be shown. Applications for refund must be made in the prescribed manner, and the Commission cannot make refund on the basis of a request by letter or through personal visit.

Under normal circumstances applications for refund are prepared by the employer. If approved, a refund cheque for the total employer-employee contributions is forwarded to the employer, as it is from the employer that the erroneous contributions have been

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the month ending September 30, 1947, showed 3,030,766 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1947, an increase of 82,280 since August 31, 1947.

As at September 30, 1947, 184,559 employers were registered as having insurable employees representing an increase of 1,608 since August 31, 1947.

received. The employer is responsible for seeing that the employee's share is refunded. Exception to this rule is made where the employee involved has left the services of the employer, or where the employee has become a claimant for benefit and it is found at that time that certain contributions have been made in error.

Contribution regulations under the Unemployment Insurance Act fix a period of two years beyond which no refund can be made excepting in special circumstances. It is therefore, in the interests of both employers and employees to insure that contributions are properly paid and recorded within that period. This provision is made in order to avoid checking employers' records that are over two years old, and to protect the Fund against a possible liability for outstanding refunds over a number of years. Thus, refunds can be made only in respect of contributions paid within two years of the date of application. Where written evidence shows that the request for refund originated earlier than the date of the application, the application may be ante-dated to such earlier date if copies of the evidence are attached to the application form.

Where the Commission is satisfied that the wrong contributions were paid on the direction of an officer of the Commission, the two-year period may be extended. In such cases the application for refund may be considered for payment during a period of up to five years from its date if no unemployment insurance benefit has been paid to the employee concerned. Where benefit has been paid to the employee, the period of refund may only be considered within three years from the end of the insurance year (March 31) in which an application for benefit was made which resulted in payment of benefit. Such refund will be reduced by any amount received by the employee as insurance benefit to which

he was erroneously ruled to be entitled because of the wrong contributions. This would not affect the amount of the employer's share of the refund. In order to avoid the amount of work involved in connection with refunds of very small amounts, no application for an amount of less than 50 cents will be considered.

Refunds for Unused Stamps

Refunds for unused unemployment insurance stamps, or portions of stamps, will be made to bona fide registered employers on receipt of the unused stamps with a covering letter explaining why they are surplus to their needs. Such stamps should be forwarded by

registered mail to the District Treasury Officer of the Unemployment Insurance Commission at Vancouver, Winnipeg, Toronto, Montreal or Moncton. Reimbursement will be made by cheque. Unlike refunds of contributions, refunds of portions of stamps will be considered if they total less than 50 cents.

Refunds of contributions are handled as quickly as possible in order that the cheque may be issued to the employer while the employee is still with him. Prompt attention to the proper completion of applications by employers is most helpful. Local staffs of Unemployment Insurance Offices, and Unemployment Insurance Auditors are glad to assist employers in this regard.

Digest of Selected Decisions of the Umpire Under the Unemployment Insurance Act, 1940

THE Unemployment Insurance Commission submits the following digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act, 1940, and its amendments. These cases are an extension of the series commenced in the April, 1945 number of the LABOUR GAZETTE and continued in each of the succeeding issues. They are selected on the basis of their possible precedent value for the determination of questions which may, from time to time, confront Insurance Officers and Courts of Referees. In addition, they provide a medium for presenting to employers and employees alike brief statements of the principles upon which insurance against unemployment operates in Canada and of actual facts in specific cases coming before the Umpire on appeal.

The selected decisions are being published in two series: (1) Benefit cases, designated CU-B and (2) Coverage cases, CU-C.

CU-B. 117

(6 September 1946)

Held that when misconduct (industrial) is alleged to be the reason for an insured person's separation from employment it cannot be assumed but must be conclusively and specifically proven.

The material facts of the case are as follows:

The claimant, a married man, aged 33 years, was last employed by a farm machinery manufacturing company as a blockman from 1928 to December 1, 1945. He made application for benefit on December 6, 1945, stating that

he had left his employment voluntarily because his employer had been circulating lies about him and that he had been demoted to a position which carried a lower salary. The employer stated that the claimant had been employed as a blockman or a territory man representing the company to dealers, that repeated warnings were given him regarding his conduct and that as this did not change his attitude, it was necessary to place him in their parts department where there was no necessity for him to travel. Later it was decided that it was necessary to let him go and he was given the opportunity to resign in order that the cause of separation need not be stated.

The claim for benefit was disallowed by the Insurance Officer and the claimant was disqualified for a period of six weeks on the grounds that he had voluntarily left his employment without just cause.

From this decision the claimant appealed to a Court of Referees which, by a majority decision, upheld the decision of the Insurance Officer.

The claimant appealed to the Umpire from the decision of the Court of Referees.

DECISION

The Umpire's decision was that the claim should be allowed and gave as his reasons:

From the submission and facts before me, it is apparent that for some time the conduct of the claimant had not been satisfactory to his employer. On several occasions, the matter of the claimant's relationship with the company was under consideration and finally the company demanded his resignation.

Two points are raised for consideration. The first is the nature of separation from employment. Whilst the claimant was not actually discharged from his employment, his separation can hardly be said to have been of a voluntary nature as his employers no longer wished to avail themselves of his services and demanded his resignation. Regarding the second point, the conduct of the claimant, the decision of the Court of Referees states that details have not been specifically stated. Misconduct cannot be assumed; it must be conclusively and specifically proven. In this instance, the basic rule of evidence has not been complied with.

CU-B. 120

(6 September 1946)

Held that a claimant unemployed for eleven months and desiring to complete a course of instruction in a new skill requiring further study of two weeks had without good cause refused to apply for a situation in suitable employment in other than her usual occupation.

The material facts of the case are as follows:

The claimant, a single girl, aged 30 years, was last employed at a rate of 50 cents an hour as a cutter and counter for a paper company from 1935 to June 8, 1945, when she voluntarily left her employment. She filed a claim for benefit six months later, which was allowed, and on July 9, 1946 she refused to apply for a situation in employment which, in view of the length of time during which she had been out of work, was considered suitable. Her reason for refusal was that in another two weeks' time she would have completed a stenographic course and she did not want any work except as a stenographer. The Insurance Officer disqualified the claimant for a period of six weeks on the grounds that she had refused to accept a situation in suitable employment.

From this decision the Claimant appealed to the Court of Referees on the grounds that

the position of which she was notified was not suitable. The Court of Referees, by a unanimous decision, reversed the decision of the Insurance Officer.

The Insurance Officer appealed to the Umpire on the grounds that the claimant refused to apply for a situation in suitable employment or, alternatively, that she had so restricted her sphere of employment as to render herself virtually not available for work.

DECISION

The Umpire's decision was that the claimant should be disqualified for a period of six weeks and gave as his reasons:

It is apparent that the claimant, when she was notified of employment as a cashier and waitress, was not in a position to accept this employment as, according to her own statement, she still had two weeks' further study before she could finish her course as a stenographer and she wanted to complete the course. Her claim to a position as a stenographer might have carried more weight had this been her usual occupation. For ten years she had worked as a cutter and counter for a paper company at a rate of pay of 50 cents an hour. The wages offered at the restaurant were almost equivalent to those which she formerly received. The claimant is attempting to re-establish herself in the labour market under a new set of conditions which did not prevail at the time she became separated from her last employment.

It must be taken into consideration that the claimant had been unemployed for a considerable length of time before filing her claim, had received benefit for 29 weeks and during the entire period had ample opportunity of obtaining whatever employment was considered suitable if it was available. The work of which she was notified was at the recognized rate of pay for such type of employment and, having in mind the length of time the claimant had been unemployed, the employment notified must be regarded as suitable in accordance with the proviso to Section 31 (b) (iii) of the Act.

Labour Law

Recent Regulations Under Dominion and Provincial Legislation

Dominion

IMPORTANT changes in the Old Age Pensions Act have been effected as a result of recent agreements between the Provinces and the Dominion. A new class of "excepted employment"—radio artists—has been set out in Unemployment Insurance Regulations.

Old Age Pensions Act

Agreements between the Government of Canada and the Provinces regarding the amount of pension payable and conditions governing payment were approved by Order in Council (P.C. 3644) of September 9, gazetted October 8. The agreements will be considered to have been in effect since May 1, 1947, except in Nova Scotia where the effective date is August 1. The same Order revokes certain wartime orders authorizing changes in the conditions governing, and the amount of, the pensions paid.

The agreements are a result of recent amendments to the Act (L.G., Sept. 1947, p. 1327). The maximum Dominion contribution to the cost of pensions is 75 per cent of \$30 a month instead of the earlier \$25 a month. Alberta, British Columbia, Nova Scotia, and Ontario

supplement the Dominion-Provincial pension by additional amounts. The Provinces agree to pay a maximum yearly pension of \$360 subject to reduction according to marital status, whether the pensioner is blind or sighted, other sources of income, etc. The Provinces may calculate the pension to be paid in any case where an applicant or his wife has transferred property in order to qualify for a larger pension than he would otherwise be entitled to receive. Also the Provinces are authorized to recover out of the estate of any deceased pensioner the sum of the payments made to him, provided that no claim may be instituted against an estate which does not exceed \$2,000.

Unemployment Insurance Act

The Unemployment Insurance Coverage Regulations, 1946, Part I were amended by Order in Council (P.C. 3844) of September 23, gazetted October 8, to include radio artists as being in an "excepted employment" in which they are not insured or otherwise covered by the Act, if they are employed not more than two hours and paid weekly, or employed a maximum of five hours and paid semi-monthly, or ten hours and paid monthly.

Provincial

Stationary engineers and bartenders are now covered by the British Columbia Hours of Work Act. Regulations governing the procedure for certifying a union have been issued under the Nova Scotia Trade Union Act, 1947. Quebec is providing for mine rescue stations for miners injured by gas or smoke.

Alberta Labour Act

The Holidays with Pay Order No. 6, gazetted September 30, 1947, providing holiday credits for workers employed by more than one employer in the construction industry, has been amended to include painting and interior decorating of the whole or any part of a building. It has been further amended to stipulate that a worker employed continuously by the same employer is entitled to a holiday-with-pay credit of two per cent of his earnings for

the first year and four per cent for each subsequent year. The previous order provided for a straight credit of four per cent for each working year.

B.C. Hours of Work Act

The occupation of stationary steam engineer, which includes every employee engaged in producing steam in a steam plant and possessing a certificate of competency, is to be added to the schedule of the Act, thus limiting hours of work to eight in a day and 44 in a week. This was done through Regulation 33, dated October 21, 1947, and gazetted October 23.

The occupations of bartender, waiter, and utility man in premises licensed to sell beer are added by Regulation 34 of September 16, gazetted October 9, to the list of occupations.

Nova Scotia Trade Union Act

Regulations governing the procedure of the Nova Scotia Labour Relations Board were issued on October 14, gazetted October 15.

An application for certification as a bargaining agent is to be sent to the employer and must be posted by the employer where it is most likely to come to the attention of the employees in the proposed bargaining unit. Within 14 days of receipt of the notice of the filing of the application, the employer, if he desires to contest the application, must file his statement with the Chief Executive Officer of the Board. It must contain a concise statement of the material facts upon which he intends to rely, and must specifically admit, deny or explain each of the statements made in the union application. Any person other than the employer concerned who believes he has an interest in the matter may submit a statement, within a specified time-limit, declaring the nature of his interest and the reason for his objection.

If an application for certification has been turned down, it is a general rule that no further application may be received from the same source until three months have elapsed after the rejection.

Any person alleging that a bargaining agent no longer represents a majority of the workers for whom it was certified may apply to the Board for revocation of the certification, submitting a statement setting forth the material facts of the case. Opportunity is to be afforded for a reply from the union, and further steps may follow.

Where either side fails to enter into negotiations as required by the Act, the Board, on receiving the complaint from the Minister, must forward a copy of it to the defaulter, requiring him to reply to it. The Board may then investigate the matter and make an order based on its findings.

Quebec Minimum Wage Act

Three new By-laws (B-1, B-1B, and B-1C), gazetted on October 4, fix the rate of assessments on employers subject to the Act. The latter two by-laws deal with assessments on employers concerned with timber-driving and other forest operations. These three By-laws replace one of November 27, 1940 (L.G. 1941, p. 31), and two of November 30, 1943 (L.G. 1944, p. 107).

The levy remains at one-tenth of one per cent. It has been steadily scaled down from one-fifth of one per cent at which it was first fixed in 1940. Except in timber-driving and

forest operations, the employers assessed are those whose annual payroll exceeds \$3,000.

The general by-law does not apply to municipal and school corporations, churches, charitable institutions and hospitals. Under it and the by-law regarding timber-driving, the levy is based on the payroll for the year January to December. For forest operations the assessment is made on the year May 1-April 30. In all cases, the amount of the actual payroll is the basis for calculation, not minimum wage rates. Amounts unpaid after the dates on which they are due bear interest at the rate of five per cent.

On or before the date of payment, the employer must submit to the Minimum Wage Commission a sworn declaration showing the total wages paid, the amount of deductions, the amount of the levy to be paid, if any, and other information required by the Commission.

Quebec Workmen's Compensation Act

Mine Rescue Stations

A new regulation (No. 17) approved by Order in Council 1692 of October 15, gazetted October 25, provides for mine rescue stations in certain districts. The stations are to be furnished with the most modern equipment for miners injured by gas or smoke. Subject to conditions determined under the Mining Act and regulations, the rescue stations will be established by the Minister of Mines, who is to be responsible for maintaining them and appointing the persons necessary for their operation. The Workmen's Compensation Commission will advance the necessary funds and be reimbursed by five equal annual assessments on the classes of employers concerned. The annual cost of maintenance is to be levied on the employers. The districts concerned are the Counties of Pontiac, Temiskaming, Rouyn-Noranda, Abitibi West and Abitibi East.

Quebec Industrial and Commercial Establishments Act

Workers in Compressed Air

The Regulations (O.C. 544) of February 22, 1935, for the protection of persons working in compressed air (L.G. 1935, p. 346), were amended on September 23 (O.C. 1564), gazetted October 4. Generally, maximum hours permitted under pressure have been reduced and minimum rest periods extended.

The old Regulations set out the maximum duration of work in a 24-hour period, the maximum length of continuous work in compressed air, and the minimum period of rest in open air.

These were established by the 1935 Regulations for pressures ranging from normal to 50 pounds, the maximum duration of work and of a continuous shift decreasing from eight and four hours, respectively, to $1\frac{1}{2}$ hours and $\frac{3}{4}$ of an hour, and the minimum rest intervals lengthening from one half hour to five hours, as the pressure rose from the low spread of from normal to 22 pounds to the highest spread of from 45 to 50 pounds. At these high pressures a minimum rest in the open air of five hours was required.

The new Regulations start with a spread of from normal pressure to 18 pounds when an eight-hour day and a maximum of four continuous hours may be worked. At a pressure of from 48 to 50 pounds, only one hour may be worked in a day in two half-hour periods

separated by a minimum rest period in the open air of six hours.

Saskatchewan Health Services Act

An amendment to previous Orders (L.G. June, 1946, pp. 833-34) under the Act has effected some changes in the classes of persons entitled to health services, chiefly to make eligible old age pensioners moving to Saskatchewan from other Provinces. These changes are intended to clarify the previous Order and to broaden the categories of persons covered. The new Order, dated October 7, gazetted October 18, became effective on October first of this year. Old age pensioners and recipients of Mothers' Allowances and their children or grandchildren under 16 years of age are the chief groups concerned.

Labour Law Administration in Quebec in 1945

Industrial Relations—Minimum Wages—Labour Inspection— Workmen's Compensation

THE critical importance of labour matters during the year ended March 31, 1946, is emphasized in the Annual Report of the Minister of Labour of the Province of Quebec. Although there were many factors making for industrial unrest in the year 1945-46, the termination of the war and the reconversion of industry from a war to a peace-basis with the accompanying inflationary tendencies, it is pointed out that relations between employers and employed in Quebec were somewhat better during the year than in Canada as a whole.

The Report is divided into four parts; the first deals with the administration of the statutes which affect relations between employers and employed; the second reports on the operation of the legislation for the safeguarding of persons and property; the third is concerned with such social welfare measures as the Employment Offices Act and laws providing old age pensions, mothers' allowances and workmen's compensation; the fourth Part gives a statement of Revenue and Expenditure.

Included, too, is the report of the Superior Council of Labour, an advisory body of 28 members representing employers and workers, economists and sociologists, with Government officers from the Department of Labour, Workmen's Compensation Commission, Minimum Wage Commission, and Department of Trade and Industry. Similarly constituted is the permanent Commission of the Council

with ten members. The Council had two meetings during the year and the Commission, five. Proposals for legislation were considered and recommendations made to the Minister of Labour.

Industrial Relations

In Part I are reviewed the year's operations under the Labour Relations Act, 1944, the Public Services Employees' Disputes Act, 1944, the Trade Disputes Act, enacted first in 1901, the Professional Syndicates Act of 1924, and the Collective Agreement Act of 1934. In this section, too, are the reports of the Minimum Wage Commission, the Apprenticeship Service, and the Fair Wage Officer.

COLLECTIVE BARGAINING

The Labour Relations Act, the Professional Syndicates Act and the Collective-Agreement Act have all to do with collective bargaining. The Labour Relations Act, much like Acts in other provinces, but with some important differences, safeguards freedom of association, requires collective bargaining, and places in abeyance the right to strike or lockout until after conciliation and investigation have been tried. The Professional Syndicates Act provides that an agreement between an employer and a union or group of employees which comes within the definition of a "professional syndicate" is enforceable at law if a copy is deposited with the Minister of Labour. The

Collective Agreement Act, unique in Canada, resembles legislation in many other countries in requiring non-parties to a collective agreement to observe the wages, hours, apprenticeship, family allowances, and holidays conditions which are laid down in the agreement which has been voluntarily entered into by a substantial proportion of the industry in which they are engaged and which has been declared so to apply by Order in Council.

Under these three statutes, the Deputy Minister of Labour estimates there are about 300,000 workpeople benefiting from some 800 collective agreements. These estimates take account of some overlapping in regard to agreements under the Professional Syndicates Act and the Labour Relations Act. During the year, 882 applications for the certification of bargaining agents were received by the Labour Relations Commission of which 620 were approved. As a result, 564 collective agreements were concluded covering 55,800 workers. The wage-earners covered by the 520 agreements deposited under the Professional Syndicates Act during the year numbered 51,600. Of these agreements, 427 affected 5,312 workers in "public services", including municipal and school services and charitable institutions. The 86 agreements in industry covered 34,054 employees. Under the Collective Agreement Act 93 agreements which have been extended by Orders in Council cover all the employers and workers in the industries concerned, each being restricted to the district covered by the agreement. These agreements protect more than 200,000 workers and apply to 19,900 employers. Most of them were in force when the Labour Relations Act 1944, went into effect.

In addition to these provincial statutes, the Dominion Wartime Labour Relations Regulations applied to "war industries" in Quebec during the fiscal year 1945-46. The Quebec Wartime Labour Relations Board received 14 applications for certification of bargaining agents during the year, 12 of which were granted. Eighteen agreements, affecting 4,052 work-people, were filed with the Board.

The Collective Agreement Act provides for the enforcement of an agreement by a joint committee of the parties with, at the Minister's discretion, representatives of non-parties. The committee's expenses in ensuring the observance of the agreement may be paid from an assessment of not more than one-half of one per cent of the employer's payroll and the same proportion of the worker's wages. Inspectors employed by these joint committees work under a Director-General, who is also the Director of the Conciliation and Arbitration Service. All complaints concerning the non-observance of the agreed condi-

tions, or concerning existing conditions, concerning the refusal of a committee to give a workman a certificate of qualification, or concerning the application of the agreement, are taken up by the inspection service. The by-laws of 18 joint committees were approved by Orders in Council during the year, amendments were made in by-laws by 23 Orders, and in one case the constitution of a joint committee was revoked. The right to levy assessments was granted by 67 Orders in Council and extended by 17.

The agreements which have been generalized to apply in all parts of the Province include those in the following industries: paper-boxes, corrugated boxes, men's hats, boots and shoes, fine and work-gloves, lithographing, building supplies, furniture, painting, women's dresses, tanneries, taverns, men's and women's clothing, and cotton and jute bags. The other agreements concern industries in particular cities or parts of the Province.

In 1945-46 seven new agreements were extended by Orders in Council, 11 were renewed, 66 amended and the duration of 21 extended. The seven new Orders in Council apply to the fire-department at Sherbrooke, municipal employees at Kenogami, wholesale establishments in Sherbrooke, retail stores in St. Hyacinthe, commercial establishments in Megantic and Farnham, woodworking at Ste. Agathe.

CONCILIATION AND ARBITRATION

The Conciliation and Arbitration Service is charged with administering the Trade Disputes Act, Labour Relations Act, and the Public Services Employees' Disputes Act and, during the year 1945-46, the Wartime Labour Relations Regulations and the Wartime Wages Control Order. The Service co-operates, too, with the Joint Committees enforcing the Collective Agreement Orders in Council.

The report sets out particulars of conciliation work under these statutes, of arbitration proceedings and the number of strikes and of special inquiries during the year. There were 138 cases in which conciliation officers intervened. These involved 266 private employers and 22,187 workpeople, as well as eight municipal, and 172 school corporations and their employees. In 83 of these disputes involving 211 employers, the issue was collective bargaining under the Labour Relations Act, 1944. Bargaining agencies had been certified in 119 of these cases but no agreement arrived at. In 20 of these disputes, the parties agreed to submit their differences to arbitration. Conciliation was successful in 83 cases. Other disputes involving wages were referred for settlement to the Regional War Labour Board. In addition to these submissions to voluntary

arbitration, there were 47 disputes referred to arbitration under the Public Services Employees Disputes Act under which awards are binding. The 67 arbitration boards concerned 940 employers and 18,314 workers, but 23 of these boards had been established during 1944-45. Of the 65 boards which reported in 1945-46, 35 gave a unanimous decision.

As regards strikes, the Report shows 43 affecting 16,732 workers, causing time-loss of 41,365 man-days or an average of 2½ days. In 1944-45, there were 46 strikes. In 12 of the 1945-46 disputes, federal authorities had jurisdiction under the Wartime Labour Relations Regulations. Of the 43 disputes causing a stoppage of work, five were settled in the worker's favour, 14 in the employer's, four by compromise and 18 were inconclusive. In view of the high degree of industrial activity, the Conciliation and Arbitration Service considers that these facts present a fairly encouraging picture.

In addition, the Report shows that the Service intervened to inquire into some 57 complaints, 43 of them arising from the dismissal of one or more employees and 5 others charging some other unfair labour practice on the part of an employer. In these cases, it is pointed out, the Conciliation officer is usually confronted with contradictory statements; such disputes are extremely difficult to settle, and reliance must be placed on the calibre of the officer and the confidence reposed in him by both parties.

APPRENTICESHIP

The Quebec Apprenticeship Act was passed on May 24, 1945. It provides for Apprenticeship Centres for one or more trades to be governed by Apprenticeship Commissions. Any municipality may be recognized by the Government as an Apprenticeship Centre if such recognition is applied for by an employer's association and one of employees or by a Joint Committee under the Collective Agreement Act. Ten or more persons may apply to be incorporated as an Apprenticeship Commission. They must set out their plans for developing apprenticeship schemes in the trades with which they are to be concerned. The Report states that much moral as well as financial support has been given to the Apprenticeship Commissions by the Joint Committees.

Fourteen Centres of Apprenticeship were established during the year: for the building trades in Montreal, Quebec, Chicoutimi, Sherbrooke and Hull; for shoe-making throughout the Province; for automobile-repair, printing, lithographing, watch-making, hairdressing, and barbering in Montreal; for hairdressing and barbering in Three Rivers, and for women's

dresses in Montreal. Five Commissions were set up and nine more were to be established.

The Montreal Building Trades Apprenticeship Commission had already organized courses in bricklaying, plastering, painting, carpentry, sheet-metal work, plumbing and heating, and electrical work. Up to March 31, 1946, 244 of the 285 apprentices of this Centre were war veterans.

In the shoe industry, evening courses were being given in different factories in the Province. In the Fall of 1946, day courses were to be given in a vocational school.

The Apprenticeship Commissions in motor-vehicle-repair work, printing and lithographing were making plans in co-operation with the Arts and Trades Schools and the School of Graphic Arts. For building trades in centres other than Montreal, work was not yet organized.

MINIMUM WAGES

The Minimum Wage Act, which applies to all employees in the Province except farm workers, domestic servants and workpeople governed by an Order in Council under the Collective Agreement Act, is administered by the Minimum Wage Commission reporting to the Minister of Labour. General Order 4 of 1942 applies throughout the Province to all persons within the scope of the Act except those subject to a special Order. This Order was amended to raise the rates of wages in July and September, 1946. Some 30 special Orders apply, to, *inter alia*, the silk and cotton textile industries, manufacture of matches, brick-making, wooden box-making, glass bottles, hosiery, charitable institutions and a few occupations or establishments in certain areas. One Order covers forest operations.

The Minimum Wage Act gives authority for assessing the cost of its administration against the employers' payrolls. Unlike the Collective Agreement Act, it does not authorize a levy on wages. It is under the authority of this Act that employers are required to provide holidays with pay.

During the fiscal year 1945-46, minimum-wage inspectors made 6,992 visits in the Quebec district and 4,623 in the Montreal district. Special investigation was made of 671 complaints in the Montreal district and 234 in the Quebec district. For the purpose of the Act, the Province is divided into these two districts. The Commission's inspectors co-operate with the Labour Relations Commission in carrying out the certifying of unions which wish to negotiate a collective agreement. In this connection, they made 762 enquiries in the Quebec district and 1,164 in the Montreal District. They also supervised the taking of numerous votes to determine the proper bargaining agent.

During the year, there were two prosecutions in the Quebec district for not paying wages in accordance with minimum wage orders, and ten in the Montreal district. Six hundred and thirty-three employers were required to pay to 2,428 employees an aggregate amount of \$35,559.57 in the Quebec district. In the Montreal district the amount paid was \$11,726.14.

FAIR WAGES ON PUBLIC WORKS

Finally, Part I of the Report contains the annual review of the Fair Wage Officer who is charged with ensuring the observance of the Québec Fair Wage Policy in relation to Government contracts for public works. Like the Dominion and most other Provinces, Quebec requires Government contractors to pay the rates and observe the hours of work which prevail in the district where the work is performed. A large proportion of the contracts for the year were for road and bridge construction or repair. Most contractors were reported to have submitted promptly a copy of their payrolls, and, where adjustments were needed, to have complied with orders to that effect. During the year, claims amounting to \$7,865 were adjudged.

Labour Inspection

Part II of the Report includes the reports on the regulation and inspection of industrial and commercial establishments and of public buildings, boilers and electrical works, and on the examination of plumbers and steamfitters.

As regards industrial and commercial establishments, the Report is concerned with the enforcement of the Industrial and Commercial Establishments Act, the general regulations under that Act and special regulations for foundries, shipyards, ice-cutting, handling explosives, and for the protection of workers in caissons and in compressed air.

The general regulations forbid the employment of women and persons under 18 in certain dangerous and unhealthy occupations, the employment of boys under 16 and girls under 18 in certain other occupations, and that of boys and girls under 18 on certain machines or on special jobs in certain kinds of factories, including biscuit-making, canneries, laundries, paint works and others. These regulations deal also with certain structural conditions, with lighting, ventilation, hoists, power transmission, woodworking machinery, emery wheels and grindstones, fire prevention, window cleaning, seats, facilities for changing clothing and for meals, safety clothing, first-aid and other matters. In addition, the In-

spection Service is charged with the scrutiny of plans for public buildings and for the inspection of such buildings, as well as enforcing the Orders in Council under the Act for the limitation of Hours. The latter Orders apply to the building trades throughout the Province and to beauty shops and shoe repairing on the Island of Montreal. During the fiscal year 1945-46, 98 permits were given for overtime beyond 48 hours in construction.

Collaboration of the Inspection Service with the Workmen's Compensation Commission facilitates the investigation of accidents; close relations with the Provincial Bureau of Revenue prevent public buildings being used unless they have been approved under the Public Buildings Act, and the Quebec Employment Offices provide machinery for granting the necessary work-permits to children between 14 and 16 years of age.

The Chief Inspector states that during the year there were 7,790 periodic inspections of industrial establishments, 4,500 visits as a result of accidents or of complaints concerning conditions, and 6,646 further visits to ensure that directions had been carried out. In addition, 549 regular visits were made to shops, 1,398 visits as a result of complaints and 1,499 to ensure compliance with orders. As regards public buildings, the regular visits numbered 7,762, complaint inspections, 977, and those for checking compliance with orders, 5,348. Thus, the inspectors made in all, 40,066 visits of one kind or another. Special investigations of factory conditions resulted from 6,865 accidents; complaints had to do with unsafe or unhealthy conditions, child labour, hours, and other matters. In shops, most of the 1,398 complaints (1,289) were concerned with child labour.

EMPLOYMENT OF CHILDREN

As regards child labour, since April, 1946, a work-permit has been required for every child under 16 years of age which gives the name of the prospective employer, the child's age and school standing. This permit has to be renewed at every change of job.

Before that date, however, children between 14 and 16 were required to have only certificates of age and school standing. The minimum age for employment in any industrial establishment, shop, hotel, restaurant, theatre or place of amusement, or as a messenger or in any trade or business is 14. The certificates are approved by a Provincial Employment Office which thus has some control over the placing of the children.

During 1945-46, 16,767 children between 14 and 16 were given certificates, of whom 9,882 were 14. Most of these children (11,484) were

employed during the months from May to August inclusive. In the Montreal district there were 13,458 given certificates. These figures show a drop of 25 per cent from the preceding year, when 22,917 children 14 and 15 years of age were given certificates.

HOURS OF WORK

For women and boys under 18, the Industrial and Commercial Establishments Act limits working hours in factories to 10 in a day and 55 in a week, and in shops in towns of over 10,000 to 60 in a week. In both places, the Inspector may permit overtime, for not more than six weeks at a time, up to 12 hours in a day and 65 in a week, the daily work-period to be confined between 6 a.m. and 9 p.m. However, the Act permits women and boys under 18 to work on a two-shift system, the shifts not to exceed eight hours each and the two to fall between 6 a.m. and 11 p.m.

Overtime permits to the number of 499 were given during the year for the employment of women and boys beyond the normal maximum hours. These related to 209 establishments employing 54,096 persons, of whom 12,742 were women, 2,434 boys and 3,047 girls under 18 years of age.

For two-shift working by women and juveniles, 75 permits were granted to 56 establishments employing 24,286 persons of whom 5,703 were women, 870 boys and 1,883 girls under 18.

Further, a Quebec Wartime Order in Council (1257) of March 15, 1940, under Sec. 3 of the Industrial and Commercial Establishments Act, authorized the Minister to exempt establishments carrying out war contracts from the hours limitations imposed by the Act, and to permit, under prescribed conditions, night work by boys over 16 and girls of 18 or more. This authority ceased on April 1, 1946. The Minister's Report shows that during 1945-46 permits were given for not more than six months at a time to 91 establishments where 101,608 persons were employed, of whom 8,242 were women, 2,239 were girls under 18 and 2,895 boys under 18. Most of the permits were two-shifts but some authorized three shifts.

Provincial Employment Service

The Quebec Department operates employment offices in Montreal, Quebec City, and in 12 other towns. Two of these were opened in 1945-46, one in Joliette and the other in Rouyn.

Placings during the year numbered 100,891, of which 49,427 were of men, 39,014 of women and 12,450 boys and girls under 16. Forest operations claimed 22,931 of those placed, and casual employment, including domestic workers, 32,628. To construction jobs 16,980 were assigned, and 13,753 to factory employment.

A special Section for juvenile workers was organized during the year and has been operating since April, 1945. As stated above in connection with the employment of children, the granting of work-permits to those between 14 and 15 is now entrusted to this Section of the Quebec Employment Service. These permits are valid only in relation to the employers named on them and to the jobs specified. This arrangement facilitates the safeguarding of health and some vocational guidance.

Workmen's Compensation

In its report to the Minister of Labour, the Workmen's Compensation Commission stated that the number of accidents reported in 1945 was 82,724, a drop of 1,584 from 1944. Much credit for this reduction is given to the Industrial Accident Prevention Associations. No information is given as to the industries in which the accidents occurred, nor concerning their nature or cause.

Provisionally, the total amount paid for compensation during 1945 is given as \$5,156,963, of which \$1,010,305 was for medical aid, \$2,217,986 for temporary incapacity, \$1,055,625 for permanent incapacity and \$219,803 to the Pension Fund; \$173,234 was paid to safety associations.

A notable development in 1945 was the decision to set up a clinic in Montreal to aid in restoring injured workers to health and jobs.

Labour Legislation in India

Conference on Future Policy

THE Eighth Labour Conference of India which met in April had before it certain legislative proposals of the Government of India including a five-year program of legislation. Represented at the Conference were the Central and Provincial Governments, six

representatives of the Indian States and employers' and workers' representatives.

The Conference system has become since 1940 an important part of the machinery of the Government with regard to labour. At the 1942 conference, it was urged that joint

meetings of the Government, employers' and workers' representatives be held periodically. Later in the year this tripartite Conference was inaugurated along the lines of the International Labour Organization with equality of representation as between Governments and non-governmental organizations. Of the employers' representatives (eleven in all), eight are nominated by the Government in agreement with the two main employers' organizations, and the remaining three are reserved to represent other classes of employers. In the same way eight of the workers' representatives are nominated by the Government in agreement with the two principal workers' organizations, the All-India Trade Union Congress and the Indian Federation of Labour, while the other three represent other groups of workers. The Government representatives are chosen on a territorial basis.

The Conference meets at least once a year while a Standing Committee similarly organized meets at least twice annually. The organization is advisory in nature, and the Government submits proposed legislation to it. The Conference system is considered helpful in expediting the work of the Government by making unnecessary the lengthy consultations at different stages which used to take place between the Central and Provincial Governments and between the provincial authorities and representatives of employers and workers.

It may be well to look at the constitutional arrangement in India as it has been with respect to labour up to this time.

The Government of India Act, 1935, gave concurrent powers to the Provincial and Central Legislatures in relation to labour. Certain fields were specifically assigned to the Provinces, but the Act declares that the Federal Legislature may legislate in matters enumerated in the Provincial list unless a proposed law is to apply only to one province or a part of a province. In practice, Central legislation is not put through without consulting the provincial authorities as noted above. As regards the Indian States, the 1935 Constitution provided that they might have their own representatives in the Central Legislature.

On this question of jurisdiction between the Central Government and the Provinces, the Royal Commission on Labour in India said in 1931:—

Acts whose essence is the creation of civil privileges or liabilities, such as the Workmen's Compensation Act and the Trade Unions Act, do not demand any intimate relation between the authority responsible for the law and the authority responsible

for the administration. Still less is such relation necessary in the case of Acts which merely confer the power to invoke machinery, such as the present Trade Disputes Act. On the other hand, it is vital that the authority passing the law should have the assurance that they will be made universally effective.

The Central Department of Labour is responsible for administration, in relation to federal railways, of the Payment of Wages Act, Trade Disputes Act, hours of work laws for workers not covered by the Factories Act, the regulation of the employment of children, the regulation of employment and safety in mines, and other industries, and for the settlement of disputes in government industries.

As regards concurrent powers, Central Legislature is responsible for factories, boiler inspection, welfare and conditions of labour, workmen's compensation, health insurance, unemployment insurance, trade unions, industrial disputes and other matters.

The Government of India in order to promote uniformity has passed legislation in regard to most of these matters but the administration of the various Acts connected with factories, workmen's compensation, trade unions, payment of wages, the pledging of child labour, etc., is entrusted to the Provinces which bear the cost of administration. The Constitution does not permit the Central Government to incur any expenditure in the administration of Provincial subjects. Some measure of control may be exercised by the Governor-General in Council over the administration of Central legislation through his general statutory authority of superintendence and direction and through the control reserved to him by most of these statutes. However, the practice is to leave the Provinces as free as possible to administer these all-India Acts.

The specific proposals placed before the 1947 Labour Conference included plans for achieving uniform conditions of service, regulation of employment on the docks, eradication of forced labour, recommendations to the Provincial Governments to set up Welfare Trust Funds and a Workmen's Health Insurance Scheme. The latter plan will be applicable to factory workers and will provide medical treatment and monetary relief during sickness, maternity benefits, medical treatment during disablement, etc. Bombay Province set the example in establishing welfare centres for workers. Although some companies did have welfare officers to provide services, most people were not provided for. Recreation facilities child welfare, adult education and medical services have been made available throughout many schemes. In addition the Government plans revision of

Employment, Hours and Earnings

Introduction

EMPLOYMENT in Canada had passed the five million mark by mid-August and a further rise of about 100,000 was expected by the beginning of October. Unemployment, on the other hand, had fallen to 73,000 at the August date or 1.4 per cent of the total labour force. The current high level of employment was expected to continue at least until early in 1948 in all major fields with the exception of the summer-active industries.

Labour was scarce during September with agriculture, food processing, trade and transportation making heavy demands on the existing pool of labour. Also, demand for logging workers was increasing in preparation for the winter cut. The labour force was temporarily augmented by students, married women and retired workers but these workers were employed mainly in seasonal industries and were expected to withdraw shortly as activity slackened.

Immigration also provided an immediate source of labour. Many Dutch immigrants had settled on Ontario farms; British immigrants to Ontario were taking jobs chiefly in the cities, although some were employed on farms and in logging camps. The displaced persons from Europe who had entered logging camps were learning the work rapidly and were soon expected to make valuable contributions to pulp wood production.

The turning point in seasonal labour demand, as indicated by the statistics available at the National Employment Service, occurred around the middle of September. At that date a surplus of 33,000 jobs existed. Since that time, however, demand had gradually slackened while at the same time the release of seasonal workers increased the available supply of labour. By October 30, unplaced applicants totalling 96,000 exceeded vacancies on file by 4,000. Many industries had been operating below capacity because workers were unobtainable, and it was hoped that this would offset somewhat the normal seasonal downtrend during the coming winter months. Claims for unemployment insurance were slightly fewer at the end of September than one month earlier. At the September date 36,700 persons signed the unemployment insurance register as against 37,350 one month before.

Employment in firms with 15 or more employees, as reported by the Dominion Bureau of Statistics, continued to gain during August but at a much slower rate than in June and July. Expansion was held back mainly by the scarcity of suitable workers. Increases in employment during August were confined to manufacturing, construction and maintenance, and trade. The index of employment (June 1, 1941=100) rose from 126.1 to 126.3 during August, bringing recorded employment in this series to 1,989,000 at the beginning of September.

Average hourly earnings in manufacturing continued to gain during August. Price decontrol, however, had brought about sharp increases in the cost-of-living and as a result real wages (earnings in relation to the cost-of-living) continued to drop. Hourly earnings of manufacturing employees rated on an hourly basis totalled 82.2 cents as against 81.3 and 70.6 cents one month and one year before respectively. Average hours worked remained relatively constant over the year, the work-week totalling 42.3 during the last week in August in contrast to 42.7 in the previous year and 42.4 in the July period.

In the Maritime region the employment situation improved further during September, even though the seasonal peak had already been passed in all other regions. Grain harvesting was over, but the potato and apple crops were in the process of being harvested. In the heavy industries, material shortages were easing. Work had begun in the New Glasgow area on a box car order which was expected to employ 1,200 men for a year; the Sydney steel plant was working at capacity. Coal output was steadily increasing, except in the Minto area where coal car shortages interrupted production temporarily. In the Cape Breton area, miners had voted to accept a new schedule of rates for various mechanized operations when the new system of mining will be installed; thus the new system could go into effect as soon as the machinery arrives. Pulpwood cutting had been extensive and demand for 1,000 woodsmen existed. Construction activity was speeding up as the supply situation improved; skilled tradesmen were in demand everywhere, except in the Saint John area where a carpenters' strike had tied up building activity.

Estimates are based on sample Labour Force Survey of the Dominion Bureau of Statistics. All figures represent persons 14 years of age and over.

² Statistics are based on the eight leading industries. Data are compiled from reports of firms with 15 or more employees.³ Weekly average for month in all industries reporting to National Employment Service.⁴ Average hourly earnings and man-hours apply to manufacturing only.⁵ During the month.

(*) For more recent figures, see below under Operations of the National Employment Service.

Reports from the Quebec region indicated that general employment remained at its high level and labour demand was still placing very heavy pressure on labour supply. Shifts from the seasonal summer industries were expected shortly to relieve the strain, however, although logging would probably absorb many of the men released. Labour unrest due to the rising cost of living was noted. Many new manufacturing plants, producing electrical equipment, commercial alcohol, and other commodities were either beginning operations or about to be established. Fall harvesting was over and the yield being well below normal, many farmers were turning to bushwork; the logging industry added about 10,000 men to the pay-rolls during September. Experienced miners were unobtainable, and high labour turnover generally interrupted the training of mine beginners; as a result, operators were strongly supporting immigration plans. Construction projects, though acutely short of skilled workers, were forging ahead in order to finish as much work as possible before winter came.

In the Ontario region, seasonal influences intensified the already heavy demand for workers. The great competition for workers had caused much labour turnover; the usual migration from outdoor to indoor work at this time of year, however, would ease the situation somewhat. Small industrial centres were in greatest need of factory labour since workers tended to move to the larger cities.

Many British and Dutch immigrants had been placed on farms in the region. Poor feed crops may affect livestock production this winter; the recent meat packing strike seriously delayed cattle marketings. The prospects of attracting sufficient labour for the logging industry were hopeful due to immigration and an increased influx of workers from Quebec. Base metal mining employment was expanding as a result of intensive recruiting campaigns in all eastern regions, but the gold mining labour situation had become so acute that fear of ghost towns was growing in the north. Skilled construction tradesmen were still very scarce in the face of great demand throughout the whole region.

In the Prairie region, the pressure of farm labour demand had begun to ease and the next problem was to recruit sufficient workers for winter pulpwood cutting. The mass movements of labour necessary to handle the harvest needs of the three Prairie provinces had been successfully completed; only the sugar beet crop remained to be harvested. Pulpwood operators estimated that they would need about 8,000 men in addition to the 2,200 displaced persons they were employing in their camps. The box car shortage was again hindering the coal mining industry, with some temporary shutdowns having occurred recently. The base metal industry reported a drop in labour turnover; the housing project at Steep Rock Iron Mines was progres-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

sing well. Gold mines were recruiting workers in the Maritimes. Among manufacturing industries, sawmills reported capacity operations but heavy labour turnover; meatpacking plants were closed throughout the nation-wide strike, but settlement had since been reached; sash and door factories were still hampered by glass shortages. Construction tradesmen were in heavy demand as the summer building pace continued; carpenters, bricklayers, electricians, plasterers, and painters were needed most urgently.

In the Pacific region employment was starting to level off as seasonal activity slackened. Breakdowns in labour-management negotiations closed many plants in the meatpacking, metal, and furniture manufacturing industries, and about 1,500 workers became temporarily unemployed. The meatpacking strike ended

just as the B.C. Electric strike began, disrupting urban transportation; negotiations were under way in several other industries, which somewhat obscured the employment outlook. The logging industry recently imported three or four hundred men from the Maritimes which relieved the labour scarcity greatly, although a shortage of key personnel still existed. Labour turnover in sawmills and pulp and paper plants was decreasing; participation in the pension schemes offered by most large companies had been one important reason for the improvement. Base metal and gold mines had been recruiting workers from the Prairies. Construction workers were in great demand, chiefly for out-of-town jobs; many projects having reached the finishing stage, there were heavy orders for skilled carpenters.

Employment and Payrolls at the Beginning of September, 1947

THE trend of employment as reported by the larger establishments in the major industrial divisions was favourable at the beginning of September, when the indicated advance was rather less-than-average in the experience of earlier years of the record. Data were received by the Dominion Bureau of Statistics from 18,072 employers whose working forces included 1,989,302 men and women, as compared with 1,985,944 at August 1. This increase of 0.2 per cent was smaller than in any preceding survey since that for the first of May. It was also less than the gain recorded at September 1, 1946, when the

resumption of operations in certain industries in which the employees had been on strike had been an important factor contributing to the unusually marked expansion then indicated.

Based on the 1926 average as 100, the index of employment was 192.9, as compared with 192.6 at August 1, and 175.5 at September 1, 1946. The latest figure is the highest in the record, slightly exceeding the previous maximum of 190.5 at December 1, 1943.

A brief review of the situation indicated at the beginning of September shows an upward movement in manufacturing, construc-

¹ This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

² Mainly hotels and restaurants and laundry and dry-cleaning plants.

tion and maintenance and trade, while curtailment of operations was indicated in logging, mining, communications, transportation and laundries and dry-cleaning establishments. In several of these industries, the contractions were at variance with the usual seasonal trend at September 1 in the experience of preceding years; employment in the various divisions nevertheless continued at a high level, being in many cases in greater volume than in any preceding September.

Within the manufacturing division, the general changes as compared with August 1 were also rather slight. The most noteworthy gains were in the food, lumber, electrical apparatus and iron and steel groups. There were reductions in a number of industries, the most important losses being reported in clay, glass and stone plants. Activity in manufacturing generally was greater than at September 1 in either 1946 or 1945. Declines in the industries which had been mainly engaged on war work pro-

duced a falling-off in the group as a whole as compared with the later years of the war, but many other branches of manufacturing reported a higher level of employment at the date under review than at the beginning of any preceding September.

Payrolls

Accompanying the moderate improvement generally indicated in industrial employment at the beginning of September was a relatively larger increase in the amount of the salary- and-wage payments of the co-operating firms. Their weekly aggregate was \$73,084,471, as compared with \$72,552,687 at the first of August. There was thus an increase of 0.7 per cent in this comparison, while that in employment amounted to 0.2 per cent. The average earnings per employee stood at \$36.74 at September 1, as compared with \$36.53 at the beginning of August, and \$32.72 at September 1, 1946. The latest per capita figure is the highest in the record of 6½ years.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY PROVINCES AND ECONOMIC AREAS, (AVERAGE CALENDAR YEAR 1926=100).

(The latest figures are subject to revision.)

	CANADA	Maritime Provinces	Prince Edward Island	Nova Scotia	New Brunswick	Quebec	Ontario	Prairie Provinces	Manitoba	Saskatchewan	Alberta	British Columbia

¹ The relative weight shows the proportion of employees reported in the indicated industry, to the total numbers of employees reported in Canada by the firms making returns at the date under review.

As compared with September 1, 1946, there was an increase of 9.9 per cent in the general index of employment in the eight leading industries, of 23.6 per cent in the index of aggregate payrolls, and 12.3 per cent in the per capita weekly earnings of the persons employed by the larger industrial establishments.

If the statistics for the finance group are included with those just given for the eight leading industries, the survey shows that the number of persons in recorded employment at September 1 was 2,071,753, as compared with 2,066,562 at August 1. The latest aggregate of weekly payrolls disbursed by the reporting establishments was \$76,162,986, considerably exceeding their total of \$75,577,546 paid at August 1. The average earnings in the nine leading industries were \$36.76, as compared with \$36.57 at August 1, 1947, and \$32.81 at September 1, 1946.

Table II summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas and the 20 leading industrial cities, and gives comparisons as at August 1, 1947, and September 1, 1946. Table I gives a monthly record for the eight leading industries as a whole, and for manufacturing, showing the movements of employment and payrolls in the period since 1943. The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100. To facilitate comparisons of the trends of employment and payrolls, the indexes of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100.

Table I shows that in the period for which current data on payrolls are available, the index number of employment in the eight leading industrial groups has increased by 26.3 per cent, that of aggregate weekly salaries and wages has risen by 79.9 per cent, and the per capita earnings have advanced by 45.5 per cent. Including finance, the indexes of employment, payrolls and average weekly earnings from June 1, 1941, to September 1, 1947, mounted by 26.7 per cent, 79.7 per cent and 44.2 per cent, respectively. These advances are the highest in the record. The explanation given in preceding bulletins for the relatively greater rise in the salaries and wages than in the numbers employed may again be stated:—(1) the payment of higher wage-rates in large numbers of industries and establishments, in addition to the general increase resulting from the mandatory payment of cost-of-living allowances to the majority of workers during the war; the rates

at which these bonuses were paid were increased on more than one occasion before they were absorbed in the basic wage-rates as from February 15, 1944; (2) the progressive up-grading of employees as they gained experience in their work, and (3) reductions in the numbers and proportions of women workers.

• In manufacturing the index of employment during the period for which monthly statistics of payrolls are available has risen by 21 per cent; the salaries and wages have mounted by 73.1 per cent, and the weekly earnings per person in recorded employment have increased by 45.3 per cent. In the indicated non-manufacturing industries taken as a unit, the index of employment at September 1 had risen by 33.4 per cent since the commencement of the record of payrolls, while the index of aggregate salaries and wages showed a gain of 88.6 per cent.

With regard to the considerable variations in the average earnings of workers in the different industrial classes, it must again be pointed out that the sex distribution of such persons is an important factor, frequently associated with differences in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in the industry is of course a factor of outstanding importance.

Sex Distribution of Persons in Recorded Employment

Slightly increased employment was indicated for workers of both sexes at September 1 as compared with a month earlier, according to the information furnished by the larger firms in the eight leading industries; of the total indicated staff of 1,989,302 persons, 1,576,071 were men and 413,231 were women. The advance among workers of the former sex as compared with August 1, amounted to 0.1 per cent, and that among women, to 0.5 per cent; the increase among the latter was to a considerable extent seasonal in character, taking place largely in the food-processing industries. In each 1,000 persons in recorded employment at the beginning of September, 792 were men and 208 were women. At August 1, 1947, the distribution was 793 men and 207 women per 1,000 employees, while at

September 1, 1946, there were 780 men and 220 women per 1,000 persons in recorded employment.

Firms in the nine leading industries reported an increase of 5,191 workers as compared with August 1; of these, 1,201 were men, and 3,990 were women. The gain among the former amounted to 0.1 per cent, and that among the latter workers, to 0.9 per cent. The proportions in this group of industries were 782 men and 218 women per 1,000; these ratios were much the same as those of 783 men and 217 women per 1,000 employees at August 1, but differed considerably from the proportions of 770 men and 230 women per 1,000 workers indicated by the co-operating firms at September 1, 1946. The ratios of women per 1,000 persons in recorded employment had reached its highest point at October 1, 1944, when the proportion reported in the eight industries was 261, and in the nine major industrial divisions, 271 per 1,000.

Increases in the number of men and of women on the payrolls of the larger establishments as compared with a month earlier were indicated in manufacturing, construction, trade and finance. On the other hand, there were losses in employment for male workers in logging, mining, communications, transportation and laundries and dry-cleaning establishments. Among women, activity also declined in communications and in laundries and dry-cleaning plants.

As compared with September 1, 1946, the number of men employed by leading employers in the eight main industries rose by approximately 11.7 per cent, while the increase in the nine major groups amounted to some 11.4 per cent. In the same comparison, the number of women employed by the larger establishments gained by about 3.8 per cent in the case of the eight leading industrial divisions, and by approximately 4.1 per cent in the case of the nine main industries.

Operations of the National Employment Service

THE pressure of seasonal demands was reflected in a sharply increased placement rate during September. The scarcity of workers was the main factor limiting placement during the summer months; this was partially overcome in September by the temporary absorption of married women and retired workers. Immigration also offered an important source of labour. Group movements from displaced persons camps provided help for the logging industry and the service fields, while immigration from the United Kingdom eased the shortage of executive and professional personnel.

One out of every two applicants registered with the National Employment Service was

referred to a specific job during September. The stepped-up referral rate resulted in a further decline in the number of unplaced workers. Those remaining on file were reduced to the record low of 84,000 at mid-September. Since that time the release of seasonal workers had led to a gradual increase, the number unplaced totalling 96,000 at October 30.

At the peak of labour demand, September 11, unfilled vacancies exceeded unplaced applicants by 33,000. Since that date, the surplus of jobs had been constantly reduced, falling to 22,000 at the end of September and developing into a deficit of 3,000 by the end of October.

Agriculture

No serious shortage of farm labour developed during the peak of fall activity. Demand which could not be met locally was eased by an extensive program of transfers undertaken by the National Employment Service. Approximately 2,200 Eastern workers were

transferred to the Prairie harvest fields during August and September. In the Maritime region, surplus workers in urban centres provided seasonal labour for agriculture; 1,500 persons were brought into the Annapolis Valley; 800 persons were recruited for potato

picking in Prince Edward Island and the same number were dispatched to potato fields in New Brunswick.

In addition to transfers within Canada, there was a substantial movement of workers to the United States. Approximately 6,900 were recruited in Quebec and New Brunswick for harvesting operations in the New England states. In the mid-west sections, 700 Manitoba workers were temporarily transferred to North Dakota and approximately 200 to the Montana sugar beet fields.

Non-agricultural Industry

Vacancies Notified—The demand for workers was strong during September since the high point in employment is usually reached around the beginning of October. The intensity of demand developed largely in the seasonally active agriculture, construction, and transportation industries; pressure was also added by a heavy recruiting program in logging. Employment in trade was stimulated by the opening of schools which created a sizable demand for temporary help. In the service industry, the influx of orders for immigrant help strengthened the already heavy demand for this type of worker.

Considerable spoilage among field crops lessened labour needs in food processing. As a

The pressure of seasonal labour demand, especially in the southern districts of Ontario, was somewhat lessened by inclement weather and early frosts.

Placements into agriculture reached their yearly high during September when 1,480 were effected per week as against 1,186 in the August weekly period. At the end of September, 2,852 vacancies (including those reported in fishing and trapping) remained unfilled.

result, the severe labour shortage which appeared imminent did not materialize.

By endeavouring to start logging operations earlier in the season than usual, woods employers placed a considerable strain on manpower resources during September. The overall outlook for logging employment in the 1947-48 season, however, appeared to be satisfactory. Many farmers in the poor-crop areas were expected to enter woods employment in order to supplement their reduced farm income. In addition, immigration was greatly increasing the work force. At the end of October, 3,000 of the proposed 4,500 displaced persons to be brought over for woods work had arrived in Canada.

The number of vacancies reported to the National Employment Service continued to increase during September but at a much slower rate than was evident during August. The September level was sustained largely by a heavy demand for loggers which offset the decline in manufacturing requirements. Average weekly vacancies in non-agricultural industry totalled 32,512 during September as against 31,794 one month before.

The number of jobs remaining on file (including agriculture) reached their peak at mid-September when 117,000 were reported. Since that date unfilled vacancies had steadily declined, falling to 110,000 at the end of September and 93,000 at October 30.

Applicants Registering—Accelerated seasonal activity drew additional workers into the labour force during September. Married women entered the labour market to aid in agriculture and in food processing plants. At the same time, part-time employment gave opportunities to students and retired persons. As seasonal activity slackened over the next few months, these workers would again appear in the labour market. However, their release was not expected to create an unemployment problem since many of the seasonal workers were not interested in obtaining permanent work.

The shifting of workers from summer to winter employment also increased registrations for work. Temporary workers in tourist resorts were returning to winter employment

in hotels, restaurants, and laundries. At the same time, logging employment was beginning to draw workers from construction and agriculture.

Immigration provided a steady inflow of workers. A total of 5,000 immigrants arrived in Canada during July, and the rate of entry was stepped up considerably during August and September. The group movement of displaced persons alone had brought in 3,421 persons by the end of October. The immigration under the auspices of Premier Drew of Ontario eased the labour shortage situation in urban centres while immigration under private sponsorship provided various types of key men for industry.

Unemployment, as reported by the Dominion Bureau of Statistics, had fallen to 73,000, or 1.4 per cent of the total labour force, at the mid-August date. It was generally felt that this represented the minimum to which unemployment could be reduced, since the figure included the physically handicapped, the elderly workers, the partially-qualified, and those temporarily out of work while changing jobs.

Approximately 31,000 persons registered for work during each week in September, indicating an increase of 18 per cent over average weekly registrations for August. Workers were quickly absorbed into employment during the early part of September, with the number unplaced falling to 84,000 at mid-September. As labour needs tapered off, how-

ever, the number unplaced began to accumulate. By the end of September, the number on file had risen to 87,000 and by October 30 totalled 96,000.

Referrals—The urgency of seasonal demand greatly speeded up referral activity during September. Openings, being largely in the unskilled field, were easily matched to available labour which had been narrowed down, for the most part, to that class of worker. Non-agricultural referrals rose by 11 per cent during September to average 24,881 per week. All main industry groups shared in the upswing, the most pronounced increases occurring in logging, followed by substantial rises in trade and transportation.

Referral activity, in relation to the supply of workers, indicated a substantial improvement over that reported in August. Whereas in August 44 per cent of available applicants (those on file at the beginning together with those registered during the period) were referred to vacancies, by September the percentage had risen to 52 per cent. The referral rate also indicated a marked increase in relation to vacancies available. During September, 46 per cent of available vacancies received referrals as against 42 per cent in August.

Placements—The entry of many "non-workers", i.e., married women, retired workers, etc., into the labour market during September stimulated placement activity considerably. Placements jumped in all main industry classifications with the exception of mining and construction. Non-agricultural placements averaged 15,198 per week, an eight per cent increase over the August level.

The current level fell short of that reported during September, 1946, however, when placements totalled 16,591 per week.

The flow of workers to the woods was well below the comparative level in 1946, with 347 entering each week as against 681 one year before. As agricultural activity subsided, however, the rate of entry was expected to increase rapidly. Food processing plants received approximately 1,000 workers per week; by

the end of the month demand had largely been satisfied. Inactivity in meat plants due to labour disputes prevented the normal influx of seasonal workers at this time of year; the recent settlement of the strike, however, should increase recruiting greatly during the early winter months.

The start of heavy grain shipments increased labour needs in the transportation industry. Placements rose by 16 per cent during September to average 849 per week.

The employment situation for women continued to be one of severe labour shortages. The acute scarcity of women power in the service industry was easing somewhat due to immigration; at the end of October, 400 displaced persons had arrived to take up employment in service establishments. In the more specialized fields, women for nursing, teaching and secretarial work were in constant demand while few suitable applicants were available.

The movement of Nova Scotia workers to Ontario industry slowed up considerably during September and October since the seasonally-active agricultural industries in the Maritimes were employing a large number of workers. By November 1, the number transferred under this program totalled 2,585 (2,299 men and 286 women).

The following table gives the placements effected by employment offices, each year, from January 1937, to date:—

Year	Placements		
	Regular	Casual	Totals
1937.....	275,300	114,236	389,536
1938.....	256,134	126,161	382,295
1939.....	242,962	141,920	384,882
1940.....	320,090	155,016	475,106

1947 (39 weeks).....	520,736	74,143	594,879

Special Placements

The number of physically impaired workers seeking employment had fallen to 3,520 by the middle of September, as against 6,819 one year before. Opportunities for the physically handicapped have been greatly broadened owing partly to the prevailing scarcity of workers. Although many employers had accepted these workers only on a temporary basis, the favourable results obtained from their employ have led to a considerable number being given permanent jobs.

Placement of handicapped persons rose slightly during the period August 15 to September 13, totalling 1,202 in comparison to 1,078 in the previous period. Officers from the special placement section of the Employment Service, designed to deal with youth applicants, reported many youths were unwilling to accept jobs with low starting wages because of the high cost of living. Labour turnover of youthful workers was also a problem, especially in the labour shortage areas.

Executive and Professional Offices

Placements effected in the Executive and Professional field during September surpassed all records since the beginning of 1946. The current rise reflected the absorption of immigrants from the United Kingdom, the great proportion of whom have settled in Ontario and British Columbia. Seasonal influences also tended to stimulate placements during September. The re-opening of schools increased the hiring of teachers and instructors, while the demand for accountants was growing as the year-end closing of books approached.

Placements averaged 75 per week during September as against 51 and 44 one month

and one year before respectively. The accelerated placement rate led to a considerable reduction in the number of vacancies remaining on file. At the end of September 1,569 positions continued unfilled in contrast to 1,700 one month before.

The number reporting for work at Executive and Professional offices increased markedly during September, weekly registrations jumping from 190 to 303. Reflecting this, unplaced applicants rose to 2,197 at October 2, an increase of 198 over the number on file five weeks before.

Veterans

Applications.—The number of veterans entering employment offices increased considerably during September. The rise took place largely in the older age groups, veterans of World War I as well as dual service discharges. This problem of discrimination against the older worker has been dealt with in some detail in the September issue of the *LABOUR GAZETTE*.

An average of 6,361 persons registered each week in September, in comparison with 6,057 during the August period.

Placements.—Despite the increased registration of job-seekers, placements declined slightly during September. In part this reflected the greater number of ex-service personnel getting jobs "on their own" rather than through the employment offices. Placements of ex-servicemen averaged 3,417 per week as against 3,536 in August.

The selective placement of physically handicapped veterans by the National Employment Service has been an important contribution to the successful rehabilitation of ex-service personnel. During the period August 15 to September 13, 579 veterans received jobs, of whom 179 were placed by the Casualty Rehabilitation Officer of the Department of Veterans Affairs.

Unplaced Applicants.—The high level of seasonal activity resulted in a further scaling down in the number of unplaced ex-servicemen. At September 25, the number of unplaced veterans stood at 21,548 representing a drop of 874 and 24,599 from that reported one month and one year before respectively.

The number of applications registered for more than two weeks continued to fall off; at September 25, the number registered totalled 13,773, or 64 per cent of the total unplaced.

Regional Analysis

The following regional analysis is based on reports received from National Employment Service offices throughout the country. The report covers the month of September, 1947.

Maritime Region

The harvesting of potato and apple crops was underway, a satisfactory labour supply having been obtained through transferring workers within the region. There was marked improvement in activity at coal mines and metal working plants.

Agriculture.—An average grain crop had been harvested in Nova Scotia and New Brunswick while Prince Edward Island reported an excellent year for all grains.

Potato picking in New Brunswick had reached its peak and there were indications that the yield would surpass that of last year. Five hundred men had been moved into the potato fields from other parts of the region and still more help was needed. However, it was thought that the needs would be met by pickers being released in areas where work had been completed. Prince Edward Island potato harvest was getting underway, the peak expected about the second week in October. Plans had been made to bring in a train load of workers from Cape Breton area to augment the existing supply of labour. About 500 workers were dispatched for harvest work in the state of Maine.

Up until the end of September, all demands for fruit pickers in the Annapolis Valley had been met and it was expected that future requirements could be supplied from within the province. However, a shortage of warehouse workers may develop later.

Logging.—Total Maritime lumber cut for 1946-47 was estimated at 800,000,000 board feet, about 40 per cent going to domestic markets, 30 per cent to the United Kingdom and the balance to the United States and other countries.

EMPLOYMENT TRENDS IN CANADIAN INDUSTRIES SEASONALLY ADJUSTED FROM 1939 TO 1947

(AVERAGE - 1939 = 100)

Pulp operations had also been extensive this year. Standing orders for over 1,000 woodsmen have been on file since early summer.

Mining.—As operations gained momentum output was increased. However, the temporary shortage of coal cars and experienced miners had to a degree limited production.

A new hard rock tunnelling project, expected to prolong the life of No. 18 Colliery by approximately 25 years, had been decided upon by the Dominion Coal Co.; work on the project was to start as soon as the machinery arrived. This will give employment to about 50 additional men. The change from the present system to mechanized mining was further advanced by the acceptance, by a referendum vote of the miners, of a new schedule of rates covering various operations.

The continuing dry weather during the last two months had been a great asset to the peat industry and a heavy cut had resulted. By the end of the month operations were mostly confined to drying, storing and shipping.

The gypsum plant was working at capacity with a good supply of labour and materials available.

Manufacturing.—Material shortages in heavy industry which had been bottlenecks in the past, seemed to be easing. Labour demands, except for a few highly skilled workers, were being filled.

The Sydney Steel Plant announced that they were expanding their present plant and would require an additional 200 men. The Eastern Car Co., New Glasgow, had started work on the 1,700 box cars for the C.N.R. which was expected to give steady employment to about 1,200 men for the coming year.

Demand for male help in light industry was slight but females were required at several points especially in the candy making industry.

The shut-down of the Mahone Bay Shipbuilding Co. had affected about 40 carpenters and labourers. However, it was expected that they would be readily placed in other jobs until new contracts were obtained by the company. The working force at the Halifax Shipyards was larger than usual but owing to the completion of contracts for Canadian Navy destroyers, a temporary lay-off was anticipated pending the approval of plans for three ships for the Argentine Government. Work on the Argentine order was expected to begin early in November.

Construction.—The extensive construction programs reported from all points created a demand for carpenters, bricklayers, plasterers and plumbers. A cement shortage had delayed many projects; some which were expected to

be completed this fall will be held up until next spring.

Favourable progress was made on the pulp mills and hydro plant in the Newcastle area while projects in the Saint John area were being hindered by a carpenters' strike. The pier on Prince Edward Island which had employed 125 men expected a 50 per cent cut-back in employment when operations were curtailed for the winter months.

Transportation.—The restriction of imports into the British West Indies was causing concern among Halifax shippers as it would reduce shipments through that port considerably and thus decrease the number of openings for stevedores during the winter. Grain and lumber shipments had slowed down.

Quebec Region

Reports indicated that the poor yield in the agriculture and fishing industries was forcing men to turn to other forms of work—especially woods operations.

Agriculture.—Harvesting was practically over, yields being far below those of normal years. A great number of farmers were engaged in fall ploughing while others were proceeding to jobs in the logging or construction industries.

The movement of about 5,700 workers to the United States for the harvesting of vegetables took place between September 17 to 25. The majority of these will have returned by the end of October.

Logging.—During September, the movement of men to the woods increased by 10,000, reflecting the early completion of fishing and agricultural programs. In spite of this and the uncertain factors in the exporting field, additional men were still needed. However, it was not expected that the number of men engaged in woods operations during the coming season would be greatly enlarged; most operators were specifying skilled workers which limited the number which would be eligible.

Fishing.—Fishing was almost completed. The reduced catches and the low prices being paid for cod had been given as the cause for the short season.

Mining.—Mines which were in the early stages of development were not seriously handicapped by the shortage of workers but producing mines were in a critical position due to the extremely limited supply and a high labour turnover. Operators were anxiously awaiting assistance through immigration.

Manufacturing.—Industrial activity remained high during the month. Heavy steel industries were forging ahead although somewhat hampered by material scarcities. Textile plants were busy but labour shortages persisted in most districts. Shoe manufacturing, on the other hand, was being curtailed due to decreased demand and a scarcity of some grades of leathers.

Newsprint production had increased.

It was announced that in the near future a new commercial alcohol plant would open

at Gatineau which would draw workers from the town and surrounding district. The newly-opened electric meter plant in Quebec was expected to give employment to approximately 300 women and 50 men when production gets underway.

The Montreal Locomotive and Canadian Car & Foundry were busy on C.P.R. contracts which would carry them well into 1948. Canadair had already reduced its staff and further reductions appeared imminent as contracts were completed.

Activity in shipbuilding yards was forging ahead in an endeavour to complete as much work as possible before freeze up. There was an acute shortage of pipe-fitters and electric welders. Canadian Vickers Ltd. was re-opening its welding school to train helpers.

Construction.—Residential building was somewhat retarded as the supply of material and trained workers, especially bricklayers and plasterers, was spotty. Large construction projects which offered longer terms of employment were drawing off the more constant flow of both labour and materials. These hindrances were more apparent in rural districts.

Road construction was at its peak as contractors were pressing ahead to have the jobs completed before the cold weather began.

Transportation.—There was some tapering off of harbour activity in the Montreal area due to the lack of grain cargoes for overseas. Lake and coastal shipping continued busy.

Air travel was increasing, a new service between Montreal and Shannon, Ireland, being inaugurated in September.

Ontario Region

A continually increasing labour shortage had become a primary obstacle of many industries in the Province. Seasonal labour in particular was in short supply.

Agriculture.—Harvesting operations had made good progress until September 22, when a widespread frost damaged many crops, especially tomatoes and burley tobacco. The demand for labour in the special crop areas such as peach, apple and grape districts, was heavy.

It was felt that the inferior hay and grain crops, the frost damaged fodder corn, and the marked cost increase in concentrated feeds would have an adverse effect on the livestock industry.

A number of British and Dutch immigrants had been satisfactorily placed.

Logging.—There was a decided decrease in the number of orders for bushmen and no demand for unskilled workers. However, statistics showed that there were 60 per cent more men engaged in pulp cutting than in the month of September last year.

Many families had moved to the woods for the season thereby providing much needed stability in woods labour. The influx of workers from the poor-crop areas of Quebec and displaced persons from Europe had aided greatly in filling immediate needs.

Mining.—Despite the loss of student labour and the usual turnover, the labour force in base metal mines was increasing. The combined drive for workers by National Employment Service officers and the International Nickel Co. through circulating orders, advertising and provision of fares, had resulted in approximately 400 placements during the month.

On the other hand, the situation in gold mining camps was becoming serious. Single experienced miners were leaving in large numbers for more lucrative employment.

Production schedules were seriously threatened by the acute shortage of workers and there was fear that present mining sites may develop into ghost towns.

Manufacturing.—While materials appeared to be in better supply, some bottlenecks were still apparent. There was evidence of heavy migration from outdoor activities to indoor work although the movement was restricted by the lack of housing in industrial towns.

Steel and iron centres reported continued shortages of foundry workers, buffers and polishers, and trained toolmakers. Machine tool operators and workers in agricultural implement and aluminum plants were in light demand.

The manufacture of building materials had been severely handicapped by the scarcity of workers, brick plants in particular found it difficult to maintain adequate work crews.

There were few labour shortages in news-print mills but turnover was heavy among mill yard workers. Paper mills generally had an adequate staff.

Tannery operators feared that the prevailing strike of meat packers would be reflected in the flow of hides and which in turn would affect shoe and fancy leather goods factories. The call for help at textile mills was unabated and plants were curtailing operations due to labour scarcities.

Packing houses, not affected by the current labour dispute, were operating under a heavier burden and needed additional help. The frost had virtually halted operations in many canning plants which had placed substantial orders for temporary help for the processing of the tomato crop.

Construction.—Work on industrial and residential projects was being pushed forward so as to have projects housed in before the end of the fine weather. Skilled tradesmen continued to be in short supply with an increasing demand for labourers. Many

offices reported a shortage of materials which was retarding progress.

The number and size of new contracts for municipal and industrial developments indicated a heavy building program for the 1948 season.

Transportation.—As passenger service on the Great Lakes had been discontinued for this year, there was only a slight demand for unlicensed personnel on freighters.

Prairie Region

The situation in the Prairie Region had been one of mass labour movements, inter-

provincial and across-the-border. Many industries reported that a number of workers were absent for a month or more during the harvesting period.

Agriculture.—Manitoba passed over the peak of labour demand the first week of the month and Saskatchewan by the close of the period. During that time harvesting operations in the former had been completed and the workers thus released were being moved to harvest fields farther west.

The sugar beet harvest had begun in Manitoba and sufficient labour was available as Polish veterans had returned from

temporary employment in the grain fields. The advent of snow and rain had retarded work in Alberta but it was gaining momentum by the end of the period.

Arrangements were made for the movement of approximately 1,000 Manitoba potato pickers to North Dakota, while preliminary arrangements were under consideration for a similar movement of beet workers to the Milk River irrigation district in Montana and from Saskatchewan to North Dakota.

Very few requests for winter help had been received.

Logging.—It was estimated that a working force of 15,000 men would be required for

logging operations in the Lakehead region and authorities were expecting that no difficulty would be encountered in maintaining this force. The influx of workers from the Prairie provinces which numbered approximately 13,000 last year, was not expected to start for at least another month. The new wage agreement effective September 1 improving the wage rates would be an added inducement.

It was expected that the Saskatchewan cut would be greater than in the last two years due to the easing of provincial restrictions. Alberta reported that activity would not be on a large scale for at least another month.

Fishing.—The fall fishing in Lake Winnipeg was in progress, approximately 1,000 persons being engaged in the industry. In the Fort Francis area fishermen continued to get excellent catches, and prices had remained steady.

Mining.—The response to mining needs was slow but it was thought that it would pick up once harvesting operations were completed. Demand in base metal mining at Flin Flon and the strike-bound Sherritt-Gordon mines was quiet but Steep Rock Iron mines reported increased activity and a shortage of labourers.

Gold mines in the Geraldton-Beardmore area were seeking 70 experienced miners and 100 mine beginners—the latter group being recruited in the Maritimes.

Coal mines in the Edmonton district were in full production, the most apparent hindrance being the shortage of rail cars. At other mines reports pointed out that a general scarcity of workers prevailed—the lack of suitable living accommodation being the foremost hindrance in securing a complete working force.

Manufacturing.—Saw and planer mills in the Lakehead area were very active, working full time with adequate staffs. In the Edmonton district many of the mills were closed for the annual overhauling and repairs while employees were engaged in harvesting operations.

Meat packing was practically at a stand still due to the current strike. Packers were expecting a heavy run of stock once the plants re-open. Vegetable canning plants had completed their season's operations and shut downs were expected in the near future.

Activity in grain handling at the Lakehead elevators was high. It was not anticipated that there would be any difficulty in supplying help.

Manufacturers of construction materials such as brick, cinderblock and wallboard, were working at peak capacity to supply the pressing needs for these materials. Sash and door manufacturers were being seriously hindered by the acute shortage of glass.

Construction.—Despite the scarcity of certain building supplies, the construction of dwellings, particularly veterans' homes, was keeping well up to summer activity. Skilled tradesmen of all classifications were urgently needed.

Efforts to house in commercial and industrial units were being carried on at an accelerated pace and were keeping the requirements for semi-skilled workers at a

relatively high level for this time of year. There was a decrease in the number of permits being issued and it was expected that shortly many-workers would be released for other jobs.

Transportation.—The navigation season on Lake Winnipeg was expected to close about November 1—most of the cargo during the past month had been freight for the mines. Air travel from Yellowknife was being curtailed as fewer prospecting companies were operating.

Track maintenance men were in short supply at many points while boilermakers and machinists were required at C.P.R. shops in Calgary.

Pacific Region

This period had marked a gradual decline in employment opportunities coupled with an increase in the number of applicants. The situation was further aggravated by several industrial disputes.

Agriculture.—In the Southern Interior the fruit crop had reached its peak, several points indicating a tight labour situation. The transient labour force which had been expected to fill demands had not materialized. It was not likely, however, that there would be any loss of crops. Critical labour shortages had occurred in the tomato fields of the Kamloops and Lillooet areas due to the indifferent living accommodation being offered to workers.

Only minor demands had been registered on Vancouver Island where seasonal activity was subsiding.

Logging.—Throughout the region logging camps continued to expand their activities as far as the labour supply would permit. The shortage of key personnel still prevailed but there was a slackening off in demand for the lesser skills. This was due in some degree to the importation of about 400 men from the Maritimes.

The situation in the Prince George area, which was one of the most favourable points for employment needs, was unsettled due to the current meat packers strike. The B.C. Forestry Branch was having considerable difficulty in procuring snag fallers and bush labourers.

Fishing.—This season's salmon catch had been one of the largest in the last six years and fishermen were receiving a higher price for pinks and chums. Marketing arrangements had been concluded which assured disposal of the entire pack.

Herring fishing had been average, the halibut catch almost double that of last year, and pilchard fishing a virtual failure.

Mining.—The demand for certified coal miners continued, orders remaining unfilled due to the dearth of skilled workers. Canadian Collieries Ltd. on Vancouver Island expected to be in a better position to attract workers once their housing scheme was finished.

Base metal mining reported that labour turnover was depleting the existing supply of workers. Men from the Prairies and the closing of seasonal mines, prevented the situation from becoming critical.

After a successful year, the season for placer mining was drawing to a close. It was expected that miners thus released would move to lode mines where winter operations would be in progress.

Manufacturing.—Shipyards in the Vancouver area announced that work on new ships and repair jobs was plentiful. Only minor lay-offs occurred, due to non-arrival of materials from sub-contractors. On Vancouver Island about 75 steel workers had been laid off upon the completion of their contract but these would be readily absorbed at other points. Ship's joiners and carpenters were urgently needed.

Employment at the small wooden boat yards continued at a high level.

General engineering and repair establishments in New Westminster were suffering a recession in activity, many plants handicapped by shortages of materials and a decline in orders. Small lay-offs were prevalent and it was thought that staffs would be reduced to a minimum for the winter. In the Vancouver section of the steel industry and in furniture making, the prevailing strikes had paralyzed activity.

The canning and food processing plants, having passed the peak volume of work, were expected to close shortly. This would place several hundred workers in the labour market.

Textile plants presented a brighter picture with all types of materials in good supply. There was, however, a real shortage of tailors, needle workers and power machine operators.

Construction.—The demand for construction workers remained at a high level; a large proportion of the jobs, however, were in the rural areas. As many projects were reaching the final stage the greatest need was for finishing carpenters.

Dismantling work had started at the Canol refinery with sufficient local men available for the present. Work on the Elk Falls power project, which was urgently needed to supply power for a large pulp mill at Port Alberni, was being pushed forward.

At Victoria, construction values for the first eight months of 1947 were up \$1,000,000 over last year. No serious slump in employment was anticipated as contractors planned to operate throughout the winter.

There was great activity at Port Alberni as contracts had been let for 100 houses and work was in progress on a new city hall, fire house and court house. Arrangements had also been made to bring 200 duplex houses from Bremerton, U.S.A. in an attempt to relieve the local housing shortage.

Transportation.—Students, returning to school left many openings on ships which had been difficult to fill. Certified engineers and engine room hands were still scarce. However, there had been a noticeable reduction in labour turnover which had stabilized the industry.

Hours and Earnings, September, 1947

AVERAGE hourly earnings of hourly-rated wage-earners in manufacturing reached a new maximum at September 1, 1947, of 82.2 cents. At August 1 the figure was 81.3 cents, while at September 1, 1946, it was 70.6 cents, and at the same date in 1945 it was 69.2 cents.

Average weekly hours were relatively stable, being 42.3 at September 1, 1947, as compared with 42.5 the previous month, and 42.7 at September 1, 1946. At the corresponding date in 1945, however, the work-week had been approximately two hours longer, being 44.1.

The increase in earnings was accounted for partly by increases in wage rates in several

industries, but changes in the industrial distribution of the reported wage-earners and in their earnings also tended to raise the general average in manufacturing as a whole.

The wage-earners for whom statistics were available at September 1 were paid an average of \$34.77, as compared with \$34.55 in the week of August 1, \$30.15 at September 1, 1946 and \$30.52 at September 1, 1945. The increase in the average weekly wages of the hourly-rated wage-earners employed by the co-operating manufacturers at September 1 amounted to 15.3 per cent as compared with a year earlier, and to 13.9 per cent as compared with September 1, 1945.

Statistics of hours and earnings were compiled by the Dominion Bureau of Statistics on the basis of information received from 6,357 leading manufacturers, whose staffs rose from 780,978 in August to 782,464 at the date under review, or by 0.2 per cent. The aggregate hours worked in these plants were given as 33,131,520, being less by 0.1 per cent the total of 33,158,291 recorded for the week of August 1, while their weekly wages advanced from \$26,954,001 at that date, to \$27,232,393 in the week of September 1, or by one per cent.

Hours Worked.—There were small decreases on the whole in the working time reported in many categories of plants turning out durable and non-durable manufactured goods. The losses in lumber, paper products and clay, glass and stone works were most pronounced. On the other hand, higher aggregates of hours were reported in several industries, notably in pulp and paper, textile, beverage, tobacco, electrical apparatus and iron and steel factories. In some cases, the

changes were of a seasonal nature, while in certain instances, the losses were probably due, in the main, to holidays or absenteeism before the Labour Day week-end. Hourly-rated employees reported in factories turning out durable manufactured goods worked an average of 42.5 hours, as compared with 42.6 hours in the week of August 1, 1947, 42.6 hours in the week of September 1, 1946, and 44.2 hours in that of September 1, 1945. In the light manufactured goods division, the reported hours gave an average of 42.2 as compared with 42.3 at August 1, 1947. At September 1, of last year and the year before, the averages were 42.7 and 44 hours, respectively.

Hourly-Earnings.—In the heavy manufactured goods division, the co-operating firms reported an average of 88.7 cents for their wage-earners at the date under review, as compared with 87.7 cents at August 1, 1947, and 76.5 cents at September 1 in both 1946 and 1945. In the latter comparisons, the increases amounted to 15.9 per cent and 24.1

* The averages at these dates were affected by loss of working time at the year-end holidays in the case of January 1, and by the Easter holidays in the case of April 1, 1945, and May 1, 1946.

per cent, respectively. In this category, slight advances were again reported in several branches of the lumber, clay, glass and stone, electrical apparatus, iron and steel and non-ferrous metal industries.

In the production of non-durable manufactured goods, the hourly earnings averaged 75.6 cents, exceeding by four-fifths of a cent the August 1 mean, previously the maximum in the record of slightly less than three years; at September 1 in 1946 and 1945, the averages were 65.1 cents and 60.9 cents, respectively. In the 12 months, the rise amounted to 16.1 per cent and in the 24 months, to 24.1 per cent. In the comparison with the August 1 figures, increases were shown in a considerable number of groups, notably in animal and vegetable food, rubber, textiles, tobacco, petroleum and other classes. As compared with September 1 of last year, there were widespread advances.

In the durable manufactured goods division, the co-operating establishments paid a total of \$14,725,133 in weekly wages to their hourly-rated wage-earners; as compared with

the sum of \$14,566,385 which they had disbursed in the week of August 1, there was an increase of 1.1 per cent. Leading manufacturers in the non-durable goods division reported that they paid \$12,507,260 to their hourly-rated personnel. This sum was higher by one per cent than their August 1 aggregate of \$12,387,616.

Weekly Earnings.—The movements in the average earnings of salaried employees and wage-earners in the period commencing at November 1, 1944, and those in the weekly earnings of hourly-rated wage-earners are given in Table 2. The latter figures are obtained by multiplying the average hourly earnings in the week of observation by the average hours worked in the same week.

There was a rise of 19 cents over August 1 in the weekly salaries-and-wages figure in manufacturing as a whole at the first of September, as compared with that of 22 cents in the weekly wages paid to the hourly-rated staff of the same firms. In the durable manufactured goods industries, the reported weekly salaries-and-wages figure also advanced

¹ The industries classed in the durable manufactured industries are indicated by an asterisk.

² Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows: July 1, 1947, 170.6; Aug. 1, 1947, 181.2; Sept. 1, 1947, 180.8; Sept. 1, 1946, the index was 141.6.

³ Chiefly street and electric railways.

⁴ For information respecting the sex distribution of the persons in recorded employment, see monthly reports on employment and payroll.

by 19 cents at September 1, but the indicated weekly wages in that category were higher by 34 cents than at August 1. In the light manufactured goods division, the average weekly earnings of the persons on salaries and wages were increased by 19 cents as compared with August 1, accompanied by a rise of 26 cents in the weekly earnings of the hourly-rated staffs of the co-operating establishments.

At September 1, the wage-earners for whom information on man-hours and hourly earnings were available made up 75.2 per cent of the total number of persons of all categories on the payrolls of the manufacturers¹ furnishing monthly statistics of employment and payrolls at the same date as published in the article earlier in this section entitled *Employment and Payrolls*.

Non-Manufacturing Industries

The proportions of wage-earners in the non-manufacturing industries paid by the hour are smaller than in the case of the manufacturing industries, with the result that records of hours worked are frequently not available for such persons. Thus the representation in the non-manufacturing industries in the monthly statistics of man-hours and hourly earnings is less than in the manufacturing division.

The number of hourly-rated wage-earners employed at September 1 by the co-operating coal operators showed a seasonal decline at September 1, when their aggregate and average hours were also lower. The average hourly earnings, however, were rather higher, standing at 110.8 cents, as compared with 107.4 cents at August 1, 95 cents at September 1, 1946, and 94.1 cents at September 1, 1945. The latest figure is the highest in the record of 35 months. In the extraction of

metallic ores, the reported wage-earners were fewer in number than at August 1, when the aggregate hours had also exceeded the total indicated for the week of September 1. The average hours fell from 44.8 in the week of August 1, to 44.1 in that of September 1. The average hourly earnings at the latter date, however, were 102.3 cents, as compared with 101 cents at August 1. At September 1 in 1946, the mean was 88.9 cents, and that in 1945, 85.4 cents. On the miscellaneous non-metallic mineral mining group, the co-operating operators reported little general change in the number of hourly-rated wage-earners, but the hours and the earnings were higher, in the aggregate and on the average. The latest hourly rate was 80.3 cents, the highest in the record. The August 1 mean was 78.2, while at September 1 in 1946 and 1945, the figures were 69 cents and 65.7 cents, respectively.

The number of hourly-rated wage-earners reported in the local transportation group (in which the co-operating firms belong largely in the street and electric railway division), was smaller at September 1 than at August 1; the average working time showed little change, but the average hourly rate stood at 84.8 cents, as compared with 83.8 cents at August 1, 71.9 cents at September 1, 1946, and 70.7 cents at the first of September in 1945.

In the building construction group, data were received from 1,034 contractors employing 83,595 hourly-rated wage-earners; as compared with their staffs at August 1, there was an increase of 3.1 per cent, accompanied by that of 1.7 per cent in their aggregate hours, and 3.4 per cent in their weekly wages. The average hours, however, fell from 40.5 in the week of August 1, to 40.0 in that at September 1. The average hourly rate then stood at 92.9 cents, as compared with that of 91.4

TABLE 4.—AVERAGE HOURS AND EARNINGS BY PROVINCES AND CITIES

	Average Hours Worked			Average Hourly Earnings

cents at August 1; the means at September 1 in 1946 and 1945, were 83·7 cents and 79·6 cents, respectively. In regard to the average earnings in the building industry, it will be recalled that large numbers of unskilled and casual workers are employed therein, as well as many skilled tradesmen at high rates of pay. In highway construction and maintenance work, the reported number of wage-earners showed a further increase. The aggregate and average hours also advanced. There was a rise in the aggregate weekly wages reported in this industry, but the average hourly rate declined slightly, from 71·7 in the week of August 1, to 71·4 in that of September 1, when the average was higher than that of 66·1 cents at September 1, 1946, and 62·1 cents at September 1, 1945.

The co-operating hotels and restaurants employed a rather larger number of hourly-

rated workers, but there was a decline in the working time which fell from 43·6 hours in the week of August 1, to 43·3 in that of September 1. The average hourly rate, on the other hand, advanced from 51·6 cents at the former date, to 52·2 cents at the latter, as compared with 44·5 cents at September 1, 1946, and 41·4 cents at September 1, 1945.

A further reduction in employment was reported by laundries and dry-cleaning establishments, in which the average hours were slightly higher, at 40·6 in the week of September 1, as compared with 40·4 in that of August 1. The hourly rate was then 55 cents, as compared with 56·2 cents in the week of September 1, 1947; at September 1 in 1946 and 1945, the averages were 48·9 cents and 47·4 cents respectively.

Unemployment in Trade Unions at the Close of the Quarter ending September 30, 1947

TRADE union unemployment in Canada showed a slight decline to 0·7 per cent at the end of September from 0·8 at the end of the previous quarter and 1·0 per cent at September 30, 1946. At the date under review 2,446 local unions reported a combined membership of 463,483. In the previous

quarter, reports were received from 2,409 locals with a total of 468,269 members while at the end of September last year, the percentage of trade union unemployment was based on reports from 2,378 locals representing 425,899 members. For the quarter under review, an increase in trade union unemploy-

ment was indicated in construction while declines were noted in mining, manufacturing and communication.

In the following report unemployment refers only to involuntary idleness due to economic causes. Persons who are without work because of illness, a strike or a lockout, or who are engaged in work outside their own trade are not considered as unemployed. As returns from unions reporting vary from quarter to quarter with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that the figures refer only to organizations reporting.

Table I shows the percentages of trade union unemployment at certain dates, in each province. In comparison with the previous quarter declines in the percentage were shown in Nova Scotia from 7.2 to 4.9, in New Brunswick, from 2.2 to 0.8, in Ontario, from 0.5 to 0.3 and in Saskatchewan, from 0.5 to 0.2. A comparison with September, 1946, indicates that employment conditions were more favourable in the period under review in all the provinces with the exception of Nova Scotia where the percentage rose from 0.9 to 4.9.

A separate compilation is made each quarter of unemployment among trade union members in the largest city in each province with the exception of Prince Edward Island. As compared with the previous quarter the percentage increased in Halifax, from 3.9 to 5.7, in Montreal, from 0.4 to 0.6, in Winnipeg, from 0.4 to 0.7, in Regina, from no unemployment to 0.3 per cent and in Vancouver, from 0.9 to 1.2. Declines in the percentage were reported for Saint John, from 6.5 to 3.1, Toronto from 0.3 to 0.2, and Edmonton from 0.7 to 0.5. In comparison with September, 1946, the latest percentages were somewhat higher in Halifax, Winnipeg and Regina.

Returns were tabulated from 971 locals in the manufacturing industries. These reported a combined membership of 232,401 of whom 2,035 or 0.9 per cent were unemployed at September 30. At the end of the previous quarter 1.1 per cent of 238,550 members reported by 931 locals were without work. In September, 1946, 896 local unions reported 1.4 per cent of 207,660 members as unemployed. In comparison with the previous quarter (Table II), trade union unemployment increased in animal products and chemical products but declined among groups engaged in the manufacture of iron and its products, non-ferrous metals and wood

products. A comparison with September, 1946, indicates improvements in animal products and textile products with slight variations in the remaining manufacturing categories.

In the transportation group, reports were received from 855 local union branches with a total membership of 98,969 of whom 506 or 0.5 per cent were unemployed on the reporting date. At the end of the previous quarter the percentage was 0.6 and at the end of September, 1946, it was 0.8.

Unemployment in the mining group decreased to 0.3 per cent from 1.0 in the

previous quarter. The percentage in coal mining declined from 0·8 to 0·1 while among metallic ore miners it was unchanged at 0·1. Unions of miners of non-metallic minerals, other than coal, reported 3·4 per cent of 1,760 members unemployed, a decrease from 4·7 in the previous quarter.

Reports were received at the end of September from 207 locals in the building and construction trades. These reported a combined membership of 42,717 of whom 0·8 were without work on September 30. This percentage was unchanged from the 0·8 per cent noted in the third quarter of 1946 but was an increase over the 0·4 per cent unemployed at June 30, 1947. Decreased employment was indicated for carpenters and joiners and bridge and structural iron workers. The employment situation was more favourable

for bricklayers, masons and plasterers, electrical workers, painters, decorators and paper-hangers, and hod carriers.

Trade union unemployment in public and personal services increased to 0·5 per cent at the date under review from 0·2 in the preceding quarter and 0·3 per cent in September, 1946. The communications group showed a decline in the percentage from 1·3 to 0·1 reflecting a decrease from 1·6 to 0·1 per cent in unemployment among union members in telegraph operations.

There was no reported unemployment at the end of September among union members engaged in logging in Ontario and British Columbia. The same situation existed a year ago but 0·8 per cent unemployed was indicated in the previous quarter.

Wage Rates, Hours and Working Conditions in the Electrical Products Industry, 1946

INFORMATION on the Electrical Products Industry¹ is presented in two sections, one dealing with Electrical Machinery and Apparatus and the other with Radio Sets and Parts.

The index of wage rates in 1946 for the combined industries showed an increase of 69·1 per cent over the base year, 1939, and of 7·8 per cent over 1945. This is indicated in the following series which gives annual indexes since 1939 based on wage rates in that year as 100.

Year	Index
1939	100·0
1940	105·6
1941	123·2
1942	133·7
1943	149·2
1944	154·1
1945	156·8
1946	169·1

In the summary which follows, in which the two groups are dealt with separately, the statistical information was obtained from the annual survey, 1946, of "Wage Rates and Hours of Labour in Canada."² The tables on wage rates contain comparative figures for 1945 which were obtained in the survey of that year.

In the 1946 survey, employers were asked to report their straight-time wage or salary rates or the average straight-time earnings for workers on piecework during the last pay period prior to October 1, 1946. They also reported on certain other conditions of work³, such as

hours, overtime, vacations with pay, sick leave, Sunday work, and the numbers of workers under collective agreement in each establishment. The total number of workers in each establishment, including both plant and office staffs, was also obtained.

In the tables on wage rates, the averages shown are for selected representative occupations in each industry. They do not include the value of any allowance to employees, such as free transportation, group insurance, sick benefits or other welfare plans. The ranges include approximately the middle 80 per cent of the workers in each occupation. The purpose of this is to exclude extremely high and low rates and at the same time to show the ranges which contain the rates for the majority of the workers. The averages, however, include the rates for all the workers in each occupation.

¹ Comparable information on the Automobile Parts and Accessories and Agricultural Implements Industries was published in the October issue of the *LABOUR GAZETTE* (p. 1532); on the Lumber and Lumber Products Industries in the September issue (p. 1374); on the Rubber Products Industry and the Motor Vehicles Industry in the August issue (p. 1164); on the Pulp and Paper Products Industry and the Brewery Products Industry in the July issue (p. 988); and on the Construction and Steam Railways Industries in the June issue (p. 890).

² This report will be issued shortly.

³ Information on provincial legislation pertaining to annual vacations with pay, maximum hours of work and minimum wages is contained in an annual publication, "Provincial Labour Standards Concerning Child Labour, Annual Holidays, Hours of Work, Minimum Wages, and Workmen's Compensation", by the Legislation Branch of the Department of Labour.

Electrical Machinery and Apparatus Industry

Table I shows the regional distribution of the 91 establishments whose returns were used in the present analysis. These plants were engaged in the manufacture of heavy elec-

trical machinery, electrical household appliances and miscellaneous electrical products. Slightly more than two-thirds of the plants, employing 66 per cent of the total workers,

were located in Ontario. Sixty per cent of the employees were concentrated in one Quebec and three Ontario establishments. Fifty-eight establishments, employing less than 100 workers each, accounted for only seven per cent of the total number of workers in the industry.

Collective Agreements.—Twenty-seven establishments reported collective agreements covering 19,300 workers in the industry. Eighteen of the 27 plants were located in Ontario, five were in Quebec and four in the Western Provinces. Of these, four establishments in Ontario and two in Quebec reported having employees' associations only and accounted for 37 per cent of the workers reported under collective agreement.

Wage Rates, Table II.—Average hourly wage rates in 1945 and 1946 for selected occupations in this industry are shown, along with the range of rates in 1946. While wage rates are shown for the provinces of Ontario and

Quebec only, the western provinces are included in the Canadian averages. Average rates for Canada as a whole in 1946 showed increases over those in 1945 of from four cents per hour in some occupations to 13 cents in others.

Standard Hours of Work, Table III.—Of the 91 establishments covered, 44 reported a standard week of either 44 or 45 hours and employed 54 per cent of the total workers in the industry. A 40-hour week was reported by 18 establishments employing 32 per cent of the total workers. Twelve others, which reported a 48-hour week, accounted for only 1,600 workers.

The five-day week was reported by nearly 60 per cent of the plants, including approximately two-thirds of those in Ontario and four of the five in British Columbia. These employed more than 70 per cent of the workers in all plants from which reports were received.

9 4.....	2	1	1		
Total.....	38	11	20	6	1

More than one-half the plants in Quebec and all of those in the Prairie Provinces reported working six days per week. However, only two plants reported working a full eight hours on Saturday, hours ranging in all other cases from three to five and one-half for Saturday work.

The average standard weekly hours in the industry, weighted by the number of male employees in each plant, was 43.2 for Canada as a whole. By areas, the averages were as follows: Quebec, 40.7; Ontario, 44.4; and the Western Provinces, 42.8 hours per week.

Only 22 establishments reported Sunday employment which was confined to maintenance work in all cases.

Overtime Rates, Table IV.—More than 50 plants reported a rate of time and one-half for overtime work after daily or weekly hours. Twenty-eight also reported this rate for Sunday work and 26 for work on holidays. Double time for Sunday and holiday work was reported by about 15 per cent of the establishments.

In approximately one-half the cases, no information was given for Sunday and holiday work, which may mean that the plants concerned did not work on those days.

Vacations with Pay, Table V.—Vacations with pay for factory workers are provided by law in all the provinces covered in this analysis. In Saskatchewan, the vacation is two weeks after one year of service while the other provinces require one week after one year. In Quebec, a further provision states that one-half day is to be given for each month of continuous service.

All the plants from which returns were received reported a vacation of one week, usually after a service of one year but in a few cases after three or six months. In 55 of these 91 plants the vacation did not exceed one week regardless of the length of service but in 36 others two weeks was provided, in the majority of cases after five years of service. In three cases an initial vacation of two weeks was reported after either six months or one year.

TABLE IV.—OVERTIME RATES OF PAY IN THE ELECTRICAL MACHINERY AND APPARATUS INDUSTRY, BY ESTABLISHMENTS, 1946

Region	After Daily Hours		Only After Weekly Hours	Sunday	Holidays

Canada.....	9	16	42	43

⁽¹⁾ Includes one plant at straight time plus five cents per hour for overtime.

⁽²⁾ In one plant, time and one-half after midnight.

⁽³⁾ In one plant, time and one-half after 9 p.m.

⁽⁴⁾ In one plant, only after 9 p.m.

⁽⁵⁾ One plant on five-day week paid this rate only after three hours.

⁽⁶⁾ In one plant, double time for three statutory holidays and in another, double time to firemen.

⁽⁷⁾ One plant reported this rate for the first four hours of overtime and double time thereafter.

⁽⁸⁾ One plant reported double time and one-half for hours over daily hours on holidays.

A paid vacation of less than one week was also provided in 31 plants for service of less than one year. These included the eighteen plants in Quebec, in compliance with legislative requirements in that province, twelve in Ontario and one in the Prairie Provinces.

Sick Leave with Pay.—More than one-half the establishments reported some provision for sick leave with pay. These included 29 in Ontario, four in the Western provinces and 14 of the 18 Quebec establishments.

In 25 instances, provision for payment for sick leave was reported in the case of salaried or office workers only, or in special cases. Nine establishments had group insurance schemes and 13 did not specify the plan in effect.

Production or Incentive Bonus.—Seven establishments in Ontario and one in Quebec reported having a production or incentive bonus.

In one establishment the foundry workers were the only employees eligible; another reported a bonus paid on piecework jobs only, while a third stated that all hourly-rated employees participated in their bonus scheme. Only certain occupations or departments were eligible for bonus payment in some plants.

Shift Work.—Twelve establishments, employing a total of 10,000 workers, reported 470 men and 140 women on the second shift of their two-shift operations during the survey period. A premium of five cents per hour was given in six of the establishments while in another, employees on the six-hour night shift received the same take-home pay as those working on the eight-hour day shift.

Four establishments showed three-shift operations, one reporting 360 women on the second shift who were paid a bonus of ten

(1) In 31 of these plants a fraction of a week was given for service under one year.

(2) Two establishments in Quebec and one in Ontario also reported three weeks after 21 years of service.

(3) Includes two establishments reporting two weeks only after ten years.

cents per hour or ten per cent of total earnings, whichever was higher. A similar rate was paid in the same plant to 704 men on the second shift and to 153 on the third. Another establishment paid a 6½ per cent bonus on

both shifts. A third establishment reported paying a bonus of three cents per hour on the second shift and five cents on the third. The other plant reporting a three-shift operation paid a five-cent premium for work after 1 a.m.

Radio Sets and Parts Industry

Information from plants engaged primarily in the production of radio sets and parts was used in the following analysis. The industry is confined to the provinces of Quebec and Ontario, and returns from 19 plants employing 4,800 workers during the survey period were used, as indicated in opposite table:

	Canada	Quebec	Ontario
Total Establishments ..	19	2	17
Employees: Male	2,562	1,656	906
Female	2,287	875	1,412

* The decline in average rates in 1946 in some occupations was due to increases in the number of workers at the lower rates in the occupation and not to actual decreases in wage rates.

Of the total employment in the industry, nearly one-half were women. The two Quebec establishments reported practically twice as many men as women workers, but only 40 per cent in Ontario were men.

The two Quebec establishments accounted for 52 per cent of the total employment in the industry. Six of the Ontario establishments employed less than 100 workers in each while the remaining 11, employing up to 450 workers each, included 43 per cent of the total employment in the industry in Canada.

Collective Agreements.—Eight plants in Ontario and two in Quebec reported some 2,900 workers under collective agreement. Two-thirds of these workers employed in five plants, belonged to unions affiliated with international labour organizations, while the remainder were covered by agreements with employees' associations.

Wage Rates, Table I.—Average hourly wage rates in selected occupations for 1945 and 1946 are shown in Table I. Ranges of rates in 1946 are also included. An effect of conversion to peace-time operation in this industry was reflected in the decrease in 1946 average rates in some occupations compared with the 1945 figures. This was due in most cases to the fact that the number of workers had been considerably increased. With new workers paid at basic rates, the weighted average was lower.

Standard Hours of Work, Table II.—The weekly hours reported in this industry ranged from 40 to 48 during 1946. Twelve of the 19 establishments, employing 83 per cent of the workers, were on a five-day week. Of these, three Ontario and two Quebec plants, employing 3,100 workers, reported working 45 hours per week.

The six-day week was in effect in seven Ontario plants, six of which were on a 44-hour week, the seventh working 48 hours, with a four- and three-hour Saturday, respectively.

Overtime Rates of Pay, Table III.—Time and one-half was reported for overtime either after daily or weekly hours in all but one plant reporting straight time for Saturday work and three others which gave no overtime information. Of those reporting rates for Sunday and holiday work, the majority paid time and one-half. Double time was reported in two instances only and covered both Sunday and holiday work, although three other establishments paying time and one-half, reported double time under certain conditions.

Vacations with Pay, Table IV.—A number of plants in both provinces exceeded provincial legislative requirements with respect to paid vacations in 1946. In two cases, one week was provided although the length of service was less than one year and five Ontario plants

TABLE II.—STANDARD OR NORMAL WORKING HOURS FOR MALE PLANT EMPLOYEES IN THE RADIO SETS AND PARTS INDUSTRY, 1946

NOTE.—Hours for female workers were the same as male workers in all cases but four where they worked from 2½ to 4 hours less per week.

provided paid vacations of less than one week for service under one year. One reported one-half day for each month of continuous service while two others reported this provision after the employee had been three months with the company. After six months of service, one plant provided three days with pay and

another paid for vacations after the same service, but at the rate of two per cent of gross earnings to date. Another plant gave two weeks after one year of service.

Of the nine plants granting a maximum vacation of two weeks, which is more than required under provincial law, two gave it after

⁽¹⁾ Three weeks after 25 years.

⁽²⁾ In four plants a vacation of less than one week was reported for service under one year.

one year of service and seven after five years. One plant reported a further provision of three weeks after 25 years of service.

Sick Leave with Pay.—Twelve of the 19 establishments reported provision for sick leave with pay. Seven stated that only salaried or office staff were eligible, four had group insurance schemes and the other reported paying for a maximum of 30 days of sick leave accumulated by each employee over a period of three years.

Labour Legislation in India—Conc.

the Mines Act along the lines of the new factory legislation, especially a reduction in hours. Special plantation legislation is being considered.

The five-year program envisages minimum wage legislation, the standardization of occupational classifications and wage differentials, wages fixed by collective agreements, and industrial training and apprenticeship schemes. With respect to working conditions, the Government plans to reduce hours of work in mines from 54 a week to 48 as has been done in factories. A general overhaul of the Factories Act, particularly as regards health and safety, is contemplated. Concerning recruitment, the Employment Exchanges are to be extended. Many social security and welfare measures are planned. In industrial relations, improvements are to be introduced as indicated below.

The Royal Commission on Labour, under the chairmanship of Mr. J. H. Whitley, former Speaker of the British House of Commons and well known for the "Whitley" Councils, strongly influenced labour policy. Its recommendations in 1931 (L.G., 1931, p. 983), included the reduction of hours by legislation, minimum wage-fixing machinery, maternity benefits, workmen's compensation, and revision of trade union law. A tripartite industrial council was urged and this saw its fulfilment in the labour conference scheme.

Of particular interest in Indian labour legislation have been the Factories Acts and statutes regulating industrial relations. Factories Acts began in 1881 but few of the important provisions came from before 1922. The consolidated Act of 1934 which reduced maximum hours from 60 to 54 in a week with punitive rates for overtime, was further revised in the forties. In 1940 it was amended to prevent employment of children under 15 in unhealthy or dangerous factories, and in 1945 to require in all but seasonal factories an annual paid holiday of ten days for adults and of 14 days for children. The minimum age for employment is 12 years, but a child under 15 may not work more than five hours

Shift Work.—Very little shift work was reported in this industry other than that required by maintenance and power crews.

One plant reported 77 workers on a second shift on production work where a wage differential of either eight per cent of earnings or a minimum of five cents per hour was given. Another plant showed a small number of workers on a second shift during the pay period covered receiving a wage differential of five cents per hour.

in a day, and the work must not be spread over more than 7½ hours.

A Trade Union Act of 1926 provides for voluntary registration of trade unions, each of which must supply complete information, its name, objects, purposes to which its general funds are to be put, etc. Every registered trade union is regarded as a body corporate with the right to sue and be sued. Its general funds may be used only for the regular conduct of business as described in the regulations. A special fund for political purposes may be raised, but no member can be compelled to contribute. Special legal protection is afforded registered unions which may not be prosecuted for causing a member to break an employment contract or for interfering with the trade, business or employment of other persons, or with the right of another person to dispose of his capital or labour as he wishes. Union account books may be inspected at any time. A proposed amendment requires employers to recognize unions which satisfy certain prescribed conditions, and would penalize certain unfair practices. The membership of registered trade unions rose from 399,159 in 1938-39 to 685,299 in 1942-43.

In 1945 the Central Government set up separate machinery for dealing with industrial relations in the undertakings over which it has direct jurisdiction. The organization, composed of labour commissioners, conciliation officers and inspectors, was combined with the labour welfare organization to carry out conciliation, administer labour legislation and gather information on wages, etc.

The Industrial Disputes Act 1947, provides for joint Works Committees which, it is hoped, will be set up in every plant to deal with the day-by-day relations of labour and management. Industrial Tribunals are also instituted, having the power to arbitrate a dispute if both sides apply for it. Conciliation will be compulsory in public utility services and any industry may be so defined for such period of time as the Government may specify.

Strikes and Lockouts

Strikes and Lockouts in Canada During October, 1947

STRIKE activity in Canada showed an increase during October, 1947, as compared with the previous month, and also with October, 1946. During the month under review, the strike of meat packing plant workers, which commenced on August 27, 1947, and involved 47 establishments across Canada before settlement was reached on October 23, was responsible for about 50 per cent of the workers involved in all strikes and about 65 per cent of the total time loss. Preliminary figures for October, 1947, show 46 strikes and lockouts, involving 27,560 workers, with a time loss of 428,170 man-working days, as compared with 41 strikes in September, 1947, with 19,879 workers involved and a time loss of 276,859 days. In October, 1946, there were 27 strikes, involving 33,425 workers, with a time loss of 392,247 days.

For the first ten months of 1947 preliminary figures show a total of 199 strikes and lockouts, involving 68,382 workers, with a time loss of 2,283,633 man-working days. For the

same period last year there were 209 strikes, with 136,665 workers involved and a time loss of 4,459,311 days.

Of the 46 strikes recorded for October, eight were settled in favour of the workers, seven in favour of the employers, ten were compromise settlements and five were indefinite in result, work being resumed pending final settlement. At the end of the month 16 strikes were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., Edmonton, Alta., and Vancouver, B.C., which commenced on May 30, 1946, are still continuing.

Strikes and Lockouts in Great Britain and Other Countries

The latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing up to date that given in the March, 1947, issue in the review "Strikes and Lockouts in Canada and Other Countries". The latter includes a table summarizing the principal statistics as to strikes and lockouts since 1919 in the countries for which such figures are available. Statistics given in the annual review and in this article are taken from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British Ministry of Labour Gazette publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in August, 1947, was 112 and 11 were still in progress from the previous month, making a total of 123 during the month. In all stoppages of work in progress in the period there were 46,700 workers involved and a time loss of 122,000 working days was caused.

Of the 112 stoppages which began during August, 19 arose out of demands for advances in wages; 44 over other wage questions; five on questions as to working hours; 14 on questions respecting the employment of particular classes or persons; 26 on other questions respecting working arrangements; three were on questions of trade union principle; and one was in support of workers involved in other disputes.

India

Preliminary figures for the months of March, April and May, 1947, are as follows:

March—154 work stoppages involving 145,132 workers with a time loss of 1,202,862 man-days; April—141 work stoppages involving 151,083 workers with a time loss of 1,665,916 man-days; and May—107 work stoppages involving 92,042 workers with a time loss of 1,536,412 man-days.

Australia

Figures for 1946 are now available and show 869 work stoppages, directly involving 331,865 workers with a time loss of 1,947,844 working

days, for workers directly and indirectly involved.

United States

Preliminary figures for September, 1947, show 200 strikes and lockouts beginning in the

month, in which 75,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 2,000,000 man-days. Corresponding figures for August, 1947, are 325 strikes and lockouts, involving 120,000 workers with a time loss of 2,500,000 days.

*Preliminary figures.

‡ Strikes underminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1947⁽¹⁾

Industry, Occupation and Locality	Number involved		Time Loss in Man-Working Days	Particulars(?)
	Establishments	Workers		
Strikes and Lockouts in Progress Prior to October, 1947				
MINING— Copper and zinc mine and mill workers, Sherridon, Man.	1	250	5,000	Commenced August 13; for a new agreement providing for increased wages and other changes, and against alleged discrimination; unternminated.
MANUFACTURING— <i>Animal Foods—</i> Dairy and poultry plant workers, Melville, Sask.	1	25	500	Commenced July 16; for extension of existing agreement to October 30, 1947, with provision for increased wages and reduced hours; unternminated.
Meat packing plant workers, Charlottetown, P.E.I. Sydney, N.S. Moncton, N.B. Hull, Montreal, Princeville, Quebec, P.Q., Kitchener, Peterborough, Toronto, Ont., Brandon, St. Boniface, Winnipeg, Man., Moose Jaw, Prince Albert, Regina, Saskatoon, Sask., Calgary, Edmonton, Alta., New Westminster and Vancouver, B.C.	47	14,150	275,000	Commenced August 27; for a master agreement providing for increased wages and other changes; terminated by October 24: negotiations and conciliation, provincial; compromise.
<i>Fur and Leather Products—</i> Fur products factory workers, Toronto, Ont.	64	470	2,500	Commenced September 29; for new agreements providing for increased wages; terminated October 7; negotiations; compromise.
<i>Textiles, Clothing, etc.—</i> Clothing factory workers, Louiseville, P.Q.	1	190	750	Commenced September 10; for a greater increase in wages than awarded by arbitration board and against dismissal of union officer; terminated October 5; conciliation, provincial; in favour of workers.
<i>Pulp, Paper and Paper Products—</i> Paper products factory workers, Chambly, P.Q.	2	100	2,000	Commenced April 15; for implementation of award of arbitration board providing for increased wages, two weeks' vacations with pay, check-off, pay for seven statutory holidays, etc.; unternminated; partial return of workers.
<i>Miscellaneous Wood Products—</i> Sash and door factory workers, Edmonton, Alta.	1	72	500	Commenced August 29; for a new agreement providing for increased wages and other changes; terminated October 14; replacement and return of workers; in favour of employer.
Furniture factory workers, New Westminster, Vancouver and Victoria, B.C.	4	439	7,500	Commenced September 10; for new agreements providing for increased wages and reduced hours; terminated by October 30; negotiations; compromise.
Box factory workers, Montreal, P.Q.	1	92	500	Commenced September 18; for a union agreement providing for increased wages, grievance procedure, etc; terminated October 8; return of workers pending certification of a union as bargaining agency; indefinite.

STRIKES AND LOCKOUTS IN CANADA DURING OCTOBER, 1947⁽¹⁾—*Con.*

Industry, Occupation and Locality	Number involved		Time Loss in Man- Working Days	Particulars ⁽²⁾
	Establish- ments	Workers

Minimum Age for Dangerous Trades in U.S.A.

A minimum age of 18 years came into effect on August 1 in the State of Maine for employment in specified hazardous occupations in manufacturing and mechanical establishments, laundries and bakeries.

Under powers conferred by a 1945 law, the State Commissioner of Labour has made a Hazardous-Occupations Order prohibiting the employment of young persons under 18 as elevator operators, truck drivers, or power-hoist or crane operators; in maintenance work as blacksmiths, beltmen, carpenters, electricians, millwrights, shaftmen, engineers, firemen, or night watchmen; and in other specified occupations in a long list of industries.

The federal Fair Labour Standards Act, 1938, fixes a minimum age of 16 for work in industries engaged in, or producing goods for, interstate commerce but the U.S. Department of Labour has power to declare any occupation to be particularly hazardous, and on such declaration the minimum age becomes 18.

Declared, under this Act, to be hazardous occupations and subject to a minimum age of 18 are manufacture of explosives, driving or helping about motor vehicles, coal mining except for a few surface occupations, logging and sawmilling, operating power-driven wood-working machines, occupations involving exposure to radioactive substances, and operating power-driven hoisting apparatus.

The Logging and Sawmilling Order (No. 4, in effect from August 1, 1941, L.G. 1941, p. 828) is likely to be revised as a result of an investigation with respect to hazards to young workers between 16 and 18. Public hearings are to be held on December 3. The findings of the investigators published as Report No. 4C of the series, "Occupational Hazards to Young Workers," show that certain occupations in logging, not now included in the Order, are sufficiently hazardous to be covered and that others, exempted during the war, are sufficiently non-hazardous to warrant their permanent exception.

Prices, Retail and Wholesale, in Canada, October, 1947

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics cost-of-living index rose 2.8 points to 142.2 between September 2 and October 1, 1947, thereby equalling the rise of the previous month. This marks an increase of 41.1 per cent since August, 1939. Substantially higher prices for foods were the principal supporting factors, the index for this series advancing 6.0 points to 171.3 due mainly to higher quotations for bread, flour, butter, bacon and fresh pork. In the homefurnishings and services group a gain of 2.5 to 149.9 was due to increases in laundry rates coupled with firmer quotations for furniture, floor coverings, sheets and towels. Clothing rose 2.2 to 154.2 while rentals advanced 2.1 to 119.9. The increase in the latter series was based upon returns from a one per cent sample survey of urban tenant families across Canada supplemented by information from real estate agents. Fuel and lighting costs averaged 0.8 higher at 121.9 due to increases in coal and coke, while the miscellaneous group moved up 0.1 to 117.6, reflecting higher prices for medicines, personal care items and magazines. These outweighed a drop in automobile tires.

Cost of Living in Eight Cities

Cost-of-living indexes for eight regional cities all recorded relatively sharp increases between September and October supported principally by firmer food prices. Smaller increases, however, were noted at most centres for clothing, homefurnishings and services, rents, fuel and light and miscellaneous items. On the base August 1939=100, city index increases were as follows: Saskatoon 3.4 to 144.0; Winnipeg 3.3 to 137.4; Vancouver 3.1 to 141.3; Montreal 2.9 to 145.5; Toronto 2.7 to 140.0; Saint John 2.1 to 139.5, and Halifax and Edmonton each 1.9 to 138.9 and 137.1 respectively.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada, at the date under review.

The prices of the staple food items included in the table are all used in the calculation

of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores. As the movement of chain store prices agrees closely with the movement of independent store prices it was considered that the extra work and cost involved in compiling and printing a separate table for chain store prices were not warranted, although chain store prices are used in the calculation of the index.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a \$4 spread centred around each city average.

Table III is designed to show the variation in the retail price of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is included in Table I.

COST OF LIVING AND WHOLESALE PRICES IN CANADA

(a) Rent figures are obtained by multiplying increases since June, 1941 by the average rental determined by the census of that date. The increases are based upon reports from real estate agents and periodic sample surveys which are now being conducted by direct interview.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

(f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Revised. (j) From August, 1945. (k) Consumers Price Index for Moderate-Income Families in Large Cities. (l) New series, June 17, 1947=100. (m) Interim Index of Retail Prices (W.M.S.O. June 1947).

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1,439 families of wage-earners and salaried workers with earnings between \$600 and \$2,800 in 1938. The average expenditure was \$1,413.90 divided as follows: food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.59; clothing (11.7 per cent), \$165.80; home furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not directly represented in the index brought the total family living expenditure to \$1,453.80.

Wholesale Prices, September, 1947

The general index of wholesale prices rose 3.0 points to 133.8 (1926=100) between August and September, 1947, due mainly to higher prices for vegetable and animal products. Price de-control measures, as announced in September for a large number of commodities, were reflected in these increases. In the vegetable products group substantial advances

for rye, flour, millfeeds, linseed oil and corn syrup overbalanced weakness for potatoes, onions and automobile tires to move the index 7.1 points to 122.1. Animal products rose 4.3 points to 135.9 due to advances for butter, bacon, ham and leather. Eggs were lower in this section. Upturns for creosote oil, paint, cyanamid and sulphate of ammonia were sufficient to move the chemical products group 2.2 to 112.6, while similarly copper sheet, brass sheet, silver and solder accounted for a gain of 1.6 to 134.6 for non-ferrous metals. An increase in the export price for cedar shingles was responsible for a gain of 0.5 to 166.3 in the wood product group while the non-metallics series rose 0.2 to 117.5 supported by advances in certain coal descriptions and textiles and textile products 0.1 to 134.2 due to increases in cotton and woollen underwear. Iron and its products remained unchanged at 136.8.

A narrow gain of 0.4 to 120.4 occurred for Canadian farm product prices at wholesale between August and September. Field products rose 1.1 to 107.4 due to a firmer price tone for rye, hay and corn which outweighed weakness for potatoes and onions. The advance in this group was, however, partially nullified by a decline in the animal products group index of 0.6 to 142.2 due to lower egg quotations.

Fatal Industrial Accidents in Canada During the Third Quarter of 1947

THERE were 401 industrial fatalities in the third quarter of 1947 according to the latest reports received by the Department of Labour. In the previous three months there were 351 including 35 in a supplementary list. The accidents recorded are those which involved persons gainfully employed, during the course of or arising out of their employment and include deaths which resulted from industrial diseases as reported by the Provincial Workmen's Compensation Board.

During the quarter under review, there were five industrial accidents which resulted in the death of three or more persons in each case. On July 11, a fire in a wholesale wool establishment at Peterborough, Ontario, caused the death of two inspectors and one sorter. On July 12, three agricultural workers were killed when the truck in which they were riding, was struck by a passenger train at a private crossing located on the farm on which they were working. An underground explosion in a gold mine at Pioneer, British Columbia, resulted in the death of a foreman

and two miners on August 18. Four railroad employees were killed at Dugald, Manitoba, on September 1 when a special train collided with an express train which was waiting at the station. On September 24, a coal carrying steamship collided with an oiltanker in the St. Lawrence River near Morrisburg, Ontario; as the result of an explosion which followed the collision, 11 seamen were killed.

Statistics on industrial fatalities are compiled from reports received from the Provincial Workmen's Compensation Boards, the Board of Transport Commissioners and certain other official sources. Newspaper reports are also used to supplement these data.

Grouped by industries the largest number of fatalities, 82, was recorded in transportation. During the previous quarter 61 deaths occurred in this group. Of the total of 82 fatalities, 39 were on steam railways and 23 in water transportation. In the previous quarter there were 26 industrial deaths on steam railways and 20 in water transportation.

There were 76 fatalities recorded in manufacturing as compared with 42 in the second quarter of 1947. These deaths included 22 which occurred in iron, steel and products, 14 in non-metallic mineral products, 10 in saw and planing mills and 10 in the pulp and paper industry.

The number of fatalities in agriculture was 55 and in logging 47, as compared with 23 and 46 respectively in the previous quarter.

Of the 44 fatalities in the mining group, 30 were in metalliferous mining and 12 in coal mining. In the previous quarter there were 65 deaths in mining of which 50 were in metalliferous mining.

In the construction group, 39 fatalities were recorded of which 30 were in buildings and structures. In the previous quarter 41 deaths occurred in this group, 19 of which were in the construction of buildings and structures.

Moving trains, watercraft, and other vehicles caused 134 fatal industrial accidents during the quarter as compared with 132 in the previous quarter. This was the most important cause of fatalities during the period (See Table II).

Falls of persons caused 64 deaths and falling objects 49. Industrial diseases, infection and other causes resulted in 65 deaths while dangerous substances caused 47 deaths.

The greatest number of fatalities was recorded in Ontario where there were 163, as compared with 143 in the previous quarter. In British Columbia 85 fatal industrial accidents were recorded and in Quebec 51. Comparative figures for the preceding quarter were 74 for British Columbia and 54 for Quebec.

During the quarter under review there were 145 fatalities in September, 139 in August and 117 in July.

Canadian Mission to Select Polish Veterans

DURING the summer of 1946, the Canadian government, in consultation with the government of the United Kingdom, decided to recruit for agricultural employment in Canada, Polish soldiers who had fought with the Allies in the Mediterranean area. (L.G. 1946, p. 1710).

The first group of 2,876 Polish veterans was selected by a Canadian Mission and brought to Canada in the autumn of 1946. This initial group gave general satisfaction to their Canadian employers. In fulfilment of an earlier commitment made by the Dominion to the British government, it was decided in the spring of 1947 to recruit a second group of Polish veterans, this time in the British Isles, where all the remaining members of the Polish corps were then stationed.

Accordingly a second Canadian Mission was set up in April 1947, to proceed to Great Britain to select the veterans and to facilitate their discharge from the Armed Forces and their subsequent transfer to Canada.

Personnel of Canadian Mission

The following were the members of the Selection Mission: George V. Haythorne and V. C. Phelan, Department of Labour, Ottawa; W. Davison, Department of Labour, Toronto; and A. Howells, Department of Justice, Ottawa.

The Canadian Mission was joined in England by Dr. W. E. Egan and Dr. F. C. Lynch of the Canadian Department of National Health and Welfare in London. From time to time, representatives of the Canadian Departments of Agriculture and Trade and Commerce, resident in London, assisted in the work of the Mission while it was in Britain. Leading officials of the British Ministry of Labour and National Service, co-operated also and two British Labour officers were made available to the Mission at each selection point.

At the outset of the work in Britain the Canadian High Commissioner, Hon. Norman Robertson, arranged meetings in London which were attended by officials of the British Departments interested, Canadian officials in London and members of the Selection Mission. At these meetings plans were formulated to select Polish veterans from the western, northern and Scottish commands in Britain. Details as to how the selections were to be made, such as the nature of the information to be required of applicants, the processing of army discharge and other documents and the assembling of those who would be selected

for movement to Canada were worked out. It was further agreed that an effort would be made to have the first group of 300 to 500 men ready to sail on or about May 19, 1947, and that the remainder would leave as early in June as possible, so that the men would reach Canada in time to assist in spring farm work.

At the time the Mission arrived in Britain there were more than 80,000 Polish soldiers in the Polish re-settlement corps, which had been established by the British government on a semi-military basis, operated by the Polish veterans themselves as a stepping-stone from army to civilian life. The group selected for Canada were all members of this Polish re-settlement corps. They were all single men under 45 years of age who had fought against the Axis and who had previous farming experience. They were all medically examined, including X-ray and blood tests.

Unforeseen delays were encountered in making the early selections, chiefly due to the time required to complete blood tests of applicants. Later, the technique was modified so that this and other difficulties were overcome. During the first two weeks about 700 applicants were interviewed and, of these, 250 were finally cleared. Later, in the Scottish command, nearly 600 applicants were interviewed and nearly 350 were approved in a single week.

Selection Procedure

The selection procedure varied somewhat depending on circumstances, but in general it was as follows:

A short informal talk was given, through an interpreter to *groups* of from 25 to 250 applicants. By this means the men were informed concerning living and working conditions on farms in Canada, including intensity of work expected, hours of work, variety of agriculture and the nature of the employment undertaking applicants would be expected to sign. Questions were asked and answered and the men given opportunities to withdraw before proceeding further if they felt the requirements were too difficult. Only a small number withdrew at this stage, but in later interviews over ten per cent of those interviewed *individually* decided to do so.

As a preliminary to the "screening" a master list of all applicants was prepared by the documents office, usually in alphabetical order, showing names, ranks, ages, name of camp and Polish Resettlement Corps numbers. The men were interviewed and as far as possible given their earlier X-ray tests in the order of this list. Personal identification numbers were

assigned on the basis of this list, which were recorded on specially-prepared forms. The security officer had all approved men fingerprinted and had them sign their respective forms.

(2) The first *individual* screening was done by the security officers, usually through interpreters. This consisted of inquiries to ascertain whether the men had taken part in activities against the Axis. It was found that many of the younger Polish soldiers had enlisted after V.E. day and, consequently, were considered unsuitable for immigration to Canada on security grounds. Care was taken also in these initial interviews to inquire into the family circumstances of the men, in order to make sure that they had no family encumbrances.

(3) If approved by the security officer, applicants were next interviewed by a labour officer to determine the extent of their farm experience and also to obtain names and addresses of relatives in Canada as well as to have applicants indicate any province of choice.

(4) Applicants who passed successfully the first two interviews were given a thorough physical check-up, including determination of blood tests, X-rays, etc.

(5) Following the individual interviews, successful applicants were required to sign the employment undertaking, (which was printed in both English and Polish) and to answer the necessary questions on the Canadian Declaration form required for immigration purposes.

Final Arrangements

Documents relating to all successful applicants were processed as quickly as possible by the Records office of the Polish Resettlement Corps, the men were given their discharges and issued civilian clothing. They were then assembled at central points in each of the commands and proceeded to Southampton in groups of approximately 50, by special trains. Just before entrainment the men were given another medical examination, mainly to make final check for any communicable diseases.

During the voyage to Canada informal classes were arranged to assist the men in learning English. Further medical examinations were made by the ship's doctor and reports forwarded to the Quartermaster General of the Canadian Army at Ottawa. This, together with details of the number on board and amount of luggage was helpful in arranging transportation of the men to the various distribution centres in Canada. Three successive crossings by the *Aquitania* on May 20, June 6, and June 24, 1947, brought a total of 1,651 Polish ex-soldiers from Britain to Canada.

As in the case of the movement of Polish soldiers from Italy to Canada in the autumn of 1946, the British government paid the expense of transporting the men as far as Halifax. This amounted to about £28 per man.

Regulations for the Pottery Industry in the United Kingdom

DRRAFT Health and Welfare Regulations for the British pottery industry have recently been issued by the Minister of Labour and National Service under the authority of the Factories Act. They apply to the manufacture and decoration of pottery and to the crushing, grinding or sieving of flint or quartz, the mixing of flint or quartz with clay or other material, and the making of lithographic transfers, frits or glazes.

These Regulations, when finally adopted, will be one in a series of some forty Dangerous Trades Regulations which have been made and revised from time to time over a long period of years.

The new Pottery Regulations, replacing earlier ones of 1913 and 1932, are the result, in part, of recommendations made by the Tile-Dust Committee, appointed in 1938 by the Chief Inspector of Factories, and by the National Joint Council of the Pottery Industry in 1945. The need for better working conditions was urged, too, by the Pottery Working Party appointed by the President of the Board of Trade (L.G. Feb. 1947, p. 155).

The Tile-Dust Committee stressed the danger of silicosis from handling finely ground material, a danger largely unabated by the previous Order. It was recommended that the employment of women and young persons be entirely prohibited in certain specified processes.

The unhealthy conditions of the pottery trade, arising from high temperature and humidity, emission of dust, wet floors, and the lifting and carrying of heavy weights, lead to a high incidence of lead poisoning, silicosis, respiratory diseases and other ills, as well as general discomfort.

The new Regulations would particularly restrict the use of glazes other than "leadless" or "low solubility" glazes, and would restrict the use of ground or powdered flint or quartz.

The minimum age, for most occupations covered by the Regulations, is 16 years. This standard was generally established by the Regulations of 1913 and continues under the new Order. Persons under 18, however, are prohibited from employment in the making or mixing of frits or glazes containing lead or colours, handling of flow material, colour blowing, ground laying, colour grinding, lithographic transfer making and certain related processes involving the use of lead compounds.

Pre-employment and monthly medical examinations are required of all persons in these occupations. Regulations regarding suspension of employees for medical reasons,

keeping of health registers, and certificates for permission to work are substantially the same as in the earlier Regulations.

Women and young persons under 18 are also prohibited from stopping biscuit ware with material containing more than five per cent of its dry weight in a lead compound; handling unfritted lead compounds; preparing or weighing out flow material; cleaning boards used in any place after dipping, ware-cleaning, or glost placing is done; cleaning mangles or cleaning or scraping floors in which any process included in the regular schedule of occupations, is carried on; grinding clay dust; loading, carrying, conveying or unloading clay or clay dust, and some other occupations.

Maximum loads which may be carried by young persons under 18 have been reduced from 30 pounds to 20, and a limit of 50 pounds has been established for women. In addition, women and young persons are not permitted to load, carry, convey or unload clay or clay dust. Medical certificates of permission are required before a young person under 18 may be employed in lifting or carrying work, but a weight of not more than 20 pounds may be carried without such a certificate.

Detailed stipulations are made for the suppression of dust in potters' shops, for the use of efficient exhaust appliances in dusty processes, for adequate ventilation, for washing and other facilities with hot and cold water, for mess rooms separate from work rooms, sanitary work benches, and other matters. Special attention must be given to the floors of all places where there is dust given off or where water may collect. Floors impervious to water, with suitable drainage arrangements and daily cleaning, are required in slip houses. Brick, flag or other hard material, washed daily, is required wherever flint or quartz is crushed or ground, and in potters' shops and certain other places. Floors impervious to water but made of wood with a smooth, sound surface and washed daily by a hose are to be permitted in old establishments for the next five years.

The new legislation, like the old, lays down definite provisions regarding protective clothing, the handling and storage of food, the use of proper respirators, temperature, glazing and colour blowing, and facilities for work.

One or more persons must be appointed by the occupier to supervise the observance of the Regulations in the plant and to keep records concerning them.

DECEMBER, 1947

[NUMBER 12

Notes of Current Interest

Nova Scotia coal miners receive wage increase Coal Co., Ltd., Acadia Coal Co., Ltd., Old Sydney Collieries, Ltd., and the Cumberland Railway and Coal Co., Ltd., have been granted wage increases of 40 cents per day as of December 1, 1947.

The increase is connected with the terms of settlement of the general strike of coal miners in the Maritimes which occurred on February 15, and was finally terminated on June 12, 1947 (L.G., June, 1947, p. 820). That settlement, insofar as the four major companies connected with the Dominion Steel and Coal Corporation were concerned, provided for an immediate wage increase of \$1.00 per day, with a further increase of 40 cents per day to be payable in six months' time if production advanced by then to the 1939 tonnage level.*

The target of productivity which would result in a further wage increase was set at 2.42 tons per man for the Dominion Coal Co., Ltd., 2.41 tons per man for Old Sydney Collieries Ltd., 1.77 tons per man for Cumberland Railway and Coal Co., and 1.75 tons per man for Acadia Coal Co., Ltd.

By November 6, it was announced that the overall average of production at the eleven collieries of the Dominion Coal Com-

pany had reached 2.28 tons per man-day, with a range of from 1.42 to 2.69 tons per man-day at the different mines. At the same time the tonnage averages were reported to be 2.52 for Old Sydney Collieries, Ltd., 2.05 for Cumberland Railway and Coal Co. and 1.83 for Acadia Coal Co., Ltd.

During the balance of November the coal miners were at some disadvantage in their efforts to increase production because of the incidence of five Sundays and one holiday during the month. However, by December 1, it was announced that while the men in the south Cape Breton Field of the Dominion Coal Company had missed their target by 1.7 tons per man-day, all the pits operated by these companies in north Cape Breton and on the Nova Scotia mainland had exceeded their objectives.

Following conferences between officials of the Dominion Steel and Coal Corporation and District No. 26, United Mine Workers of America, it was announced that the 40-cent wage increase would be paid to the men of all the mines.

The wage increase boosts the basic daily wage of the coal mine employees from \$6.84 to \$7.24.

Arbitration award in meat packing dispute

Elsewhere in this issue (p. 1791) will be found the text of the arbitration award of Mr. C. P. McTague in the dispute between Canada Packers Limited, Burns and Company Limited, and the United Packerhouse Workers of America. Also

*At the time of the strike it was claimed by the management of the Dominion Coal Co., Ltd., that there had been a drop of 41 per cent in the output per man-shift in its mines and that production was only about 1½ tons per man per day on the average, which was one ton below the output of pre-war years.

included is a brief narrative of the nation-wide strike of some 14,150 meat packing plant workers which commenced in August and ended in mid-October.

Employment and industrial statistics The accompanying table contains the latest available statistics reflecting industrial conditions in Canada. Figures are shown for certain months in the current year together with figures for the same months of 1946.

Employment at October 1 was again at an all-time high and per capita weekly earnings continued to rise. Wholesale prices rose sharply during October and the cost-of-living index again increased, although the rate of increase during October was less than in the preceding two months. Carloadings during the four weeks ending November 29, were 1.1 per cent lower than in the preceding four-week period, but were 6.2 per cent higher than in the corresponding period of 1946. The value of Canada's merchandise exports moved up sharply during October showing a gain of 14.7 per cent over the September figure and a gain of 22.8 per cent over October of last year.

Employment and Earnings.—The index of industrial employment, calculated by the Dominion Bureau of Statistics, based on the 1926 average, reached a new maximum of 194.6 at October 1 as compared with 193.2 at September 1. The indexes at the beginning of October in preceding years were:—1946, 178.1; 1945, 168.7; 1944, 183.3; 1943, 187.5 and 1942, 181.3. The highest index during the war was that of 190.5 reached at December 1, 1943.

Industrially, there was important expansion in logging. Trade showed considerable seasonal improvement, while building was also more active. On the other hand, the trend was unfavourable in other branches of the construction industry, and in mining, communications, transportation and hotels and restaurants. In manufacturing, the outstanding change was the reported decrease of some 10,700 workers in slaughtering and meat packing plants, largely or wholly due to the strike. Lumber and pulp and paper mills showed substantial contractions of a seasonal nature. On the other hand there were important seasonal advances in vegetable food processing and textile factories.

Improvement in the situation as compared with September 1, was shown in the Maritime Provinces, Quebec and Ontario but curtailment was reported by leading firms in the four Western Provinces, where industrial disputes had a particularly marked effect.

Reports from 18,182 employers showed combined staffs of 2,007,879 persons, an increase of 0.7 per cent from the total reported at September 1. The advance was accompanied by 1.7 per cent rise in weekly salaries and wages. Payrolls distributed by the reporting firms at the beginning of October aggregated \$75,038,687 being 2.4 per cent higher than the \$73,285,907 which was distributed in weekly payrolls at the beginning of September. The weekly average per employee at the date under review was \$37.37 as compared with \$36.76 at September 1. Per capita figures at October 1 in previous years were:—1946, \$33.15; 1945, \$32.08; 1944, \$32.36; 1943, \$31.53; 1942, \$29.51 and 1941, \$26.37. In the last twelve months, the indexes of employment and payrolls have risen by 9.3 per cent and 23.2 per cent, respectively. Average weekly earnings in the same period rose 12.7 per cent.

Prices.—The general index of wholesale prices, based on the 1926 average as 100, was 139.3 in October, as compared with 133.8 in September. In October last year the index stood at 111. All but one of the eight sub-groups, chemical products, contributed to the gain over September.

A considerable gain was noted in the iron products group where the index rose 11.8 points, from 136.8 in September to 148.6 in October. The increase reflected higher wholesale prices for pig iron, steel billets, rolling mill products, wire, car axles, and iron and steel scrap. The index of wood products rose from 166.3 to 175.7 in the period due to increases in pine, spruce, and fir and cedar lumber. The indexes of animal and vegetable products advanced 4.7 and 4.8 points respectively. Higher prices for cotton underwear and woollen hosiery were reflected in the rise from 134.2 in September to 137.4 in October in the index of textile products. The index of non-ferrous metals moved from 134.6 to 134.9 while the index of non-metallic minerals rose from 117.5 to 119.1. Advances were indicated in the index of consumers' goods from 121.6 to 124.7, and in producers' goods, from 135.0 to 139.8. The index of Canadian farm products rose from 120.4 to 122.9.

The cost-of-living index based on average prices for the years 1935 to 1939 as 100 rose 1.4 points to 143.6 between October 1 and November 1, 1947.

The index for the food group rose 2.3 points to 173.6, due mainly to increases in the prices of eggs, fluid milk, certain meats and canned vegetables. Butter, lemons and a few fresh vegetables, on the other hand, were slightly reduced in price between October 1 and November 1. The clothing group rose

STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

NOTE.—Many of the statistical data in this table, with an analysis, are included in the *Monthly Review of Business Statistics* issued by the Dominion Bureau of Statistics.

¹Base 1926=100. ²Base, June, 1941=100. ³Base 1935-1939=100. ⁴Revised for the years 1935 to present and available in the *Monthly Review of Business Statistics* for May, 1947. ⁵Figures are for four week periods.

*Factory shipments.

2.8 points to 157.0, reflecting rising prices in all subsections, while home furnishings and services advanced from 149.9 to 151.4 due to increases in the prices of furniture, floor coverings, furnishings, dishes and cleaning supplies. Slightly higher costs for medicinal supplies, personal care items, newspapers and gasoline were responsible for an advance of 0.6 to 118.2 in the miscellaneous items index. Fuel and lighting rose 0.7 to 122.6 due principally to higher prices for coal and coke. No change was recorded in the index of rentals which remained at 119.9. The advance in the general index since August, 1939, was 42.5 per cent.

Use of training by Canadian Veterans

In a statement commending the effectiveness of veterans rehabilitation training carried out under the Canadian Vocational

Training Plan, Hon. Humphrey Mitchell, Minister of Labour, announced on November 18 that more than 80 per cent of all veterans who completed training in Vocational Training Centres were now employed along the lines for which they were trained.

The Minister stated that recent reports indicate that the vocational training of veterans is rapidly drawing to a close, and will be completed much earlier than was anticipated when the war ended. This has been made possible by the rapid demobilization of the armed forces, and the adequate facilities for their training established throughout the country through the excellent co-operation of Provincial Governments and other organizations.

Up to October 31, 1947, approximately 130,000 veterans have been enrolled for training. Of these, over 80,500 have completed their training; about 38,000 discontinued their training prior to its completion; and 11,535 were still in training on November 1.

The training given in the pre-matriculation classes and in the vocational training centres appears to be the most effective. Of those who enrolled in pre-matriculation classes, 74 per cent have completed their training and fewer than 24 per cent have discontinued. In the vocational schools more than 61 per cent have completed their training, and 31 per cent have discontinued. Of those enrolled for training-on-the-job in industry, more than 59 per cent have completed their training, and 28 per cent have discontinued. Of those enrolled in private trades schools, or business colleges, 52 per cent have completed their training and more than 33 per cent have discontinued. The correspondence courses have shown the least satisfactory results, with

only 16 per cent of those who enrolled having completed their training up to the present, and more than 77 per cent having discontinued.

The Minister pointed out that the maximum enrolment at any one time was slightly more than 39,000 in the early summer of 1946. Since then there has been a steady decline which has become more rapid in the last six months.

On October 31, 1947, those still under training were as follows:—

Correspondence Courses	993
Private Trades Schools and Business Colleges	2,199
Training-on-the-Job in Industry...	3,591
CVT Pre-Matriculation Classes ...	568
CVT Vocational Centres	4,184

During recent years the health of industrial workers has been increasingly recognized as an important factor in production and in labour-management relations.

In the October number of *Industrial Health*, issued by the Health League of Canada, it is stated that "there are in Canada between 800 and 900 industrial firms operating health programs for their employees." It is asserted that these firms, both large and small, are convinced of the value of such programs in reducing absenteeism, almost eliminating serious illness among workers, and in creating and fostering kindlier relationships in industrial plants. Further, it is held that "the day is not far distant when workers' health will be a major factor in plant management" and that its neglect "will brand management as short-sighted and incompetent." One authority is quoted as claiming that it is "well recognized that no amount of inspection will take the place of the active interest of employers and employees in maintaining health."

Rest periods and dismissal pay in recent collective agreements

The agreements summarized elsewhere in this issue, in the article *Recent Collective Agreements*, give an indication of the growing number of agreements for manufacturing establishments which make provision for ten-minute rest periods in morning and afternoon working periods. In some cases these are still granted to female employees only, but in others both male and female employees are included. A much more uncommon provision is that noted in the agreement between the Canada Paper Company and Le Syndicat National des Travailleurs de la Pulpe et du

Papier de Windsor Mills, Inc., in which dismissal pay is provided, in this case 50 hours' pay to employees who are discharged after 5 years' or more continuous service.

Polish veterans allowed to purchase their own farms

Polish veterans who came to Canada to work on farms last year are now permitted to purchase their own farms, it was announced on November 7

by the Honourable Humphrey Mitchell, Minister of Labour. They will also be permitted to rent farms which they intend to operate themselves.

This accords with the general plan for which the Polish veterans were brought to Canada—to increase food production in the Dominion.

Nearly two-thirds of the 2,876 Polish veterans who came to Canada last November are still employed on the original farm to which they were assigned. It is felt that those veterans who have so fully co-operated should be given some freedom of choice of the farm on which they will be employed during the second year of their two-year contract. Where the Polish veteran has completed one year's employment with the same employer, he may be allowed to make his own arrangements for employment in the second year with a farmer of his own choice.

These arrangements are to be made through the local placement officers of the National Employment Service of the Department of Labour, or the provincial department of agriculture concerned.

More than one-third of the Polish veterans have been transferred at least once within the agricultural industry as a result of application either from themselves or from employers.

Effect of 5-day week on unemployment insurance contributions

of contributions under the Unemployment Insurance Act. An article describing the administrative procedure appears elsewhere in this issue, on page 1812.

With an increasing number of firms operating on a 5-day week it has been thought advisable to issue an explanation of the effect of this working arrangement on the determination under the Unemployment Insurance Act. An article describing the administrative procedure appears elsewhere in this issue, on page 1812.

President Truman asks authority to reimpose controls

the "alarming" trend toward inflation by granting him authority to reimpose "selective"

In opening a special session of Congress on November 17, the President of the United States, Harry S. Truman, asked Congress to give him authority to fight

controls and to revive consumer rationing, if necessary.

The power he seeks to fix ceilings and reinstate rationing, the President said, would apply only to "products in short supply which basically affect the cost of living or industrial production" and only to "such wage ceilings as are essential to maintain the necessary price ceilings." He emphasized that the controls would be "selective"—limited to such basic items as food, clothing, fuel and rent and to a selected list of such items and that such "selective treatment of a relatively few danger spots is very different from overall wartime price controls." He made it clear that he did not seek immediate revival of controls but the authority to reimpose them if necessary in the future.

President Truman asked for authority to put into effect eight other specific controls, including control of consumer credit, regulation of speculation on commodity exchanges, extension and expansion of export controls, extension of authority to allocate transportation facilities and equipment, and the extension and strengthening of present federal rent controls which are due to expire on March 1 next.

Practically all controls had been removed in the United States in November, 1946 (L.G., Dec., 1946, p. 1691).

Trend toward profit-sharing plans noted in United States

A trend toward the adoption of more profit-sharing plans in the United States is noted in *Business Week* of November 8, 1947.

The article describes the recent formation of the Council of Profit-Sharing Industries, a co-operative project. Its membership at the start included 55 firms which have profit-sharing plans and are convinced they promote sound labour relations. The article also reveals that more companies co-operated in creating the council and are expected to join as members.

The immediate purpose of the council will be to bring together those practising or interested in adopting profit-sharing. Research into employer-employee relations under profit-sharing plans will also be conducted. Other activities of the council will be to assemble and give out information and to co-operate with persons and companies engaged in installing profit-sharing systems.

The council will probably not advocate any one particular plan. Instead, *Business Week* states, "it will give the best possible guidance to managements which want to tailor profit-sharing to individual plant situations."

Other developments in profit-sharing plans as reported in the article are the institution

of a "share of production" plan in a paper plant in Ridgefield, New Jersey, and the formation of the Profit-Sharing Union, Inc., in Chicago. The latter organization is offering its aid to management in establishing a profit-sharing retirement program.

U.S. Ford workers reject pension plan

Workers at the Ford Motor Company, Detroit, recently rejected by ballot a proposal for a pension plan which would have been the

first among the major automobile manufacturers in the United States.

The plan was negotiated between the company and the union, the United Automobile Workers (CIO), and was then submitted to the membership for ratification. In the vote, the workers were offered a choice between two contracts, one of which provided for a wage increase of 7 cents an hour and the pension plan, and the other for an increase of 11½ cents plus 3½ for paid holidays.

The pension scheme was defeated by a vote of 53,027 to 16,611, the alternative proposal being adopted.

An article in the November issue of *Factory* describes a survey taken by one of its editors among the Ford employees, to determine their reasons for voting against the pension plan. Eight classes of reasons were given, the consensus of which, according to the editor, was that while the workers were "still hungry for a pension" they objected to certain features of the plan that was proposed, or to the wording of some of its provisions.

One-year vacations after 10 years' service offered by small firm

As a means of combating labour turnover, a small Los Angeles firm, American Electric Motors Inc., has announced that it will grant one-year vacations with pay after ten years'

service, according to an article in a recent issue of *Business Week*. The workers will continue to get regular annual vacations with pay. Another innovation is a holiday for each employee on either the birthday or wedding anniversary.

The firm, which manufactures electric motors to power woodworking machines, employs 60 persons including 15 women. To finance the vacation plan a trust fund for the employees will be created into which the company will contribute 5 per cent of its annual payroll. The plan has been approved by the Government as a deductible business expense for taxation purposes.

The article in *Business Week* indicates that the company proposes to have job under-

studies. An employee on a year's vacation will be replaced by an understudy, but an unconditional guarantee will be given that after his vacation the employee will get his job back at the same rate of pay.

A condition laid down by the Government is that the employees must retain a proprietary interest in the fund. Hence, should future business conditions or the dissolution of the company force abandoning the plan, the trust money will be shared by the employees on a seniority basis.

Safety code in baking industry

A Safety Code for Equipment in the Baking Industry was approved by the American Standards Association on August 4 last.

It may be purchased for \$1.00 from the Association, 70 East 45th St., New York.

The Code deals with general machine guarding, flour-handling equipment, mixers, dividers, moulders, manually fed dough brakes, miscellaneous equipment, slicers and wrappers, biscuit and cracker equipment, and ovens. The Code was sponsored by the American Society of Bakery Engineers and drawn up by a Committee representing the American Bakers Association and other similar organizations, Associated Retail Bakers, Society of Bakery Engineers, Bakery Equipment Manufacturers' Association, the International Association of Government Labour Officials, the International Association of Industrial Accident Boards and Commissions, the United States Bureau of Standards, United States Department of Labour, and others.

Federal-State co-operation in enforcement of labour laws in U.S.A.

The Wage-and-Hour Division of the U.S. Department of Labour, which is responsible for the enforcement of the minimum wage and hours standards and the child labour provisions of

the Fair Labour Standards Act, 1938, has been combined for administrative purposes with the Public Contracts Division of the Department.

The Public Contracts Act, 1936, or the Walsh-Healey Act as it is commonly called, forbids employers manufacturing for Government contract supplies and equipment in excess of \$10,000: (1) to permit longer hours than eight in a day and 40 in a week unless time and one-half is paid for longer hours; (2) to pay less than the rates prevailing in the industry; (3) to employ a boy under 16 or girl under 18; (4) to let out work to be

done at home; or (5) to allow any conditions which are unhealthy or dangerous to the health and safety of the employees. Under the Fair Labour Standards Act, for workers in home or factory producing goods for shipment across State boundaries 16 years is the minimum age for employment and 18 the minimum in occupations declared hazardous; the minimum rate is 40 cents an hour for a 40-hour week, time and one-half to be paid for extra hours; and home-work is prohibited in at least seven industries.

Inspection staffs of State or local agencies are, in some cases, utilized under agreement between the agency concerned and the Division. In North Carolina and Minnesota, inspection and investigation functions under the two Acts have been delegated to the State Department of Labour. In twenty States, agreements have been reached with the State Labour Department for State inspection to ensure the enforcement of the Public Contracts Act. In other cases, the Division uses the services of the twelve Regional Offices of the Department of Labour for inspection and enforcement work.

Secret ballot before striking in New Zealand A 1947 amendment to the New Zealand Industrial Conciliation and Arbitration Act requires members of a trade union to take a secret ballot before striking. A similar stipulation is made concerning lockouts by employers' associations. These provisions are to be deemed to be rules of the organizations.

As introduced, the I.C.A. Bill provided penalties for infringement of these provisions up to £20 for a union member and £1,000 for a member of an employers' union, but these penal clauses were struck out by the Legislature. A clause was added permitting the Registrar of Industrial Unions to conduct a secret ballot of all members directly concerned in the strike if a strike was called without holding a secret vote. For interfering with the Registrar's conduct of the ballot, a fine of not more than £20 may be imposed, and if the offence continues, a further fine of not more than £5 a day.

The Act also provides for the appointment of Deputy Judges of the Court of Arbitration.

Trade union membership in the Netherlands At the beginning of 1947, total trade union membership in the Netherlands was 19.2 per cent higher than just prior to the German invasion, according to a recent report

in the *Monthly Labour Review* of the United States Department of Labour. Total membership shared by four main bodies at January 1, 1947, was 816,850 in comparison with 699,500 in the previous year and 685,100 in 1940.

The socialist organization, the Netherlands Federation of Trade Unions, which the *Review* states "has long been the strongest federation, has not wholly regained its pre-war membership." Although increasing from 242,600 to 303,300 during 1946, the membership was lower than the 373,000 noted in 1940. The Protestant federation with 119,250 members was almost as strong as in 1940 when its membership was 120,400. The Catholic movement showed a membership of 224,900, an increase from 191,700 in 1940. Comparatively recently in the field is the Trade Union Unity Central, which is described as Communist. Unlike the other federations, which increased in size, this organization in 1946 declined from 180,000 to 169,400 members.

New film on labour-management co-operation

Continuing its program designed to arouse and focus public interest in labour-management problems through the medium of motion pictures, the Labour-Management Co-operation Section of the Industrial Relations Branch of the federal Department of Labour, has released a new film entitled "*Take it up with the LMPC*".

The picture opens with views of an industrial plant in which poor housekeeping, indifferent work and mounting waste are obvious characteristics. This is followed by pictures of four shops where co-operation is practised under the stimulus of labour-management production committees. The vivid contrasts provide visual evidence of some of the benefits industries may obtain through the medium of such committees.

For showings before industrial groups, the film, which runs about 20 minutes, can be obtained through the offices of the Labour-Management Co-operation Section, Industrial Relations Branch, Department of Labour, Ottawa. It will also be made available for general showings in the near future, through the regional offices of its producers, the National Film Board.

Co-operation Between Canada and United States in Harvesting of Crops

International Development on Agricultural Front During War Now Vital Factor in Food Crisis

AN IMPORTANT factor in Canada's war economy was the organized two-way flow of agricultural labour between this country and the United States.

The history of this movement, how it was geared into the intensive war concentration of both countries, and its continuance into the peace years as a practical contribution to the food necessities of the world is the purpose of this article.

This now well organized movement had its origin in those sporadic and spontaneous shifts of labour across the Canada-United States border which were a natural corollary of common economic conditions.

The pattern of this trans-border movement was fixed during the latter decades of the 19th century when New England was rapidly becoming industrialized. Attracted by the prosperity engendered by this development, many Canadians migrated from Quebec and the Maritime Provinces to New England mill towns and remained there.

Also, for many years there was always a seasonal ebb and flow of Canadian labour from the border areas of New Brunswick and Quebec to Maine to garner the potato crop and to engage in woods operations.

Farther west, across the borderlands of the fenceless prairie, there was also a sort of haphazard inter-change of seasonal hired help on the ranches and homesteads. It was characteristic of the Old West, prior to the advent of the disc plough, the tractor and the combine, for cow-hands and harvesters to find their employment on an individual basis.

The depression of the early thirties, which ushered in the barren years of agriculture in both countries, reduced all such nomadic drifts across the 49th Parallel and over the Quebec-Maine boundary. With both countries emerging out of the economic doldrums in the late thirties, this movement gradually returned but in lesser degree. In the West particularly, with increased mechanization in the grain fields, the seasonal flow (south to north) of harvest hands never reached its former proportions.

The depression had another effect. Occupational selection, prior to the "black years" beginning late in 1929, had registered a definite urban trend. This was reversed as

the full impact of unemployment mounted in cities and towns with the industrial recession.

To those who had left the concession lines and the homesteads for a job in industry, the old farm became a haven from the distress of unemployment. Hence the retreat to the rural areas where the problems of living were less pressing.

Thus it was that at the commencement of the war in September, 1939, there was a reservoir of rural labour and certainly no shortage of industrial labour. The crisis of the war eventually acted as a magnet in drawing all this accumulated reserve of manpower into production or the Armed Forces.

Because of this reserve, however, the increasing demands of the Services and industry were not reflected in any appreciable shortages of farm labour for the first two years.

Hyde Park Declaration

The exigencies of the war created another set of problems on the financial, industrial and production fronts. As these developed, and as the world conflict cast its lengthening shadow across the United States, it became necessary to arrive at solutions of mutual aid to both countries. Accordingly, at a memorable conference between the Prime Minister of Canada, Right Hon. W. L. Mackenzie King, and the then president of the United States, the late Franklin D. Roosevelt, there emerged the Hyde Park Declaration on April 20, 1941.

Its primary object concerned such vital matters as "measures by which the most prompt and effective utilization might be made of the productive facilities of North America for the purposes of both local and hemisphere defence and of the assistance which in addition to their own programs Canada and the United States are rendering to Great Britain". . . . The project developed into an all-out effort that tapped all the productive sources of the two countries. The tempo of this co-ordinated drive was accelerated after Pearl Harbor into a productive achievement that had a major bearing on the course of the war. From this Hyde Park Agreement stemmed plans to use, in most

effective fashion, the content of farm labour and material available in the two countries.

Constituting the medium of this international co-operation were the Joint Economic Committees set up on June 17, 1941, as a part of the complex of joint committees and joint boards which grew out of the Hyde Park agreement.

International Administrative Machinery

In the agricultural field, one of the first functions of the Committee dealing with agriculture was to accelerate the seasonal movement of farm help across the boundary, and to free it from the deterring effect of immigration and customs regulations.

On February 27, 1942, it was recommended that the two countries "take appropriate action to facilitate the movement across the boundary of used agricultural machinery together with the necessary operators or crews".

(The acute shortage of metal for the manufacture of new machines and the developing shortage of the special class of agricultural labour to operate those still in use, made necessary the rapid shifting of men and used machines from one country to the other, particularly at harvest periods.)

In the spring of 1942 therefore, the two governments made formal arrangements for this migratory movement. These arrangements were renewed annually through 1943, 1944, 1945 and 1946, with a further renewal for the crop year of 1947.

In putting these formal arrangements into effect, it was necessary to draw upon the co-operation of the Departments mutually concerned in both countries. In Canada, the co-ordinating agency was the Agriculture, Forestry and Fisheries Division of the Department of Labour. In the United States the work was centred in the federal Department of Agriculture.

But there were other categories of greatly needed seasonal labour, the movement of which had to be facilitated across the common border. These included potato, tomato and apple pickers, woods workers, maple sugar workers, tobacco workers and food processing workers. Informal agreements were worked out between the two governments to carry out this program. The informal arrangements were worked out between the United States and Canadian State Departments, the active administration, as in the case of the combine movement, being directed in the United States by the Department of Agriculture and in Canada by the Department of Labour (Agriculture, Forestry and Fisheries Division).

Developments in Canada

In Canada during the early months of 1942, when the war production program was being expanded rapidly on a tremendous scale, local shortages of farm labour began to appear.

Later in 1942 National Selective Service regulations came into effect in a complete mobilization of Canada's human resources.

The extension of National Selective Service "to effect the orderly and efficient employment of the men and women of Canada for the varied purposes of the war" was announced by the Prime Minister, Right Hon. W. L. Mackenzie King in the House of Commons on March 24, 1942.

Briefly, the policy of war-time mobilization of manpower and womanpower, which became effective on March 23, provided for the direction of Canada's utmost effort on the three major fronts—the active service front, the industrial and labour front and the agricultural front. (LABOUR GAZETTE, April, 1942, pp. 402-9.)

The Minister of Labour, Hon. Humphrey Mitchell, was assigned the primary responsibility of extending this tremendous project while the direction, co-ordination and administration of policy was vested in a Director of National Selective Service. Within a few months of its inception, Mr. Arthur MacNamara was appointed to this exacting post in the dual capacity of Director, and Deputy Minister of Labour.

Among the Departments sharing in the allocation of manpower were the Departments of National Defence, Munitions and Supply, Agriculture, and Pensions and National Health.

An integral part of Selective Service Regulations was the "freeze" order which prevented workers from leaving their jobs without express authorization. However, this order was subsequently modified to permit farmers to accept employment in other primary industries, including woods operations during "off" seasons. Also included in the National Selective Service *modus operandi* was a system of labour exit permits. By this procedure workers were only permitted to leave the country after having obtained the necessary permission, this being granted only after close scrutiny into the circumstances.

In accordance with the spirit and intent of the Hyde Park Agreement these Labour Exit Permits, while preventing the casual movement of workers across the Border, facilitated the organized inter-change of agricultural labour on the international basis, already outlined in preceding paragraphs.

Thus for the duration of the war, and for a year after, the movement of farm labour was integrated into agricultural objectives pre-determined in the programs of each country.

Therefore, governed by seasonal requirements in both countries, there was an orderly two-way trek of farm labour across the border, without which maximum crop yields could not have resulted.

Accordingly, across the boundary between the Great Plain States and the Western Provinces long trains of combines under their own power moved to harvest the ripened grain, while in the woods of Maine thousands of Canadian wood cutters augmented the labour force of that State.

In November, 1946, some of the controls on the wartime Canadian economy were removed but Labour Exit Permits were not released until February, 1947.

Continuance of Project

With the spectre of famine stalking through the devastated areas of Europe the necessity of alleviating food shortages continued acute. Drawing upon the experience of the close co-ordination of agricultural projects during the war, organized group movements of agricultural workers continued under the grim urgency of maintaining maximum production to feed Europe.

Something else intruded into this problem of mechanized agriculture, and this, too, precluded any early abandonment of this post-war development of organized group movements. Once a crop is sown there are unpredictable factors—such as weather—that makes necessary quick mobilization of harvesting operations. A bumper yield in one section, with a spell of ideal weather, often determines the course and destination of a combine train. Here is where the machinery of directed group movements between the two countries is of incalculable value.

The practical results of this international co-operation during the war and the immediate post-war period are set forth in the following paragraphs:—

Exchange of Grain Harvesting Units

Each year since 1942 provision has been made for harvesting outfits and crews from the prairie provinces to assist in harvesting in the grain growing areas of the United States, and for similar units from that country to assist in harvesting in the Canadian West.

Applications from interested operators are made, in the case of Canadians, through the Farm Labour Directors, named under the Dominion-Provincial Farm Labour Program.

Operators in the United States apply through officials of the United States Department of Agriculture or of the State Extension Program. These officials, who work in close co-operation, keep informed continuously of each other's needs and of the number of harvesting outfits available. Only outfits which are approved by these officials are able to cross over the border under the specially relaxed immigration and customs regulations.

In earlier years, Canadian units were permitted to move to the United States on June 15, returning for the Canadian harvest by September 1. In 1947, due to a demand for Canadian outfits for early harvesting in Texas, Canadian combine units commenced moving on May 27.

The number of harvesting units participating in the movement has varied from year to year depending on weather conditions, the availability of outfits and other factors.

(It should be explained that a unit may consist of a combine and operator along with other vehicles, and up to seven helpers. The maximum number of helpers permitted in 1947 was three.)

During 1942 and 1943 only a limited number of Canadian units served in the United States while during that same two-year period 58 United States units trekked to Canada. In 1944 the balance swung the other way, 50 Canadian units proceeding to the United States. For 1945, 1946 and 1947, the Canadian totals were 165, 460, and 1,150 units respectively. The record-breaking wheat crop in the United States plus an unusually rapid ripening of the grain in Colorado and Nebraska were largely responsible for the large southward movement in 1947.

Movement of Potato Harvesters

Each Autumn, it has been the custom for Canadians in the border areas of Quebec and New Brunswick to assist with potato harvesting in Maine. As already outlined, during the war years this was placed on a controlled, organized basis. Arrangements for recruiting workers who could be spared temporarily from Canadian agriculture were negotiated through local agricultural committees, provincial agricultural representatives or agronomes and local employment offices. At each of the selected border crossing points the Canadians were met by farm labour officers in Maine who arranged for their allocation to farmers requiring help. Statements outlining the working and living conditions were given to each worker in printed form.

The movement of these workers is ordinarily started around September 12, and continues for approximately one week. Of the

total movement in 1945, 1946 and 1947, over 1,000 workers were recruited from urban centres in Quebec. Students and others also assisted, especially in the earlier years.

Some idea of the numbers of Canadians participating in the Maine potato harvest is indicated as follows:—

	Quebec	N.B.
1942.....	200	580
1943.....	300	—
1944.....	1,100	380
1945.....	3,800	300
1946.....	4,500	300
1947.....	6,200	480

North Dakota.—A somewhat similar movement of potato harvesters has been arranged each year since 1943 through the federal and provincial farm labour officials in Manitoba, and the agricultural officials in the United States and the potato growers there. The numbers involved in this movement have been as follows:—

1943.....	255
1944.....	200
1945.....	1,209
1946.....	1,000
1947.....	1,000 (requested)

During 1945 and 1946 some workers were recruited from the City of Winnipeg, in addition to those permitted to leave from the border area of the province. The movement was mainly limited to women and young people, since adult males were required for harvesting on the prairies. The movement usually occurs around the middle of September.

Maple Sugar Harvesters

There has been an annual movement from the province of Quebec since 1943 of workers needed on maple sugar harvesting operations in nearby centres in New England. The movement has ordinarily started around the middle of March. The harvesting period usually extends from one to two months. The numbers who have crossed the border have been in the neighbourhood of 300 to 500 annually.

Tobacco Workers from Southern States to Ontario and Quebec

A number of experienced tobacco workers consisting mainly of "primers" and "curers" move to Canada each year before the special arrangements were made for exchanging labour between the two countries. In 1940, for example, there were 907 men who entered Canada for this purpose. Since 1940, the

numbers have increased as indicated in the following records of those who have entered:—

	Ontario	Quebec
1941.....	1,610	—
1942.....	2,172	—
1943.....	1,469	—
1944.....	1,511	65
1945.....	1,502	41
1946.....	2,000	—
1947.....	1,350 (up to 1st week in October)	—

Arrangements are made each year for representatives from the Dominion-Provincial Farm Labour Committee in Ontario to recruit these experienced workers in the southern states in conjunction with federal and state agricultural officials. A simple immigration form is used by the Canadian immigration authorities to record the movement into and out of Canada of these men. Transportation is ordinarily paid by the farm employers.

Other Movements of Farm Workers

During 1945 and 1946, a number of workers were recruited in the province of Quebec, mainly from urban centres, to assist in harvesting a variety of crops in the New England States and in New York. In 1945 the movement was largely confined to men who helped with haying in New Hampshire and Vermont, and in fruit processing in New York State. Approximately 100 workers participated in these movements. In 1946 the workers were recruited for bean and pea harvesting, and apple picking, in addition to haying and fruit processing. Over 1,000 workers participated, including around 100 from New Brunswick, some of whom worked in vegetable processing plants in Maine for which special arrangements were made between the United States and Canadian Departments of Labour. In 1947 similar movements occurred but the total number was much smaller.

During the past summer, arrangements were also completed with the United States Department of Agriculture for the movement of some 225 sugar beet workers from southwestern Saskatchewan to northern Montana. These workers were permitted to cross the border on September 15 and return not later than November 20.

Each year a number of Indians move from Canada to neighbouring areas in the United States to help with fruit picking. They are free under treaty right to move across the border, but due to serious farm labour shortages in Canada, some efforts were made during the war years to reduce the numbers involved in these movements, which are mainly limited to British Columbia and the Maritimes.

Operations in Maine

Mention should also be made of a large movement of farmers each fall and winter from Quebec and Northern New Brunswick to woods operations in Maine and other New England States. During the war years, this movement has been maintained within limits arranged between the Canadian and United States Departments of Labour, through the issuance of Labour Exit Permits by local National Employment Service Offices. The quotas of skilled workers designated as of November each year are as follows:—

1941.....	2,000
1942.....	2,600
1943.....	3,500
1944.....	4,500
1945.....	6,000
1946.....	8,400
1947.....	9,000

The numbers employed during the winter months are approximately equal to the quotas, employment normally falling off during the summer when many workers return to their farms.

Appraising the results of all these trans-border movements from another angle, it is possible that some features of this develop-

ment may have permanent economic value to the two countries. From a purely Canadian standpoint the fact that these workers from Canada bring back in wages a substantial total of United States dollars is of definite benefit in meeting the present exchange deficit. Indicative of the importance of this factor, are the wage totals received in 1947 by workers from Canada. As an indicator of the work and earnings of one Canadian group only, the returns from Saskatchewan for 1947 operations show that 649 combine units proceeding to the United States from that province combined over 630,000 acres for gross earnings of nearly \$3,000,000. Taking into account all these movements from Canada in 1947 it is estimated, conservatively, that the total of earnings in United States currency will exceed \$15,000,000.

Thus a movement which started from the Hyde Park Agreement as part of a larger plan of hemispheric defence, progressed, under the impact of war, into a major factor in maintaining food supplies, and now that the organized arrangements have yielded such concrete benefits, the system is being projected into the peace period to make its contribution in alleviating the present world food shortages.

United Nations Approves ILO Resolution on Freedom of Association

REFERENCE was made in the November issue of the *LABOUR GAZETTE* (p. 1592) to the resolution on freedom of association adopted by the International Labour Conference at Geneva last July, and to the action taken by the Economic and Social Council in approving the ILO document.

The ILO report subsequently became the subject of an extended debate in the Third Committee of the United Nations General Assembly, where it was opposed by a minority of members, who argued specifically against certain of its provisions and called for greater

participation in consideration of the subject by the World Federation of Trade Unions.

Following approval of the report by the Committee, it was endorsed by the General Assembly on November 17. It was then transmitted to the Commission on Human Rights, for consideration of those aspects of the subject which might appropriately form part of a bill or declaration of human rights.

A list of workers' rights submitted by Argentina, was also approved by the Assembly.

International Labour Organization

First Sessions of ILO Industrial Committees

THE International Labour Office has prepared an analysis of the work of the industrial committees of the ILO during their first sessions. (Accounts of these meetings have appeared in the *LABOUR GAZETTE* during the last two years.)

Seven committees, dealing with the following industries, have so far held their first sessions: coal mines, inland transport, iron and steel, metal trades, textiles, building and petroleum. An eighth committee, set up recently for the chemicals industry, will meet in France in the spring.

The agenda of each of the first meetings was drafted in very wide terms and as a result the discussions were necessarily of a general nature. In each of the industries covered, the war has raised a very large number of complex problems. It was therefore only natural that as the members of the Committees met very shortly after the war they felt obliged to express their views on all those problems and suggest the solutions they advocated. The meetings therefore provided a wealth of detailed information on the present situation and on recent developments in these industries.

A total of 85 resolutions was adopted by the seven committees. The subjects dealt with included: manpower problems (recruitment, vocational guidance and training in labour-short industries); full employment; conditions of work (especially hours of work and holidays with pay); industrial relations; wages (guaranteed wages, minimum wages, bonuses, etc.); social security; safety and health.

The Office comments as follows on the achievements of the committees:

"Although the subjects discussed were often controversial, the committees worked in a spirit of mutual understanding and with an obvious desire to reach agreement on practical solutions. Evidence of this desire to reach an understanding can be found in the fact that practically all the conclusions were reached unanimously.

"It would seem reasonable to suggest that the results of the first meetings of industrial committees have been satisfactory. These first meetings brought within the orbit of the Organization extensive new fields of industrial activity. They also had for the Organization a publicity value which must not be underestimated. The tripartite system, so success-

fully employed in the past in International Labour Conferences, has now been applied to a series of different industries. While it is true that the conclusions so far reached are somewhat general and vague in character, it would seem that from now onwards it should be possible to obtain more definite and concrete conclusions.

"If the activities of the industrial committees are closely followed and due guidance is given to them in their work, if the agenda is carefully planned, if meetings are held at the most desirable intervals, if conclusions are drawn up in the most suitable form, and if action is taken to urge Governments to apply those conclusions as widely as possible, then there is every reason to hope that the industrial committees will go from strength to strength."

Work of Committees Studied by Governing Body

The Office analysis of the work of the industrial committees was considered by the Governing Body at its 102nd Session at Geneva, June 13 to July 10, 1947.

Representatives of the workers', employers' and government groups alike supported the principle of industrial committees.

The Governing Body took a number of decisions designed to improve the work of the committees; among other things it was agreed to allow a longer period (18 months to two years) between sessions of the committees, in order to give the Office time to collect all available material and submit preparatory reports with proper care.

It was decided not to set up, for the time being, new industrial committees for the timber and wood-working industries, or for metal mining as had been earlier proposed.

Canadian Appointments to ILO Bodies

The Governing Body at its 102nd Session appointed Mr. Charles McCord, Department of Labour, Canada, as substitute member of the Administrative Board of the ILO Staff Pensions fund.

It also appointed Mr. Herbert Marshall, Dominion Statistician, as Canadian representative on the committee of six experts set up to advise the Governing Body concerning the determination of the eight states of chief industrial importance.

Second Sessions of Industrial Committees on Iron and Steel and Metal Trades

MEETING at Stockholm, the Iron and Steel Committee and the Metal Trades Committee of the International Labour Organization held their second sessions from August 20-29 and from September 3-12 respectively.

The first meetings of these committees, held at Cleveland and Toledo in 1946, were described in the issues of the *LABOUR GAZETTE* for June and November of that year, on pages 729 and 1538.

Like the other six industrial committees of the ILO, these committees are tripartite

in structure, consisting of representatives of governments, workers and employers from the member countries. Their function is to treat the special problems of particular industries, giving them more detailed and continuing attention than is possible at the General Conference of the ILO.

Their resolutions are normally directed to the Governing Body of the ILO with the request that they be transmitted to the governments and to the workers' and employers' organizations concerned.

Iron and Steel Committee

Three main items were on the agenda of the second session of the ILO Committee on Iron and Steel.

Under the first of these the Committee studied ways and means of regularizing production in the industry—and thus employment—at a high level.

The second item, Minimum Income Security, gave opportunity for a discussion of various types of guaranteed wage systems.

Labour-management co-operation was the third item.

The Committee also debated a General Report prepared by the International Labour Office dealing with recent events and developments in the industry, and with action taken in the various countries and by the Office to give effect to the decisions of the first meeting.

The following 14 nations sent delegations to the meeting:—United States of America, Australia, Belgium, Brazil, Canada, China, France, United Kingdom, India, Italy, Luxembourg, Mexico, Sweden, Union of South Africa. A total of 90 persons, consisting of 77 delegates and substitutes and 13 advisers, were present.

The Canadian delegation was as follows:—

Government Delegates.—Mr. J. A. McClelland, Member, National War Labour Board, Ottawa; Mr. J. S. McCullagh, Assistant Director of Industrial Relations, Department of Labour, Ottawa.

Employers' Delegate.—Mr. Arthur H. Munson, Director of Industrial Relations, Dominion Bridge Company Limited, Montreal.

Workers' Delegates.—Mr. Wm. Mahoney, International Representative, United Steelworkers of America, Sault Ste. Marie, Ont.; Mr. George P. Schollie, Secretary Canadian Office, International Association of Machinists, Montreal.

Mr. W. Björck, Government delegate, Sweden, acted as Chairman of the Committee, while as Vice-Chairman the Committee elected Mr. R. Mather, United Kingdom, for the employers' group, and Mr. A. Gailly, Belgium, for the workers' group.

The Secretary-General of the meeting was Mr. John Price, International Labour Office.

The Iron and Steel Industry

The outlook for the steel industry in most producing countries, according to a report prepared by the International Labour Office "is dominated by two factors: first, the extremely heavy demand for steel for reconstruction and re-equipment, following in the wake of the war; second, uncertainty on the question whether or no the more highly developed countries, especially the United States, will escape an early post-war downswing in the business cycle. . . .

"European production of steel is in a recovery and expansion phase, still limited by coal shortages. Plans for further expansion of steel-making capacity and for modernization of facilities are prominent in France and the United Kingdom. Steel production and demand remain high in the United States, although some observers maintain that steel supply there may overtake demand before many months. Unemployment is not at present a problem in the steel industry, although the possibility of a

cyclical downturn, especially in the United States, cannot be excluded."

Procedure of Committee

The Committee held a debate on the General Report at a series of plenary sittings. Meanwhile the other three items on the agenda were considered by subcommittees, whose reports were later submitted to the Committee as a whole for approval. The subcommittees were aided in their work by the preliminary reports which had been prepared by the Office.

Production and Employment

The Report prepared by the Office entitled *Regularization of Production and Employment at a High Level* points out that the problem of irregularity of employment has in the past been especially serious in the iron and steel industry in almost all steel-producing countries. Changes in the level of production activity are of course the basis of employment irregularity.

The ILO Report divides the problem into three aspects. The first type of unemployment is caused by cyclical swings in steel production, which make up an important component of the general business cycle. Thus, stabilizing employment in steel is closely bound up with the question of stabilizing the economy in general; and in this connection the ILO has on a number of previous occasions advocated policies designed to maintain full employment.¹ The Report also calls particular attention to the pricing policies of the industry as important factors bearing on the general level of industrial activity and employment.

The second aspect of the problem has to do with the effect on the industry of long-term changes in the economy, such as basic shifts in technology or in the patterns of industrial demand. Consideration of this matter, the Report states, "presents a question whether stability programs for steel should be aimed at relative stability around a rising or a falling trend. A study of full-employment patterns in the United States suggests that if full employment is to be maintained, the present steel-making capacity of the country will need to be expanded in order to supply the necessary materials."

The third aspect of the problem relates to short-term fluctuations in production, result-

ing from seasonal factors or other causes. The Report suggests that in this connection two devices "are especially worthy of consideration, namely, the proposal to encourage those types of purchasing policies of important steel consumers which help to stabilize steel employment, and the proposal to encourage production of steel for stock. Admitted difficulties with the second plan centre about the expense of storing such a bulky commodity, and the deterioration which affects certain types of steel products." The Report also notes a variety of efforts of steel producers to regularize the production of particular products and in other ways to stabilize the over-all level of their activities.

The subcommittee on Production and Employment had before it the ILO Report. After an exchange of views four draft resolutions were submitted, one by the employers, two by the workers and one by the Mexican delegation. A consolidated resolution was finally approved for submission to the Committee in plenary session, where it was adopted with one minor change.

Following a lengthy preamble, which touches on many of the points mentioned in the ILO Report, the resolution makes a number of proposals, among them the following:—

That the Office assemble and analyse such information as may be available on fluctuations in demand for the principal types of steel products, and their effect on employment;

That methods of timing purchases of steel in such a way as to promote greater regularity in production be explored in conferences between representatives of the iron and steel industry and of the major steel-consuming industries, such conferences to be sponsored in the various countries by the governments and organizations concerned;

That the movement to eliminate unnecessary varieties in manufacturing be encouraged;

That the Office inquire into the feasibility of extending the practice of production for stock;

That plans for promoting the regularization of production in the steel industry should take full account of earlier ILO recommendations in regard to public investment policy;

That the ILO express to the United Nations its readiness to co-operate in a study of the proposal recently submitted to the Economic and Employment Commission "for the promotion of an auxiliary stream of investment from the highly industrialized countries to less developed areas (in addition to a regular long-term development program), with a view to utilizing the excess capacity during depression of the industrialized areas and thus promoting higher levels of activity and employment in those areas and accelerating the development of the less developed areas."

¹ In particular the ILO International Development Works Committee made recommendations in 1946, which were summarized in the *LABOUR GAZETTE* for March of that year, page 278.

The resolution also asks the Governing Body to request the Office to carry out an inquiry into vocational training methods, promotion of workers, and recruitment policies in the industry, and also to study the effect on employment of technological improvements.

Minimum Income Security

A description of various types of guaranteed wage plans, in industry generally and in the iron and steel industry in particular, and their application in various countries, is contained in the Report prepared by the Office entitled *Minimum Income Security*.

New Zealand and the United Kingdom are indicated as countries in which guaranteed wage plans have achieved a certain degree of acceptance, while in the United States considerable interest in the subject is being displayed. "In Canada," the Report states, "though few guaranteed wage schemes are actually in operation, employers, labour groups and Government agencies have given steadily increasing attention to the idea of a guaranteed annual wage or an assured minimum period of annual employment."

In the iron and steel industry, a "guaranteed week" has been in operation in the United Kingdom since 1941, at first under the provisions of a statutory order, and more recently on the basis of freely negotiated collective agreements.

Discussion by the subcommittee centred on the subject of the guaranteed weekly wage. A draft resolution was submitted by the workers' group on which the subcommittee was unable to reach agreement, the employers' group being opposed to recognition of the principle of a guaranteed weekly wage in the iron and steel industry, on the grounds that the whole question of wages, which undoubtedly would include the question of a guaranteed weekly wage, had been placed on the agenda for the next International Labour Conference. To submit a resolution favouring the principle of a guaranteed weekly wage in the iron and steel industry might prejudice the discussion at the next Conference as to the general application of this principle. Moreover, the employers felt that sufficient information on the subject was not available as, apart from one or two countries, the matter had not developed beyond the experimental stage.

The subcommittee finally agreed that instead of a formal resolution, a Memorandum addressed to the Governing Body should be prepared.

The most important paragraphs in this Memorandum take the following stand on the question of the guaranteed weekly wage:—

"The Committee is of the opinion that the iron and steel industry has attained such a state of development by its constant technical progress that it may now be possible and desirable to look forward to an improvement in the methods of wage payment of its workers. As the wage is the main element in the workers' income, the improvement would take into account, beyond the payment of wages for services rendered, the social necessity of ensuring the workers a guaranteed weekly wage. The Committee recommends, therefore, the adoption and the application, wherever feasible, of the principle of a guaranteed weekly wage in the iron and steel industry.

"The guaranteed weekly wage would constitute a substantial improvement over present conditions for many workers in the iron and steel industry, by protecting them to a considerable extent from the effects of intermittent employment.

"The Committee realized that conditions vary in the countries represented therein. It considers therefore that it should be left to the organizations of employers and workers, acting through their collective bargaining machinery, to work out the most practical means of introducing in their respective countries the guaranteed weekly wage for iron and steel workers."

These paragraphs were opposed by the employers' representatives, being construed by them as accepting the principle of the guaranteed weekly wage, which they were not prepared to do at this state. They were, however, accepted by the workers' and government delegates, and were adopted in plenary session by a vote of 38 to 14.

Other sections of the Memorandum carried without opposition, including a recommendation that the Office collect from the iron and steel producing countries information on the practical application of systems of minimum income security, and submit it to the next session of the Committee.

The Canadian Government delegation supported the entire Memorandum on the ground that the principle of a guaranteed weekly wage had already been accepted in certain industries in Canada and because the Memorandum indicated that the application of the principle should be effected through the established collective bargaining machinery.

On the recommendation of the subcommittee, the Committee also requested that the Office collect information on the observance in the various countries of measures concerning dismissal pay and payments for public holidays.

Labour-Management Co-operation

The Report prepared by the Office entitled *Labour-Management Co-operation* dealt with the questions of freedom of association and collective bargaining machinery, and labour-management co-operation at the industry and plant levels. After the Report was prepared, however, the question of freedom of association had come before the General Conference of the ILO at its 30th Session (Geneva, July, 1947), which had adopted a resolution and also decided to include the subject on its agenda at the 1948 Session. The Office therefore decided to withdraw the draft resolution contained in its Report for the Iron and Steel Committee.

Under these circumstances, the subcommittee limited its action on the question of freedom of association to a resolution noting "with satisfaction" the resolution adopted by the Conference. The employer members abstained from voting, both in the subcommittee and Committee sessions, on the ground that the Committee had no authority to express any opinion, whether of approval or disapproval, with regard to any action taken by the General Conference.

In regard to co-operation at the industry level, the subcommittee adopted a resolution submitted by the employers recommending that consideration be given to the setting up in each country, "where practicable and where no similar organization exists, of a national joint consultative committee consisting of the representative organizations of the iron and steel employers and the iron and steel workers' trade unions." Such committees, the resolution stated, would have the function of considering and making recommendations to their organizations concerning the implementation of decisions reached by the ILO Iron and Steel Committee and other matters concerning the welfare of workers and production. It was understood that, where desirable, representatives of governments and other groups could be included in the committees.

The resolution failed to get the support of the employers' members from the United States and Canada, but was adopted in plenary session by a vote of 53 to 2.

In regard to co-operation at the plant level, the establishment of works committees (corresponding to labour-management production committees in Canada) was recommended.

The Italian Government representative moved an amendment which would have had the effect of permitting all employees to elect representatives to such committees instead of allowing the trade unions with membership

in the establishment to elect or appoint them. The workers' representatives opposed the amendment, which was defeated. The Canadian Government representatives voted against the amendment on the ground that works committees in establishments where no collective bargaining relationships exist tend to become negotiating committees and thus prejudice trade union organization.

The resolution was finally adopted as originally submitted.

A further resolution requested that the Office continue the studies on safety and health conditions in the iron and steel industry undertaken in accordance with the resolution on safety measures adopted at the first session of the Committee in Cleveland in 1946.

Other Resolutions

The Committee passed a resolution asking the Governing Body to communicate to the Governments of the countries represented, the following definition of the Iron and Steel Industry, for guidance in making nominations for future sessions of the Committee:—

- (a) the extraction of iron from iron ores whether in the blast furnace or by any other process;
- (b) the production of steel ingots, wrought iron and steel for castings;
- (c) the operation of rolling steel and wrought iron, whether in the hot or cold state;
- (d) the manufacture of sheet coated with tin, zinc or other metals;
- (e) the drawing of iron and steel wire.

The Committee also adopted a resolution concerning the standardization of certain statistics in the iron and steel industry, proposed by a Working Party on Statistics and submitted through the Steering Committee.

General

Many delegates raised questions, in subcommittee and in plenary sessions, as to the exact scope and functions of the Industrial Committees and their relationship to the General Conference of the International Labour Organization. Concern was expressed because of the action of the Office in withdrawing from consideration the draft resolution on labour-management co-operation because this subject is to be discussed at the next General Conference in 1948. Similarly, the employer members declined to express an opinion on the guaranteed weekly wage because the whole field of wages is on the agenda for the 31st Session at San Francisco

in 1948. Views were expressed in favour of submitting resolutions on these topics on the ground that they might be of some guidance to the General Conference as interesting trends and views in the iron and steel industry; but on the other hand some delegates were against submitting resolutions on these subjects lest they prejudice the decisions of the General Conference.

There was a general feeling that the Governing Body was responsible for any over-

lapping of functions that might seem apparent and while no formal resolution was moved, Sir John Forbes-Watson (Great Britain), representing employers on the Governing Body, in his remarks at the closing session of the Committee, undertook to take up this matter at an early session of the Governing Body with a view to clarifying the functions of the Industrial Committees and preventing the overlapping and duplication of work.

Committee on Metal Trades

The Committee on Metal Trades had for its second session the same agenda as did the Iron and Steel Committee, namely: regularization of production and employment at a high level; minimum income security; labour-management co-operation; and a General Report.

The following 16 countries were represented at the meeting: United States of America, Australia, Belgium, Canada, Denmark, Finland, France, United Kingdom, India, Italy, Mexico, Netherlands, Norway, Sweden, Switzerland, South Africa. A total of 109 persons, consisting of 96 delegates and substitutes and 13 advisers, were present.

The Canadian delegation was as follows:

Government Delegates.—Mr. J. A. McClelland, Member, National War Labour Board, Ottawa; Mr. J. S. McCullagh, Assistant Director of Industrial Relations, Department of Labour, Ottawa.

Employers' Delegates.—Mr. S. C. Evans, Taylor-Forbes Ltd., Guelph, Ont.; Mr. A. H. Lawraon, Eureka Foundry Manfg. Co. Ltd., Woodstock, Ont.

Workers' Delegates.—Mr. Geo. P. Schollie, Secretary, Canadian Office, International Association of Machinists, Montreal; Mr. Lucien Lavellee, National Metallurgical Federation, Canadian and Catholic Confederation of Labour, Montreal.

The Chairman of the Committee was Mr. Henry Altman, Government delegate, Poland; while the Vice-Chairmen were Mr. George Romney, United States, representing employers, and Mr. Robert Openshaw, United Kingdom, for the workers' group.

The Secretary-General of the meeting was Mr. John Price, International Labour Office.

Procedure of Committee

The Committee debated the General Report in plenary session. The other three items were considered by subcommittees, whose reports were later submitted to the Committee as a whole for approval.

Canada was honoured in the election of Mr. McClelland as Chairman of the Subcommittee on Minimum Income Security.

Production and Employment

The Report prepared by the International Labour Office which was before the subcommittee on Production and Employment, and which was entitled *Regularization of Production and Employment at a High Level*, has specific reference to the problem as it affects the automobile industry.

Following a discussion of the economic significance of the industry, of its past record of sharp fluctuations in production from year to year and from month to month, of the causes of these fluctuations, and of possible methods of reducing them, the Report points out that while the existing heavy demand is likely to continue for many more months, nevertheless from a long-term point of view "it must be concluded that the growing dependence upon the automobile as a necessary form of transportation has failed to assure a more steady demand for new automobiles; that, on the contrary, the combined effect of automobile durability, used car availability, and consumer sensitivity to price and style has made the automobile industry more subject than ever to fluctuations in demand.

"Unless greater stability is achieved in the economy as a whole, therefore, the problem of regularizing automobile production and employment is one which time will apparently worsen rather than solve, regardless of the expansion which is now taking place. In particular, the severity of cyclical fluctuations in the automobile industry may be expected to increase with expanding automobile ownership, and even under conditions of sustained full employment there would remain the peaks and valleys in demand which weather and changing models produce.

"A calculated effort must therefore be made to deal with the fluctuations in demand and

the resulting fluctuations in production and employment which may be expected to reappear after current deferred demand has been met."

The Report adds: "One of the most obvious conclusions which must be drawn from even a superficial review of this problem is the complete mutuality of interest which obtains among management, labour and consumer in any effort to level off the fluctuations in automobile production. Each would stand to benefit from greater regularization, and the future of each would be enhanced by a serious study now of the various means which might be employed and the measures which ought to be in readiness which current high levels of demand no longer obtain."

The subcommittee also had before it a section of the General Report dealing with technological improvements in the metal trades and their effects on employment. The Report points to the inadequacy of the information available for a detailed study of the problem, but stresses the great interest that such a study would have.

As a result of its deliberations, the subcommittee adopted seven resolutions, all of which were subsequently approved by the Committee in plenary session, and which ask the Governing Body:

To suggest to governments that they set up agencies, where such do not already exist, to collect and analyze information on the problems affecting the metal trades, and make recommendations;

To arrange for the collection of forecasts of the long-term demand for metals;

To request the Office to prepare a report on the development internationally of a fair distribution of raw materials; and on the possibility of specialization in particular branches of the national metal trades industries so that they might complement each other;

To request the Office to study further the effects upon employment of technological improvements;

To recommend the use of training programmes, vocational guidance, etc.;

To support the efforts of underdeveloped countries to obtain equipment and financial and technical assistance;

To help see that war-devastated countries are provided with assistance.

Minimum Income Security

The Report on *Minimum Income Security*, prepared by the Office, notes that there are "very few" guaranteed wage plans in operation in the metal trades. In the United Kingdom, however, wages for a 34-hour week are guaranteed in the engineering industry, and for a 47-hour week in railway workshops;

while in the United States the United Steelworkers of America have agreement with various companies in the metal trades containing provision for guaranteed wages.

The subcommittee adopted a resolution on income security, worked out as a compromise expression of the conflicting views of the employers' and workers' members.

Its main provisions are as follows:

1. The Governing Body of the International Labour Office is invited to inform the next session of the International Labour Conference at San Francisco that the Metal Trades committee holds:
 - a. That income security, if, when and wherever economically possible, is in the interest of sound labour relations;
 - b. That there should be continued studies of the problem of income security which would deal with the problem on a realistic basis that would safeguard the interests of the workers, employers and consumers in all countries represented on the Committee;
 - c. That, to be constructive and lasting, any solution of this problem must be based on a realistic consideration of industrial development, economic conditions, existing legislation, current practices and the benefits of unemployment and other social insurance schemes;
 - d. That in connection with the study of income security there should be a review of existing legislation in such pertinent fields as social insurance and in minimum wage and hours, in order that the inter-relationship may be evaluated to the end of coordinating their effects; and
 - e. That it would be desirable for the Conference to consider the possibility of adopting guaranteed wage plans, if, when and wherever economically possible, preferably through the process of free collective bargaining, which will meet the varying conditions of different countries and of different segments of the metal trades. Any guaranteed wage plan is self-defeating, however, if it involves an employer in additional costs to the point where his ability to adjust becomes unduly limited.
2. A limited number of systems of calculating time rates or piece rates which are simple enough to be understood by all workers to whom they apply should be worked out and adopted by the organizations of employers and workers in the different countries concerned.
3. The Governing Body of the International Labour Office is invited to request the Office to continue its study of the guaranteed wage problem in the metal trades bearing in mind the principles set forth in this resolution as to the basis on which such studies should be made; this study should include a thorough examination of anticipated savings and increases in production resulting from the possible adoption of guaranteed income plans as well as additional costs to be borne by the employers and by the consumers.

This resolution was adopted in plenary session by a vote of 59 to 3, with 9 abstentions, following the defeat by 36 to 28 of an amendment proposed by the employers, which would have substituted the words "minimum income security" for the words "guaranteed wage" in paragraphs 1 (e) and 3. The Canadian Government delegates voted against the amendment because they felt it was necessary to emphasize that the guaranteed wage is one specific feature of minimum wage security.

Similarly, the Canadian Government delegates voted for the resolution because its implementation is left to the process of free collective bargaining.

Labour-Management Co-operation

Following the same action it had taken at the meeting of the Iron and Steel Committee, the Office withdrew a section of its report on *Labour-Management Co-operation*, since the broad subject of labour-management relations had recently come before the International Labour Conference.

The subcommittee agreed to refrain from making proposals which might prejudice the decisions of the Conference, and accordingly decided to embody its conclusions in the form of a Memorandum to the Governing Body rather than a resolution. The Memorandum asks the Governing Body to call the attention of the Conference to a resolution adopted at its first session which recommends:

"A. In the social field, the establishment of bargaining units, units responsible for interpreting agreements and supervising their application, and units for mediation and arbitration in case of disputes arising either before or during negotiations or again during the validity of collective agreements binding on the parties; according to the functions which they would be required to perform, these units might be national or regional or at factory level, it being understood that the matter would in no way take the place of the organizations parties to the collective agreements" and further recommends:

"B. In the economic and technical field,

- (a) the establishment of joint national committees for the metal trades, the object of which would be to assist the industry in maintaining its maximum efficiency by a full use of its economic, human and technical resources, should be taken into consideration;
- (b) the establishment of joint committees on the factory level with the object of maintaining and developing production without restricting the prerogatives of management should also be taken into consideration."

The subcommittee adopted also a resolution asking that the Office obtain further information on co-operation in industry. Its actions were unanimously approved by the Committee in plenary session.

Other Resolutions

A resolution submitted to the plenary sitting by the employers' group asked the Governing Body to obtain and provide the Committee with information concerning the supply of metal product requirements and the methods used to expand the domestic and international use of metal products.

After some debate, it was agreed that the text be referred to the Governing Body for consideration without being passed as a formal resolution.

Another resolution invited the Governing Body to urge each country to speedily examine the proposals and resolutions of the Metal Trades Committee and to take the necessary action for putting them into effect.

A resolution defining "metal trades" was also adopted. As the proposed definition appeared to be broader than that generally observed in Canada, the Canadian Government delegation abstained from voting.

The definition was as follows:

For the purpose of indicating the range of industries and trades with which the Committee is concerned, the term "metal trades" shall be considered to comprise the fabrication, manipulation and construction of iron and steel and non-ferrous metals (but excluding in general precious metals), together with substitutes therefor and ancillaries thereto, in the manufacturing and processing and/or the repairing and servicing of finished or semi-finished products.

Conventions of Labour Organizations

BRIEF accounts of the 1947 conventions of the two major labour organizations in the United States, the American Federation of Labour, and the Congress of Industrial Organizations are presented below.

The AFL Convention, its sixty-sixth, was held in the Civic Auditorium, San Francisco,

October 6 to 16. The ninth Convention of the CIO took place in the Hotel Bradford, Boston, October 12 to 17.

Also appended is a summary of trade union meetings held in Czechoslovakia, Germany and Italy.

American Federation of Labour

APPROXIMATELY 700 delegates, representing over 7,500,000 members, took action on a wide range of issues of interest to labour at the AFL Convention. Among these were resolutions authorizing a vigorous, nation-wide campaign to effect an early repeal of the Taft-Hartley Labour Act; ordering the setting up of an "Educational and Political League;" endorsing the Marshall plan of aid to European countries; protesting "the rising tide of inflation" in the United States; enacting an amendment to the constitution of the Federation making its President and Secretary-Treasurer its sole officers, and electing Daniel J. Tracy of the Electrical Workers to replace John L. Lewis of the United Mine Workers, as a member of the Executive Council of the Federation.

Among the many speakers who addressed the Convention were Judge Lewis B. Swollenbach, Secretary of Labour for the United States, Governor Earl Warren of California, Hubert H. Humphrey, Mayor of Minneapolis, General Mark Clark, of the U.S. Army, Kurt Schumacher, German democratic leader, and James F. O'Neil, Commander of the American Legion.

Address of President, William Green

In his keynote address to the Convention, President William Green declared that the repeal of the Taft-Hartley Act was "the No. 1 objective of American labour." He pledged "uncompromising efforts to achieve the defeat of every member of Congress who had voted for the oppressive anti-union law." He declared that labour "resented the action taken by the State legislatures and the Congress of the United States in passing anti-labour legislation after the war is over and following the establishment of such a wonderful record as labour made during that great conflict."

A major portion of Mr. Green's address was devoted to refuting the charge that labour's productivity was at a low level. He declared

that "we (the United States) are now producing 59 per cent more actual physical products than in 1939 and 80 per cent more than in 1929."

He declared that "a recent report of the federal Bureau of Labour Statistics showed that after deducting the increase in income taxes and inflated prices, the average unmarried factory worker with an income of \$49.37 per week in June, 1947, was worse off economically than the average factory worker with a weekly income of \$29.58 in 1941."

In the period between March, 1945, and June, 1947, "only the income of wage and salary workers stood still . . . though the cost of living jumped 24 per cent." Continuing, Mr. Green said, "Despite record-breaking production and the highest employment in the history of our country, prices in July (1947) stood 58 per cent above the prewar level."

Discussing the international situation, President Green declared that the workers of the United States and throughout the world earnestly desired peace and security. Nevertheless, "we will oppose, with all the power at our command, any attempt on the part of any nation to impose any sort of political philosophy upon any people throughout the world against their will", he said.

Mr. Green accused those who seek to blame labour for the soaring cost of living as misrepresenting the facts. Food prices have doubled, he declared, and "even the National Association of Manufacturers cannot successfully blame organized labour for that." He insisted that producers have an obligation "to return to the American tradition of producing in large quantities for a mass consumer market at the lowest possible prices compatible with American standards. Then, and only then, will we realize a strong, permanent economy with full production, full employment and purchasing power in the hands of our people sufficient to keep the wheels of American industry in full motion."

Turning to a discussion of Communism, Mr. Green declared, "our great convention has on different occasions declared to the world our uncompromising, irrevocable opposition to Communism and the communist philosophy. . . . We will have nothing to do with Communism in any shape or form."

Educational and Political League

In order to counteract what was termed "the anti-labour actions" of the Federal Government and several of the State legislatures, the Convention instructed the Executive Council of the AFL to establish an "Educational and Political League." The general objectives of the League will be to campaign for the repeal of "anti-labour" legislation and "to regain the self-government of which the Taft-Hartley Act robbed us."

Address by Canadian Fraternal Delegate

Mr. Robert Brown of Toronto, a member of the International Printing Pressmen and Assistants Union (TLC), stressed the value of co-operation in human relations. "Co-operation is democracy in perfect action. . . . It is the ultimate objective toward which all effort in social and economic progress is pointed. . . . It is the basic principle in . . . the fusing of all human elements into the brotherhood of man," he asserted. He claimed that it could be traced in the achievements of trade unions for the betterment of the working conditions and the standards of living of workers.

"Labour wants unity . . . a unity of ideals . . . it wants freedom from war . . . from want . . . and freedom and equality for all the peoples of the earth to destroy selfishness whether it be of men or nations," he said.

Mr. Brown contrasted the conditions that existed during the depression of the 1930's, with those of the war years and urged that it was necessary that "industry on this continent look with favour on the principle of collective bargaining and stabilization through labour unions," and asserted that industrialists should give consideration to "the depreciation of the worker" quite as much as in setting up funds for the replacement of out-worn machinery in their plants.

Foreign Policy

By a unanimous vote, the Convention endorsed the Marshall plan for European aid, "as a practical means of preserving world peace and bolstering the free governments of Western Europe." In addition, the Convention gave its approval to a ten-point declaration on foreign policy, "designed to put an end to international tensions and to eliminate world economic disintegration."

Among other things, this declaration urged the simultaneous withdrawal of all armies of occupation from foreign territories; the abolition of peacetime conscription in all countries by means of a collective agreement to be sponsored by the United Nations; the use of the technical and industrial resources of the United States to assist in the reconstruction of all war-torn countries that are willing to co-operate for mutual self-help and "the development of a healthy world economy;" the free interchange of information between countries in order to foster mutual understanding and friendship; and the application of the principles enunciated in the Atlantic Charter as the basis of international relations.

Other Resolutions

Among the many other resolutions adopted by the Convention were the following:—

Protesting the trend toward inflation and calling upon the government to take action to reduce the cost of living.

Amending the constitution of the AFL making President Green and Secretary Meany the Federation's sole officers.

Calling for the establishment of a comprehensive plan of social insurance.

Demanding the enactment of legislation to provide an extensive housing program.

Approving the admission to the United States of 400,000 European displaced persons.

Favouring generous federal aid for education.

Urging all affiliated unions to give serious consideration to demands for a shorter work-day in all future labour-management negotiations.

Directing the AFL to provide services for members planning to organize consumers' co-operatives.

Urging the dismissal from the government service of all known communists.

Ordering an intensification of the AFL's organizing activities, especially in the Southern States.

Pledging support of adequate minimum wages and old-age security for farm workers.

Asking for the removal of the federal payroll tax on wage workers of the U.S.

Favouring a holiday on all state, national primary and general election days.

Requesting an amendment to the federal Social Security Act to reduce the age for the payment of old age insurance benefits from 65 to 60 years of age and to provide payments to disabled workers at any age.

Petitioning Congress to raise the social security tax from one per cent to two per cent, so as to raise payments under the Social Security Act.

President William Green and Secretary-Treasurer George Meany were re-elected unanimously.

The sixty-seventh annual convention will be held in Cincinnati, Ohio, in 1948.

Congress of Industrial Organizations

MORE than 600 accredited delegates from 41 national and international unions, 34 States industrial union councils, 163 city and county industrial union councils, and 125 local industrial unions, representing a total membership of some 6,000,000 workers, took part in the deliberations of the CIO convention.

Among the many matters dealt with were: commodity price controls and the cost of living; housing and rent controls; State anti-labour legislation; social security; the foreign policy of the United States; and the necessity for labour unity and the promotion of political action in an "all-out fight for the repeal of the Taft-Hartley Labour Act."

Several notable personalities addressed the Convention. Hon. George C. Marshall, Secretary of State, went to some pains to show how carefully the American Aid-to-Europe program was being worked out, both to assure maximum results in Europe and to prevent undue strain on the American economy.

He asserted that "labour plays a vital part in the functioning of the modern state. If labour can be confused or embittered," he continued, "if labour can be made to lose faith in the community of which it forms a part, then the core of any national society is threatened." He declared that the issue today is not one of political labels, but whether or not civil liberties remain intact. "The rights of labour and the hope and possibility of further gains for labour are absolutely dependent upon the preservation of civil liberties," he said.

The Secretary of Labour, Hon. Lewis E. Schwellenbach, told the convention that while wage increases "have a relationship to price increases," nevertheless he denied "that all price increases should be blamed on wage increases."

Other distinguished speakers were, Senator Claude Pepper, Most Rev. R. J. Cushing, Governor Robert F. Bradford of Massachusetts, Hon. Maurice Tobin, Franklin Delano Roosevelt, Jr., and Rabbi Joseph L. Liebman.

President Truman's Letter

In a letter to President Philip Murray, extending his greetings to the convention, President Harry S. Truman said that "labour and industry, recognizing the seriousness of the situation abroad, will co-operate to raise the production level still further, to help meet the critical conditions which threaten the well-being of the entire world...."

Address of President Philip Murray

In his keynote address, President Philip Murray directed the attention of the convention to the "skyrocketing of prices in the United States in the course of the past several months." He asserted that the CIO "fought day in and day out for the maintenance of reasonable Federal price controls." Moreover, "it fought for rent control. Its voice was heard in the halls of Congress...." It predicted an inflationary situation if such controls were removed and he held that subsequent events have justified the prediction. "The most dangerous inflationary situation that has ever developed in the history of the United States of America now presents itself to the American people," he claimed.

Turning to "the opposite side of the picture," he declared that large profits made it possible for United States corporations "to pay mighty healthy dividends and save a great deal of money." He denied the claim of "certain politicians" that "high prices are directly attributable to high wages.... There have been no general wage increases in the United States in the course of the past eight or nine months," he said. In his opinion, "the recent skyrocketing of prices in the U.S.A., therefore, is directly attributable to those practices of extortion which lie at the doorsteps of the great industrialists and food combines in the United States of America."

He accused the Congress of the United States of failing to give attention "to any of the important problems which confronted our people." Instead, "the Congress enacted the Taft-Hartley Act," which he condemned as "a sinful piece of legislation," designed "to impose the wrath of its promoters upon millions of organized and unorganized workers throughout the United States of America," under the pretext that Congress had been given a mandate by the American people. To combat this legislation, Mr. Murray said, the CIO is undertaking "for the first time in our history, a real national campaign to organize votes and to get out large registrations.... for the 1948 elections. The answer has to be provided by ballots and by votes and by large registrations."

He declared that the CIO had to fight "in every legitimate way against the issuance of injunctions in labour disputes.... We have got to fight lynchings in the South.... We have got to attempt to secure the enactment of federal legislation that will impose justifiable penalties against the use of the mob

against any man or woman because of colour, race, or religion.... We must be free; not only within the CIO, but we must be free here in America, and that means that we must as a militant, crusading organization use our power in every legitimate way toward the attainment of these common goals, which will seek a reduction of all those evils which are opposed to us."

While admitting that he did not see many fields in which the CIO could work together with the AFL "in the common interest," there was one in which he felt they could co-operate and that was "the field of political action." He declared that the two organizations had "common enemies, working and planning day and night for the destruction of American unions...for the depression of American living standards." He made a plea to the AFL to "act for mutual defence before it is too late."

Social Security

The convention recognized "as one of its major continuing legislative tasks, the speeding of action toward establishment of a strong, unified national system of social insurance," for protection against "the economic hazards of illness, death and unemployment . . . as a part of the right and heritage of the people of a strong democratic nation."

Housing and Rent Control

Attention was drawn to the removal of rent controls and the abandonment of the emergency housing program. This, it was claimed, had led to rent increases and had opened the way to widespread evictions. It was urged that "merely to alleviate the worst hardship cases alone, this nation needs the construction of a minimum of one million new houses a year." A resolution was adopted calling upon President Truman to insist upon the enactment of legislation by the Emergency Session of Congress in November, to provide for new rent controls; provide governmental assistance in a large-scale program for the construction of rental housing; restrictive non-residential construction and to "give present occupants of existing publicly-built, war-housing projects prior consideration in the disposition of such projects".

State "Anti-Labour" Legislation

The Convention took action to check the flow of what was termed "reactionary and dangerous anti-labour laws" that had been passed by several of the State legislatures within the past year. It was held that these

laws formed "a peril to our movement just as dangerous as the iniquitous Taft-Hartley Act". A resolution was adopted demanding the stoppage of "the wilful destruction of social gains which has taken place and threatens to continue to take place . . . on the State level."

Other Resolutions

Among numerous other resolutions adopted were the following:

That the CIO support a program for consolidating all government activities dealing with the immediate interests of workers, into an enlarged Department of Labour, which would include the Federal Security Agency.

That the CIO, through its constituent internationals and its educational departments give every possible support to UNESCO.

That legislation, pending in Congress, designed to promote fair employment practices, be energetically supported.

That the CIO fight for the establishment of an economic bill of rights and the enactment of a full employment law.

That income tax exemptions be increased to \$1,500 for the individual; \$3,000 for a married couple; and \$500 for each dependent.

That the CIO renew its support of full protection for the job rights of veterans, including full seniority for all time spent in the services, vacation benefits, promotions and increases which they would have received had they not been in the armed forces.

That the CIO work for legislation that will broaden the child-labour provisions of the Fair Labour Standards Act to cover all interstate commerce and industrial agriculture.

That the Convention call upon its affiliated unions to co-operate with labour and farm organizations for the purpose of meeting mutual problems.

That the CIO fight to insure the achievement and protection of equal rights of women, both on and off the job.

That a vigorous program to promote collective bargaining be conducted.

That affiliated locals and industrial union councils be urged to support actively in their own communities, better schools and educational services.

That unemployment insurance benefits be made available to workers on strike.

That continued support be given to the World Federation of Trade Unions.

A replica of a bronze plaque was unveiled at the Convention as a memorial to the late President Franklin Delano Roosevelt, to "proclaim the affection and esteem in which the working men and women of the CIO" hold his memory. (The original plaque was unveiled in the children's wing of the Georgetown Memorial Hospital in Washington early in December, 1947.)

Philip Murray and James B. Carey were re-elected President and Secretary-Treasurer, respectively, for the ensuing year.

Trade Unions in Czechoslovakia, Germany and Italy

BRIEF reports of the proceedings of (1) the plenary session of the General Council of the Czechoslovakia Trade Unions; (2) the fifth Inter-zonal Conference of the German Trade Unions; and (3) a statement of the Italian General Confederation of Labour are given in a recent issue of *Information Bulletin*, fortnightly publication of the World Federation of Trade Unions. Summaries of these reports follow.

Czechoslovakia

Attended by 120 delegates, the plenary session of Czechoslovakia Trade Unions was held in Prague on July 3 and 4, 1947. The following questions were examined: (1) the structural organization of the trade unions; (2) intensification of trade union work; (3) social and political questions; (4) questions of national economy; (5) cultural problems.

It is stated that the composition of trade union bodies at all levels, from trade union groups in factories and districts to central committees of federations is determined by democratic elections, and that elections of works' councils have been carried out in accordance with existing laws and instructions.

Having completed its structural organization, the trade union movement is turning its attention to "strengthening its contacts with the masses of the people;" to "the education of trade union officials;" and to "relations between various sections of trade union movement."

With regard to social and political questions, the report, among other things, states that the Central Council "approves the work accomplished by the Administration and instructs it to undertake further steps tending to establish social security;" and that it considers "existing legislation makes it possible to meet the elementary requirements of large sections of the workers in the matter of social insurance." However, a speeding-up of negotiations in National Front organizations to enable the Bill on general insurance to be submitted to Parliament, is requested. The Council also demands that "the just and generally recognized principles of the estimation of work performed, should be taken as the basis in drawing up the new regulations governing the salaries of employees in Government Departments and Public Services."

Concerning questions of national economy, the Council commends the progress being made in the fulfilment of the two-year economic plan" and declares that the function of the trade unions is to transform the several factors that have contributed to this success

into "real mass movements and to extend them to all workers." Special attention is directed to the building industry which, it is claimed, has not made satisfactory progress in the fulfilment of the two-year plan. To correct this condition, the Council "demands the establishment of the necessary conditions to make good the delay which has occurred in the building industry," such as the guarantee of the necessary labour force, the introduction of mechanization and improved organizations. Among other demands, the Council asks for representation within the Central Co-operative Council and in Special co-operative unions.

Under the heading of "cultural questions" the Council urges the transfer of powers of control over cultural organizations to local cultural councils, as bodies of popular authority. Other demands of the Council are: (1) the application during this year of legislation to settle the question of the single state school; (2) exemption from taxation for undertakings of a cultural and educational nature; (3) the establishment of trade union courses for instructors and teachers in technical schools, as a means of improving technical education of young people in factories; (4) the provision by employers of health-giving gymnastics for young factory workers; (5) the same advantages in cultural institutions for pupils of technical schools as those offered to other students; (6) the enactment of a law governing theatrical undertakings.

Germany

The fifth inter-zonal conference of representatives of German Trade Unions was held August 7 to 9, 1947, at Badenweiler in the French occupation zone. The conference adopted the following agenda: (1) the affiliation of the German trade unions to the World Federation of Trade Unions; (2) collective contracts; system of labour legislation; (3) organizational questions; (4) making arrangements and drafting agenda for the next session.

The General Council of the WFTU, at a meeting held in Prague last June, agreed in principle to the affiliation of German trade unions to the WFTU. It was further agreed to establish in Germany a liaison bureau of the WFTU to maintain contacts with the German trade unions and to prepare, with them, conditions of unity on a national scale and by democratic methods. This arrangement was to become effective, with certain reservations having to do with the subsequent

structure and activities of the German trade unions. The conference of the German unions in August received "with great satisfaction," the action taken by the WFTU and instructed a working committee to draw up the necessary proposals for consideration at the next inter-zonal conference.

The fifth inter-zonal conference drafted a statement outlining the current economic conditions in Germany and urged the German people to do everything in their power to restore the possibilities of material existence. It was claimed that it was essential that the occupying powers and other competent authorities should assist these efforts; that all German trade unions "co-operate effectively in the improvement of the harsh conditions of existence"; that rural workers exert their greatest efforts to garner the harvests and that

women workers, civil servants, etc., assist by all means at their disposal. The German trade unions again confirmed their desire for the socialization of the coal industry and that in the meantime, "powers of control and of distribution should be transferred immediately to the German authorities."

Italy

The Secretariat of the Italian General Confederation of Labour, in a recent message to the Italian people, "declared a merciless war on the high cost of living and on speculation, which are," it was claimed, "the fundamental causes of the poverty and sufferings experienced by workers, pensioners, and the great majority of Italian families."

*Industrial Relations Conference at Dalhousie University**

ALMOST a hundred persons gathered at Dalhousie University in Halifax on November 19 for the annual conference on Industrial Relations. It was the largest attendance ever experienced in the ten-year history of the organization. Nearly all the major corporations of Nova Scotia were represented, as well as many other firms, most of them members of the Maritime Bureau of Industrial Relations which sponsored the conference.

After Colonel K. C. Laurie, Chairman of the Board of Governors of Dalhousie University, had welcomed the gathering, Premier A. L. MacDonald expressed his government's appreciation of the work done in the field of industrial relations. The Chairman of the morning session, D. R. Turnbull, greeted the distinguished speakers from the United States and Canada who were on the program. They included H. S. Fox, Commercial Attaché of the American Embassy in Ottawa, J. H. Brace, Vice-President of the Bell Telephone Company, Hon. L. D. Currie, Nova Scotia Minister of Labour, Dr. George F. Davidson, Deputy Minister of Welfare, Ottawa, Dr. E. P. Weeks, Department of Reconstruction and Dr. L. Richter, Halifax.

International Aspects

The subject of Mr. Fox's lecture was "International Aspects of Industrial Relations". He dealt with the close inter-relations which exist between conditions of production and labour relations, discussing the international aspects of the problem. Only in a sound world economy can labour be prosperous and the

trade agreements which have just been announced are, therefore, of profound importance to both partners in industry-management as well as labour. The draft charter of the new World Organization which was enunciated in August, and the new multilateral trade agreements provide an example of constructive international co-operation which will demonstrate in the economic field, as well as in other fields, that the United Nations can function effectively, and that there exists a fundamental basis for the long term solution of the many difficult economic problems which are the present heritage of global warfare.

Management's Part in Industrial Relations

One of the highlights of the session was the address given by Mr. J. H. Brace, Vice-President of the Bell Telephone Company. He described the functions which a progressive company must perform in the field of industrial relations, basing his remarks on the organization created by his own company. Good employee relations in industry, the speaker declared, involve three major factors: first, security, second, good wages and working conditions, and third, job satisfaction. Business has progressed a long way from the days when employees were merely persons without identity who perform a chore for so many hours a day. A modern company will aim at providing its employees with inspiration; it will interest them not only in their work but also in the conditions of their industry to get their whole-hearted co-operation.

In the field of wages and working conditions we have today compulsory collective bargaining. This is the direct outcome of the desire

* Report by Managing Director, Maritime Bureau of Industrial Relations.

among the employee group to accomplish through a spokesman what the individual cannot do alone.

In the field of security, the main goal is protection against the contingencies of unemployment, old age and sickness. It is in the realm of health care that the greatest progress has been made since the war years. The Bell Telephone Company has created a system by which its employees are provided with the services of doctors and hospitals. Those who are unable to look after themselves are cared for by nurses. A full-time doctor has been added to the headquarters staff of the Company and every effort is made to add to the existing services.

At the luncheon meeting, Professor L. Richter gave a report on the activities of the Bureau of Industrial Relations, of which he is Director. He dealt especially with the research work undertaken by the Bureau in co-operation with the Institute of Public Affairs at Dalhousie University. A large part of it is at present devoted to the employment situation in the Maritimes where there are some pockets of unemployment. The Bureau is further instituting courses for personnel officers in industry and co-operates closely in that field with the Maritime Personnel Association.

Legislation and Labour Relations

The chief feature of Hon. L. D. Currie's address was his insistence that in labour relations in the past, too much attention had been paid to the ill-considered writing of laws and not enough to the spirit of principles behind the law.

"The spirit of the operative sections of our Trade Union Act is to point the way to voluntary collective bargaining and to impose penalties upon those who by their wrong-doing as citizens and not alone as members of industry, imperil the peace, order and harmony of the common weal. It is of no avail to pass a law providing for voluntary collective bargaining if in the first place the bargaining is not voluntary and if, in the second place, the negotiations are not conducted in a spirit of co-operation and mutual understanding."

The speaker then discussed the main principles underlying the new Nova Scotia Labour Code. He expressed the hope that under his régime industrial harmony would make further progress in the province.

Although his talk was titled "Canada's Program of Social Security", Dr. Davidson, Deputy Minister of Welfare, pointed out that the problem of federalism in Canada meant that Canada has no single "program" approved by the three levels of government, the private welfare organizations, and the people of the

country. Since the Canadian Constitution gives no clear-cut guide as to the allocation of responsibility in that field, achieving social security in this country must be a slow process of working out the most efficient and effective inter-governmental relations possible through study and consultation, Dr. Davidson said.

The Dominion-Provincial difficulty has also meant that although Canada in some fields—notably workmen's compensation, unemployment insurance, and family allowances—had among the best pieces of legislation in the world, in others—such as health insurance, sickness benefits, provision for old age, and survivors' insurance—there is still much to be achieved.

Economic Recovery Program

Speaking on the Significance of Europe for Canada's Future Development, Dr. E. P. Weeks of the Department of Reconstruction and Supply, dealt with the importance of Western Europe and the United Kingdom in world and Canadian trade before the war, current conditions in those areas, and their present role in the pattern of Canadian trade, as the background to the economic recovery program resulting from Secretary Marshall's Harvard address.

He then analysed briefly the report of the European Economic Committee and the assumptions upon which it was based; and emphasized the magnitude of the European recovery problem and the sacrifices which would be required for its realization.

The speaker devoted considerable attention to the relation between the economic recovery program and the recently announced trade agreements, stressing particularly the following points: that the level of trade depends ultimately, even more on the recovery of production in the great trading areas, than on the actual height of tariffs; that the period during which the provisions of the agreements regarding temporary restrictive measures to deal with adverse trade balances will apply, will, in turn, be governed by the extent and speed of assistance to Great Britain and Western Europe from the Western hemisphere; and that the program would be of direct significance to Canada in the form of greater demands for the sinews of recovery—food, timber, and non-ferrous metals—and have indirect effects through the impact of European recovery on other trading areas, like Latin America and the British West Indies—with which Canada also has close trading relations.

Finally, the speaker maintained that only through the rehabilitation of Britain and Western Europe could the multilateral trading system—so profitable to Canada in the past—be revived on a stable basis.

Working Conditions in Iron Foundries in Great Britain

Recommendations of Advisory Committee

MEASURES to improve general working conditions in iron foundries are recommended in the Report of the Joint Advisory Committee which was set up by the Chief Inspector of Factories in Great Britain in August, 1945.

The Committee, consisting of seven representatives of each side of the industry, a technical adviser and four factory inspectors was chiefly concerned with: (a) provision of better amenities and more comfortable and healthy working conditions; (b) improvement of the appearance of iron foundries through greater cleanliness and orderliness and more light and colour; and (c) improvement of the atmospheric conditions by prevention or removal of dust, smoke and fumes. In dealing with various technical points, the Committee was assisted by a six-member Sub-Committee.

The practical difficulties involved in making improvements under existing conditions and the widely different circumstances in foundries with respect to size, methods of production, mechanization, etc., caused the Committee to suggest some flexibility in the nature and application of its recommendations. A section on "New Foundries" indicates points which should receive attention in the design and layout of a new foundry in order to comply with the requirements of the Factories Act and the recommendations in the Report.

A Joint Standing Committee is suggested to keep under review conditions and developments in the industry affecting the health, welfare and safety of the workers and to follow up the work already done.

Under the general headings of "Cleanliness" and "Good Housekeeping", the latter term covering "all means of attaining tidy and orderly conditions and avoiding obstruction and congestion", the Report discusses frequency and methods of cleaning and the importance of system and orderliness in storage and stocking of materials and equipment in areas set apart for the purpose, and of maintaining unobstructed gangways of suitable width. In the Committee's view, "good housekeeping" contributes to safety, improves the appearance of a foundry and has a beneficial effect on morale and production.

As to cleaning, the Committee recommend that all iron foundries should be required to observe the provisions of the Factories Act, 1937, for the washing, painting, white-washing

or colour-washing of walls and tops of rooms every 14 months, and that, until the Act is amended, district factory inspectors should require cleaning to be done in appropriate cases. The Committee consider it highly desirable to use light colours to relieve the drab appearance of a foundry. Rooms in which the cleaning of castings is done should be cleaned every three months. Besides the daily removal of refuse and the weekly cleaning of floors required under the Factories Act, all accessible parts of floors should be cleaned daily. Vacuum cleaning is strongly recommended. Where sweeping is done, the dust should first be damped. Floors should be firm and level and should be made of concrete, brick, wood, steel, tar macadam or other suitable material, unless a sand floor is necessary because of the nature of the work.

As regards temperature, reference is made to the fact that workers in a foundry are quite likely to suffer from cold rather than from an unreasonably high temperature. During cold spells, moulding sand often freezes and becomes unworkable overnight, thus necessitating the use of open fires, a practice of which the Committee disapprove. The Report recommends that in parts of a room where work is going on the temperature should be at least 50° within an hour after starting work, subject to the proviso that, if the outside temperature is less than 30° F., the inside temperature should be at least 20° higher.

With regard to lighting, the Committee point out that the dark nature and lack of contrast of much of the material handled make good lighting a necessity apart from its value as an amenity. It is recommended that the standards of the Factories (Standards of Lighting) Regulations, 1941, should be adopted and additional lighting provided where necessary. Full use should be made of natural lighting. The Report mentions the use of colour to further the effects of good lighting.

Recommendations for washing, bathing and cloakroom accommodation include provision for baths, preferably shower baths, for persons engaged in hot, dirty or arduous jobs (the number of baths to be settled by discussion between management and workers), wash-basins with hot and cold water on the scale of one for 10 persons, a changing room, and lockers or other arrangements for the

accommodation of outdoor clothing. All these should be supervised and kept clean by persons appointed for the purpose. Equipment should be of the best standards.

Other welfare amenities include the provision of canteens in all foundries where workers remain on the premises for meals, and, where there is no canteen, a separate eating-room, with facilities for warming food and boiling water, under the charge of a responsible person.

Since maintaining good atmospheric conditions in iron foundries is a most pressing problem, the Report devotes considerable space to methods of drying and heating ladles, mould drying, the easing of castings, knock-outs, dressing operations and fumes from core bonds, and makes specific recommendations concerning each as to dust and fume removal.

A section is devoted to the fundamental principles to be followed in connection with the design of dust- or fume-extraction equipment. Reference is made to the adoption of mechanical aids and labour-saving devices which the Committee feel are helpful in the problem of dust and fume removal.

The use of ordinary open fires should be avoided wherever possible, it is urged. Where this is impracticable, adequate measures should be taken to prevent fumes from entering the atmosphere of the workroom. A special ladle drying and heating station should be provided in new foundries and wherever practicable in existing ones. Mould and core stoves used for drying purposes should be constructed to prevent fumes from escaping, or mechanical exhaust ventilation or some alternative method should be provided to collect fumes at their source and carry them to the outside air.

It is recommended that special attention be given to good ventilation in the vicinity of all "knock-outs." Water should be used to allay dust and all knock-out and dressing operations should be done in an area where local exhaust ventilation is provided, or, in a well-ventilated, separate space partitioned off. All dressing operations should be done inside buildings with walls on all sides and a weatherproof roof.

Other sections deal with various matters relating to health and noise and to the need of establishing some form of welfare supervision.

Extent of Non-Production Bonuses in the United States 1945-46

NON-PRODUCTION bonuses were paid by two-fifths of the manufacturing and about half of the non-manufacturing establishments surveyed in 1945 and 1946 by the United States Bureau of Labour Statistics, according to an article in the October issue of the *Monthly Labour Review*. Data for plant workers were supplied by nearly 16,000 establishments in manufacturing and over 6,000 in non-manufacturing while for office workers 17,000 firms gave the necessary information.

Christmas bonuses were by far the most common type and were paid in over four-fifths of the manufacturing and non-manufacturing firms paying bonuses. Profit-sharing bonuses ranked second. Attendance bonuses were of some importance in laundries.

For the most part, the payments seem to be intended to boost morale, to improve attendance, to stimulate workers to save power and materials, and to grant workers a share in the profits of the firm. By heightening the interest of workers in their jobs output per worker may be stimulated, but non-production bonuses are not directly related to output. The article states that such bonuses should not be confused with incentive pay, since the bonuses are not sufficiently frequent or regular in amount to

affect hourly rates of pay. Moreover, whether such bonuses will be paid and their extent are generally subject to management's decision alone.

The survey of the Bureau of Labour Statistics showed that plant workers received some form of non-production bonuses in two-fifths of the manufacturing establishments studied. Half of the firms in chemical and metalworking reported such payments while in the textile industry about two-fifths of the plants reported such bonuses. Office workers in manufacturing appeared to receive bonuses more frequently than plant workers.

About half of the non-manufacturing establishments reported the payment of non-production bonuses. More than two-thirds of the retail-trade establishments reported this practice. Relatively fewer establishments in other industries, such as public utilities and selected service industries, granted non-production bonuses.

Non-production bonuses are important to the workers who receive them mainly where they are paid in lump sums at Christmas. In regard to average hourly earnings, the article states that there were few instances in which such bonuses increased hourly pay by as much as 1 cent for plant workers and 2 cents for office workers.

Industrial Disputes and Conciliation

Introduction

THE *Industrial Disputes and Conciliation* section contains monthly articles concerning proceedings under the *Wartime Labour Relations Regulations, P.C. 1003*, and under the *Conciliation and Labour Act*.

During the war and its aftermath the Dominion Wartime Labour Relations Regulations (P.C. 1003) of February 13, 1944 (which suspended the Industrial Disputes Investigation Act, enacted first in 1907), have required employers to negotiate with the representatives of their employees and provided machinery for the settlement of disputes.

At the present time the Regulations apply only to industries within the legislative authority of Parliament, including navigation and shipping, lines of steam or other ships, railways, airlines, canals, telegraph, telephone and radio communications, ferries, and works situated in a province but which have been or may be declared by Parliament to be for the general advantage of Canada or two or more provinces.

The Regulations, which were issued under the authority of the War Measures Act, are continued in effect under the continuation of the Transitional Measures Act, 1947. A bill incorporating many of the features of the Regulations, with modifications and additions, was introduced in the House of Commons on June 17, 1947, but was allowed to stand over until the next session of Parliament (L.G., July, 1947, p. 923, Aug., p. 1102).

The Regulations are administered by the *Wartime Labour Relations Board (National)* in respect of those provisions relating to: The certification of bargaining representatives, the intervention of the Board for the purpose of obtaining conciliation services from the Minister of Labour, the establishment of

procedures for the final settlement of disputes concerning the interpretation or violation of collective agreements, and the institution of prosecution proceedings.

The provisions of the Regulations relating to conciliation services are under the administration of the Minister of Labour and are provided to parties desiring to negotiate agreements through the formal intervention of the Board.

The Board with the approval of the Minister of Labour, has adopted rules or regulations which govern procedure in making the various types of applications invoking the provisions of the Regulations and the services of the Board. Copies of these procedural regulations and of the Wartime Labour Relations Regulations, P.C. 1003, may be obtained from the Department of Labour, Ottawa.

Proceedings under the Regulations are here described in two separate articles. The first deals with applications made to the Board for the certification of bargaining representatives and other services, and records the decisions reached in such matters; the second describes conciliation proceedings under the Regulations and includes the reports of Boards of Conciliation.

Conciliation proceedings are also provided through the Industrial Relations Branch of the Department of Labour under the provisions of the Conciliation and Labour Act. This Act empowers the Minister of Labour to inquire into the causes and circumstances of a dispute, to take such steps as seem expedient for the purpose of bringing the parties together and to appoint a conciliator or arbitrator when requested by the parties concerned.

Application for Certification Under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Board (National) met for two days during the month of November. During the month the Board received five applications, held 7 hearings, issued 4 certificates designating bargaining representatives, rejected one application,

ordered two representation votes, allowed the withdrawal of three applications and issued Reasons for Judgment on three decisions rendered by the Board on five applications for certification of bargaining representatives.

Certificates Issued

Four applications for certification of bargaining representatives were approved by the Board and certificates issued as below:—

1. *Canadian Brotherhood of Railway Employees and Other Transport Workers* and certain of its officers for the employees employed by the *Canadian National Railways* in the restaurant of the *Central Station, Montreal, P.Q.* The manager, head chef, hostess, assistant manager and dietitian, time clerk and storekeeper were excluded from the bargaining unit.*

2. *Canadian Seamen's Union* and certain of its officers for the unlicensed employees employed by *Branch Lines Limited, Sorel, P.Q.*, on the vessels ss. *Elmbranch*, ss. *Oakbranch*, ss. *Firbranch*, ss. *Pinebranch* and ss. *Sprucebranch*.**

3. *Canadian Seamen's Union* and certain of its officers for the unlicensed employees employed by the *Anticosti Shipping Company, Montreal, P.Q.*, aboard the ss. *Fleurus*.**

4. *Canadian Seamen's Union* and certain of its officers for the unlicensed employees employed by *Northumberland Ferries Limited, Charlottetown, P.E.I.*, on the ferries *Charles A. Dunning* and *Prince Nova* and classified as deck hands, oilers, firemen, assistant engineer, chief cook, assistant cook, bosuns and clean-up women. The canteen supervisors and assistants, pursers, assistant pursers and the supervisor of women employees were excluded from the bargaining unit.**

Application for Certification Rejected

Air Engineers Society of Canada and Trans-Canada Air Lines, Winnipeg, Man. (L.G., October, 1947, p. 1450).

Following an investigation of the application and a public hearing, the Board decided to reject the application. Reasons for Judgment will be issued at a later date.

Representation Votes Ordered

1. *National Association of Marine Engineers of Canada, Inc.*, and *Canadian Dredge and Dock Company Limited, Toronto, Ontario* (L.G., November, 1947, p. 1608). Following an investigation of the application and a public hearing, the Board ordered a representation vote among the second engineers employed by the *Canadian Dredge and Dock Company, Limited, Toronto, Ontario*. Mr. F. J. Ainsborough, Industrial Relations Officer,

Toronto, Ontario, was appointed by the Board to supervise the vote.

2. *Canadian Association of Maritime Transport Workers, Local No. 8*, and *Terra Nova Steamship Company, Limited, Montreal, P.Q.* (L.G., November, 1947, p. 1608). Following an investigation of the application, the Board ordered a representation vote among the unlicensed personnel, excluding the steward, employed by *Terra Nova Steamship Company, Limited, Montreal, P.Q.* Mr. L. Pepin, Industrial Relations Officer, Montreal, P.Q., was appointed by the Board to conduct the vote.

Applications for Certification Withdrawn

1. *Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees and Canadian Pacific Railway Company, Moose Jaw, Sask.* (L.G., October, 1947, p. 1450). On the request of the General Chairman, System Board of Adjustment, Western Lines, Canadian Pacific Railway Company, the application was withdrawn.

2. *Canadian Seamen's Union and Maritime Towing and Salvage Limited, Halifax, N.S.* (L.G., August, 1947, p. 1133). On the request of the National Director of Organization of the Canadian Seamen's Union, the application was withdrawn.

3. *Canadian Seamen's Union and Foundation Maritime Limited, Halifax, N.S.* (L.G., August, 1947, p. 1133). On the request of the National Director of Organization of the Canadian Seamen's Union, the application was withdrawn.

Applications for Certification Received During the Month of November, 1947

1. *Canadian Navigators Federation* on behalf of the licensed personnel and/or non-licensed personnel holding an officer's position aboard the ss. *Empire Gangway* of the *Terra Nova Steamship Company Limited, Montreal, P.Q.*

2. *Canadian Air Line Pursers-Stewards Association* on behalf of pursers-stewards employed by *Trans-Canada Air Lines, Winnipeg, Man.*

3. *Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees* on behalf of express messengers and helpers employed by the *Northern Alberta Railway, Edmonton, Alta.*

4. *Canadian Air Line Stewardess Association* on behalf of stewardesses employed by *Trans-Canada Air Lines, Winnipeg, Man.*

* Following an investigation of the application.

** Following an investigation of the application, a public hearing and a representation vote.

5. *Canadian Merchant Service Guild, Inc.*, on behalf of licensed deck officers aboard the ss. *Transbay*, ss. *Transtream*, ss. *Transriver* and ss. *Translake of Transit Tankers and Terminals Limited, Montreal, P.Q.*

Reasons for Judgment on Decisions of Board

Reasons for Judgment on three decisions of the Board on five applications for certification of bargaining representatives, are given below:—

Between: Canadian Seamen's Union, Applicant, and Sincennes-McNaughton Line Limited, Montreal, Respondent, and National Seamen's Association of Canada, Intervener, and Canadian Lake Seamen's Union, Intervener.

The Board consisted of the Vice-Chairman and Messrs. Best, Complin, D'Aoust, Hills, Mosher and Taylor.

Reasons for Judgment

This is an application for certification of bargaining representatives selected by the applicant union to represent a bargaining unit consisting of unlicensed personnel employed upon the ships of the respondent Company.

The Respondent and the National Seamen's Association oppose the application on the grounds

- (1) that a collective agreement is in effect between the Company and the Association representing unlicensed personnel employed on the ships of the Company, entered into under date of June 27, 1947, and to have effect from June 1, 1947 to May 31, 1948, and that such agreement constitutes a bar to the present application for certification in view of the provisions of section 9 of the Regulations;
- (2) that the applicant does not represent the majority of employees in the bargaining unit.

The Canadian Lake Seamen's Union opposes the application on the ground that the applicant does not represent the majority of the employees in the bargaining unit.

The evidence submitted to the Board on behalf of the Company and the National Seamen's Association is to the effect that a collective agreement was entered into between the Company and the Association representing the employees in the proposed bargaining unit under date of May 9, 1939; that this agreement was amended in February, 1943, and again on October 4, 1944. This agreement which was produced to the Board and, as amended in 1944, provides that "this agreement shall remain in force as from the signing thereof and remain in full force and effect continuously for one year or until renewal date hereafter defined, and shall be considered as renewed from year to year thereafter as from a fixed renewal date of March 15th between the parties hereto unless

any party to the agreement shall give written notice to the other of its desire or intentions to revise, modify, change, amend or cancel such agreement. Any such notice shall be given at least sixty days prior to the expiration or renewal date of the agreement; and if such notice is not given, the agreement shall be deemed to be renewed for the successive year."

This agreement between the Company and the Association was replaced on June 27, 1947, by a new agreement entered into between the same parties and applicable to the same unit of employees. The new agreement reads that: "this agreement shall remain in force for a period of one year as from June 1, 1947, and remain in full force and effect until May 31, 1948, and may be renewed, altered, revised or amended thereafter between the parties hereto upon mutual consent or agreement for extended periods."

The present application for certification was not filed with the Board until July 22, 1947. Moreover, while the applicant claimed to have at the time of making application a majority of employees in the bargaining unit as members of the union the Investigating Officer's report, made after a check of the Canadian Seamen's Union records, shows that these employees' applications for membership in the union were dated as at dates at least three weeks subsequent to June 27, 1947.

Therefore, at the time the agreement between the Company and the National Seamen's Association was entered into on June 27, 1947, the applicant union did not represent a majority of employees in the bargaining unit nor had it on or prior to that date filed its application for certification with this Board.

The application was consequently made too late in point of time and is rejected in view of the effect of section 9 of the Regulations which does not permit an application for certification to be made until after the expiry of ten months of the term of a collective agreement covering the employees in the bargaining unit.

Some question was raised as to whether the agreement entered into between the

Company and the National Seamen's Association under date of June 27, 1947, is merely an extension of the former agreement or constitutes a new agreement.

In view of the evidence given and from a perusal of the agreement itself, the Board is of opinion that the agreement of June 27, 1947, was a new agreement and not merely an extension of the term of the earlier agreement.

The 1939 agreement is interpreted by the Board for the purposes of section 15 of the Regulations as an agreement for a term of at least one year and for a term of indefinite duration thereafter subject to cancellation or revision upon sixty days' notice prior to March 15th in any year. Therefore the parties to the 1939 agreement were not precluded by section 15 from negotiating the new agreement at the date this was entered into in June, 1947.

Between: Canadian Lake Seamen's Union, Applicant, and Sincennes-McNaughton Line Limited, Montreal, Respondent, and National Seamen's Association of Canada, Intervener, and Canadian Seamen's Union, Intervener.

The Board consisted of the Vice-Chairman and Messrs. Best, Complin, D'Aoust, Hills, Mosher and Taylor.

Reasons for Judgment

This is an application for certification of bargaining representatives for a bargaining unit consisting of unlicensed personnel employed on the vessels of the respondent Company.

The respondent and the National Seamen's Association (intervener) oppose the application on the grounds that (1) there is a collective agreement entered into on June 27, 1947, in effect between the Company and the Association representing the employees in the proposed bargaining unit and binding upon such employees, which, under the provisions of section 9 of the Wartime Labour Relations Regulations, constitutes a bar to a further application for certification of bargaining representatives until ten months of the term of the said agreement have expired; (2) the applicant does not represent the majority of employees in the bargaining unit.

The intervener, the Canadian Seamen's Union, opposes the application on the grounds that the applicant is not a bona fide trade union within the meaning of the Regulations and does not, in any event, represent the majority of employees in the bargaining unit.

For the reasons given above, the application for certification is rejected.

(Sgd.) A. H. BROWN,
Vice-Chairman

Canadian Lake Seamen's Union.

Dated at Ottawa, November 19, 1947.

The Board finds that the persons for whom certification is desired were selected by the applicant organization and were not elected by the majority of employees in the bargaining unit pursuant to section 5 (1) of the Regulations.

The applicant relies upon the provisions of section 5 (2) of the Regulations which provides that where the majority of employees in a bargaining unit are members of a trade union, the trade union may elect or appoint bargaining representatives for the employees in the unit. The Regulations define a trade union as "a provincial, national or international employees' organization, or a local branch chartered by, and in good standing with, such an organization."

The evidence produced by the applicant relating to its organization does not satisfy the Board that the organization was either a provincial, national, or international employees' organization, or a local branch chartered by, or in good standing with, such an organization at the time it purported to select the persons for whom certification is desired.

Consequently, the Board finds that the persons for whom certification as bargaining representatives is desired have not been properly selected in compliance with the

Regulations. The application is therefore rejected.

the Canadian Seamen's Union.

Dated at Ottawa, November 19, 1947.

Between: National Association of Marine Engineers of Canada, Inc., Applicant, and S/S Texaco Brave Limited, Toronto, Respondent; and S/S Texaco Chief Limited, Toronto, Respondent; and S/S Texaco Warrior Limited, Toronto, Respondent.

The Board consisted of the Vice-Chairman and Messrs. Best, Complin, D'Aoust, Hills, Mosher and Taylor.

The Judgment of the Board was delivered by the Vice-Chairman.

Reasons for Judgment

These are three separate applications for certification of bargaining representatives appointed by the applicant union for a bargaining unit consisting of engineer officers of the company employed on board the company vessels, excluding chief engineers. The facts in all three cases are similar. In each case the Board's investigating officer has reported that a substantial majority of the employees in the proposed bargaining unit are paid-up members of the applicant union. The respondent company in each case intervened and requested that the Board order a vote of the employees in the bargaining unit. In support of the request for a vote the respondent company has submitted individual written statements signed by a number of employees in the bargaining unit which, in each instance, is to the effect that although a member of the union, the employee does not desire the union to represent him for the purpose of collective bargaining. In no instance does the employee, who allegedly signed the statement, express therein any desire to sever his connection with the union. The representative of the union appearing at the hearing advised the Board that the union had not received any advice from any of these employees.

These statements were obtained by a personal canvass of employees made by one of the officers of the company. This officer, who gave evidence at the hearing, stated that no pressure of any kind was exerted on the employees in the course of his canvass and

that the canvass was undertaken by the Company without motive other than to be satisfied that the majority of employees desired the applicant to represent them in collective bargaining with the company. This evidence was not contradicted.

Where a canvass of employees is carried out in the manner described and while an application for certification is pending as in the present case, employees may be reluctant to make known to the company their true wishes as to collective bargaining but may, nevertheless, consider that a refusal to make a statement to the company on this point would prejudice the employee in his service with the company. Consequently, however well-intentioned the company may be in carrying out such a canvass, the procedure is inadvisable.

For this reason, the Board is not prepared to lend any encouragement to the procedure followed in this instance, nor to give weight to the results of the same as evidence of the wishes of employees.

The Regulations authorize the appointment of bargaining representatives for a unit of employees by a trade union of which the majority of employees in the bargaining unit are members. It is within the discretion of the Board either to accept the evidence of membership in the union submitted in this instance by the applicant and verified by the Board's investigating officer as evidence of the wishes of the employees in the bargaining unit, or, in the alternative, to order a vote. There was no suggestion of pressure having been exerted on the employees to have them become members of the union or to deny them the right of withdrawal from the union.

In each of these applications, the Board having regard to all the circumstances and being satisfied that a great majority of employees in the proposed bargaining unit

are members of the union, is prepared to certify without ordering a vote. This is in accordance with the procedure approved by the Board in Wright-Hargreaves Case, D.L.S. 7-542.

On all three applications, certification is granted of bargaining representatives selected by the applicant union for a bargaining unit consisting of the engineer officers of the company employed on its vessels, excluding the chief engineer.

(Sgd.) A. H. BROWN,
Vice-Chairman
for the majority of
the Board.

Messrs. Complin and Taylor dissented from the decision on the ground that a vote should be ordered.

W. F. GRANT, Esq.
for the Applicant.

D. F. BENTLEY, Esq.

F. W. COWIE, Esq.
for the Respondents.

Dated at Ottawa, November 19, 1947.

Between: National Association of Marine Engineers of Canada, Inc., Applicant, and S/S Texaco Brave Limited, Toronto, Respondent; and S/S Texaco Chief Limited, Toronto, Respondent; and S/S Texaco Warrior Limited, Toronto, Respondent; and Shell Canadian Tankers Limited, Toronto, Respondent.

Dissenting Opinion

This is a dissenting opinion expressed on behalf of the minority of the Board consisting of E. R. Complin and H. Taylor. The majority included Messrs. Mosher, D'Aoust, Best and Hills.

It is convenient to deal with these cases in one opinion, since the circumstances of each are to a large extent similar.

The Regulations are quite clear that a trade union may act with authority of the majority of the employees affected in the matter of electing or appointing bargaining representatives and that having done so in fact, it is then entitled to apply for certification of such bargaining representatives. It is equally clear that before certifying bargaining representatives the Board must satisfy itself that the action of the trade union in this respect is within the Regulations. For this purpose, the Board has a wide discretion since it may examine and accept or reject the union's record of membership, order a vote or use other means.

In the Texaco cases, an examination of the union's records indicated a majority were members of the Association. However, in the

course of the hearing, the representatives of the Company presented signed statements of a majority of the employees affected which in substance stated that they as employees did not desire to have the union represent them for purposes of collective bargaining, although such statements did not deny membership in the Association. This evidence was offered as voluntary statements of the employees obtained on solicitation by a representative of the Company but with the unchallenged statement that they were obtained without duress, intimidation or threat of any kind. The majority of the Board declined to attach any weight to this evidence and proceeded to certify the union on the basis of the membership record.

The circumstances in the Shell Canadian Tankers case vary only in that no letters or signed statements were obtained from the employees nor were any requested. The claim, however, was made by the company's representatives that in verbal statements the majority of the employees involved stated they did not desire the Association to bargain on their behalf.

The National Association of Marine Engineers of Canada, Inc., apparently was not originally conceived as a trade union. It included among its several purposes the general improvement of working conditions for its members and many facilities usually identified with a fraternal organization. Subsequently, the Association undertook collective bargaining on behalf of some of its members and has been recognized in other cases as qualifying as a trade union. Some engineers appear to have held membership in the Association for nearly thirty years which appears to ante-date its trade union status.

It is customary in joining this Association, as is the case with many other associations, to pay dues in advance for a full year or a full season.

As a minority, we are not challenging the status of the Association as a trade union but we cannot overlook the history of the Association. We recognize that certain persons may have desired to become members of this Association largely because of its known trade union activities; but we also recognize that certain persons in the past may have become members of this Association because of its other benefits without necessarily authorizing the Association to bargain on their behalf.

The constitutions of most trade unions do not permit their members to resign but provide only for the expelling of members for cause. This constitutes a form of voluntary irrevocable union membership as far as the employee himself is concerned.

Membership in the National Association of Marine Engineers of Canada, Inc., apparently differs from most trade unions in that it is possible for a person to resign. However, since dues for a full year or a full season have been paid in advance it is reasonable to assume that the name of such a person would remain on the records as a member for the balance of such period.

It is our view that an important principle is involved, namely, whether the presence of a person's name on the membership records of the trade union should automatically carry with it the right of the trade union to elect or appoint bargaining representatives to bargain on behalf of the member, even though such member cannot voluntarily resign. The principle involved is little changed in the present case in spite of the fact that a member can resign because having paid a full year's or full season's dues he is considered a member for the full period. Under the circumstances, a resignation is in effect postdated.

However much may be said about the voluntary irrevocable union membership brought about by the absence of resignation provisions in most union constitutions, the fact remains the Board is charged with the duty of making sure that the majority of the employees affected desire the union to bargain on their behalf. This is very important because the Regulations do not permit the Board to revoke a certification. In effect this means that once a majority have become members of a trade union and bargaining representatives are certified, the employees are compelled from that point on to have a union whether trade or independent. There does not appear to be any way under the Regulations where the employees can return to a status of no union however much they desire such a change. They may change

bargaining representatives or unions within prescribed time limits but they can only substitute one union for another. They must have a union or employees' organization. Under these circumstances, it is the responsibility of the Board to make certain at the very start by removing any doubt that a majority of the employees affected do want to bargain collectively and have authorized a particular group of bargaining representatives to undertake this on their behalf.

In the opinion of the minority, a vote should have been ordered in all of these cases to remove any doubt which clearly existed as to where the employees stand in the matter of collective bargaining and with particular reference to the Association involved. If the evidence submitted by the employers in these cases is to be disregarded, there appears to be no practical course open to employees who become members of a union during an intensive organizing campaign and who change their minds before certification proceedings are concluded. If an employee cannot resign from a trade union and he does not desire an alternate union or employees' organization, one may well ask to whom should he go to have his views presented to a Board.

Statements have in other cases been presented to the Board by one trade union purporting to represent a revocation of authorization or membership in another trade union. Similar statements should be admissible, if presented by an employer, provided always they are obtained without breach of the Regulations. If it is alleged such statements were obtained in contravention of the Regulations, redress is undoubtedly provided under the Regulations themselves.

(Sgd.) H. TAYLOR.

(Sgd.) E. R. COMPLIN.

Dated at Ottawa, November 19, 1947.

Conciliation Proceedings Under the Wartime Labour Relations Regulations

THE Wartime Labour Relations Regulations provide conciliation machinery to attempt settlement of disputes where negotiations for an agreement following certification of bargaining representatives, or negotiations for the renewal of an existing agreement, have been unsuccessfully continued for thirty days. Disputes of this nature are referred to the Minister of Labour by the Wartime Labour Relations Board (National), and, until May 15, 1947, such

disputes in certain provinces were also referred to the Minister by the Provincial Boards in their respective jurisdictions. The Minister then appoints a Conciliation Officer to confer with the parties and endeavour to effect an agreement. If the Conciliation Officer is unable to bring about settlement of the matters in dispute and reports that in his view an agreement might be facilitated by the appointment of a Conciliation Board, a Board is then established by the Minister.

The duty of such a Board is to endeavour to effect an agreement between the parties on the matters in dispute and to report its findings and recommendations to the Minister.

I. Assignment of Conciliation Officers

During November, 1947, a Conciliation Officer was assigned to confer with the parties in an attempt to effect an agreement in the following case:

Trans-Canada Air Lines and Canadian Air Pilots' Association. H. S. Johnstone, Conciliation Officer.

II. Agreement Facilitated by Conciliation Officers

In the following case a report was received during November, 1947, from the Conciliation Officer indicating the successful completion of negotiations with the signing of an agreement:

Newfoundland Railway (clerical staff, North Sydney, N.S.) and Canadian Brotherhood of Railway Employees & Other Transport Workers (CCL). H. R. Pettigrove, Conciliation Officer (L.G., November, 1947, p. 1609).

III. Board Established

During the month a Conciliation Board was established to deal with a dispute between the following parties:

Canadian Air Express Ltd. (ground crew personnel at Dorval, P.Q., and Ottawa, Ont.) and International Association of Machinists (TLC). L. Pepin, Conciliation Officer. (L.G., November, 1947, pp. 1608-9).

IV. Settlements Following Board Procedure

During the month advice was received that matters in dispute between the following parties have been settled as a result of further negotiations following the receipt by the parties of the Conciliation Board report:

Canadian Vickers Ltd., Montreal, P.Q., and Local 271, International Brotherhood of Boilermakers, Iron Shipbuilders, Welders & Helpers of America (AFL-TLC); Local 144, United Association of Journeymen, Plumbers & Steamfitters of United States & Canada (AFL-TLC); Local 568, International Brotherhood of Electrical Workers (AFL-TLC); and Local 116, Sheet Metal Workers' International Association (AFL-TLC). (L.G., May, 1947, p. 669.)

No reports of Conciliation Boards were received during the month.

Appointment of Industrial Disputes Inquiry Commission Under Wartime Labour Relations Regulations, P.C. 1003

The Shipping Federation of Canada and the Shipowners' Association (Deepsea) of British Columbia

The November issue of the *LABOUR GAZETTE* contained a report of conciliation in connection with disputes between the Shipping Federation of Canada, Montreal, P.Q., and the Shipowners' Association (Deepsea) of British Columbia, Vancouver, B.C., and four maritime unions representing the deck officers, engineer officers, radio officers and unlicensed seamen employed by the shipping companies belonging to the two Federations.

After negotiations between the parties at Vancouver had become deadlocked, the Minister of Labour on November 13 issued Industrial Disputes Inquiry Commissions naming the Hon. Mr. Justice D. A. McNiven, of Regina, Sask., to deal with the disputes. Conferences between the parties were held at Montreal, P.Q., under the guidance of the Commissioner. On November 28, the Minister of Labour announced that negotiations between the employer Federations and the Canadian Seamen's Union for the renewal of

a collective agreement for the 1948 season had been satisfactorily concluded by the Commissioner. It was reported that the new agreement involved a wage increase of \$20 per month for all unlicensed seamen retroactive to October 15, 1947; an increase of 10 cents per hour in overtime rates of pay; two weeks' holidays with pay after one year's service; a 40-hour week while in port; sick pay in foreign ports at the rate of two-thirds of regular wages for a period not exceeding 12 weeks; payment for the loss of personal effects in the event of a marine disaster; continuity of employment; maintenance of membership and other minor concessions.

Negotiations between the shipping operators and the three unions representing licensed personnel, namely the Canadian Merchant Service Guild, the National Association of Marine Engineers of Canada, Inc., and the Canadian Communications Association (Marine Department) were begun on December 2, with the Commissioner presiding. The outcome of these conferences had not been announced at the time the *LABOUR GAZETTE* went to press.

Conciliation Work of the Industrial Relations Branch During November, 1947, Under the Conciliation and Labour Act

OFFICERS of the Industrial Relations Branch dealt with 6 industrial disputes during the month of November, involving 6,173 workpeople employed in 33 separate establishments. Of these, three were new disputes which originated during the month and three were situations which had been untermiated as of October 31, and received further attention in November. These disputes were dealt with under the provisions of the Conciliation and Labour Act. They were thus distinct from and in addition to the conciliation proceedings described on previous pages, which developed under the Wartime Labour Relations Regulations.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, and Fredericton, N.B. The territory of the officer resident in Vancouver comprises British Columbia and Alberta; two officers stationed in Winnipeg cover the provinces of Saskatchewan and Manitoba and Northwestern Ontario; three officers resident in Toronto confine their activities to Ontario and work in close collaboration with the Provincial Conciliation Service; two officers in Montreal are assigned to the Province of Quebec and the officer resident in Fredericton, N.B., represents the Department in the Maritime Provinces. The headquarters of the Industrial Relations Branch and the Director of the Industrial Relations and staff are situated in Ottawa.

A brief summary of the case of chief interest is given below:—

Unlicensed Seamen, Great Lakes and St. Lawrence Waterways.—During November officers of the Department of Labour supervised a representation vote among the unlicensed seamen employed by the Colonial Steamship Co., Ltd., and Sarnia Steamship Co., Ltd., Port Colborne, Ontario, to determine if the employees desired the Canadian Seamen's Union to act as their bargaining representative for the purpose of negotiating a collective agreement with the two companies for the 1948 navigation season. The vote had been agreed upon in August as part of the settlement arranged by Mr. L. W. Brockington, K.C., C.M.G., of Ottawa, acting as an Industrial Disputes Inquiry Commissioner in connection with a dispute which threatened to result in a strike at that time.

Mr. F. J. Ainsborough, Industrial Relations Officer, Toronto, acted as Chief Returning Officer, and Deputy Returning Officers were stationed at various points on the Great Lakes and St. Lawrence River. The ballots were counted in the presence of scrutineers representing the parties, under the supervision of Mr. J. H. Stitt, Barrister, of Ottawa, who was appointed as Commissioner for that purpose. There were 348 eligible voters employed by the two companies, of whom 297 voted in favour of the Canadian Seamen's Union. A total of 22 employees voted against the union and there were 9 spoiled ballots among the 328 votes cast.

Settlement in Meat Packing Dispute

Arbitration Award of Hon. Mr. Justice C. P. McTague in Dispute Between Canada Packers, Limited, and Burns and Company, Limited, and the United Packinghouse Workers of America (CIO-CCL)

DURING November the arbitration award of Mr. C. P. McTague in the matter of a dispute between Canada Packers, Limited, and Burns and Company, Limited, and the United Packinghouse Workers of America was announced. The arbitration had been agreed upon as part of the terms of settlement of the 'nation-wide' strike of meat packing plant workers which commenced in August and ended mid-October.

The strike by members of the United Packinghouse Workers of America began in six plants of the Swift Canadian Co., Ltd., on August 27 and a seventh plant of the same company on September 9. On and after September 10, it spread to eleven plants of Canada Packers, Ltd., six plants of Burns and Co., Ltd., and numerous plants of smaller "independent" companies. At its height it involved some 14,150 workers employed in 47 establishments. The strike resulted from a breakdown in negotiations between the union and the "big three" meat packing companies in which the union representatives had made demands for master agreements providing for wage increases of 17 cents per hour and numerous other changes in working conditions.

The plants affected by the strike were located in all nine provinces and controversy arose over the form which outside mediation, if any, should take. Although the meat packing industry had not been brought under the Wartime Labour Relations Regulations, P.C. 1003, the Minister of Labour for Canada had used the emergency powers of the federal Government in 1944, 1945 and 1946, after securing the approval of the provincial authorities, to appoint Industrial Disputes Inquiry Commissioners in order to forestall work stoppages in the industry. In 1945 the federal Government had also appointed a Controller and seven Deputy Controllers to take charge of the operations of 18 plants of the "big three" meat packing companies in order to prevent a strike while the Industrial Disputes Inquiry Commissioner was securing a settlement of the dispute. However, the power of the federal Department of Labour to intervene had lapsed on May 15, 1947, when normal jurisdiction over labour relations was restored to the provinces.

On September 26 representatives of the Departments of Labour of eight provinces met in Toronto to consider ways and means

of settling the dispute. The Premier of British Columbia expressed sympathy with the objects of the meeting but announced that it was not possible to send a representative. Prince Edward Island sent an observer and the other provinces were represented by six Ministers of Labour, one Deputy Minister of Labour and other officials. The gathering was unable to agree upon a common plan for dealing with the situation, although the representatives of several provinces suggested a person as a common conciliator.

Eventually direct negotiations between representatives of the Swift Canadian Co., Ltd., and the union resulted in a mutually satisfactory agreement on October 18. It was reported that the settlement provided for a general wage increase of 10 cents per hour effective as of August 1, 1947; an additional increase of 2.27 per cent in the former wage rates of employees at plants in St. Boniface and Edmonton; an additional increase of 3 cents per hour for employees at Moncton, N.B.; a clause permitting the reopening of negotiations on wage rates upon 15 days' notice; a standard work week of 44 hours instead of 45 hours; incorporation in the collective agreement of the company's sickness and accident plan; and no change in union security provisions.

Work was resumed at the plants of the Swift Canadian Company by October 21.

Negotiations continued between the union and Canada Packers, Ltd., and Burns and Co., Ltd., assisted by the Minister of Labour for Ontario and his Chief Conciliation Officer. A settlement was reached on October 21 under which a general wage increase of 7 cents per hour would be put into effect and the parties would agree to final and binding arbitration in regard to any additional wage increases and other matters in dispute. Mr. C. P. McTague of Toronto, a former Justice of the Supreme Court of Ontario, and for a period during the last war, chairman of the National War Labour Board, was chosen as arbitrator and the text of his decision is reproduced below.

The employees of Canada Packers, Ltd., and Burns and Co., Ltd., began to resume work on October 23 and production was restored in all plants by October 27.

Between October 20 and 23, work was resumed in the plants of the smaller companies. It was reported that generally the

settlements in these plants involved wage increases of from 7 to 10 cents per hour, with the remainder of the union's demands to be arbitrated.

An interesting feature of the strike was that the Government of Prince Edward Island put a Controller in charge of the operations of the plant of Canada Packers, Ltd., at Charlottetown on September 30. It was reported that most of the striking employees refused to return to work without a wage increase and it was necessary to recruit some 39 new employees in order to operate the plant. Before returning control of the plant to the company, the provincial authorities announced that arrangements would be made with the company for the permanent employment of Government-hired workers whose work proved satisfactory to the superintendent of the plant. No report has been received upon the results of the arrangement.

Text of Award

Under date of the 11th day of October, 1947, the parties entered into Agreements that the Companies would grant a general increase of .7 cents per hour on prevailing wage rates on condition that the employees of the Companies then on strike would return to work and that all matters remaining in issue between the Companies and the Union would be submitted for arbitration to the undersigned.

One wishes that the parties to the Agreement had been more specific as to just what issues were to be arbitrated because it did develop that certain matters said to be in issue by the Companies were considered to have been settled by the Union. Certain matters considered by the Union to be in issue were regarded as settled prior to the arbitration by the Companies or either of them. However, at the Arbitration Hearing the parties proved to be agreeable and so all matters considered to be in issue by any of the parties were placed in issue and became matters for determination. I shall deal with them in the order of presentation.

1. Wages—General Increase

The first and most important point for determination is the matter of general wage increase. The Union has demanded an increase of .17 cents hourly. The Companies have already granted an increase of .7 cents an hour, so what remains to be decided is what should be the amount of any additional increase if any. In any matter of general wage increase a heavy burden is placed upon the Arbitrator. The factors involved are always very contradictory and complicated and the evidence makes it most difficult to

come to any very clear cut decision in one's mind. There are involved the question of increased cost of living, the ability of the Companies to pay, comparisons with wages paid in other industry and the consequences which may follow such as increased prices to the general consumer, including the wage earner himself, and lower prices to the primary producer. In the present conditions of the National economy where higher wages, greater profits and increased prices tend to keep mounting into an ever developing vicious spiral one naturally looks to what is human justice and also gives consideration to what impact one's decision may have in giving additional impetus to an already very unhealthy economic situation. If I did not have before me very much in evidence the settlement between the Union and Swift Canadian Co. Limited, I might have reached a different conclusion from the one I have reached. The Swift Company has granted a general increase of .10 cents per hour and as a result its workers returned to work. I think it must be concluded on balance that the Union and the Swift Company in that settlement arrived at a figure generally considered just to the worker and within the ability of the Swift Company to pay and carry on competitively with Canada Packers and Burns & Company. While the Union contends that the resulting contract may be opened in regard to wages if my award exceeds the .10 cents an hour figure, any substantial increase above or any substantial decrease below that figure would almost inevitably result in further strife and trouble in the industry. Therefore I feel obligated, much as I dislike doing so, to adopt the figure which to me represents an appraisal in the collective bargaining process by two most interested parties as to what is the proper result regarding wage increase. Accordingly, in addition to the .7 cents increase already given by the two Companies involved in the arbitration, there should be a further increase of .3 cents per hour, making the total increase .10 cents per hour as agreed to by the Swift Company.

2. Wage Differentials

These two Companies as well as Swift Canadian Co. Limited operate in a sense on a National basis. I do not mean that the operation is definitely comparable to that of a railway company or other communications system, because it is not. On balance one must come to a conclusion as to whether it is proper to regard each plant as if it were a purely local operation or whether to regard each plant as a component part of an integrated whole. The point of view makes some

difference in respect to wages. I do not believe either that wages should necessarily be made uniform throughout because there are different factors relating to wages in different districts. Neither on the other hand do I believe that certain districts should remain chronic low wage areas because of factors that are not fundamentally related to wages at all. Accordingly I think that upward adjustments should be made generally in the following plants of Canada Packers Limited:—

	Cents per hour
Charlottetown, P.E.I.5
Montreal, Quebec3
Hull, Quebec3
Peterborough, Ontario4
St. Boniface, Manitoba.....	.1½
Edmonton, Alberta1½

In the plants of Burns and Co. Ltd., I think upward adjustments should be made in the following plants:—

	Cents per hour
Winnipeg, Manitoba1½
Calgary, Alberta1½
Edmonton, Alberta1½

3. Length of Work Week and Guarantee

In an industry as National in scope as this one, a wary arbitrator must keep an eye on provincial legislation. Having this in mind, particularly British Columbia and Saskatchewan, I think the work week in Canada Packers should be 44 hours per week except in the Montreal and Hull plants where it should be 46 hours weekly. The guaranteed 37½ hours in effect under the last contract should be reduced to 36½ hours and the guaranteed 40 hours in Montreal and Hull should be reduced to 38 hours. In the case of Burns and Co. Limited the work week should be reduced to 44 hours and the guaranteed 37½ hours reduced to 36½ hours. In view of the other benefits given in the award, I do not make any compensating wage adjustment as a result of the reduced hours of work.

4. Union Membership and Check-Off

This problem has given me a great deal of trouble. Neither Company objects to the principle of voluntary check-off. Both appear to be prepared to co-operate to facilitate the collection of Union dues in accordance with the wishes of the Union and its individual members. While the Companies are agreeable to co-operate for the financial welfare of the Union, both take strenuous exception to being put in the position of having to

supplement expulsions or resignations from the Union by dismissals from employment or even having to entertain applications by the Union for such dismissals. For a time I thought the solution for the difficulty lay in the Rand Formula. However, the Rand Formula involves compulsory check-off on all employees in the bargaining unit, a principle which does not appear to have received recognition in any provincial legislation, except under certain conditions in the Province of Nova Scotia where neither of the Companies concerned has a plant. The Rand Formula seems to have induced a greater sense of responsibility on the Union's part in the plant of the Ford Motor Car Company of Canada Limited, as far as I can learn. I notice also that it appears to have been accepted at General Motors of Canada Limited quite recently. On the other hand, it does not appear to have been a factor in promoting Union responsibility in the plant of Sherrit Gordon in Manitoba. That the Rand Formula will necessarily promote greater responsibility on the part of the Union and therefore good industrial relations, I have grave doubts. I think on the other hand that modern tendency is in the direction of non-compulsion as far as minorities are concerned and away from the compulsory contract labour principle. Unions are entitled to exercise their own disciplinary measures over their members according to their own constitutions and by-laws, but I do not think that an employer should be placed in the position of providing additional sanctions or depriving employees of the right to work merely because the employee has got into difficulties with the Union. It is true that the Rand Formula may be just and equitable as far as the "dead beat and free rider" is concerned, but I think it is jumping at conclusions to assume that it is any general rule that persons who object to the check-off are "dead beats and free riders." It may well be that a considerable proportion of those objecting to the check-off do so because of their conviction that the affairs of the Union are being conducted in a way which does not meet with their approval. Accordingly, I am of the opinion that the check-off provision in the last contracts of the Company should remain as they are in the proposed new contract and that the maintenance of membership provision should be amended to read as follows:—

- (a) Subject to compliance with the procedure hereinafter set out, it shall be a condition of employment that any employee who on the date hereof was a member of the Union in good standing or who becomes a member after

that date shall maintain such membership during the term of this agreement. An employee shall have satisfied the requirements of this clause so long as he has not been expelled from membership in the Union in accordance with its Constitution and By-laws.

- (b) No employee shall be subjected to any penalties against his application for membership or for reinstatement as a member in the Union except as may be provided in the Constitution and By-Laws of the Union; and no coercion or intimidation of any kind shall be practised to compel or influence an employee to join the Union nor shall any discrimination of any kind whatever be practised or permitted with respect to employees who are or who become members of the Union.
- (c) If any employee asserts that he has been unfairly deprived of membership in the Union such assertion shall constitute a grievance and shall be dealt with according to the Grievance Procedure established by this Agreement.

5. Duration of Agreement

I have reached the conclusion that the contract should terminate the 1st day of August, 1948. I reach such conclusion with some degree of misgiving. The Companies point out that all negotiations in the past for new labour contracts have taken place in the midst of strikes. Naturally in these circumstances they are anxious to have the present proposed contract extend for as long a time as possible. The real difficulty is not in the length of the contract but in the attitude of the parties to the collective bargaining process. The Union holds its convention usually some time in the month of May. There the new demands are discussed. They are then presented to the Companies by the Union officers some time in June. I am rather afraid that the tendency on the part of the Union officers is merely to collect the maximum demands from all of the Locals no matter how exorbitant or extravagant they are and present these to the Companies. This is a technique that may satisfy very aggressive and unreasonable members of the Union, but it is far from being a constructive foundation for the process of collective bargaining as understood by reasonable men. It does seem to me that the Union officers have some responsibility in formulating demands which carry their own judgment rather than making themselves mere messenger boys for unreasonable elements in the membership. There has been a tendency on the part of the Companies to hold back a reply to the Union demands for

an unreasonable length of time. Then the trouble begins. The existing contract has reached its termination date. The membership becomes restless. Meetings are held and a strike results. Then the true and genuine collective bargaining process begins to take place in the very worst of auspices for its success, in the midst of a strike. This must be clear to the parties as bad collective bargaining, but perhaps it is healthy that a third party should say it. If a healthy relationship is to be built up, the demands must be of a responsible kind, carrying the judgment of the Union officers who present them as reasonable. The Companies must reply to those demands promptly. The Union and the Companies must then get down to reasonable collective bargaining with the intention of settling differences without strikes or disturbances. Surely from the 1st day of June to the 1st of August is sufficient time for discussion and reaching fair settlement. The proposed contract should be dated the date of signing and should terminate the 1st day of August, 1948. The wage increases given should be retroactive to the 1st day of August, 1947. No other provisions should be retroactive to a date prior to the date of signing.

6. No Strike Clause

There should be a new no strike clause introduced in the proposed contract. I suggest the following:—

"The Union agrees that no strike vote of the members of any of the Local Unions will be taken during the term of this agreement or the course of negotiations with the Company for renewal or extension thereof until an attempt has been made in good faith to settle any differences arising in such negotiations by conciliation, arbitration or some other form of mediation."

I am happy to report that the above clause has not been forced on the Union by me but has been agreed to by the Union. This clearly indicates a genuine desire on the part of the Union to avoid the disturbances which have been taking place with such regularity in the past. I am confident that the Companies will approach the bargaining process in the future with at least a similar degree of good will.

7. Continuance of Existing Practices

The Union has asked that a general clause should be introduced into the contracts providing substantially for the continuation of existing practices not specifically covered in the contract itself. It is rather obvious, I think that such a clause would provide a

very strong anchor for the Union in connection with matters not definitely in the contract itself. The general theory seems to be that in different plants certain practices have grown up and been adopted of some concessions to the workers not specifically mentioned in the contract. The effect of such a clause would be to convert what may have been voluntary concessions into contractual obligations. Any matters of this kind, I think are matters for collective bargaining when the occasion arises. Accordingly, it is my opinion that such a clause should have no place in the contract.

8. Communication of Wage Rates to the Union

I was rather amazed to learn that in this particular industry there was no provision for communication of classifications and wages to the Union. The position taken by Canada Packers was that its classification was of the man rather than the job. The position of Burns & Co., was that its wage rates were on a scientific and impersonal basis. Both Companies submitted that they were always prepared to disclose the wage rates of an individual workman to the shop stewards, but were not prepared to disclose the full schedule of classifications and rates of employees in the bargaining unit. I am of the opinion that this goes to the root of genuine collective bargaining. How can *bona fide* collective bargaining be carried on when the Union is kept in the dark as to classifications and wages paid? I know that a schedule will take some time to prepare in a form which will furnish the foundation for future relations in this regard. Accordingly, I think that a clause should be introduced into the respective contracts by which the Companies undertake to furnish the Union with a schedule of classifications and rates of those employees in the bargaining unit within a period of three months from the dates of signing the contracts.

9. Consultation between Union and Companies on Schedule of Daily Hours of Work

In principle, the matter of setting up daily hours of work is, I think, the function of management. However, there may be circumstances where this should be the subject-matter of grievance procedure. Furthermore, I think there may be circumstances where the Companies would desire to discuss changes with the Union. Accordingly, I believe there should be introduced into Canada Packers contract at the end of Article XI in the former contract or at the end of Article X in the proposed contract the following addition:—

If a change of schedule involves a reduction in take-home pay, it shall be subject to grievance procedure.

In the case of Burns & Co., I think there should be added to paragraph 2 of schedule B as in previous contract, at page 28:—

Changes contemplated in a gang schedule will be discussed with the Union before they are made and, where feasible contemplated changes in the schedule for any individual will also be discussed.

10. Notice of Lay-off

During the War the Companies were bound by National Selective Service Regulations—7 days' notice. It must be kept in mind that lay-off is not the same as discharge. I mention this because in at least one of the Provinces (Saskatchewan) the law provides that at least one week's notice must be given in case of discharge. National Selective Service Regulations were designed to meet quite a different situation to what prevails in a peace-time economy. I do not think that the Companies should be required to give more than 48 hours' notice of lay-off with the additional provision that in the case of employees on the payroll at the beginning of the work week they must be paid for the guaranteed number of hours' work for that week.

11. Provision for Sick Pay

The proviso sought by the Union to be embodied in the contracts is the same as that contained in the Union's contract with the Swift Canadian Company. The clause appears to be a very reasonable one. As I understand the Companies' submission, sick benefits run to employees both within and without the bargaining unit herein concerned. The Companies appear to be of the opinion that if given a little time, they can work out a plan generally more beneficial to the workers than that which the Union is prepared to accept. The estimated cost of such a plan is $\frac{2}{3}$ cent per hour per employee. The Companies have indicated their willingness that a fund resulting from this hourly figure be set aside pending completion of a plan agreeable to the Union. Accordingly, it is my opinion that such fund should be set aside pending such a plan being accepted. If agreement is not reached within 60 days from the date of the proposed agreement, then the provisions put forward by the Union should be embodied in the agreement. The setting aside of $\frac{2}{3}$ cent per hour per employee should begin with the date of signing of the proposed new contract.

* * *

In the case of Canada Packers only, there are two further points in issue.

1. *Payment for Statutory Holidays*

The Company pays in full all regular hourly-rated employees for eight Statutory holidays. Statistics put forward by the Company indicate a very high rate of absenteeism on the days before and the days after Statutory holidays for which pay is received. The Union does not take any exception to the correctness of the figures. This results in overtime and much inconvenience for fellow workers and undue increase in cost of production for the Company. Accordingly, I think a proviso should be introduced into the contract to the effect that those persons absent on the work days next preceding or next following any Statutory holiday should not be entitled to pay for such holiday unless the absentee received permission from the Company to be absent or was absent because of sickness or for other good cause arising from circumstances beyond his or her control.

2. *Sunday Work*

In the case of Sunday work, the clause in the previous contract is fair if the Company's approach to the problem is the elimination of Sunday work altogether, except for maintenance, emergency repairs and other work arising out of a real emergency. It perhaps is well to call the attention of the Company to The Lord's Day Act of Canada, particularly sections 4 and 11. The clause presently in the contract for payment for Sunday work is workable with the proper kind of approach to the problem and I make no suggestions as to any change.

* * *

In the case of Burns and Company Limited, there is another matter in issue.

Inclusion of Burns & Co. (Eastern) Ltd. in Burns & Co. Ltd. contract

Burns & Co. (Eastern) Ltd., is a wholly owned subsidiary of Burns & Co. Ltd. It operates the Kitchener, Ontario, plant formerly

owned and operated by Dumarts Limited. I am unable to reach a conclusion from the Agreement providing for arbitration and appointing me Arbitrator, that it was intended that I should deal as an Arbitrator with what I regard as a purely legal matter. I do note that Burns & Co. (Eastern) Ltd., was not a signing party to the document providing for arbitration. Therefore, I think I lack any jurisdiction to order the plant of Burns & Co. (Eastern) Ltd., to be included in the contract between Burns & Co., Ltd., and the Union. Burns & Co. Limited and Burns & Co. (Eastern) Ltd., are entirely separate legal entities. I am afraid that any ruling of mine in favour of the Union's contention would result in injunction proceedings in the Courts. Accordingly, I refrain from making any ruling. However, in a practical way, I think no harm should result. Mr. Kelly, solicitor for Burns & Co., Ltd., gave assurance that any benefits bestowed upon Burns & Co., Ltd., employees through the arbitration would be extended to the employees of Burns & Co. (Eastern) Ltd., at Kitchener, through a separate contract. I have every reason to believe this will be done.

* * *

I think the terms of the award are sufficiently clear that no summation is necessary. If there is any difficulty in interpretation, I shall be available to the parties at any reasonable time. I am very grateful to all of the parties for the way in which the case was presented to me. There is no doubt if the pleasant relationship evidenced throughout the hearing is carried forward to the next negotiating period, there will be little danger of sparring, unrest and strikes. I think both parties can look forward to a relationship more sound and constructive than that which has existed in the past.

Dated at Toronto, this 29th day of November, 1947.

C. P. McTAGUE,
Arbitrator

Canadian Railway Board of Adjustment No. 1

THE Canadian Railway Board of Adjustment has released its findings in cases heard on September 9 and October 7, 1947.

Case No. 559, concerning the Canadian Pacific Railway Company (Western Lines) and the Brotherhood of Locomotive Engineers, in respect to disputed run around claims of an engineer assigned to pusher service at Bow Island, Alberta, December 19, 1945.

The joint statement of fact noted that on the date in question, the engineer claimed two 50-mile run around claims on account of not being called to assist two trains, both of which had tonnage greater than one engine could handle over the grade. The trains in question were double-headed by freight engines.

The employees contended that under article 2, clause (1) of the engineers'

schedule the two trains should have received pusher assistance, instead of use being made of freight engineers.

The company's rebuttal held that the assigned pusher service was not required in these instances as there was sufficient motive power attached to each train by virtue of double-heading necessary for traffic reasons.

This latter interpretation was sustained by the Board and contention of employees denied.

Case No. 560, concerning Canadian National Railways (Central Region) and the Brotherhood of Railroad Trainmen. The controversy was in regard to the claims of a yard foreman and yard helper for eight hours each, January 1 to 8, 1945, account held out of service for refusing to work on other than their regular assignment on January 1, 1945.

The joint statement of facts noted that an arrangement had been made whereby as many men as possible might be off duty on Christmas Day and New Year's Day. To carry out these arrangements it was necessary to work certain men on other than their regular assignments. Thus the two men were scheduled to work on another engine on New Year's Day. On reporting for duty on January 1, they were so instructed by the yardmaster, but refused to comply and went home. Subsequently the two employees were suspended from January 1 to 8 inclusive.

The employees contended that to make the two men work on the other engine on January 1, 1945, was a violation of article 139 of the Current Schedule of Rates of Pay and Regulations governing services of conductors, baggagemen, brakemen and yardmen, and was a violation of their seniority rights. Also, to hold the two men out of service for eight days was a violation of part of article 121 of the Current Schedule which states that yardmen will not be held out of service pending the rendering of decision except in cases of dismissable offences.

The company asserted that when the arrangement regarding Christmas Day and New Year's Day had been made, it was distinctly understood that the employees were aware of the intention to relieve a certain number of men on Christmas Day and as many as possible of the balance on New Year's Day. The action of the two men in refusing to comply bordered on insubordination. In an interview with the Terminal Superintendent on January 8, the two had admitted that they had been in the wrong. In view of their previous good records it was decided to impose a suspension only.

The contention of the employees was not sustained.

Case No. 561, concerning the Canadian Pacific Railway Company (Western Lines) and the Brotherhood of Locomotive Engineers. The matter in controversy was the discipline and reduction in earnings suffered by an engineer reduced to fireman for improper handling of brake.

The joint statement of fact noted that the engine manned by the engineer was derailed on January 16, 1947. Examination showed that the leading driving wheel on the left side was on the inside of the rail, due to the tire having moved off wheel centre towards centre of track.

The contention of the employees was that the engineer had manipulated the brake in the manner prescribed and that the offending tire was inadequately fitted. Furthermore, the engineer was disciplined 14 days after the occurrence when article 13 of the Engineers' Schedule states that such action should come within 10 days of the incident.

The company contended that the engineer had not handled the brake in accordance with the rule. It was also maintained that the tire was properly fitted and that later investigation showed that all the tires had been overheated. Finally the delay in the discipline was due to illness of the engineer.

The contention of the employees was sustained.

Case No. 562, concerning Canadian National Railways (Central Region) and the Brotherhood of Railroad Trainmen, in regard to the claim of a trainman for payment of 26 days at yard rates covering time lost when not permitted to take employment on the Joffre spare board on being displaced from his assignment as switchtender, Joffre Yard.

The statement of facts of the employees showed that under Article 131, Rules A and B, of the Trainmen's Schedule, the man in question had filed application with the joint spare board at Joffre to which he was entitled on seniority basis. He was denied this right by the crew supervisor who assigned him to a yard 18 miles from his home. The trainman refused this assignment and remained idle for 26 days until agreement had been reached for him to take the spare board at Joffre.

The employees contended that the yardman had been entitled to apply to the joint spare board at Joffre. The refusal of his application by the crew supervisor was an injustice, and constituted a disregard of the Schedule and of the man's seniority rights. Refusal of the assignment at a yard 18 miles

from his home was justified. The request for compensation for time lost should therefore be granted.

The company's statement of facts showed that the employee had been assigned to a regular yard position which he refused, and that he stayed away from duty without permission.

The contention of the company was that the man in question should have handled the matter as a grievance in recognized grievance procedure instead of absenting himself without permission.

The decision of the Board was that both parties were in error and that the employee should be reimbursed on a 50 per cent basis.

Case No. 563, concerning Canadian National Railways (Central Region) and the Brotherhood of Railroad Trainmen. The dispute was in connection with the pooling of crew trains.

The statement of facts of the employees showed that crews of two passenger trains were pooled in the spring of 1947. By so doing, the guaranteed payments to one crew were offset and the number of trainmen previously assigned to the other was reduced by one. The employees contended that this pooling arrangement by reducing the number of men required, violated Article 7, Rule C, and Article 80, first paragraph, of the Schedule. Furthermore, the senior men were thus deprived of their choice of assignment; and also of their right to the Sunday layover at their homes since crews lay over at one town one Sunday and at the other town the following Sunday.

The statement of facts of the company outlined the inception and pooling of the

four passenger trains. Its contention was that the number of crews was not reduced and the reduction in the number of men was no violation of the Articles in question.

The claim of the employees was not sustained.

Case No. 564, concerning Canadian National Railways (Central Region) and the Brotherhood of Locomotive Firemen and Enginemen, regarding discipline of 6 days assessed a fireman in connection with a derailment of 24 cars at Lansdowne, Ontario, on December 22, 1946.

The joint statement of facts noted that a railway car of this train broke because of overheating and was derailed, resulting in the derailment of the next 23 cars following. The train had been fully inspected at Kingston but a blazing hot box was noticed before the derailment by two trackmen and a section foreman who signalled for the train to stop.

The contention of the employees was that the fireman had used reasonable precautions in his inspection, that his duties required his constant attention, and that therefore he should not be held responsible for duties of engineman or front brakeman prescribed by Operating Rules.

The company contended that the fireman had failed in the discharge of his duty in not noticing the hot box which was on the first car behind the engine. The hot box had been blazing for over six miles and he should have noticed this and stopped the train.

The claim of the employees was not sustained.

Collective Agreements and Wage Schedules

Recent Collective Agreements

A FILE of collective agreements is maintained in the Research and Statistics Branch of the Department of Labour. These are obtained directly from the parties involved and from the Industrial Relations Branch of the Department. A number of those recently received are summarized below.

Agreements made obligatory under the Collective Agreement Act in Quebec are summarized in a separate article following this.

Manufacturing: Vegetable Foods

PETERBOROUGH, ONT.—QUAKER OATS COMPANY OF CANADA LIMITED AND UNITED PACKING-HOUSE WORKERS OF AMERICA (FLOUR AND CEREAL MILL WORKERS' DIVISION)

Agreement to be in effect from April 6, 1947 to August 30, 1948, and thereafter from year to year subject to notice. The company recognizes the union as the sole and exclusive collective bargaining agent for all eligible employees. There will be no discrimination, intimidation or coercion because of membership or non-membership in the union. Check-off: the company agrees to deduct monthly from the pay of employees who so authorize for the duration of the agreement their union dues and to remit same to the union.

Hours of work: 8 per day Monday through Friday, 4 on Saturday, a 44-hour week for day work. For those on rotating shifts, 8-hour shifts. Rest periods: two ten-minute rest periods in each shift. Overtime: time and one-half for work in excess of the above hours and for all work on Sundays (except when part of regular shift or when employee is changing from one full regular shift to another). Double time shall be paid for work on any of 8 specified holidays, all of which are paid holidays if they fall on regular working days for employees with over 30 days' service.

Vacation: one week with pay for employees with one year's continuous service with the company, 2 weeks with pay for employees with 5 or more years' service and 3 weeks with pay for employees with 20 or more years' service.

Hourly wage rates: including an increase of 10 cents per hour effective April 6, 1947, certain female classifications follow: package department—starting rate 51 cents, increased to 53½ cents in 4 weeks, blockers 53½ to 63 cents, packers 53½ to 67 cents; shipping department—starting rate 51 cents increased to 59 cents in 2 weeks and to 65 cents 4 weeks later and to 67 cents after approval; bag factory—starting rate 51 cents increased to 53½ cents after 4 weeks and to 56½ cents after approval. Males: packing department—mechanic 93 cents to \$1.04½, others 73 to 87½ cents (excluding leaders); shipping department—starting rate

73 cents increased to 76½ in two weeks and to 80½ cents 4 weeks later, others 80½ to 90 cents; bag factory—80½ to 90 cents (excluding head pressmen); feed department—80½ to 90 cents; boiler room and pipe shop—engineers (second and third class) 86 to 99 cents, pipe shop men 80½ to 87½ cents; electrical department—power house operators \$1.04½, electricians 93 cents; repair department—millwrights, machinists, tinsmiths, welders \$1.04½, carpenters and painters 93 cents to \$1.04½, helpers 80½ to 87½ cents; elevator—blenders, sweepers 80½ cents, weighmen, shovellers, distributors 85 to 90 cents; cereal departments—83 to 93 cents; paste goods department—83 to 85 cents; flour mill—bolters 92 cents, purifiers, wheat cleaners, corn mill 87½ cents, oilers 84 cents, sweepers 80½ cents. A shift bonus of 3 cents per hour shall be paid for work on the second shift and 5 cents per hour extra for work on the third shift.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Pulp, Paper and Paper Products

WINDSOR MILLS, P.Q.—CANADA PAPER COMPANY AND LE SYNDICAT NATIONAL DES TRAVAILLEURS DE LA PULPE ET DU PAPIER AND THE NATIONAL FEDERATION OF PULP AND PAPER WORKERS INC.

Agreement to be in effect from May 1, 1947, to April 30, 1948 and thereafter from year to year subject to notice. The company recognizes the union as the bargaining agent for all eligible employees. The company and its representatives fully recognize that its employees have the right to become members of the union and will not attempt to interfere with such rights or to discriminate against such members. The union shall not attempt to obtain members through intimidation or coercion. Maintenance of membership: all employees who are now members or who later become union members as well as any new employees who become members must maintain their union membership as a condition of employment. In the event of an employee who has had 5 years' continuous service being discharged, he will receive 50 hours' pay.

Hours of work: 8 per day, 6 days per week. Overtime: time and one half for work in excess of the regular hours (except tour worker who has to work long hours due to absence of relieving tour worker) and for all work on Sundays and 4 specified holidays.

Vacation: one week with pay for employees with one year's continuous service with the company, and 2 weeks with pay for employees with 5 or more years' service. All female employees to be allowed a 10-minute rest

period in the morning, 10-minutes in the afternoon, and 10 minutes on the night shift.

Hourly wage rates for certain classes: guarantee of minimum wage rates—any employee covered by the agreement is entitled for each working week to a rate which under no circumstances shall be less than an amount representing 79 cents an hour for men over 18 years of age, 64 cents an hour for boys under 18 years of age and 47 cents an hour for female employees. Kraft mill—cooks \$1.01, helpers 79 to 84 cents, washers, evaporators 90 cents, firemen, liquor makers 92 cents, firemen's helpers 85 and 86 cents, others 79 to 92 cents; Wood handling—chips screen 86 cents, yard labourers 79 cents, others 79 to 82 cents; Converting—scutator operators 92 cents, No. 1 rewinder operators 91 cents, crepe machine operators, duplex operators No. 1, 90 cents, others 79 to 89 cents; Bag factory—79 to 94 cents; Windsor shipping—weigher 89 cents, checker 85 cents, others 79 to 83 cents; St. Francis outside crew—79 to 85 cents, St. Francis Shipping—80 and 87 cents; Truck drivers 87 and 89 cents, teamsters 80 cents; machine tenders \$1.19 to \$1.37, back tenders 97 cents to \$1.20, third hands 88 to 99 cents, fourth hands 80 to 90 cents, fifth hands 79 to 85 cents; St. Francis Beaters—beater engineers \$1.16, beater men 84 cents, others 81 to 87 cents; Windsor Beaters—beater engineers \$1.05 to \$1.24, beater men 84 cents, others 79 cents; No. 3 Pulp Drying Machine—machine tenders 95 cents, back tenders 85 cents, third hands 80 cents, fourth hands 79 cents; Groundwood mill—grinder operators 85 cents, others 79 and 80 cents, St. Francis Finishing—calander operators 90 cents, cameron winder and rewinder operators 84 and 85 cents, others 79 to 86 cents. Female rates for most classifications 51 to 59 cents with following regulations in force—10 per cent of female help in all departments will receive apprentice rate of 47 cents per hour, 25 per cent will receive apprentice rate of 51 cents and 65 per cent will receive full rate of 53 cents per hour or over. Certain male classifications in the shops—machinists 84 cents to \$1.09, pipefitters, millwrights 84 cents to \$1.06, painters 79 and 84 cents, bricklayers 86 and 99 cents, carpenters, tinsmiths and wiremen 84 to 94 cents.

KAPUSKASING, ONT.—SPRUCE FALLS POWER AND PAPER COMPANY, LTD. AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS (LOCAL 523), THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS (LOCAL 89) AND THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS (LOCAL 1149).

Agreement to be in effect from May 1, 1947, to April 30, 1948, and thereafter from year to year subject to notice. This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE for September, 1946, p. 1244, with the following changes—hourly wage rates have been increased by 24 cents for most classes, others slightly more.

Manufacturing: Metal Products

TORONTO, ONT.—THE JAMES MORRISON BRASS MANUFACTURING COMPANY LTD. AND UNITED STEELWORKERS OF AMERICA, LOCAL 2446.

Agreement to be in effect from June 1, 1947, to May 31, 1948, and thereafter from year to

year subject to notice. The company recognizes the union as the sole bargaining agency for all eligible employees. All employees who are members of the union or who later become union members as well as all new employees hired during the life of the agreement must become and remain union members during the term of the agreement. Check-off: the company will deduct union dues monthly from the pay of employees who so authorize while such authority is in effect and remit same to the union.

Hours of work: 8 per day Monday through Friday, a 40-hour week. Overtime: for maintenance men time and one-half for all work in excess of regular hours; for production men, time and one-half for first 2 hours in excess of 8 per day and for first 4 hours' work on Saturdays and double time for all work in excess of the above and for work on Sundays and statutory holidays, four of which shall be paid holidays if they fall on a regular working day, for employees working the work days immediately preceding and following the holiday.

Vacation: all employees with one year's continuous service to receive 2 weeks' vacation with pay. Employees with less than one year's continuous service with the company must take 2 weeks' vacation, but with proportionately lower vacation pay.

Hourly wage rates: all rates are increased by 6 cents per hour retroactive to April 15, 1947. A premium of 10 cents per hour will be paid for work on any shift other than the regular day shift. This does not apply to night-watchmen, janitors or guards.

Provision is made for seniority rights and grievance procedure.

Manufacturing: Non-Metallic Minerals and Chemicals

ST. MARY'S, ONT.—ST. MARY'S CEMENT CO. LIMITED AND THE AMALGAMATED BUILDING AND CONSTRUCTION WORKERS OF CANADA, LOCAL 15.

Agreement to be in effect from July 28, 1947, to July 27, 1948, and thereafter from year to year subject to notice. The employer recognizes the union as the exclusive collective bargaining agency for all eligible employees. There will be no discrimination, intimidation or coercion because of membership or non-membership in the union. Maintenance of membership: all union members and any who become members of the union must as a condition of employment maintain their union membership.

Hours of work: 8 per day, 6 days a week, a 48-hour week. Overtime: time and one-half for work in excess of the regular hours and for work on 5 specified statutory holidays. Vacation: effective September 1, 1947, employees with one year's service will be granted one week with pay, those with 5 or more years' service shall either be granted one week with 2 weeks' pay during the summer or 2 weeks with pay during the winter.

Hourly wage rates: basic rate of pay throughout the plant will be 74 cents. Employees with less than 3 months' continuous service will be paid 71½ cents. Employees on shift not otherwise classified will be paid 76½ cents plus shift differential while on shift work. Mill operators will receive 79 cents plus 3 cents per hour shift differential, while on shift work. Kiln

burners 92 cents, crushers 85 cents, electric shovel (big) \$1.03, electric shovel (small) and diesel shovel 96 cents, sub-station operators 81½ cents, repairmen 74 to 84 cents, machinists 79 to 86½ cents, welders 89 cents, blacksmiths 84 cents, carpenters 84 to 94 cents, painters 79 cents, others 74 to 84 cents.

Absenteeism: the union agrees to support the employer in the elimination of unnecessary absenteeism, and the parties agree that for each unauthorized absence from work over two days during the year (other than proven sickness or injury) the employee will forfeit his right to overtime rates of pay on one named statutory holiday.

Provision is made for seniority rights and grievance procedure.

WINDSOR, ONT.—PARKE, DAVIS AND COMPANY LTD. AND UNITED CHEMICAL WORKERS, LOCAL 350.

Agreement to be in effect from June 16, 1947, to June 15, 1948, and thereafter from year to year subject to notice. The company recognizes the union as the sole collective bargaining agency for all union members and for all eligible employees when and if it is demonstrated that a majority of such employees are union members. All employees who are union members and all present and new employees who later become union members must as a condition of employment remain members of the union in good standing during the life of the agreement except that they may withdraw from the union during the first 2 weeks in June. Check-off: the company agrees to deduct union dues monthly from the pay of employees who so authorize and to remit same to the union, such deductions to continue until the employee requests it be revoked.

Hours of work: 8 per day Monday through Friday, a 40-hour week (except firemen who work 40 hours one week and 48 hours the next week). During July, August and September, 1947, however, 44 hours will be worked at regular rates to assist in maintaining production during the vacation period. Overtime: time and one-half for work in excess of the

regular hours. Six specified holidays, if not worked, shall be paid for at regular rates. Employees who work on any of the holidays shall be paid at their regular rates plus their holiday pay. Vacation: 40 hours with pay to employees with one year's continuous service with the company, 60 hours with pay to employees with 2 years' service, 80 hours with pay to employees with 3 years' service, 120 hours with pay for employees with 20 years' service. Employees who have been away over 30 days during the year through sickness or lay-off will have their vacation period reduced by a corresponding number of days in excess of 30 that they have been absent. A 10-minute rest period shall be allowed morning and afternoon to all female employees.

Hourly wage rates: the company agrees to give all employees in the bargaining unit an increase of 8 cents per hour. Minimum hiring rate for female employees is 55 cents, which shall be increased at the end of 3 months' service to 65 cents and at the end of 6 months to 65 cents plus premium which is designed to give at least 70 cents. Seventy cents is guaranteed to all female employees in the Finishing Department who have been with the company more than 6 months. Female checkers shall be paid an additional 5 cents per hour and all female employees shall receive this additional 5 cents per hour while making hypodermic tablets, filling, sealing and sorting capsules in air-conditioned rooms, filling ampoules with powder, sealing ampoules. The minimum hiring rate for male employees is 75 cents which shall be increased at the end of 3 months' service to 85 cents and at the end of 6 months to 90 cents. Male employees immediately connected with finishing production shall be included in the bonus system at a rate established at ¼ the hourly bonus rate paid female employees during each pay period. The bonus system in lieu of a smoking period shall remain in force. Payment to be made early in December or at time of leaving the company's service if before December.

Provision is made for seniority rights and grievance procedure.

Collective Agreement Act, Quebec

Recent Proceedings Under the Act

IN QUEBEC the Collective Agreement Act provides that where a collective agreement has been entered into by an organization of employees and one or more employers or associations of employers, either side may apply to the Provincial Minister of Labour to have the terms of the agreement which concern wages, hours of labour, apprenticeship, and certain other conditions made binding throughout the province or within a certain district on all employers and employees in the trade or industry covered by the agreement. Notice of such application is published and 30 days are allowed for the filing of objections, after which an Order in Council may be passed granting the application,

with or without changes as considered advisable by the Minister. The Order in Council may be amended or revoked in the same manner. Each agreement is administered and enforced by a joint committee of the parties. Further information concerning this legislation is given in the *LABOUR GAZETTE*, January, 1943, p. 86. Proceedings under this act and earlier legislation have been noted in the *LABOUR GAZETTE* monthly since June, 1934.

Recent proceedings under the Act include the extension of 2 new agreements, the amendment of 7 agreements and the correction of one of them and the repeal of 2 other agreements. These include the amendment of the agreement for building trades at Chi-

coutimi in the *Quebec Official Gazette* of October 31 and the extension of the term of the agreement for clockmakers at Montreal in the issue of November 8. The others are summarized below.

Requests for the amendment of the agreements for municipal employees at Jonquière and for building trades at Three Rivers were gazetted October 25. Requests for the amendment of the agreements for the sheet metal manufacturing industry at Montreal, for the dress manufacturing industry for the province and for barbers and hairdressers at Montreal were published November 8. Requests for the amendment of the agreement for barbers and hairdressers at Chicoutimi and for a new agreement for printing trades at Quebec were published November, 15.

Orders in Council were also published approving or amending the constitution and by-laws of certain joint committees and others approving the levy of assessment on the parties. An Order in Council was published annulling the right to levy of a joint committee.

Manufacturing: Fur and Leather Products

SHOE INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated October 8, and gazetted October 31, amends the previous Orders in Council for this industry (L.G., Sept., 1946, p. 1247; Oct., 1947, p. 1473). Hours: effective September 1, 1947, 48 hours per week, instead of the former 55-hour week for all employees except foremen. Overtime is payable at time and one-half.

Minimum wage rates: the new wage rates, which became effective September 1, 1947, are shown in the accompanying tables.

Manufacturing: Pulp, Paper and Paper Products

UNCORRUGATED PAPER BOX INDUSTRY, PROVINCE OF QUEBEC

An Order in Council, dated November 12, and gazetted November 15, makes obligatory the terms of a new agreement between "L'Association patronale du Commerce de Québec, Inc." and eighteen individual companies, and "Le Syndicat catholique des Employés des Industries de la boîte et des sacs en papier de Québec inc." and the various employees' associations of the individual companies. Agreement to be in effect from November 15, 1947, to April 1, 1948, and thereafter from year to year, subject to notice. Territorial jurisdiction comprises the entire province, and is divided as follows: zone I, the Island of Montreal and within 50 miles from its limits; zone II, the remainder of the province.

Hours are unchanged at 47½ per week (60 for firemen and enginemen) in zone I and 50 per week (60 for stationary enginemen and firemen) in zone II. Overtime is payable at time and one-half. Night shift employees are to be paid 20 per cent higher than the day rate and overtime is computed on the 20 per cent higher rate. Work performed on specified holidays is payable at double time to all employees, except night watchmen, stationary enginemen and firemen and repair men for machines and buildings.

Minimum hourly wage rates in zones I and II for all employees (male and female) are the same as those which became effective July 26, 1947, and were published in *THE LABOUR GAZETTE*, Sept., 1947, p. 1307. Vacation: one week with pay after one year's service, as in previous agreement.

Wages, labour and apprenticeship conditions of employees of the printing trades working in establishments governed by this agreement are governed in zone I, by the agreement relating to printing trades in Montreal (L.G., Sept., 1946, p. 1250, Dec., p. 1772; March, 1947, p. 369, April, p. 543) and in zone II, by the agreement relating to printing trades in Quebec (L.G., May, 1946, p. 628; Nov., 1947, p. 1660, and previous issues), with the exception of the duration of working hours which shall consist of 47½ hours in zone I and 48 in zone II.

Manufacturing: Printing and Publishing

PRINTING TRADES, QUEBEC

An Order in Council, dated October 23, and gazetted October 31, extends the term of the previous Orders in Council for this industry (L.G., May, 1946, p. 628; Nov., 1947, p. 1660, and previous issues) to December 1, 1947.

PRINTING TRADES, MONTREAL

An Order in Council, dated August 12, and gazetted October 31, amends the previous Orders in Council for this industry (L.G., Sept., 1946, p. 1250, Dec., p. 1772; March, 1947, p. 369, April, p. 543) by setting down general provisions governing apprenticeship in zone I. These include the necessary qualifications of applicants for apprenticeship in the printing trades, examinations every 6 months to determine the apprentice's progress, program of subject-matter for each year of apprenticeship for apprentice compositors, pressmen and bookbinders and the special provisions pertaining to these trades.

Manufacturing: Metal Products

GARAGES AND SERVICE STATIONS, MEGANTIC

An Order in Council, dated October 29, and gazetted November 8, repeals the Order in Council making this agreement obligatory (L.G., Dec., 1946, p. 1772).

Construction

BUILDING TRADES, QUEBEC

An Order in Council, dated October 23, and gazetted October 25, makes obligatory the terms of a new agreement between "L'Association des Constructeurs de Québec, inc." and "Le Conseil des Métiers de la Construction des Syndicats catholiques nationaux de Québec," representing "Le Syndicat national catholique des Bricqueurs-maçons du Canada inc.", section No. 1,

Québec; "Le Syndicat national catholique des Plâtriers du Canada inc.", Local No. 1, Québec; "L'Union nationale catholique des Charpentiers-menuisiers de Québec, inc."; "L'Union nationale catholique des Peintres de Québec, inc."; "La Fraternité des Plombiers et Electriciens de Québec, inc."; "L'Union nationale catholique des Ferblantiers-Couvreurs de Québec, inc."; "L'Union catholique des manoeuvres de Québec, inc."; "Le Syndicat national catholique des Métiers de la Construction, inc." of Rivière-du-Loup; "Le Syndicat national catholique du Bâtiment de Thetford-Mines"; "Le Syndicat national catholique des Métiers du Bâtiment inc." of St. Joseph-de-Beauce; "Le Syndicat catholique des Métiers de la Construction de Rimouski, inc."

Agreement to be in effect from October 25, 1947, to April 30, 1948, and thereafter from year to year, subject to notice. It applies to all construction, building and engineering operations. It governs also the operations of asbestos coverers (heating and pipe systems), blower fitters, oil burning system mechanics, cooling system mechanics, pipe mechanics, electricians, tinsmiths, joiners, ornamental iron and bronze workers and tinsmiths roofers. It does not apply to municipal or railway employees, nor to the employers in the pulp and paper industry regarding the maintenance of mills producing pulp and paper. Territorial jurisdiction comprises the city of Québec, the counties of Québec, Portneuf, Montmorency, Lévis, Lotbinière, Beauce, Dorchester, Megantic, Bellechasse, Montmagny, L'Islet, Kamouraska, Témiscouata, Rivière-du-Loup, Rimouski and Matane. It is divided into 4 zones, as follows: zone I, the city of Québec, Lévis and neighbouring municipalities; zone II, the city of Thetford-Mines and the town of Black Lake; zone III, the city of Rivière-du-Loup, the towns of Matane and Rimouski, the municipalities of Notre-Dame-du-Sacré-Cœur, St. Germain-de-Rimouski and Rimouski-East; zone IV, the territorial jurisdiction not included in the above 3 zones.

Hours: 48 per week (as in agreement previously in effect), 60 per week for employees on road construction. Overtime: time and one-half to midnight, double time thereafter. Work performed on Sundays and 9 specified holidays is payable at double time.

Minimum wage rates: there are increases ranging from 5 to 10 cents per hour in zones I and II and from 4 to 10 cents per hour in zones III and IV over the rates paid in previous agreement, while the rates for contractors (personal services) in the pipe mechanic's and electrician's trades remain unchanged. Asbestos insulation mechanic is added with a minimum rate of 95 cents per hour in zone I, 85 cents in zone II, 80 cents in zone III and 75 cents in zone IV. All wage rates for employees of the structural steel industry, steam generator mechanic and boiler-maker trades are the same as those previously paid. Maintenance men—in zone I, skilled workmen are paid \$34 per week and labourers \$27; outside zone I, skilled workmen receive \$29 per week, labourers \$25. (This is an increase of \$2 per week over the rates in effect on November 23, 1946.) Vacation: one week with pay to maintenance men with one year's service.

Provisions are made for apprenticeship regulations and for travelling expenses for certain classes of employees working out of town.

BUILDING TRADES, SOREL

An Order in Council, dated October 23, and gazetted October 31, amends the previous Orders in Council for this industry (L.G., Sept., 1944, p. 1142; Oct., 1946, p. 1446, Dec., p. 1773; April, 1947, p. 544, and previous issues). Territorial jurisdiction comprises the city of Sorel, the county of Richelieu and that part of the county of Verchères not governed by the agreement regulating building trades in the district of Montreal.

*Trade***WHOLESALE FOOD STORES, QUEBEC**

An Order in Council, dated October 29, gazetted November 8, and corrected in the issue of November 15, amends the previous Orders in Council for this industry (L.G., July, 1944, p. 868; July, 1946, p. 930, Aug., p. 1094, Dec., p. 1774). Hours: in establishments making meat mashes, the weekly working hours for stationary enginemen and firemen other than first-class chief enginemen are decreased from 59 to 54 hours; office employees (male and female) now work 43 hours per week instead of 44. All other employees, except occasional hands, common labourers (male and female), watchmen and boiler (not stationary) firemen, personnel and administration employees and enginemen working as first-class chief enginemen, a 48-hour week throughout the year. Overtime: all work in excess of 48 hours per week between April 15 and June 30, inclusive, and between September 1 and December 15, inclusive, is payable at straight time up to 53 hours and thereafter at time and one-half; however, during the rest of the year, overtime is payable at time and one-half, except for certain classes of workers. All the year around, packinghouse employees are paid time and one-half after 48 hours in a week, while office employees receive time and one-half after 43

hours in a week. Night shifts: in all concerns except packinghouses, all categories of employees (except office employees) doing night work and included in night shifts, shall be paid, when working at least 45 hours per week, an additional 10 per cent up to 48 hours per week, thereafter at time and one-half; when working less than 45 hours per week outside the regular working hours of the day set out in the agreement, all time worked by them in excess of the regular hours shall be remunerated at time and one-half. In packing houses, all categories of employees doing night work and included in the night shifts (except office employees) shall be paid, for all time worked outside the regular hours of the day, an additional 10 per cent up to a maximum of 48 hours, thereafter at time and one-half. Vacation: one week with pay after one year's service, one-half day per month for employees with less than one year's service.

Minimum wage rates in zone I: for employees paid by the week, increases range from \$1 to \$4 per week with the following exceptions—men employed in the dry-curing department, butchers and boners and pork butchers receive the same rates during their first 3 years as in previous agreement, butter wrappers and cutters are still paid \$22 per week and female office help receive the same rates during first 2 years of service as formerly; for employees paid by the hour, increases range from 2 to 5 cents per hour. Wage rates for commercial salesmen are increased by \$2 per week in all cases.

Minimum wage rates in zone II are the same as those in zone I, less 10 per cent.

*Service: Public Administration***POLICEMEN, QUEBEC CITY**

An Order in Council, dated October 29, and gazetted November 8, repeals the Order in Council making this agreement obligatory (L.G., Feb., 1947, p. 187).

Fair Wages Conditions in Dominion Government Contracts

THE Fair Wages Policy of the Dominion Government has the purpose of ensuring that all government contracts contain provisions to secure the payment of wages generally accepted as current in each trade for competent workmen in the district where the work is carried out.

There are two sets of conditions applicable to government contracts, those which apply to building and construction work, and those which apply to contracts for the manufacture of various classes of government supplies and equipment.

The practice of the different departments of the Government, before entering into contracts in the first group, is to obtain from

the Department of Labour schedules setting forth the current wage rates for the different classifications of workmen required in the execution of the work. These schedules, known as fair wages schedules, are thereupon included by the department concerned in the terms of the contract.

Fair wages schedules are not issued in respect of contracts for supplies and equipment. Contracts in this group are awarded in accordance with a policy which provides that wage rates must equal those current in the district.

A more detailed account of the Dominion Government's Fair Wages Policy is given in the *LABOUR GAZETTE* for July, 1946, p. 932.

Schedules Prepared and Contracts Awarded During October

(1) *Works of Construction, Remodelling, Repair or Demolition*

During the month of October the Department of Labour prepared 69 fair wages schedules for inclusion in building and construction contracts proposed to be undertaken by various departments of the Government of Canada in different parts of the Dominion.

During the same period a total of 63 construction contracts were awarded by the various Government departments. Particulars of these contracts appear in the accompanying table.

Copies of the relevant wages schedules are available to trade unions or other bona fide interested parties, on request.

The labour conditions of each of the contracts listed under this heading, besides stipulating working hours of not more than 8 per day and 44 per week, provide that "where, by provincial legislation, or by agreement or current practice, the working hours of any class of workers are less than 44 per

week, such lesser hours shall not be exceeded on this work except in cases of emergency as may be approved by the Minister of Labour and then only subject to the payment of overtime rates as specified by the Minister of Labour", and also specify that the rates of wages set out therein are "minimum rates only" and that "nothing herein contained shall be considered as exempting contractors from the payment of higher rates in any instance where such higher rates are fixed by provincial legislation".

(2) *Contracts for the Manufacture of Supplies and Equipment*

Contracts for supplies and equipment were awarded as follows, under the policy that wage rates must equal those current in the district:—

Department	No. of contracts	Aggregate amount
Canadian Commercial Corporation . . .	4,366	\$4,103,468 00

*Analysis of Unemployment Insurance Statistics for October, 1947**

A TOTAL of 34,743 claims of all types were filed in local offices of the Unemployment Insurance Commission during October compared with 25,847 in September and 36,517 during October, 1946. Revised claims represent reconsideration of existing claims (arising out of additional contribution credits, refusal of an offer of suitable employment, etc.) as well as special requests, so cannot be considered as additional cases of unemployment. Initial and Renewal claims totalled 29,369 in October compared with 20,883 in September and 34,891 in October, 1946.

Ordinary claims on the live unemployment register at October 31, numbered 42,225 (27,195 males and 15,030 females) as against 36,666 (23,401 males and 13,265 females) at September 30, and 57,036 (39,957 males and 17,079 females) at October 31, 1946. Ordinary claimants are those who are wholly unemployed in the sense that they have separated from employment or have been laid off for a period. Other claims on the register totalled 3,102 (2,440 male and 662 female) at October 31, compared with 2,157 (1,629 male and 528 female) at September 30, and 6,439 (5,907 male and 532 female) at October 31, 1946.

Other claimants are largely short-time claimants (i.e. those who have been put on short-time in the establishments in which they are employed).

Persons on the live unemployment register at October 31, are classified in Table 6 according to the number of days they have been continuously on the register since their last initial or renewal claim. In comparison with the situation at September 30, this

distribution indicates a slight lessening of the average duration of the recorded cases of unemployment, the comparable percentages for Canada being as follows:—

	Total	6 days and less
September 30.....	100	22·8
October 31.....	100	25·3

During October, 32,197 claims were adjudicated. This includes special requests not granted, but excludes cases referred to courts of referees (since the courts' decisions will constitute the final adjudication in most of these cases). Of the claims adjudicated, 23,109 were considered entitled to benefit and 8,870 not entitled to benefit, while 218 represented special requests not granted (requests for dependency allowance, ante-dating of the claim and extension of the two-year period).

Chief reasons for non-entitlement to benefit were: "insufficient contributions while in insurable employment" (2,875 cases), "voluntarily left employment without just cause" (2,489 cases), "refused an offer of work and neglected an opportunity to work" (1,309 cases), and "not capable of and not available for work" (578 cases).

Beneficiaries during October numbered 41,033 and were paid a total of \$1,544,185 for 814,218 compensated days of unemployment. This compares with 39,541 persons paid \$1,512,096 for 798,873 compensated days in September and 65,441 persons paid \$2,463,677 for 1,250,308 compensated days in October, 1946.

The average duration of the unemployment compensated was, then, 19·8 days in October, 20·2 days in September and 19·1 days in October last year. The average amount of benefit paid per beneficiary was \$37·63 in

* Statistics (including tables) are based on returns supplied by the Unemployment Insurance Commission and the Dominion Bureau of Statistics.

TABLE 1.—SUMMARY OF REGISTRATIONS OF EMPLOYERS AND EMPLOYEES BY REGIONS FROM APRIL 1, 1946 TO OCTOBER 31, 1946, AND FROM APRIL 1, 1947 TO OCTOBER 31, 1947

October, \$38.24 in September and \$37.65 in October, 1946. The average amount of benefit paid per compensated day of unemployment was \$1.90 in October, \$1.89 in September and \$1.97 in October last year.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for the

month ending October 31, 1947, showed 3,107,247 employees were issued with insurance books and had made contributions to the Unemployment Insurance Fund at one time or another since April 1, 1947, an increase of 76,481 since September 30, 1947.

As at October 31, 1947, 185,327 employers were registered as having insurable employees representing an increase of 768 since September 30, 1947.

Determination of Contributions for Five-Day or Forty-Hour Week

AS a growing number of industries and organizations are operating on a five-day or a forty-hour week it is increasingly important that management and workers should be informed as to how daily unemployment insurance contributions for such a week are determined.

First of all, it must be established that the five-day week is a regular operating feature of the plant, or portion thereof, and that the change from a six-day week was not instituted because of short time as a result of conditions that would otherwise cause a layoff of employees. The question as to whether there was a downward revision of weekly pay is an important factor in determining this point. It is not necessary that the entire industry or organization be on a five-day week, and it may happen that certain departments of a firm may operate regularly on a five-day week basis, while the remainder of the business is still on a six-day week. This quite often happens in the case where the office staff work only five days while the manufacturing departments complete the full six days.

The definition of a "working week" in the Unemployment Insurance Act is quite broad and is defined as "the number of hours, the number of days or the number of shifts which constitute the full week's work for any grade or class or shift in an occupation or at a factory, workshop or other premises of an employer".

The determination of the amount of weekly contributions required for a five-day week will, therefore, resolve itself into two classes:—

- (a) Contributions required when a full "working week" is worked.
- (b) Contributions required when less than a full "working week" is worked.

When the full working week is worked, the employee is considered to have been

employed during the whole of that week, and a full weekly contribution, that is, for six days, is required. Any holiday observed by his place of employment during the week and which was granted to the employee whether with or without pay is considered as a working day for contributions purposes.

If an employee does not work the whole working week, contributions are required for only the days on which work was performed or remuneration paid, whichever is the greater.

For example:—

(1) Six daily contributions are required for an employee who works the full number of hours required on every day of a *five-day week*—Monday to Friday.

(2) Six daily contributions are required for an employee who works the full number of hours required on every working day of a *five-day week* in which a holiday occurs (*four days actually worked*).

(3) If the employee absents himself for one day during the five-day week, a contribution is not required for the day that he was absent *nor* for the Saturday. In other words, only *four* daily contributions are payable.

(4) If the employee absents himself one day in a week which had a holiday, contributions will not be required for the holiday nor for the day he was absent nor for the Saturday; that is, only *three* daily contributions are made for the entire week.

In cases where employees work odd shifts during a week, work abnormal days, or where the work overlaps between days, reference should be made to any of the Unemployment Insurance Commission's National Employment Offices for a definite ruling in writing.

U.I. Contributions and Benefits for Veterans

A TOTAL of 211,818 World War II veterans have now been given unemployment insurance protection based on their war service, Right Hon. Ian A. Mackenzie, Minister of Veterans Affairs, announced late in November. Mr. Mackenzie said that the Department of Veterans Affairs had deposited with the Unemployment Insurance Commission, on behalf of these veterans, up to October 31, a total of \$17,999,490. He said

it was expected that ultimately the Department of Veterans Affairs would make payments totalling about \$47,500,000 on behalf of approximately 500,000 veterans.

"Under the Veterans' Rehabilitation Act once a veteran has been in insurable employment for ninety days he is entitled to have unemployment insurance payments made for him for the whole period of his service subsequent to the passing of the Unemploy-

ment Insurance Act," Mr. Mackenzie said. "Take the case of a man in the First, Second or Third Divisions who enlisted before July 1, 1941. If that man had entered insurable employment immediately on his discharge and had continued to be employed, he would now have more than six years of unemployment insurance payments to his credit with the Unemployment Insurance Commission. This would mean that in the event of him becoming unemployed, he could draw if married \$14.40 per week for the maximum period of one year. If single his weekly payments of course would be at the single rate of \$12.24. It is, of course, not anticipated that veterans will need such long periods of assistance for our experience has been that only a very small percentage of them are unemployed longer than a fifteen-day period. Employers of Canada have been most sympathetic in giving veterans an opportunity," the Minister said.

Breaking the contributions down by fiscal years, Mr. Mackenzie stated, that in the fiscal year of 1946-47 alone, contributions were paid on behalf of 84,205 veterans for a total of \$8,138,523. Up until the end of October of this fiscal year contributions had been paid on behalf of 75,655 veterans for a total of \$7,718,000.

Reprint of Canadian Report to Inter-American Conference

The Canadian report on Unemployment Insurance prepared by the Dominion Depart-

ment of Labour for presentation at the Inter-American Conference on Social Security held at Rio de Janeiro, Brazil, November 10 to 22, 1947, has been reprinted in English from the Technical Reports of the Conference, by the International Labour Organization at Montreal (L.G., June, 1947, p. 778). The reprint is a brochure of 49 pages and describes the principles, techniques and experience of the Canadian plan of Unemployment Insurance and Employment Services and their place in the over-all social security planning in Canada.

Unemployment Insurance Coverage Extended

Honourable Humphrey Mitchell, Minister of Labour, announced on December 9 that on and after January 1, 1948, every monthly rated employee (employee paid by the month) whose annual remuneration does not exceed \$3,120 will be insured under the Unemployment Insurance Act, by authority of Order in Council P.C. 4854, December 3, 1947.

At the present time, those employees paid by the month whose annual remuneration is \$2,400 or less are insured under the Act.

The Minister pointed out that the change will not affect the coverage of all hourly, daily and piece-rated employees and those paid on a mileage basis, who will continue to be insured regardless of earnings. Weekly-rated employees whose earnings are not expected to be more than \$3,120 will also continue to be insured under the Act.

Digest of Selected Decisions of the Umpire Under the Unemployment Insurance Act, 1940

THE Unemployment Insurance Commission submits the following digest of selected decisions in appeals heard by the Umpire under the provisions of the Unemployment Insurance Act, 1940, and its amendments. These cases are an extension of the series commenced in the April, 1945, number of the *LABOUR GAZETTE* and continued in each of the succeeding issues. They are selected on the basis of their possible precedent value for the determination of questions which may, from time to time, confront Insurance Officers and Courts of Referees. In addition, they provide a medium for presenting to employers and employees alike brief statements of the principles upon which insurance against unemployment operates in Canada and of actual facts in specific cases coming before the Umpire on appeal.

The selected decisions are published in two series: (1) Benefit cases, designated CU-B and (2) Coverage cases, CU-C.

CU. B. 122 (6 September, 1946)

Held that an insured person who withdraws from the labour market and later attempts to become re-established under a new set of conditions would naturally have to take whatever work is offered providing it is employment at the prevailing rate of pay in the district.

The material facts of the case are as follows:—

The claimant, a married woman, aged 41 years, was last employed by a brewery company as a packer at a wage of \$33.15 per week

from November 12, 1942 to August 11, 1945. She filed claim for benefit on March 20, 1946, which was allowed and on March 30 refused to apply for a position as a confectionery packer at 35 cents per hour for an eight-hour day, claiming that the wages were too low.

The Insurance Officer disqualified the claimant for a period of six weeks on the grounds that the employment was suitable due to the fact that she had been out of work for a considerable time and that she should have given it a fair trial.

From this decision the claimant appealed to the Court of Referees. The claimant appeared before the Court which, by a majority decision, upheld the decision of the Insurance Officer.

The claimant then appealed to the Umpire on the grounds that the employment notified was factory work and not confectionery work, involving the lifting of heavy boxes and barrels of nuts and that the wages for such work were too low.

DECISION

The Umpire's decision was that the claimant should be disqualified for a period of six weeks and gave as his reasons:—

The claimant was separated from her employment on the 11th of August, 1945. From that day until the 20th of March the records show that she made no effort whatever to obtain employment and that for all practical purposes she had withdrawn from the labour market. There is nothing on record to indicate why the claimant made no effort to obtain employment during this period or whether she was engaged solely in her household duties as a wife and mother. Two other offers of employment had been refused by the claimant because she considered them unsuitable and it would appear that she attempted to re-establish herself in the labour market under a new set of conditions which did not prevail at the time she became separated from her last employment.

Under these circumstances the claimant naturally would have to take whatever work was offered even if it were different from that in which she formerly was engaged and at a rate of pay that might not correspond with that which she formerly received, provided that it is employment at wages not lower and on conditions not less favourable than those observed by agreement between employees and employers or, failing any such agreement, than those recognized by good employers. In this instance, according to the evidence before me, the wages offered were the accepted rate of pay for this particular type of work and, in refusing to accept this

employment, the claimant has brought herself within the disqualification provided for in Section 43 (b) (i) of the Act.

CU. B. 123

(6 September, 1946)

Held that a claim for benefit made after a stoppage of work due to a labour dispute ceases to exist is valid.

The material facts of the case are as follows:—

The claimant, a married man, aged 36 years, was last employed by a brewery company as a mechanic, receiving 75 cents an hour, from 1935 until March 30, 1946. A partial stoppage of work took place at the brewery plant on March 28, 1946. The claimant worked for two days beyond the stoppage after which he failed to return to his employment because the plant was picketed and the employer sent him notice of separation. He filed claim for benefit on April 12, 1946, giving as his reason for separation from employment that he had been dismissed on account of a strike which was still in progress.

The Insurance Officer disallowed the claim and disqualified the claimant for a period of three days, i.e., from the date on which he filed his claim, April 12, to April 14, contending that a general resumption of work took place on April 15.

From this decision the claimant appealed to a Court of Referees before which he appeared and the Court, by a unanimous decision, allowed the claim on the grounds that the claimant was not participating in, financing or directly interested in the dispute.

The Insurance Officer appealed to the Umpire from the decision of the Court of Referees on the following grounds:—

1. That the claimant lost his employment on account of a stoppage of work due to a labour dispute at the factory, workshop or premises at which he was employed.
2. That from the record submitted, it was undoubtedly clear that the claimant was an interested party in the labour dispute and that he was directly interested in the result.

DECISION

The Umpire's decision was that the claim should be allowed and gave as his reasons:—

From the evidence and submissions made to me, there is no doubt that there was a dispute at the plant and that the claimant lost his employment by reason of such labour

dispute. In going over the submission, I find a statement of the conditions at the plant during the period in question, over the signature of the Insurance Officer, from which I quote:

"On April 9, 1946, out of the usual total of 1,500 employees, 1,130 were at work. On April 10, 72 new employees were engaged, 86 on the 11th, 99 on the 12th, 65 on the 15th, 20 on the 16th and 34 between the 17th and 30th."

From this quotation, taken from one of the exhibits, it is indicated by an Officer of the Commission that the stoppage of work ceased on April 12, 1946.

A claim for benefit, made after the stoppage of work ceases to exist, is valid as any disqualification imposed due to loss of employment as a result of a stoppage of work shall continue only so long as the stoppage of work continues (Section 43 (a) of the Act). It is evident that the stoppage of work had ceased on the 12th of April, 1946, the date on which this claimant made application for benefit. Such being the case, he is entitled to receive benefit as of April 12, 1946. In view of these circumstances, it is not necessary for me to consider the other questions raised in the decision of the Court of Referees.

Health of Employees Factor in Personnel Management

ADDRESSING the 27th Annual Meeting of the Health League of Canada, Mr. J. W. Brace, Vice-President of the Bell Telephone Company of Canada outlined the Company's program for maintaining the health of its employees.

At the outset, he pointed out that Canadian corporations, "more frequently now than in the past", set up funds to cover sickness, accident, pension, and death benefits for their employees. This was, he asserted, a recognition by industrial management that in order to furnish its products at the lowest possible cost, not only must the plant machinery and tools be kept in good working condition, but the people who operate the tools and machinery "must be efficient and mentally and physically at their best."

Turning to the discussion of the Bell Telephone Company's health program for its employees, he stated that the Company "operates from exchanges located in most of the cities and towns of Ontario and Quebec with a staff at the present time of over 23,000 people." In the larger cities the Company provides medical offices with a staff of doctors and nurses. In smaller communities private physicians are engaged to handle the medical work on a per case basis. Difficulties in administering the health program arise from the fact that the Company "works under 400 roofs" and has a large number of men moving about on the streets and highways.

Preplacement medical examinations are carried out and investigation is made of all special sickness and accident cases throughout the territory covered by the Company's operations. Special out-of-hour health courses have been developed. These cover nutrition, home nursing, first aid and allied subjects.

During 1947, the Company will disburse to its employees in the neighbourhood of \$40 per employee to cover salaries and wages paid for sickness absence. The cost of operating the medical services, together with fees paid to medical examiners during the current year will be approximately five dollars per employee. This will amount to a total of more than a million dollars for the year. Mr. Brace stated that the Company hoped through its health program that it will be better able, eventually, to control sickness expense. He asserted that the main purpose of the program is to develop a healthy employee organization in order to promote individual and collective loyalty and a keen desire to furnish the best possible service to the public. Advantage is taken of the visits of employees to the health centres "to give good sound advice on nutrition, out-of-hour activities, rest and all other phases of health."

In addition to the health centres operated by the Company, the Company employs travelling nurses in Toronto and Montreal. These nurses call on employees who are absent due to illness. Special attention is given to employees who do not live at home. These nurses are provided with cars equipped with mobile telephones, so that they can be quickly directed to special assignments. Mr. Brace emphasized the point that the travelling nurse is not used as a truant officer. "The medical department does not lend itself to checking up on delinquents, its responsibility is to provide a service to employees."

A recent development of the program is the provision of periodic health examinations in the larger centres served by the Company.

Labour Law

Recent Regulations Under Provincial Legislation

B RITISH Columbia has now set a weekly minimum wage for hotel bell boys of \$18 a week if they work more than 40 hours a week, and 45 cents an hour if they work less. The Board has also permitted the usual overtime for shopworkers in certain areas on specified days before Christmas, but time and one-half must still be paid for hours worked in excess of 44 in the week. The additional hours of work by which the baking industry is permitted to exceed the general 44-hour limit have been reduced.

Higher minimum rates for women have been set in Nova Scotia, and three zones replace the two previous areas one of which included communities with a population of 17,000 or over and the other, those communities with a smaller population. In Quebec licensing and apprenticeship regulations for electricians as well as conditions to govern the operation of motion-picture projectors have been published.

British Columbia Male and Female Minimum Wage Act

BELL BOYS

Bell boys are now to be covered by the minimum wage provisions of Order No. 52 of June 19, 1946, covering the hotel and catering industry (L.G., 1946, p. 988). This was effected by Order 52A of November 24, gazetted November 27. Bell boys must receive at least \$18 a week if their work-week lasts 40 hours or more or 45 cents an hour if they work less than 40 hours a week. No bell boy may be paid less than the equivalent of four hours' pay in any one day.

For learners, those with less than six months' experience in the industry, who work 40 hours a week or more, the minimum weekly rate is \$12, \$14 and \$16 for the first, second and third two-month periods, respectively. For learners working less than 40 hours a week, the hourly minimum is 30 cents, 35 cents and 40 cents for the first, second and third two-month periods.

Normal maximum hours are eight in a day and 44 a week. For hours in excess of these, overtime of at least time and one-half must be paid, and total hours must not exceed 10 in a day and 48 in a week.

The maximum amounts that may be deducted for board or meals or lodging are set out. The deduction may only be made when the employee actually partakes of the meals. The Board of Industrial Relations may judge the suitability of meals and lodging, and may order a stop to these deductions if the meals are not considered adequate. A weekly period of 32 hours of uninterrupted rest from work must be given, but other arrangements may be made provided the Board approves. Satisfactory sanitary facilities must be provided.

APPRENTICES

Under Order 2A of November 24, gazetted November 27, the rate of pay fixed by an agreement for apprentices indentured under the Apprenticeship Act need no longer be the minimum rate established under the Minimum Wage Act. The section of Order No. 2 of June 21, 1946 (L.G., 1946, p. 988) making such a provision, has been repealed.

British Columbia Minimum Wage Acts and Hours of Work Act

OVERTIME IN SHOPS FOR CHRISTMAS SEASON

The annual Orders permitting overtime at punitive rates in the mercantile industry during the Christmas season were issued on November 14 and gazetted November 20.

Under the Hours of Work Order, shop workers in Vancouver and district, Victoria, Esquimalt, Oak Bay and Saanich may work two hours in excess of the statutory eight on December 20 and December 23, and elsewhere in the Province, two hours overtime on December 23. Orders under the Minimum Wage Acts require overtime rates of time and one-half to be paid for the hours worked in excess of 44 during the week ending December 20.

For temporary workers taken on between December 4 and December 31, special rates are fixed. No male worker may be paid less than 45 cents an hour, and no woman working 39 hours or more in a week may be paid less than \$17 or if she works less than 39 hours in a week, less than 45 cents an hour.

BAKING INDUSTRY

Employees in the baking industry are permitted by Regulation 17B of November 13, gazetted November 20, to work two hours a day in excess of the eight hours laid down by the Act and four hours over the weekly statutory limit of 44 hours. This represents a reduction from the six extra hours of work allowed by the earlier Regulation 17A of November, 1934 (L.G., 1934, p. 1094) now repealed. At that time the weekly maximum hours permitted were 48.

Nova Scotia Minimum Wage for Women Act

Higher minimum rates have been fixed by an Order of September 17, gazetted November 26. Three zones have been established replacing the two earlier ones which comprised, respectively, communities of over 17,000 and those with a smaller population. The Act applies only to cities and towns, but may be extended by Order in Council to other areas. The new Order applies, like the old, to cities and towns. The distinction as to rates between girls over and under 18 has been dropped.

A minimum rate of \$15 has been set in Zone I for experienced workers, \$13 for the first three months for inexperienced workers and \$14 for the second three months. In Zone II the minimum for experienced workers is \$14 and for learners, \$12 and \$13 for the first and second quarters respectively. In Zone III, the minimum is \$13, with \$11 and, then, \$12 for learners.

The new rates exceed the old ones established on June 15, 1946 (L.G., 1946, p. 1104) of \$13 for experienced workers in places of over 17,000 persons and \$12 in smaller places. Rates for learners differed according to occupation.

Zone I consists of Halifax, Sydney, Glace Bay, Amherst, Dartmouth, Dominion, New Glasgow, New Waterford, North Sydney, Springhill, Stellarton, Sydney Mines, Truro and Yarmouth. Zone II comprises Antigonish, Bridgewater, Lunenburg, Inverness, Kentville, Liverpool, Parrsboro, Pictou, Trenton, Wolfville, and Windsor. Zone III covers Annapolis, Berwick, Bridgetown, Hantsport, Joggins, Lockeport, Louisburg, Malone, Middleton, Mulgrave, Oxford, Shelburne, Port Hawkesbury, Port Hood, Stewiacke, and Wedgeport.

Quebec Electricians and Electrical Installations Act

New licensing and apprenticeship regulations as well as conditions for the operation of motion-picture projectors are among the amendments made in the original regulations 2780 of July 20, 1940 (L.G., 1940, p. 927) under this Act. The changes were made by Order in Council 1660, of October 8, 1947 and gazetted October 31.

The Board of Examiners is to supply the candidate for the journeyman-electrician's or the moving-picture machine operator's licences with an apprentice booklet and an identification card. The identification card must carry a picture of the candidate on it. As previously required, the apprentice must still remit his booklet and identification card at the completion of his apprenticeship and when sitting before the Board of Examiners for his examination. However, under the new regulations, these will be given back to the candidate in the case of failure until the resumption of his examination.

Many amended and new orders are issued to secure greater safety from fire. In the case of a motion-picture operator, he may not; smoke or allow smoking in the operating room; read or have reading matter in the room; allow unlicensed persons other than those specifically authorized by the order, to enter the room while spectators are in the building; expose the film, allow an overload on the fuses or make new electrical connections; permit the projector or its equipment to become unclean; or use drugs or intoxicating liquors.

Saskatchewan Hours of Work Act

Employees of the Saskatoon Playgrounds' Association who maintain its rinks are exempted from November 1 to March 31 from the Section of the Act which forbids working hours to exceed eight in a day or forty-four in a week without the payment of time and one-half for the extra time. Order No. 13, approved by Order in Council 1656 of October 24, gazetted November 1, adds that no such employee may work more than the normal hours of work in any month unless he is paid time and one-half for overtime.

Legal Decisions Affecting Labour

Exchequer Court Reverses Decision of Registrar of Shop Cards—Directs Registration of Pressmen's Label

Mr. Justice E. R. Angers, on October 2, in Exchequer Court, upheld the appeal of the International Printing Pressmen and Assistants' Union of North America against the refusal of the Registrar of Shop Cards of the Department of the Secretary of State to register the Union Label of the appellant. The Registrar considered that the Shop Card was "confusingly similar" to the one used by the International Typographical Union of North America.

The appellant had applied for registration on March 16, 1944. Under the Shop Cards Registration Act, 1938, the Minister may refuse registration if the shop card is identical with or resembles a shop card already registered. On this ground the Registrar refused to register the appellant's label.

Counsel for the union pointed out that the Shop Card or Union Label concerned had been in constant use in the United States and Canada since 1903, without objection from anyone, particularly from the International Typographical Union which had registered its label in 1927. It was argued that no prejudice had been suffered by anyone as a result of the use of this label since 1903.

The Registrar was of the opinion that the general appearance of the labels was the important factor. Mr. Justice Angers, on the other hand, held that a careful comparison of both must also be taken into account. His conclusion was that the Shop Card of the appellant was not "confusingly similar" to that of the International Typographical Union, to the extent of being liable to deceive or mislead the public. *International Printing Pressmen and Assistants' Union of North America vs. The Registrar of Shop Cards, Department of State*, October 2, 1947.

Prosecution of British Columbia Union Held Up Until Its Legal Status Determined

In connection with the prosecution of the Nanaimo Dry Cleaning and Laundry Workers Union, No. 1, and certain of its members for conducting or participating in a strike which was illegal under the British Columbia Industrial Conciliation and Arbitration Act, a summary was given in the LABOUR GAZETTE October, 1947, of judgment on August 12 of the British Columbia Court of Appeal upholding the decision of Mr. Justice MacFarlane on

July 22 that the union was a legal entity for purposes of the Industrial Conciliation and Arbitration Act. This decision has been appealed to the Supreme Court of Canada.

When proceedings against the union were instituted, its President applied for a writ of prohibition directed against the Magistrate before whom proceedings were pending, alleging that the Magistrate had no jurisdiction in the matter since, among other reasons, the union was not a juristic person capable of being prosecuted under the Act. In dismissing this application, Mr. Justice MacFarlane expressed the opinion that the Act gave to a union certified under it the character of a juristic person. (L.G. August, 1947, p. 1337).

When this decision was appealed, counsel for the union moved in the Court of Appeal for a stay of proceedings before the Magistrate's Court until the judgment of the Appeal Court was given on the question of the union's status. Chief Justice Sloan on July 29 issued an order directing that proceedings be postponed. He considered that since Mr. Justice MacFarlane had dealt with the merits of the case and held that the union could be prosecuted, the defendants before the Magistrate would be prejudiced if the decision of the Appeal Court on this point was not awaited. *In re Patterson and Nanaimo Dry Cleaning and Laundry Workers Union Local No. 1, 2* (1947) Western Weekly Reports 600.

B.C. Supreme Court Rejects Application for Order to Require Official to Produce Union Records

In the action which arose out of a strike of employees of the Vancouver *Daily Province* which began on June 5, 1946, the Southam Company Limited claimed damages of \$250,000 against officers or representatives of the International Typographical Union and members of Vancouver Local 226 for conspiracy to injure the company. The defendants, all of whom except five were former employees of the plaintiff, were not sued in their representative capacity but as individual members of the union.

A temporary injunction to prohibit members of the local or officers of the I.T.U. watching or besetting or procuring to be watched or beset the company's premises was granted in the B.C. Supreme Court in July, 1946. Later, the injunction was ordered continued until the trial (L.G. 1946, p. 1835).

At a preliminary examination for discovery, one of the defendants, Neelands, for many years secretary-treasurer of the local union, refused to produce minutes and documents relating to the strike. Thereupon, the company applied to the court for an order to compel him to produce them.

On this application the secretary-treasurer filed an affidavit declaring that he held the documents as the servant of the local, that he was entirely subject to the will of the union as to their disposition and that the union had refused its permission to submit the documents.

On July 21, 1947, Mr. Justice Coady in the Supreme Court rejected the application and cited cases to show that the witness could not be required to produce the documents in question. He had actual corporeal possession of the records but not such legal possession as to entitle him to act otherwise than at the direction of the union. *Southam Company Limited v. Gouthro et al* (1947) 2 Western Weekly Reports 644.

Validity of Industrial Conciliation and Arbitration Act is Upheld in British Columbia Supreme Court

To give a Labour Relations Board or the Minister of Labour of British Columbia authority to decide certain questions which arise in a case before a Magistrate under the provincial Industrial Conciliation and Arbitration Act is within the powers of the Legislature, Chief Justice Farris of the British Columbia Supreme Court declared in refusing the application of the United Steelworkers for an order prohibiting Magistrate Ladner of Burnaby from continuing to hear charges against officers and members of the union for striking illegally. The proceedings were instituted by the Acting Minister of Labour under the provisions of the Industrial Conciliation and Arbitration Act (L.G. July 1947, p. 1013) which forbid a strike before conciliation proceedings are completed.

The case arose from a strike against the Dominion Bridge Company. Charges were laid against the union, two of its officers and certain members. There were proceedings in both Burnaby and Vancouver. When the charges against the officers were being heard, both Magistrates referred to the Minister of Labour of British Columbia certain questions of fact.

Section 58 of the Act stipulates that the decision of the Board, or the Minister of Labour acting until a Board is appointed, shall be final where any question arises under the Act as to whether the accused are employees,

whether the local union is a trade union within the meaning of the Act, whether there was an agreement by which the employees were bound or whether there was bargaining with a view to an agreement. When such questions arise in any legal proceeding, they must be referred to the Board by the "Justice or Justices of the Peace, Magistrate, Judge or Court" before whom they arise, and proceedings must be stayed until the Board's decision is made.

One, Hughes, a union member, made application for an order prohibiting the Acting Minister of Labour from hearing any evidence on the questions referred to him and prohibiting Police Magistrate Ladner from hearing the charges.

The applicant's argument was that the Magistrate had no jurisdiction because the prosecution was instituted without the consent of the Minister as the Act requires, that the Acting Minister was not properly the Minister, and that, if the Magistrate had such jurisdiction, he lost it when he referred certain questions for determination to the Minister, since in the applicant's opinion the provisions of the Act purporting to empower the Minister to determine such matters were beyond the powers of a Provincial Legislature.

This latter argument was based on the consideration that the deciding of such questions was a judicial, not an administrative function, and that Sec. 96 of the British North America Act gives the Governor General in Council power to appoint judges of the superior Courts.

As regards the powers of the Acting Minister, Chief Justice Farris was satisfied that under the B.C. Constitution Act an Acting Minister has all the authority of the Minister and retains it until the Order in Council appointing him has been rescinded.

On the question as to the judicial nature of the duties imposed on the Minister by the Industrial Conciliation and Arbitration Act, counsel for the Crown argued that the questions concerned related to facts ordinarily within the knowledge of the Board and they required no judicial decision.

Further, and more important in the Court's view, the Province had authority to give judicial power to the Board, provided such rights were not repugnant to British North America Act. As the Chief Justice saw it, all proceedings under the Industrial Conciliation and Arbitration Act must be instituted in an inferior or provincial court, that is, before a Justice of the Peace or Magistrate and not before a "Judge or Court" to which the Dominion has authority to appoint judges. He considered that the words, "Judge or Court", in the Industrial Conciliation and

Arbitration Act were surplusage and, in the light of the Act, without meaning. Therefore, it seemed to him that there had been no infringement of the rights of the Dominion even if the Board was given judicial power.

In any case, he pointed out, if such provisions of the Act are *ultra vires* the Legislature, they can be severed from the rest. The words "Judge or Court" may be ineffective but the whole Act is not thereby affected. The Province has power to grant the Board final power to decide such questions as those referred to it; the Magistrate is required to refer such questions to the Board and to proceed to determine the case before him. *Hughes v. Reg et al* 2 (1947) Western Weekly Reports 684.

Quebec Court Dismisses Shoe Employers' Application for Restraint of Collective Bargaining during Agreement

Mr. Justice Boulanger in Quebec Superior Court on August 30, 1947, dismissed the application of the Employers' Association of Shoe Manufacturers of Quebec for an interlocutory injunction to restrain one of its members, the Dependable Slipper and Shoe Manufacturing Company, and Local 500 of the International Union of Fur and Leather Workers from negotiating a collective agreement, and to restrain, too, the Quebec Labour Relations Board from certifying the Local as a bargaining agent. The application was based on Sec. 5 of the Quebec Labour Relations Act which provides that, where an employers' association is recognized by the Board for bargaining purposes, the obligation to negotiate in good faith rests with the employers' association exclusively and not with its individual members.

On March 9, 1946, the applicant, L'Association Patronale des Manufacturiers de Chaussures du Quebec, incorporated under the Professional Syndicates Act, was recognized by the Labour Relations Board as the bargaining agency for its members in relation to all the employees' associations certified by the Board as bargaining agents for negotiations with any one of its members. The applicant made an agreement with three shoe workers' unions which had not been certified. This agreement was to continue in force to September 1, 1947, and to be renewed automatically from year to year unless at least a month's notice of termination was given. None of these unions represented the workers of the Dependable Slipper Company nor were these employees members of them.

On August 3, 1946, an Order in Council under the Collective Agreement Act made the terms of the agreement concerning wages, hours, etc. binding on the whole shoe industry. The Order in Council was to remain in

force to September 1, 1947, and thereafter from year to year unless written notice was given not more than 60 days and not less than 30 days before September 1.

On January 27, 1947, Local 500 of the International Union of Fur and Leather Workers was recognized by the Board as bargaining agent for the employees of the Dependable Slipper Company. On their failure to reach an agreement with the Company, a Conciliation Officer intervened under the Trade Disputes Act, and, later, a council of arbitration was appointed. However, before the latter could act, application was made for an injunction to restrain the Company from entering into this agreement. It was claimed that the Board should not have certified Local 500 until the 60th day before the termination of the agreement with the three unions.

The defendants argued that, while an agreement and an Order in Council extending it are in force, the Board may certify any union which applies for certification as required by the Act. The applicant association, it was argued, had no interest in the action, and an injunction should not be granted against the defendants and the Labour Relations Board as the "mise-en-cause" merely to settle a private quarrel between the association and one of its members who was doing what the Act prescribed. Further, it was contended, a certified union may, under the Labour Relations Act, negotiate with an employer during the life of an agreement which has been made by an uncertified union. Lastly, it was argued that the Board is a part of the Department of Labour and its members are not subject to an injunction.

In his judgment, Mr. Justice Boulanger stated that, the recognition granted being valid, the Dependable Slipper Company was under obligation to negotiate in good faith and that it could not be prevented by injunction from doing what the Act prescribes. Even during the life of an agreement made binding by Order in Council on non-parties, the Board can certify as bargaining agent for a group of workers, made subject to the agreement by the Order, a union which applies in the proper form. At least, the Court did not know of any law to prevent them doing so. It might appear, by implication, that the effect of the sections of the Act, stating that a collective agreement is made for a year and that a rival union cannot petition for recognition as bargaining agent in place of the association which made the agreement until 60 days before the expiry of the agreement, would be to prohibit the Board from recognizing another bargaining agent before the time prescribed. Such a provision might be desirable, but the Court should not, upon

application for an injunction, insert, by implication or interpretation, such a provision in the Act. It must apply the law as it is.

Further, since the Board is purely an administrative body, whose members are appointed by the Government to assist the Minister of Labour, there was no ground for proceeding by injunction against it. *L'Association Patronale des Manufacturiers de Chaussures du Québec v. Dependable Slipper and Shoe Manufacturing Company and L'Union Internationale des Ouvriers de la Fourrure et du Cuir des Etats-Unis et du Canada and the Quebec Labour Relations Board*, Quebec Superior Court, August 30, 1947.

Saskatchewan Appeal Dropped as Provincial Authority in Labour Relations Resumed

The appeal of the Saskatchewan Labour Relations Board against the judgment of Mr. Justice Anderson of the Court of King's Bench in a case concerning the certification of a bargaining agent has been adjourned indefinitely. Mr. Justice Anderson held that the workers employed by the Dominion Clay and Fire Brick Company were engaged in "mining" and the relations of the firm and its employees were therefore within the scope of federal authority under the provisions of the Wartime Labour Relations Regulations, 1944 (P.C. 1003) (L.G. Feb. 1944, p. 135). The matter is now only of theoretical importance since these Regulations no longer apply to industries classified as "war industries" unless the latter are ordinarily under federal jurisdiction.

The case arose early in 1946 when the Clay Products Workers' Union sought certification as bargaining agent for the plaintiff's employees. The application was granted by the Saskatchewan Board, the company opposing it on the ground that the matter was federal, and not provincial. When the Saskatchewan Board appealed the decision of the Court of King's Bench, its right to appear before a Court was contested. This preliminary objection, the Supreme Court of Canada decided in the Board's favour on May 13 (L.G. 1947, p. 1341) and the question of the certification went back to the Saskatchewan Court of Appeal. *Dominion Clay and Fire Brick Co. vs. the Saskatchewan Labour Relations Board*.

English Employer, Not the Workman, Held Liable for Overloading Crane

An employer does not, merely by employing his servant to work a crane, delegate to him the statutory duty of seeing that the crane is not overloaded. This principle was enun-

ciated by the English Court of Appeal in allowing a workman's appeal with costs against his employer. The judgment was summarized in *Industrial Welfare*, September—October, 1947.

The workman was engaged in unloading from a truck by means of a travelling crane along a railway line. He was seriously injured when the crane turned over against a bundle of iron which fell on him. It was proved that the crane was loaded beyond the working load indicated by the table attached to the crane. There was an automatic indicator but it was not in working order; it was corroded and so moved slowly. The men on the job were experienced slingers and were expected to judge what was a safe load, defence stated adding that the company had delegated to the men the duty of preventing overloading. The Assize judge accepted this view, ruling that the injured man had failed to establish a breach of the duty imposed on the employer by the Factories Act to ensure that all parts of lifting machines and tracks of travelling cranes are of adequate strength and maintained in proper working order.

This decision was reversed in the Court of Appeal. The employer himself remains liable in civil proceedings for damage caused by breach of duty, the Court held, even if, charged under the Act, he has taken the steps provided in the Act to exempt himself from liability by bringing before the Court the actual offender and has proved that he himself used all diligence to carry out the Act, that he had entrusted the duties to properly instructed subordinates, and that the other person committed the offence without his consent or connivance.

In other words, that which will enable him to escape from being guilty of an offence under the Act will not afford a shield of defence in civil proceedings against a plaintiff who is damaged through the neglect of the subordinate. Where, however, the person injured as the result of the breach of the statutory duty is the employee to whom the employer has properly delegated the performance of that duty and the injury is caused by the act or omission of that employee, the latter cannot plead that his injury was caused by the breach of the statutory duty and not caused by his own act or omission.....There was no evidence of any express delegation of this duty to either of the men.....An employer does not, merely by employing his servant to work a crane delegate to him the statutory duty, of seeing that the crane is not overloaded.....If a man exercising his skill and knowledge to the best of his ability makes a mistake, particularly, as in this case, in what would be a safe lift, it does not amount to contributory negligence. *Gallagher v. Dorman, Long & Co. Ltd.* May 23, 1947.

Australian Commonwealth and State Labour Ministers in Conference

A CONFERENCE of Australian Commonwealth and State Ministers for Labour and their officials which was held in April last is reported in the *New South Wales Industrial Gazette*, May, 1947. The following agenda was placed before the Conference:—

1. Duplication of investigations made by Commonwealth and State Inspectors in regard to arbitration awards operating in factories, shops and offices.
2. Reduction of State standards in factory administration by Commonwealth awards.
3. Lack of uniformity of State Workers' Compensation Laws.
4. Employers' obligation to pay compensation for dust diseases.
5. Absence of uniform arbitration laws in Commonwealth and States.
6. Collaboration between Commonwealth and State Labour Departments in relation to Australian obligations under the amended Constitution of the ILO.

The Resolutions adopted by the Conference directed specific requests to the Commonwealth Minister of Labour and National Service with regard to these subjects, and most of them contemplated a discussion by Commonwealth and State officials in special conferences to be called by the Commonwealth Minister.

Duplication of the inspectorial work of the Commonwealth and States was regarded as undesirable, and plans for obviating it were considered. One solution proposed was that inspection in relation to awards of the Commonwealth Court of Conciliation and Arbitration might be carried out by State inspectors under delegated authority. The Commonwealth Minister of Labour and National Service was asked to consult with the Attorney General, who administers the Commonwealth Conciliation and Arbitration Act, in order to ascertain the feasibility of delegating authority and to suggest the arrangements that would be suitable.

As regards the overriding of standards prescribed by State law by some Commonwealth awards, the Commonwealth Minister was requested to consider an amendment in the Commonwealth Conciliation and Arbitration Act to preserve State standards where they are higher than Commonwealth awards. Constant review of labour standards was urged, and also, periodical conferences of officers of State Departments of Labour to discuss and review such standards with a view to making recommendations to the Commonwealth and State Ministers of Labour.

With respect to workmen's compensation and conciliation and arbitration, the Commonwealth Minister was asked to call a meeting of experts from the Commonwealth and State Departments of Labour and from other Departments concerned to discuss and propose to their Governments the steps necessary to achieve greater uniformity in these two legislative fields.

Similarly, in regard to the prevention of occupational diseases in dusty trades, a conference was recommended of federal and State officials conversant with the subject with a view to (1) determining the steps necessary to lessen the danger of dust; (2) making uniform the provisions for compensation to victims of dust diseases; (3) considering whether compensation should be provided by special legislation or by the Workers' Compensation Acts; and (4) considering means of financing a fund for such compensation.

Close collaboration between Commonwealth and State Departments was agreed on in connection with the International Labour Organization. The Commonwealth Government was asked to consider giving representation to the States in delegations to the International Labour Conference. The plan of co-operation which is to be considered by the various Governments includes the following:—

- (1) The Commonwealth Department of Labour and National Service to forward copies of ILO Conventions and Recommendations to each State Department of Labour which is to be responsible for approaching any other State authority concerned and for bringing them before the State Government;
- (2) Whenever desirable in the interest of ILO work, the Commonwealth Department to arrange for consultation with the State Departments, and between the States in order to secure co-ordinated action;
- (3) The State Departments to keep the Commonwealth informed of any action taken in relation to I.L. Conventions and Recommendations so that it may inform the ILO;
- (4) The Commonwealth Department, from information supplied by the States, to furnish the ILO with information concerning the law and practice in Australia in relation to Conventions not ratified and Recommendations not adopted.

Employment, Hours and Earnings

Introduction

A State of relatively full employment has existed during 1947 and continuance of the basically favourable conditions is expected at least throughout the first quarter of 1948. Seasonal factors will, as usual, cause a dislocation of workers during the winter months. Even seasonally, however, fluctuations are expected to be moderate.

Extensive employment shifting occurred during October as workers in summer-active industries were let out. Many of those released were drawn into logging, which, at that time, was rapidly increasing its work force. Others in the labour market eased shortages in the chronically undermanned industries, especially mining and heavy industry. Unemployment, which at the peak of industrial activity totalled only 1.4 per cent of the labour force, continued at a low level.

Rising living costs, however, added some uncertainty to the labour market scene since "real earnings" (taking into account rises in the cost of living) were currently below those at the end of 1946.

Reports from Employment Offices

The volume of applicants registering with the National Employment Service serves as a sensitive indicator of seasonal trends. Since September, the inflow of workers has increased, reflecting the normal seasonal release of workers from agriculture, construction and transportation. Throughout September and October, the re-direction of the displaced to employment in other fields kept the number out-of-work below the 100,000 mark. By November, however, demand was becoming satiated and the number remaining on file began to accumulate. At November 27, there were 117,000 unplaced applicants of whom 83,000 were men and 34,000 women. Vacancies available for referral, however, rapidly dwindled and at the November date had fallen to 58,000. The greater number of persons in the labour market during October was reflected in a slight rise in the number claiming unemployment insurance. Persons signing the unemployment register rose from 36,700 at the end of September to 42,200 one month later.

Reports by Employers

Employment in the eight leading industries, as reported by employers to the Dominion Bureau of Statistics, marked a further advance during September. Buoyancy prevailed throughout the entire employment field, marred only by labour disturbances in meat packing plants and moderate downtrends in isolated industry groups. At October 1, the index of employment (June 1, 1941=100) reached a new high, totalling 127.4 as against 126.5 and 116.6 one month and one year before respectively. Recorded employment in firms reporting 15 or more employees stood at 2,008,000 at the October date, an increase of 19,000 over the previous month. The gain during September, however, was largely seasonal in character and thus may be expected to disappear during the industrially slack months of January and February.

Hours and Earnings

Average hourly earnings in manufacturing continued to increase during September, and, in contrast to the trend since early June, outstripped the comparative gain in the cost of living. Hourly earnings averaged 83.4 cents at October 1, as against 82.2 cents and 71.4 cents one month and one year before respectively. Average hours worked per week marked a slight gain during September as capacity production was resumed in many plants. The average work-week rose to 43.0 hours during the last week in September as against 42.3 and 42.9 in the previous month and year.

Maritime Region

The Maritime region reported that fine weather had sustained employment fairly well until the middle of November, but seasonal slowdowns in construction and agriculture began to take effect as the winter weather advanced. In construction, material shortages, especially cement, and rising costs had resulted in the postponement or cancellation of many building projects which had adversely affected demand for labour, especially the unskilled; construction craftsmen, on the other hand, remained in short supply. Logging expansion was absorbing many workers; the possibility

of obtaining export markets in the United States, South America, the West Indies, and other dollar areas were being fully explored. Meanwhile, a serious freight car shortage was holding up pulpwood cutting schedules. A steady rise in coal output was reported and it appeared likely that the 40 cents per day provisional increase arranged for in the miners' working agreement would be won if the production trend continued. Nearly all manufacturing plants were working at capacity, with orders scheduled for several months. Retail trade reported a growing buyers' resistance and keener sales competition.

Quebec Region

The Quebec region reported a continued shortage of workers. Labour market conditions had changed only slightly, since fine weather had delayed the normal seasonal decline in construction and transportation. Settlement of the meat-packing strike and the recent railroad agreement had improved the industrial relations scene. For manufacturing industries, the tempo of business showed a slight hesitancy as buyers' resistance to rising prices was becoming more pronounced. The shortage of manpower remained acute in textiles and heavy industry. The recent good weather enabled farmers to finish their fall work earlier than usual, and many had left for jobs in the bush. Logging employment consequently was on the upswing, indicating a substantially larger work-force than in the comparative period in 1946. All branches of construction were booming, although industrial and commercial projects had taken the lead over residential building; the scarcity of skilled tradesmen was acute.

Ontario Region

A serious shortage of labour still confronted the Ontario region, although current releases from seasonal industries had eased the situation somewhat. The scarcity of unskilled labour in manufacturing and in logging, for example, was expected to be greatly reduced as farmers turned to winter employment. Manufacturing plants were operating at capacity—many had recently installed night shifts to increase their output. There were some 60,000 more persons in recorded manufacturing employment than one year before. Over 700 male British immigrants were interviewed in Toronto during October, and nearly all were placed in suitable jobs with little difficulty. Since the end of the war, the consumption of electricity had risen 125 per cent over the highest wartime level and conservation measures were necessary to prevent a serious shortage of power; at the present time five new power projects are under construction.

Many construction projects, both industrial and residential, had reached the stage of inside work and would sustain employment during the winter; skilled tradesmen continued to be in strong demand.

Prairie Region

In the Prairie region, the yearly peak in employment had passed with the close of the harvest season. The transfer of Eastern workers solved the harvest labour problem to a large extent, although considerable movements between the Prairie provinces were also necessary. The logging industry was expanding and absorbed the released workers from agriculture, transportation, and construction. The strike involving 400 base metal miners had just ended and the industry was again reporting a demand for skilled men. Several Alberta coal mines were falling behind scheduled production because of the box car shortage and lack of certificated miners. The meat-packing strike settlement brought a very heavy run of livestock to market, but the inflow had since levelled to normal proportions. Grain shipments to Lakehead terminals had been large and there was a constant demand for shovellers. Navigation had ceased on Lake Winnipeg, and air transportation to northern areas had closed until the ice was thicker. Unemployment among construction workers was not expected to become serious this winter since so much work had reached the inside finishing stage; unskilled construction workers, however, presented somewhat of a problem.

Pacific Region

The Pacific region reported that many of the labour strikes of the early fall months had terminated by the middle of November. Wage disputes in meat, metal manufacturing, and foundry industries were settled, and more than 2,000 persons returned to work. The street railway strike in the three major cities had just ended after a four-week stalemate, involving 3,000 workers; the tie-up had seriously affected business in the down-town areas; from 30 to 50 per cent declines in activity were reported. Wage negotiations were underway in base metal mining, and were impending in coal mines and gold mining. Seasonal activity was tapering off in agriculture, construction and the tourist trade, and seasonally displaced workers were currently seeking employment. As a result of all these factors, labour demand was dropping swiftly to a new low while job-seekers were steadily increasing. The logging industry reported much improvement in the labour supply and less labour turnover; higher wage scales had had a stabilizing effect.

Employment and Payrolls at the Beginning of October, 1947

IN spite of serious losses resulting from the dispute in meat packing plants, substantial expansion in employment and payrolls was indicated, on the whole, by leading establishments at October 1. The general gain was seasonal in character, but was rather above-average for the time of year. The staffs of the 18,182 employers furnishing data to the Dominion Bureau of Statistics in the eight leading industries rose from 1,993,483 at September 1, to 2,007,897 at October 1, or by 0.7 per cent. The general index of employment, based on the 1926 average, reached a new maximum of 194.6 at October 1, as compared with 193.2 at September 1, 1947. At October 1 in preceding years of the record, the figures were as follows: 1946, 178.1; 1945, 168.7; 1944, 183.3; 1943, 187.5 and 1942, 181.3. The highest index during the war was that of 190.5, reached at December 1, 1943.

Improvement in the situation as compared with September 1, 1947, was shown in the Maritime Provinces, Quebec and Ontario, but curtailment was reported by leading firms in the four Western Provinces. To a considerable extent, the losses in these provinces were due to industrial disputes, the strike of meat packing employees having a particularly marked effect in the Prairie Area. In British Columbia, disputes in the iron and steel group also caused some declines. Industrially, there was important expansion in

logging, in which the reported increase approximated that noted at October 1 of last year. Trade showed considerable seasonal improvement, while building was also more active. On the other hand, the trend was unfavourable in other branches of the construction industry, and in mining, communications, transportation and hotels and restaurants. Generally speaking, the reductions were moderate. In manufacturing, the outstanding change was the reported decrease of some 10,700 workers in slaughtering and meat packing plants, largely or wholly due to the strike. Lumber and pulp and paper mills showed substantial contractions of a seasonal character. On the other hand, there were important seasonal advances in vegetable food processing and textile factories, together with smaller increases in many other divisions.

Payrolls

The salaries and wages disbursed in the eight leading industries by the firms furnishing statistics at the beginning of October, aggregated \$75,038,687. This total was greater by 2.4 per cent than that of \$73,285,907 which they had distributed in weekly payrolls at the first of September. The increase in recorded employment in the same comparison had amounted to 0.7 per cent. The substantially larger gain in the payrolls resulted

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

mainly from the payment of higher wage rates in many establishments, together with a return to more normal working conditions following the vacation season. The average earnings of the workers on the staffs of the co-operating employers amounted to \$37.37 at October 1, as compared with \$36.76 at September 1, 1947. The latest figure is the highest in the record of over six years. In earlier years for which data are available, the October 1 per capita figures were as follows:—1946, \$33.15; 1945, \$32.08; 1944, \$32.36; 1943, \$31.53; 1942, \$29.51, and 1941, \$26.37.

Including the statistics for financial institutions, the latest survey shows a total of 2,090,700 employees reported at the beginning of October, when their weekly earnings amounted to \$78,114,195. At September 1, the personnel of the co-operating employers had included 2,075,893 men and women, while their salaries and wages were given as \$76,368,442. The average per employee advanced from \$36.79 at that date, to \$37.36 at the beginning of October, as compared with \$33.25 at October 1, 1946.

Table II summarizes the latest statistics of employment and payrolls for the leading industrial groups, the provinces and economic areas, and the 20 leading industrial cities, and gives comparison as at September 1, 1947, and October 1, 1946. Table I gives a monthly record for the eight leading industries as a whole, and for manufacturing, showing the movements of employment and payrolls since 1943. The index numbers of payrolls are based on the amounts disbursed by the co-operating firms at June 1, 1941, as 100

To facilitate comparisons of the trend of employment and payrolls, the indexes of employment have been converted from their original base, 1926=100, to June 1, 1941, as 100.

Table I indicates that in the period for which data are available, the number of persons in recorded employment in the eight leading industrial groups has shown an increase of 27.4 per cent, while the aggregate weekly payrolls of those workers are higher by 84.6 per cent. Including finance, the gain in employment from June 1, 1941, to October 1, 1947, amounted to 27.8 per cent, and that in payrolls, to 84.2 per cent. These increases are the highest in the monthly record. The explanation given in earlier reports for the relatively greater rise in the reported salaries and wages than in the numbers employed may again be stated:—(1) the payment of higher wage-rates in extremely large numbers of industries and establishments, in addition to the general increase resulting from the mandatory payment of cost-of-living allowances to the majority of workers during the war; the rates at which these bonuses were paid were increased on more than one occasion before they were absorbed in the basic wage-rates as from February 15, 1944; (2) the progressive up-grading of employees as they gained experience in their work; and (3) reductions in the proportions of women workers.

The index of employment in manufacturing during the period for which monthly statistics of payrolls are available has advanced by 20.9 per cent; the salaries and wages have mounted by 77.1 per cent, and the weekly

¹ This classification comprises the following:—iron and steel, non-ferrous metals, electrical apparatus, lumber, musical instruments and clay, glass and stone products.

² Mainly hotels and restaurants and laundry and dry-cleaning plants.

earnings per person in recorded employment have risen by 46.1 per cent. In the included non-manufacturing industries taken as a unit, the index of employment at October 1 had increased by 36 per cent since the commencement of the record of payrolls, while the index of aggregate weekly salaries and wages in the included non-manufacturing classes showed a gain of 94.3 per cent in the same comparison.

A comparison with the data reported a year ago shows a general increase of 9.3 per cent in the index of employment in the eight leading industrial groups, as compared with a rise of 23.2 per cent in the index of payrolls. In manufacturing, there was an advance of 7.8 per cent at the date under review in the index of employment, accompanied by that of 23.8 per cent in the index of salaries and wages, while the average weekly earnings of the persons in recorded employment have mounted by 14.6 per cent in the 12 months. Among the non-manufacturing industries taken as a unit, there has been a gain of 11.3 per cent in the index of employment in the year, together with a rise of 22.7 per cent in the index of weekly payrolls.

In regard to the marked variations in the average earnings of workers in the different industrial classes, it must again be pointed out that the sex distribution of such persons is an important factor, frequently associated with variations in the age groups. In general, the female workers tend to belong to the younger age classes, in which the earnings are naturally lower than among those of greater experience. The matter of short-time or overtime may also considerably influence the reported aggregates and averages, which likewise reflect variations in the extent to which casual labour is used; the degree of skill generally required of workers in the industry is of course a factor of outstanding importance.

Sex Distribution of Persons in Recorded Employment

There was a general increase in recorded employment for workers of both sexes at October 1 as compared with September 1, according to data received from the larger establishments in the eight leading industries. The gain among men amounted to 7,043, or 0.4 per cent, and that among women, to

¹ The relative weight shows the proportion of employees reported in the indicated industry to the total number of employees reported in Canada by the firms making returns at the date under review.

7,371, or 1.8 per cent. For persons of both sexes, the increase was 0.7 per cent. On the whole, the movements (apart from those due to strikes) were seasonal in character, heightened activity in logging being the most important factor in the advance among men, while that among women took place to a considerable extent in vegetable food and textile factories. Employment for workers of both sexes reached a decidedly higher level in trade, in which the gain was likewise seasonal.

The leading firms in the nine major industries reported the addition of 14,807 workers to their forces since September 1; of these, 7,267 were men, and 7,540 were women, there being an increase of 0.4 per cent among the former sex, and of 1.7 per cent among the latter. The ratios in this group of indus-

tries were 780 men and 220 women per 1,000 employees, as compared with 782 and 218 per 1,000 respectively, a month earlier.

As compared with October 1, 1946, there was an increase of some 8.8 per cent, in the number of men employed by the larger establishments in the nine major industrial divisions, together with a gain of over 10 per cent in their women workers. The ratios per 1,000 persons in recorded employment had then been 768 in the case of men, and 232 in the case of women. At October 1 in earlier years for which data are available, the proportions of women per 1,000 persons on the paylists of leading industrial establishments in the nine major industrial groups were as follows:—1945, 253; 1944, 271; 1943, 262 and 1942, 235.

Operations of the National Employment Service

THE balance between jobs available and unplaced applicants was maintained throughout October, but by November 27, jobless workers had outnumbered the reported demand for labour by 58,000. However, the downturn was only seasonal in nature and did not portend any widespread drop in employment levels. Buoyancy continued to exist in most industrial fields although the threat of rising living costs may cause some dislocation.

Placement levels were sustained throughout the general field owing to the normal shifts

in employment in October. Workers tended to move from agriculture and summer-active industries to logging, mining, and heavy manufacturing. In the specialized Executive and Professional and the physically handicapped divisions, however, seasonal downturns were already in evidence.

The sustaining influence of Christmas activity was expected to tide over seasonal slowdowns during the next two months but by early 1947, seasonal unemployment would probably reach its peak.

TABLE I.—UNFILLED VACANCIES AND UNPLACED APPLICANTS AS AT FIRST OF MONTH

(1) Latest figures subject to revision.

Agriculture

The pressure of agricultural labour demand had subsided by October. In general, sufficient labour had been available during the peak activity and little spoilage could be attributed directly to the shortage of manpower. The height of seasonal needs were met by an extensive program of transfers directed by the National Employment Service. Approximately 13 movements were arranged involving some 20,000 persons. Of these, 2,500 were within the respective province, 5,000 between provinces, and 12,500 across the United States border.

Activity in October centred on completion of the sugar beet harvest in the middle West. The work force consisted largely of the Polish veterans allocated to the district and a few

remaining transferees of the Prairie harvest excursion.

Since the generally lower yields in agriculture had reduced farm income in several sections of the country, many farmers had turned to some type of winter employment. Large numbers had already entered woods work while others were accepting jobs in mining, foundries and manufacturing.

Placements fell by almost 50 per cent during October to average 770 per week. At October 30, unfilled vacancies in agriculture totalled 1,058. The current low level of demand reflected not only a seasonal decline but also a much smaller call for year-round help. Immigration, for the most part, was responsible for easing the need for permanent help.

Non-Agricultural Industry

Vacancies Notified.—The call for additional help decreased sharply as seasonal activity began to wane. Power and box car shortages and growing labour unrest also had had a depressing effect on labour demand. Thirteen per cent fewer vacancies were reported in October than in September. However, the effect of the reduced labour demand was postponed as a sufficient number of vacancies were on file to meet the needs of incoming job-seekers. It was not expected that the full effect of seasonal slowdowns would be felt until early in 1947; Christmas activity usually sustains employment during November and December.

An average of 28,175 vacancies were reported per week in October, as compared with 32,512 in September. The heaviest decline was reported in British Columbia, followed by substantial drops in Quebec and Ontario. The over-all decrease was experienced in all main industry groups with the exception of mining; in this group, employers were still extremely short of help and were endeavouring to attract released seasonal workers from other industries.

In logging, it appeared that a full complement of labour would be secured without serious difficulty. Reflecting this, fewer advanced railway fares were being offered, and areas for recruiting tended to be smaller than in 1946. Demand in some areas had been reduced to skilled openings with surpluses of semi-skilled woodsmen reported in British Columbia. Indicating the easier labour situation, unfilled vacancies stood at 21,658 at October 30 as compared with 44,325 one year before. Immigration and the greater influx

of farm workers accounted largely for the more favourable situation.

Seasonal downtrends in construction and transportation employment were moderate because of exceptionally fine weather conditions. In construction, every effort was being made to close in buildings so that inside work could continue during the winter.

Food processing plants were active although untimely frosts had reduced crop yields, especially for tomatoes. Settlement of the strike in meat packing plants brought heavy demands for labour, both to replace the former staff who did not return and to relieve the pressure of the heavy stock runs when business re-opened.

Depletion of vacancies on file was rapid during October and November. By November 27, unfilled vacancies had dropped to 58,308—a decline of 50 per cent from the September peak. This situation did not necessarily reflect a shortage of jobs, since many employers, realizing the limited sources of manpower available, refrained from reporting job openings.

Applicants Registering.—Registration of workers, although well below the 1946 level, indicated the usual seasonal increase during October. Transient labour which had assisted in harvesting operations during August and September, entered employment offices in large numbers. Scattered lay-offs from transportation and construction brought in other workers, especially the unskilled and poorly-qualified. Closing of seasonal food processing plants and summer resorts added to the general influx of female workers.

At October 30, there were 95,829 unplaced applicants. Of these, 15 per cent were under 20 years of age; 56 per cent between 20 and 44; 18 per cent between 45 and 64; 11 per cent 65 years of age or over. In examining the distribution in relation to the labour force, a disproportionate number of job-seekers were among the youths and older workers. Among

youths, heavy labour turnover is a normal phenomenon since it is usual for first jobbers to take from one to two years to become established. The problem for the older worker was more severe because of the discriminating age policy of many firms. Vigorous campaigns against such employment practices, however, are gradually breaking down the age barrier.

The unskilled group weighed heavily among those out-of-work at October 30. Over one-third of the men on file were registered for labouring jobs while many others had only partial skills. A similar problem existed among women workers, with a large proportion of the semi-skilled registering in the clerical trades. The distribution of unplaced applicants, by occupation, is given in Table III.

Applications for employment during October averaged 32,053 per week, as compared with 31,091 and 26,460 during September and August respectively. The number remaining on file continued below the 100,000 mark throughout October, but by November 27 had advanced to 117,000.

Referrals.—The normal shifts in employment which occurred during October kept referral activity at a high level. Initial lay-offs from slackening seasonal industries were directed towards logging and industries which could not acquire sufficient help during the summer months. Referrals rose by 57 per cent in logging, 27 per cent in mining, and 8 per cent in construction. The service industry also benefited from the easier labour market; referrals increased by four per cent to bring the current level to slightly beyond that of 1946. Immigration, both from European Displaced Persons camps and the United

Kingdom, had helped to ease labour shortages in the service trades.

Referrals averaged 24,887 per week during October as against 24,881 and 27,881 one month and one year before respectively.

Referral activity, in relation to the supply of workers, indicated a substantial deterioration during October. In October, 46 per cent of available applicants (those on file at the beginning together with those registered during the period) were referred to job-orders as compared with 52 per cent in September. In relation to the number of jobs available, however, referrals continued at almost a constant level. During October, 45 per cent of available vacancies received referrals as against 46 per cent in September.

Placements.—Placements during October had not yet indicated signs of seasonal downturns. The greater placement activity in logging, mining, and construction offset the slackening in manufacturing hirings. Placements remained steady in all provinces except British Columbia. By sex, hirings kept the same level for men, while a slight downward movement was indicated for women. An average of 15,275 persons (10,849 male and 4,426 female) were placed each week in October.

The problem of geographical dislocation impeded placement work. Available labour

tended to be concentrated in areas distant from labour shortages. During periods of high seasonal activity, the situation was obscured but as activity began to taper off, the problem again came to the fore. In general, demand was centred in Ontario and Quebec while available workers were registered in the Maritimes, British Columbia, and, to a lesser extent, the Prairie provinces.

Reflecting this, a greater number of placements were effected by transferring labour from outside areas. During October, slightly more than 500 transfers were effected each week, representing four per cent of placement activity. The majority were moved to logging and mining camps. In addition, the Nova Scotia movement of workers to Ontario industries continued although at a somewhat slower pace than that of the early months of 1947.

As job opportunities began to dwindle, a larger number of workers accepted short-time

positions. Thirteen per cent of all placements during October were casual, that is, less than seven days duration in length. These were scattered throughout all industries, although more marked in the domestic service and trade groups:

The following table gives the placements effected by employment offices, from January, 1937, to date:—

PLACEMENTS

Year	Regular	Casual	Totals
1937.....	275,300	114,236	389,536
1938.....	256,134	126,161	382,295
1939.....	242,962	141,920	384,882

1947 (43 weeks).....	576,604	82,455	659,059

Special Placements

Seasonal influences were already beginning to affect the placement of handicapped workers. With the freer flow of workers it appeared that employers were more reluctant to accept the incapacitated worker. Placements dropped from 1,202 in the August 15-September 13 period to 1,148 during the comparative September-October dates. At the same time, the number unplaced began to

grow. At October 13, handicapped workers on file numbered 3,779 as against 3,520 one month before.

Aside from the seasonal aspect, however, absorption of the physically handicapped has been encouraging. During the first ten months of 1947 over 12,000 were placed, resulting in a reduction of 2,996 in the number unplaced. As a result of the keen attention given to

the problem by Special Placement officers, many persons who had never previously been employed, were placed in jobs over the last few months.

The Youth Employment Centre in Toronto which deals exclusively with first jobbers and those under 21 years of age, reported some difficulty was encountered in placing youths

lacking education and work experience. The problem was currently aggravated by the drift of farm workers to the cities. The seriousness of this problem is concealed greatly by the prevailing high employment levels, but should employment fall to any large extent the situation may become acute.

Executive and Professional Offices

In the executive and professional field, seasonal downturns were already in evidence. Placements fell sharply from the all-time high recorded in September. The more plentiful supply of executive and professional personnel, due in part to immigration, and the more selective attitude of the employers, affected the hiring rate. Reflecting this, the qualifications requested, as against the salaries offered, were becoming more strict. Also there was a tendency for demand to shift to out-of-town areas as fewer job opportunities were made available in urban centres.

Occupational dislocation was a problem at Executive and Professional offices. Registrations weighed heavily in the selling and specialized administrative groups; demand accentuated the technical fields. There were vacancies available for sales work on a commission basis, but applicants preferred the

salary plan. In the engineering field a persistent demand existed in practically all centres; few applicants were suitably qualified.

Placements during October averaged 59 per week, which, although 21 per cent below the September level equalled that reported in October, 1946. Reporting of vacancies showed both a yearly gain and a monthly decline; at October 30, there were 1,536 continuing on file.

The inflow of applicants during October maintained a high level, averaging 316 per week. The slower placement rate resulted in a steady accumulation of workers; by the month-end, 2,303 executive and professional applicants remained on file.

Plans were already being laid at executive and professional offices to compile lists of jobs for university graduates and undergraduates for the 1948 season.

Veterans

Two years after hostilities concluded, less than 23,000 veterans were registered for work at employment offices—slightly less than two per cent of the total number discharged. The initial stages of rehabilitation, therefore, appeared to have passed with no serious unemployment developing. Unplaced veterans at their peak (March, 1946) totalled about 83,000, but within a five-month period the number had been almost halved despite continuing high levels of demobilization.

Seasonal influences and chronic unemployment areas accounted for the bulk of veterans seeking work at employment offices. However, many veterans were appearing on the labour market who had been released from the stop-gap positions accepted immediately upon discharge. The tasks of rehabilitation such as training, reconstruction planning, rehabilitation liaison work, etc. required a large working force and, at this phase of reconversion neared completion, staffs were rapidly being disbanded. Labour turnover

also increased work applications, especially in highly competitive industrial centres such as Toronto and Montreal. Applications for employment were sustained at around 6,000 per week during the peak of employment and at about 8,000 during the winter slump.

Of the 22,982 veterans unplaced at the end of October, 14,011 or 39 per cent had not been on file two weeks before, indicating that a large number had only recently been thrown into the labour market. The unplaced veterans were concentrated mainly in four areas, Vancouver, Halifax, Winnipeg, and Saint John. These districts accounted for approximately 50 per cent of those on file.

Placement of veterans averaged 3,415 per week during October, sustaining the August and September levels. Since the beginning of 1947, 24 per cent of all placements effected by employment offices had been for veterans; a total of 161,400 ex-servicemen were placed during this period.

Regional Analysis

The following regional analysis is based on reports received from National Employment Service offices throughout the country. The report covers the month of October, 1947.

Maritime Region

General employment held up well during the period with fine weather favouring industrial progress. Labour requirements for logging operations were relatively small.

Agriculture.—The harvest of the two principal Maritime crops, potatoes and apples, was completed. New Brunswick potato growers reported a bumper year and an adequate work force. A large portion of the tubers were being transported to Halifax and Saint John for shipment to South America and Cuba. Prince Edward Island potato growers were assisted by 800 men brought in principally from Cape Breton Island. This proved a very successful movement. Some of the men remained on the Island and an effort was being made to place others in New Brunswick at woods work, railway maintenance or construction, rather than have them return to their own area where opportunities were limited.

In the Annapolis Valley, approximately 500 men from outside points were supplied to assist in the picking and packing of an apple crop of about a million and one-quarter barrels.

Fishing.—Heavy catches of sardines were reported in the Bay of Fundy and cannery employees and fishermen had promise of continuing employment for some time.

Logging.—Maritime operators predicted a lower lumber cut this winter and a possibility of some marginal operators being forced out of business. This would leave the more stable and better equipped operators in the field. The prevailing international financial situation was reflected in an unsettled export market for lumber. However, it was not regarded as serious as new markets were being explored.

A heavy cut of pulpwood was anticipated, although the shortage of freight cars was causing increasingly serious hold-ups. It was feared that if the supply did not show marked improvement soon, there would be a widespread lay-off of cutters and handlers.

Mining.—General coal mining had shown considerable improvement, the larger companies reporting a marked falling off in absenteeism and only a few small local tie-ups. No difficulty was encountered in supplying the requirements of companies as they

arose except in the Minto area. The need there was for qualified pick miners.

A gradual increase in output was noticed throughout the region and Union officers were stressing the necessity of even greater production in order to qualify for the 40c per day increase as provided for in the working agreement.

Manufacturing.—Manufacturers had been affected by material shortages, mainly sheet metal and channels. In some cases these scarcities had been partially made up by purchases from other countries which had increased the cost of production considerably. The prevailing power shortage had also proved a severe hindrance. For example, production in the Saint John Sulphide Plant had been put on a part-time basis during the month and was expected to have an adverse effect on winter activity. The company was installing a turbine generator to produce their own power but it would not be in operation until the end of the year.

With the exception of a foundry in the New Glasgow area which was on strike, large steel manufacturing industries were working at full capacity and orders were on hand to keep them busy for several months. It was expected that 200 more men would be hired when a steel company in the Sydney area began the extension of their coke oven department.

Shoe factories were operating at a high level but it was expected that higher prices would reduce consumer demand.

Construction.—There was a noticeable tapering off in all branches of construction—the completion or cancellation of contracts, or material shortages, were responsible for the cut-back. The cement shortage had been acute in Nova Scotia.

Local offices reported an increase in the number unemployed, particularly the unskilled; there were also indications of further heavy lay-offs in November. In some areas there continued to be a brisk demand for carpenters, bricklayers and plasterers.

Quebec Region

The prolonged fine weather had delayed the seasonal decline in many industries. Logging was gaining momentum, 5,000 more men being in camps at the end of October than at the same time last year.

Agriculture.—Harvesting operations had been completed, reports indicating that yields were far below those of normal years. Fall ploughing was under way but was being

hampered by the exceedingly dry condition of the land.

The movement of farmers to woods operations was taking place earlier than usual.

Logging.—Lumbering operations were very active, reporting adequate crews at most points. During October, 10,000 men were added to the number engaged in woods operations. At the end of the period there were 5,000 more men in the camps than at the same time last year.

Mining.—Prospecting had been carried on at a high level especially in the new Quebec-Labrador and Bachelor Lake areas. Producing mines in Western Quebec were in dire need of underground workers and were warmly supporting immigration into this industry. The Noranda Mines Ltd. had received close to 100 mine beginners during October which was expected to be a great help to them in a few months.

REGIONAL EMPLOYMENT TRENDS SEASONALLY ADJUSTED FROM 1939 TO 1947

The soapstone quarries were operating at full blast while the favourable weather lasts. Asbestos mines were working at capacity but with few men required.

Manufacturing.—Practically all the smaller saw mills were closed but larger ones would operate until freeze up. Newsprint production continued to show gains over the corresponding period of last year. The shortage of freight cars was beginning to be felt and there was a possibility of a temporary curtailment of activity.

Furniture factories, textile plants and clothing manufacturers were busy while shoe manufacturers continued to operate at reduced capacity. The Dominion Textile Co. had registered a need for 800 more employees, both men and women, to complete the second shift.

The heavy steel industry was forging ahead, and with an accumulation of orders on hand.

There was a large-scale lay-off at Canadair Ltd. It was thought unlikely that there would be further reductions in staff as they had enough work on hand to keep the present number of employees busy until February.

The shipbuilding industry was proceeding at an accelerated pace so as to complete and launch their ships before the St. Lawrence freezeup. It was thought that Canadian Vickers Ltd. would have enough work for outfitting gangs to continue throughout the winter.

The strike picture was still unsettled, the number of disputes terminated being offset by a measure of unrest and pressure for strike action in other industries.

Construction.—All branches of construction were at peak activity. Industrial construction was taking the lead over residential building. While many projects had been completed releasing substantial numbers of workers for other locations, a shortage of craftsmen persisted.

In many localities road work and bridge building was slowing down and lay-offs had started. However, these men were being readily placed. The shortage of cement had dogged progress throughout the season at many points.

Among the large contracts announced during the month were: a refinery in Montreal for the British American Oil Co. at approximately \$15,000,000; a chlorine plant for the Dominion Alkali and Chemical Co. Ltd. Beauharnois, \$4,000,000; a hospital at Macamic and a garage for the Montreal Tramways Co. each amounting to \$1,000,000. The widespread contracts planned, pointed to a heavy spring program.

Transportation.—Ocean shipping activities at Montreal had gained momentum towards the second half of the month. However, reports indicated that the actual number of ships using the port this year was slightly below last year's total. Lake shipping continued busy.

Companies engaged in highway transportation were operating at a high level with no let-up in sight. There were openings for experienced mechanics and transport drivers.

Ontario Region

In the manufacturing industry approximately 60,000 more persons were employed at the end of October than at the corresponding period last year. The extension of industrial activity was overtaxing the existing electric power supply which was in some measure restricting progress.

Agriculture.—With the exception of turnips, sugar beets and apples, harvesting had been completed and fall ploughing was under way. Fall wheat was showing excellent growth.

Farmers were uncertain about their livestock program for the winter due to increased grain prices and light crops. This was bringing

about a reduction in the demand for farm labour. There was, however, a continued interest in experienced hands, and in the employment of British immigrants.

Logging.—A noticeable decrease took place in the demand for pulpwood cutters, with fewer orders in clearance outside the region. Scalers were needed but no suitable applicants were available.

The labour demand for the logging industry was centred mostly in the Ottawa Valley and Sault Ste. Marie areas where about 770 bushmen were required. Some of the smaller operators were delaying the opening of camps until assured that qualified labour was available.

Mining.—Both base metal and gold mining operations presented a steady demand for miners and mine beginners. The former group had received some assistance from outside the region.

Manufacturing.—In most centres manufacturers were operating on full schedules, many of them putting on night shifts to increase their output. However, due to the prevailing high level of employment, additional help was not required in large numbers and requests were mostly confined to specialized personnel. It was expected that general unskilled help would be more plentiful as summer seasonal workers moved to manufacturing centres.

Manufacturers in iron and steel had reduced their overall number of vacancies reported, but foundries had continued their urgent request for labourers and moulders. In the Toronto area there was a marked decrease in the demand for skilled metal tradesmen while the need for semi-skilled and unskilled workers persisted.

The textile industry had placed heavy requests for day and night staffs, especially trained weavers, loopers and spinners. Orders for workers placed with employment offices in the Quebec Region were meeting with little success.

With the strike in the meat packing industry over, operators expected to reach peak production by November 1. It was estimated that Canada Packers and Swift Canadian would require all available skilled workers and about 400 unskilled workers to reach this objective.

Bench hands and cabinet makers were wanted in woodworking plants while lay-offs were being considered in rubber and leather products plants.

Construction.—The fine weather had benefited contractors of both industrial and residential building. A large number of projects had been closed in so that they could be completed during the winter months.

The demand for bricklayers, carpenters, plasterers and plumbers continued high, while the need for labourers was governed by the number of craftsmen available. There was a short supply of building materials especially cement, plumbing and electrical fixtures, and structural steel.

Considerable activity was taking place at the future power sites at Stewartville, Des Joachims, Griffith and Sault Ste. Marie.

Transportation.—Freight and express shipments were reported to have reached an all time high despite a shortage of box cars.

Prairie Region

Western Canada's harvest season was past with no apparent loss due to labour shortages. Many workers thus released were turning to other industries for winter employment.

Agriculture.—The harvest season was past without loss of crops, due in part to the greater movement of workers. There was a fair demand for farm hands for winter work but comparatively few applicants were available.

As the season's work was completed the Polish veterans employed in sugar beet camps were being directed to the placement offices in Winnipeg and Lethbridge for re-assignment.

Logging.—While harvest work was still available, the movement of men into logging camps was slow but was gaining momentum towards the end of the month. There were still many openings but several operators were becoming more specific in their requirements and were restricting the territory from which transportation was being advanced.

Some expansion was expected in pulpwood production in the Flin Flon and The Pas areas. More local manpower would likely be available in these areas this year owing to the decreased request for mining help. However, there would be very little activity in these areas or in the Northern Saskatchewan or Alberta camps until late November or December.

Fishing.—Fishermen at the Lakehead continued to report good catches and favourable marketing conditions. The fall season was over on Lake Winnipeg and nothing further would be done until ice conditions would permit.

Mining.—Base metal mining was slackening with the cessation of drilling operations at many points in the Port Arthur area. A few highly skilled persons and unskilled labourers were required at Steep Rock Iron mines. At Flin Flon the needs were being met by local applicants. The strike at the Sherritt Gordon mines, involving 400 workers, was still in

progress and the situation was reported to be tense.

Miners and muckers were required at gold mines in the Port Arthur area and it was expected that there would be a steady movement of men to the camps until freeze up closes air transportation. At Snow and Herb Lakes operations were under way with full crews and no demand for additional workers.

The salt development at Unity was closed down while considerable activity was reported at oil workings in the Turner Valley and Leduc-Calmar areas.

Coal mine operators continued to place orders at National Employment Service offices for certificated miners; many of these were filled by men returning from harvesting operations.

There was a noticeable trend towards mechanized mining and the labour requirements were showing yearly reductions. The prevailing shortage of box cars had forced several of the operators to close for a few days.

Manufacturing.—The termination of the meat packers strike resulted in a brisk attempt to replace staff losses so that the abnormally heavy run of livestock, which followed the re-opening of packinghouses, might be handled.

Grainhandling at the Lakehead terminal elevators was heavy, causing an increased demand for shovellers.

Sugar companies in the Lethbridge area reported that sufficient labour had been available to meet their needs. It was expected that processing would be completed by January, 1948.

Construction material production had continued busy owing to a prolonged fall season. Many were making plans to operate throughout the winter months. It was thought that the seasonal reduction in demand would enable manufacturers to catch up on the backlog of orders. The sash and door industry was still being handicapped by the scarcity of glass.

Foundries and machine shops were experiencing a shortage of skilled craftsmen while unskilled workers were in good supply.

Transportation.—Railway companies continued to list orders for track maintenance workers for outdoor work and skilled machinists and boilermakers for shops.

The navigation season on Lake Winnipeg was over while at Yellowknife, air transportation had been suspended until the ice was thick enough to land.

Pacific Region

The general outlook was darkened as the completion of seasonal work brought an influx

of workers to the larger centres. October marked the end of several large wage disputes and the return to work of over 2,000 persons after weeks of idleness.

Agriculture.—All areas reported that harvests had been successfully completed with practically no loss. In the Fraser Valley all ground produce, with the exception of the lily bulb crop which will continue for another two weeks, had been harvested. Labour demands were light and orders on hand were mainly for experienced dairy help.

In the Interior, fruit packing plants were finishing up the 1947 crop. It was expected that by the middle of November, 3,500 seasonal workers would be released. The Vernon area reported the largest honey crop in 25 years.

The Dominion-Provincial Farm Labour Service offices had been closed for the season and requirements were being directed through the National Employment Service.

Logging.—The labour situation in the logging industry had improved rapidly during the month and no major changes were anticipated. A surplus of unskilled and semi-skilled workers had materialized as men were arriving daily at the camps. It was also noticeable that turnover had decreased and labour was becoming more stable.

Bad towing weather on the coast had taken a heavy toll of log supplies but had not affected the flow of material to the mills. In the Northern Interior and Cranbrook areas soft roads were hampering log transportation and no additional men were being taken on until the frost set in. Nanaimo reported that all operators in that area were fully staffed.

Fishing.—Salmon canning was nearing the end, the largest pack in six years being recorded. The financial returns to the fishermen had been increased through the lifting of export restrictions on fresh fish going to the United States.

From a slow beginning, the season's catch of herring had reached proportions. The B.C. whaling industry which had been dormant since 1943 was preparing for operations in the early spring.

Mining.—All major gold mine operators reported a rapid increase in staff. A few companies had been forced to slow down the rate of hiring to prepare new working faces and to erect emergency accommodation. Gold placer mining in all areas had drawn to a close.

There was little demand for miners at base metal operations, many of the vacancies having been filled by seasonal workers. New mines and mills were being opened up near Alice Arm and Nelson which would require a substantial number of workers.

Coal production had continued to increase rapidly, the strip operations at Corbin being mainly responsible for this. However, it was expected that the output of these mines would be reduced with the advent of inclement weather. There was a shortage of certificated miners in the Fernie and Vancouver Island areas.

Manufacturing.—Sawmills were operating with a full complement of workers, the result of increased wages and the inflow of seasonal workers. A survey of the pulp and paper industry revealed that labour requirements had been met and a considerable surplus of manpower was available for replacements. The new Port Alberni pulp mill was in operation, a temporary power plant having been erected until the completion of the Elk Falls project. The mills at Powell River were building a large extension at the present site which will provide many additional permanent jobs.

Shipyards were relatively active although at some points showing the effects of the recent steel strike. Much of the work was for reconversion and repairs. Ship's joiners and marine electricians were in short supply.

Construction.—The demand for construction workers was tapering off generally throughout the region due to weather conditions and the decline in contracts for the renovation and erecting of private homes. The one exception to this was in the Port Alberni area where there was a constant demand for all skills. On larger projects difficulty was still being encountered in the procurement of certain materials such as fabricated steel, pipe, nails and electrical fixtures.

Vancouver, Prince George, Victoria and Vernon were laying plans for the erection of a substantial number of low rental homes. Large industrial construction continued to forge ahead while road work was falling off rapidly.

Transportation.—The most important development during the month was the complete cessation of all public transportation facilities in the cities of Vancouver, New Westminster and Victoria—approximately 3,000 employees were affected.

Deep sea shipping in Vancouver harbour had dwindled due to foreign embargoes, the lack of grain shipments and the shortage of dollar credits. Vacancies for merchant seamen were low while those for certified personnel continued high.

Cheaper and faster steamship runs to points in Alaska and the Yukon had been announced marking a new era in international coastal service.

Hours and Earnings, October, 1947

INDICATIVE of a return to more usual working conditions following the holiday season, the average working week in manufacturing industries was somewhat longer at the beginning of October than in September. The wages disbursed were also higher partly as a result of this factor, but also due to the payment of higher wage-rates in many industries and establishments.

The average hours worked in the plants from which information was received rose from 42.3 in the week of September 1, to 43.0 in that of October 1, as compared with 42.9 and 44.7 at October 1 in 1946 and 1945, respectively. A new maximum was indicated in the average hourly earnings in the period under review, when the general rate was 83.4 cents, as compared with 82.2 cents at September 1, 71.4 cents at October 1, 1946, and 67.8 cents at that date in 1945. This was the 18th month in succession in which the trend has been upward.

The wage-earners for whom data were available at October 1, earned a weekly average of \$35.86 before deductions for income tax, unemployment and other insurance contributions,

etc. The mean in the week of September 1 was \$34.77, while at October 1 in 1946 and 1945, the weekly averages were \$30.63 and \$30.31, respectively. The weekly wages of the hourly-rated wage-earners employed by the co-operating manufacturers at October 1 showed an increase of 17.1 per cent in comparison with the figure for a year earlier, and of 18.3 per cent as compared with October 1, 1945.

Statistics of hours and earnings were compiled by the Dominion Bureau of Statistics on the basis of information received from 6,374 leading manufacturers, whose staffs numbered 782,010 at October 1 as compared with 783,166 at the first of September. The reported working hours in the week of October 1 aggregated 33,647,408, exceeding by 1.5 per cent the total of 33,161,639 hours worked in the same plants in the week of September 1. The weekly wages paid by these firms to their hourly-rated personnel at the date under review amounted to \$28,072,844, as compared with \$27,270,384 in the week of September 1. The increase was 2.9 per cent.

* The averages at these dates were affected by loss of working time at the year-end holidays in the case of Jan. 1, and by the Easter holidays in the case of April 1, 1945, and May 1, 1946.

Hours worked.—In the heavy manufactured goods industries, the co-operating plants indicated a total of 17,039,761 hours in the week of October 1, a figure which exceeded by 2.7 per cent the aggregate of 16,599,592 hours worked in the same factories in the week of September 1. Within this category, (in which the reported wage-earners rose by 0.3 per cent to a total of 391,716 at October 1), there were general increases in the working time. The gains in the iron and steel and non-ferrous metal divisions were particularly noteworthy, but other groups also shared in the upward movement in the aggregate hours.

The situation in the non-durable manufactured goods was seriously affected by the strike in meat-packing plants, in which the indicated hours fell in the month by 64.9 per cent, to 232,607 in the week of October 1. In spite of this important loss in working time, the aggregate hours reported in the larger factories turning out light manufactured goods rose by 0.3 per cent, from 16,562,047 in the week of

September 1 to 16,607,647 in that of October 1. In this broad division, the wage-earners for whom statistics were available at the latter date numbered 390,294, a decline of 0.6 per cent from the total indicated a month earlier.

Average hours in durable goods industries were 43.5 hours, as compared with 42.5 hours in the week of September 1, 1947, 42.8 hours in the week of October 1, 1946, and 45.0 hours in that of October 1, 1945. In the non-durable manufactured goods division, the reported hours averaged 42.6 in the week under review, as compared with 42.2 in that of September 1, 1947. In 1946 and 1945, the averages at October 1 were 42.9 and 44.5 hours, respectively.

Hourly Earnings.—The manufacturers furnishing data in the durable goods division indicated an average hourly rate of 90.4 cents at the date under review, as compared with 88.8 cents at September 1, 1947, 77.8 cents at October 1, 1946, and 75.4 cents at Octo-

The percentage changes in the figures of salaries and wages, and in those of the weekly wages shown in the table on page 4 nevertheless did not greatly differ. A comparison of the latest data with the averages indicated at Nov. 1, 1944, when the record commenced, however, shows considerably more variation in the increases; thus,

¹Exclusive of electric light and power.

• See footnote to table 1.

¹The industries classed in the durable manufactured industries are indicated by an asterisk.

² Since 1941, the Dominion Bureau of Statistics has prepared current indexes of average hourly earnings of the employees of eight establishments producing heavy electrical apparatus. Based upon the hourly earnings at June 1, 1941, as 100 p.c., the latest figures are as follows: Aug. 1, 1947, 181.2; Sept. 1, 1947, 180.8; Oct. 1, 1947, 183.3; Oct. 1, 1946, the index was 143.6. Chiefly street and electric railways.

³ For information respecting the sex distribution of the persons in recorded employment, see monthly reports on employment and payrolls.

ber 1, 1945. In the 12 months' comparison, the rise amounted to 16.2 per cent, and that in the 24 months' comparison, to 19.9 per cent. In this division, further advances were indicated in several branches of the lumber, clay, glass and stone, electrical apparatus, iron and steel and non-ferrous metal industries.

As already indicated, the situation in the light manufactured goods group was seriously affected by the strike of meat-packers; the hourly earnings in the division, at 76.3 cents, were nevertheless slightly above the September 1 mean of 75.7 cents, previously the maximum in the record of almost three years. At October 1, in 1946 and 1945, the averages were 65.7 cents and 60.4 cents, respectively. In the 12 months, the increase in the class of non-durable manufactured goods industries has amounted to 16.1 per cent, and that in the 24 months, to 26.3 per cent. In comparison with the September 1 figures, there were increases in a considerable number of groups, notably in leather, vegetable food, paper, printing and publishing, rubber, textiles, tobacco, chemicals, petroleum and other classes. There were widespread advances as compared with October 1 of last year.

Weekly Earnings.—The movements in the average earnings of salaried employees and wage-earners in the period commencing at November 1, 1944, and those in the weekly earnings of hourly-rated wage-earners, are given in Table 2; the latter figures are obtained by multiplying the average hourly earnings in the week of observation by the average hours worked in the same week. In manufacturing as a whole, there was a rise of 87 cents from September 1 in the weekly salaries-and-wages figure reported at the beginning of October, when the rise in the weekly wages paid to the hourly-rated staff of the same firms amounted to \$1.09; it will be recalled that the hours of work were higher at the date under review. In the heavy manu-

factured goods industries, the weekly salaries-and-wages figure advanced by \$1.41 at October 1, while the weekly wages in that category were higher by \$1.58 than at September 1. In the non-durable manufactured goods division, the average weekly earnings of the salaried and wage-earning personnel were increased by 37 cents as compared with September 1, since when the weekly earnings of the hourly-rated staffs of the co-operating establishments have risen by 55 cents.

Non-Manufacturing Industries

The proportion of wage-earners paid by the hour in the non-manufacturing industries are smaller than in the case of the manufacturing industries, with the result that records of hours worked are frequently not available for such persons. The representation in the non-manufacturing industries in the monthly statistics of man-hours and hourly earnings is therefore less than in the manufacturing division.

Little general change was shown at October 1 in the number of hourly-rated wage-earners on the staffs of the reporting *coal operators*, but following the vacation season, the aggregate hours worked in their establishments were higher, at 853,041, as compared with 829,044 in the week of September 1. The average hours were also higher, at 39.7 as compared with 38.6 in the preceding report. The latest average, however, was lower than that of 40.9 in the week of October 1, 1946. The average hourly rate at the date under review stood at 110.9 cents, being lower by one-fifth of a cent than the average indicated at September 1. At October 1 in 1946 and 1945, the means were 95.7 cents and 94 cents, respectively.

In the *metallic ores* division, there was a further decline in the number of wage-earners, together with a relatively smaller reduction in

TABLE 4.—AVERAGE HOURS AND EARNINGS BY PROVINCES AND CITIES

	Average Hours Worked			Average Hourly Earnings		
	Oct. 1 1947	Sept. 1 1947	Oct. 1 1946	Oct. 1 1947	Sept. 1 1947	Oct. 1 1946

Winnipeg.....	41.2	41.7	41.6	80.4	79.6	72.4
Vancouver.....	38.6	38.2	39.3	99.5	96.8	87.4

the hours worked, so that the average hours per man, at 44.9 were higher in the week of October 1 than in the week of September 1, when the mean was 44.2 hours. The average hourly earnings at the latest date stood at 103.3 cents, as compared with 102.6 cents at September 1. At October 1 in 1946, the indicated rate was 89.2 cents, and that in 1945, 86.1 cents.

In the miscellaneous *non-metallic mineral mining group*, the co-operating operators reported a decrease in the number of hourly-rated wage-earners, but the hours and the earnings were higher, in the aggregate and on the average. The latest hourly rate was 80.9 cents, the highest in the record. The September 1 mean was 80.2, while at October 1 in 1946 and 1945, the figures were 70.5 cents and 65.6 cents, respectively.

In the *local transportation group*, the number of hourly-rated wage-earners reported in the local transportation group (consisting mainly of street and electric railway employees), was rather smaller than at September 1, although the aggregate and average working hours were higher, as was the average hourly rate; this stood at 85.4 cents, as compared with 84.8 cents at September 1, 76.8 cents at October 1, 1946, and 70.5 cents at the beginning of October in 1945.

Statistics were received from 1,064 of the larger *building contractors*, whose hourly-rated wage-earners number 85,362 at the date under review, when the working hours of these persons were reported at 3,445,549, and their weekly wages, at \$3,267,718. In comparison with their figures at September 1 there was an increase of 1.4 per cent in the wage-earners, of 2.4 per cent in the indicated hours, and of 3.1 per cent in the weekly wages. The average hours rose from 40 in the week of September 1, to 40.4 in that of October 1, when the

average hourly rate was 94.8 cents, as compared with 92.9 cents a month earlier. At October 1 in 1946 and 1945, the averages were 85.3 cents and 81.4 cents, respectively. In regard to the rates in the building industry, it will be recalled that large numbers of unskilled and casual workers are employed therein, as well as many skilled tradesmen at high rates of pay.

In the *highway construction and maintenance group*, the reported number of wage-earners showed a decrease. The aggregate and average hours were also lower, as was the reported total of weekly wages; on the other hand, the average hourly rate advanced from 71.5 cents in the week of September 1, to 72.6 cents in that of October 1, 1947; the average was then higher than that of 65.8 cents at October 1, 1946, also exceeding the October 1, 1945, mean of 63.1 cents.

Seasonal curtailment in operations was indicated by the 307 co-operating *hotels and restaurants*, in which the hourly-rated employees declined from 23,624 at September 1 to 22,712 at October 1, when the average working time was unchanged, at 43.3 hours. The average hourly rate, however, was slightly higher, rising from 52.2 cents at the week of September 1, to 53.4 cents at that of October 1. The latter figure also exceeded the October 1, 1946, mean of 47.5 cents, and that of 41.8 cents at October 1, 1945.

In the *laundries and dry-cleaning division*, the reporting firms employed a rather larger number of wage-earners, whose hours of work averaged 40.8 in the week of October 1, as compared with 40.6 in the week of September 1. The average hourly earnings also increased, from 56.2 cents at that date, to 57.7 cents at October 1, as compared with 49.8 cents in the week of October 1, 1946; at October 1 in 1945, the average was 48.3 cents.

Wage Rates, Hours and Working Conditions in the Meat Products and the Edible Plant Products Industries, 1946¹

THE information in this article on the Meat Products Industry and on the Edible Plant Products Industries was prepared from data on wage rates, hours and working conditions obtained in the general annual survey made by the Department of Labour in 1946. The Edible Plant Products group includes four manufacturing subdivisions, namely, Flour Milling, Bread and Cake Baking, Biscuits, and Confectionery.

In the 1946 survey, employers were asked to report their straight-time wage or salary rates or the average straight-time earnings for workers on piecework during the last pay period prior to October 1, 1946. They also reported on certain other conditions of work,² such as hours, overtime, vacations with pay, sick leave, Sunday work, and the number of workers under collective agreement in each establishment. The total number of workers in each establishment, including both plant and office staffs, was also obtained.

Since the annual report containing the results of this survey, entitled *Wage Rates and Hours of Labour in Canada, 1946*, is being published at approximately the same time as this issue of the *LABOUR GAZETTE*, the present article does not include the detailed data on wages which appears in the report, but deals mainly with working conditions.

¹ Comparable information on the Electrical Products Industry was published in the November issue of the *LABOUR GAZETTE* (p. 1722); on the Automobile Parts and Accessories and Agricultural Implements Industries in the October issue (p. 1532); on the Lumber and Lumber Products Industries in the September issue (p. 1374); on the Rubber Products Industry and the Motor Vehicles Industry in the August issue (p. 1164); on the Pulp and Paper Products Industry and the Brewery Products Industry in the July issue (p. 988); and on the Construction and Steam Railways Industries in the June issue (p. 890).

² Information on provincial legislation pertaining to annual vacations with pay, maximum hours of work and minimum wages is contained in an annual publication, "Provincial Labour Standards Concerning Child Labour, Annual Holidays, Hours of Work, Minimum Wages, and Workmen's Compensation", by the Legislation Branch of the Department of Labour.

Meat Products Industry

Average wage rates in this industry in 1946 were 65.4 per cent higher than comparable rates in the base year, 1939, and about 18 per cent higher than in 1945. The increase in 1946 following the relaxing of controls was greater than in any of the war years and followed a period of relative stability resulting from the establishment of wage and price ceilings toward the end of 1943. The index for this industry in 1943 had advanced nearly 14 per cent from the level in 1942.

The movement of the index calculated on the base of rates in 1939 as 100 is as follows:—

Year	Index
1939.....	100.0
1940.....	103.2
1941.....	112.7
1942.....	119.0
1943.....	135.1
1944.....	137.3
1945.....	141.0
1946.....	165.4

Table I shows the distribution of plants and employees, male and female, by province or region for the pay period covered in 1946.

TABLE I.—DISTRIBUTION OF ESTABLISHMENTS AND EMPLOYEES IN THE MEAT PRODUCTS INDUSTRY, 1946

	Canada	Maritime Provinces	Quebec	Ontario	Mani- toba	Saskat- chewan	Alberta	British Columbia
Total Establishments.....	81	4	15	26	9	7	9	11
Employees:								
Male.....	18,107	346	2,720	5,032	4,674	1,521	2,693	1,121
Female.....	4,513	82	532	1,169	1,216	354	836	324
Total.....	22,620	428	3,252	6,201	5,890	1,875	3,529	1,445

Returns from 81 establishments were used in compiling the statistics in this survey. These employed a total of approximately 22,500 workers of whom about one-fifth were female. One-half of the plants were located in Ontario and Quebec. More than 80 per cent of the plants reported fewer than 400 workers each and accounted for only 31 per cent of the total in all the plants. Six large establishments, of more than 1,000 workers each, employed 44 per cent of the total.

Collective Agreements.—Fifty-eight per cent of the 81 plants reported collective agreements with their employees or with organizations representing them.

More than one-half of the plants in each area other than the Maritimes and Ontario reported having collective agreements. Eleven of the 26 Ontario plants and one of the four in the Maritimes stated that they had agreements.

The number of workers covered in each area varied from 52 per cent in the Maritimes to 84 per cent in Alberta and the Canada figure represented 74 per cent of the total employment.

Standard Hours of Work, Table II.—Daily hours were not worked according to the usual pattern in industry and have not been shown in the tabulation. A number of plants reported working only one-half day on Wednesday rather than on Saturday and others normally worked on Sunday instead of Saturday.

Weekly hours varied between 44 and 55. More than ninety per cent of the workers were employed in plants which reported a standard week of either 45 or 48 hours.

The five-day week was reported by only 17 plants. The 64 plants on a six-day week

employed 76 per cent of the workers. The majority of the establishments worked on the basis of a week of 5½ days, only six stating definitely that their employees worked eight hours, six days per week.

Overtime Rates of Pay, Table III.—About sixty per cent of the plants reported a rate of time and one-half for overtime work after daily hours. These employed 92 per cent of the workers in the plants covered in the survey. About 13 per cent of the plants reported straight-time rates for overtime work after daily hours. Of the plants reporting rates for overtime work on Sundays and holidays, approximately two-thirds reported double, about one-quarter reported time and one-half and a few reported straight-time rates.

Vacations with Pay, Table IV.—Reports from all of the plants with one exception showed a vacation of one week, usually after a service of one year, and in a few cases after six months. In 15 plants the length of service was not specified and in 24 the vacation did not exceed one week. In 28 others the maximum vacation was two weeks after a service ranging from six months in one plant to 10 and 13 years in two others; in 10 cases the service requirement was one year and in nine others five years. Twenty-eight of the plants reported three weeks paid vacation after a service requirement ranging from 10 to 25 years.

Sick Leave with Pay.—Fifty-three establishments reported some provision for sick leave with pay. In most instances the provision was at the discretion of the management. Sixteen reported some provision for salaried

TABLE II.—STANDARD OR NORMAL WEEKLY HOURS FOR MALE PLANT EMPLOYEES IN THE MEAT PRODUCTS INDUSTRY, BY ESTABLISHMENTS, 1946

Standard Hours	Canada	Maritime Provinces	Quebec	Ontario	Mani- toba	Saskat- chewan	Alberta	British Columbia

55.....	1			1				
Total.....	64	4	14	19	6	5	7	9

or office workers only; eight stated it was according to length of service and three reported group insurance benefits.

Shift Work.—There is not much shift work in this industry other than necessary engineer, power and maintenance crews which usually work on rotating shifts.

Ten plants reported a total of 460 men and 70 women on the second shift of two-shift operations connected with actual production. They all reported a wage differential of five cents per hour, six establishments indicating that the differential was applicable only between the hours of 6 p.m. and 6 a.m. Another two plants did not report the number

of employees on shift work but stated that hours were variable dependent on the work to be done; one plant reported a night bonus of 50 cents and the other a premium of five cents per hour between 6 p.m. and 6 a.m.

Five establishments had three-shift operations in some production departments. Eighty men and 70 women were reported on second shift and 120 men and 60 women were on third. The wage differential was five cents per hour in four cases, three of which stated the applicable period was after 6 p.m. The fifth establishment worked ten-hour shifts, gave a night bonus of 55 cents and paid time and one-half after nine hours.

TABLE III.—OVERTIME RATES OF PAY FOR PLANT EMPLOYEES IN THE MEAT PRODUCTS INDUSTRY, BY ESTABLISHMENTS, 1946

		80		

(1) Fourteen reported two weeks after no specified time, six months or, in 12 cases, one year.

(2) Two weeks after five years.

(3) All but one plant gave intermediate vacations of two weeks; after two years in four cases and after five years in seventeen.

(4) Includes one plant reporting length of service at 25 years.

Edible Plant Products

The 1946 wage rate index for the Edible Plant Products group, based on average rates in 1939 as 100, was 153.0 which approximates

the general average index of 155.2 for Canada. Annual indices for each industry and for the group as a whole are as follows:

Year	Edible Plants Products	Flour	Bread and Cake	Biscuits	Confectionery
1939.....	100.0	100.0	100.0	100.0	100.0
1940.....	102.9	103.1	102.9	103.5	101.9
1941.....	115.0	113.9	115.5	114.4	114.5
1942.....	122.5	121.5	123.9	121.8	118.2
1943.....	130.0	133.3	128.9	131.9	130.0
1944.....	134.2	135.0	134.3	135.8	131.8
1945.....	139.4	139.2	139.0	142.0	139.0
1946.....	153.0	153.1	152.6	159.2	148.7

The upward trend of wage rates in these four industries was a reflection of the general movement since the outbreak of war. As shown in the table, the index for the Biscuit Manufacturing Industry in 1946 recorded the greatest advance both as compared with the previous year and with 1939 while the index for the Confectionery Manufacturing Industry showed the smallest advance over both years. The former was 12.1 per cent higher in 1946 than in 1945 and the latter 6.8 per cent.

The Flour Milling Industry

This study was made from returns from 37 mills employing more than 4,500 workers in 1946. Sixteen of these mills were in Western Canada, 17 in Ontario and four in Quebec. As shown in Table I, about 45 per cent of the workers were employed in Western mills, 39 per cent in Ontario and 16 per cent in Quebec.

Twenty of the 37 mills employed less than 100 workers each and averaged slightly more than 42 workers per mill. Six mills, employing between 230 and 600 workers each accounted for 46 per cent of the total workers covered in the survey.

Collective Agreements.—Sixteen mills reported 2,700 employees under some form of collective agreement. Twelve of the 16 were in Western Canada and reported 1,500 workers under agreements with national or international labour organizations. Employees of one mill in Ontario and of one in Quebec were covered by agreements with international organizations. In the remaining two, one in Quebec had an agreement with a national union and the other in Ontario an agreement with an employees' association.

Standard Hours of Work, Table II.—Standard weekly hours ranged from 44 to 55

and only in three mills did the weekly hours exceed 48; in two other mills they were 44. Thirty-two mills, working a 48-hour week and employing 87 per cent of the workers, were covered in the survey.

All of the mills whose returns were studied in this analysis reported a six-day week, 30 of them reporting a full eight-hour day on Saturday. In two mills, the employees regularly worked five and six extra hours respectively on Saturday for which they received overtime pay.

Overtime Rates, Table III.—All but eight of the plants reported paying time and one-half after either daily or weekly hours. These eight either reported straight-time rates or, in one case, gave no overtime information.

With reference to Sunday overtime, 21 plants reported a rate of time and one-half, three reported double time and 13 gave no information. On holiday overtime, eight reported double time, 17 gave time and one-half and 12 reported either straight time or gave no information.

Vacations with Pay, Table IV.—The majority of the plants reported a paid vacation of one week after one year of service. Eleven exceeded this provision either by giving one week after six months in two cases, or by providing ten days to two weeks after a year of service in nine other instances.

In 13 of the 37 plants, one week was the maximum vacation reported while the remaining plants gave two weeks after from one to ten years of service and three of these also reported giving three weeks after 25 years.

Sick Leave with Pay.—Some provision for sick leave with pay was reported by 22 plants. Five had group insurance schemes for their hourly-paid workers, to which both the company and the employees contributed. This

provided payment of \$6 per week in one mill, partial payment of wages in another and in two others, two-thirds of their regular pay plus partial payment of hospital and doctor bills. Three plants stated there were no deductions for ordinary sick leave and several others reported sick leave with pay in the case of salaried or office workers. Time allowed was from three days in one case up to one month for regular employees in another. Two reported half time for permanent employees.

Shift Work.—Five mills reported a total of 60 men and 30 women on the second shift of a two-shift operation. One of the plants reported paying a wage differential of two cents per hour.

Thirty plants reported some three-shift operations with a total of 450 men and 15 women on the second shift and 420 men on the third. No differential was reported for the great majority of these but a few on the second shift were paid an extra three cents per hour and on the third, five cents.

The Bread and Cake Baking Industry

Returns from 179 establishments across Canada, employing about 13,600 workers during the survey period in 1946, were used in compiling data on this industry. Employment was less than 200 in 163 of the establishments, and these included 60 per cent of the total employment in the industry. The distribution of plants and workers is shown in Table I.

Collective Agreements.—Sixty-three plants reported 5,400 employees under collective agreements. Of these, 220 workers in three of the plants were covered by agreements with local employees' associations only. Twenty-one of the 60 plants with union affiliations were located in the Prairie Provinces, sixteen were in Quebec, eleven in Ontario and twelve in British Columbia.

Standard Hours of Work, Table II.—In this industry, daily working hours are generally irregular. Wage rates are reported on a weekly basis and employees go off duty when their

⁽¹⁾ One plant reported 10 days' vacation with pay and the remainder gave two weeks after one year of service.

⁽²⁾ One plant reported three weeks' vacation with pay after 25 years.

⁽³⁾ These plants reported three weeks' vacation with pay after 25 years.

allotted daily work is completed. The table, therefore, gives weekly hours only.

The majority of establishments reported operations on the basis of a six-day week from Sunday to Friday inclusive. Standard weekly hours ranged from 40 to 60 with the great majority of plants stating their normal week was 48 hours. Approximately 9,000 of the workers were employed in the plants reporting a 48-hour week.

Overtime Rates, Table III.—Time and one-half was the most common rate reported in this industry for overtime after daily or weekly hours, with the majority of plants reporting this rate only after normal weekly hours had been worked. Reports from about one-quarter of the plants showed straight-time rates for overtime work while many others did not give information for such work. A double-time rate for overtime work was not common in this industry in 1946.

Vacations with Pay, Table IV.—Vacations with pay of at least one week were provided in practically all cases after one year or less of service. In a few instances, paid vacation of less than one week was reported for service of less than one year.

Slightly more than half the establishments provided for two weeks of vacation, usually after one year of service. Eighteen plants provided two weeks after two years' service and eighteen others after five years. Eight Ontario establishments had a ten-year service requirement for the same vacation period.

Sick Leave with Pay.—Seventy-nine establishments reported various types of sick payment benefits. Quite a few plants had Group Insurance schemes to which both employer and worker usually contributed, and participation was at the employee's option. One plant reported that pay was not stopped when employees were sick while others paid for sick leave of from four days to one week per year. Service required for payment varied in some instances from three months to one year; one plant gave one week with full pay and two weeks at half pay after one year of service with privileges extended to four weeks with full pay and eight weeks at half pay after five years.

Payment was confined in several cases to salaried employees only, while another stated salesmen were allowed seven days per year. Three plants reported sick benefits under an employees' social club.

Shift Work.—Seventy plants reported a certain amount of shift work during the survey period in this industry. Of these, five gave no definite information on the number of workers involved, either stating they worked staggered shifts or as in one case that they worked in groups for eight hours at a time, all work ending at midnight.

A total of approximately 440 males and 90 females were reported by 51 plants on the second shift of their two-shift operations. Twenty-five plants had three-shift work in some of their departments and included a total of 320 men and 40 women on the second

shift and 250 men and 20 women on the third shift.

Only one establishment reported paying a wage differential of five cents per hour to eight men on the third shift, while six other plants paid the same differential to a total of 25 men and 25 women on the second shift.

The Biscuit Manufacturing Industry

Returns from 31 establishments in 1946 were analysed in this industry. Table I gives the regional distribution of establishments as well as employees, of whom more than half were women. Most of the plants are in Ontario and Quebec and these employed 77 per cent of the total workers.

Eighteen plants, employing 44 per cent of the total number of workers, reported fewer than 100 workers each. The largest plant from which a return was received employed slightly more than 500 workers in the survey period.

Collective Agreements.—Ten plants, six of which were in Ontario and Quebec, reported a total of 1,900 employees, or about 50 per cent of the total number covered, under collective agreement. More than half of these employees were in three plants which reported agreements with employees' associations.

Hours of Work, Table II.—This table shows that standard hours ranged from 43½ per week to 55 hours. The majority of plants reported

TABLE III—OVERTIME RATES FOR PLANT EMPLOYEES IN THE BREAD AND CAKE BAKING INDUSTRY, BY ESTABLISHMENT, 1946

NOTE—Since many plants in this industry work on Sunday instead of Saturday, the rates given for both Saturday and Sunday overtime may refer either to overtime worked after daily hours on a regular work day, or overtime required on their off-day.

^[1] Includes six plants paying a straight hourly rate of from 60 to 75 cents, one of these giving it to night shift only.

^[2] Includes two plants paying double time and one-half.

^[3] One plant based their overtime on a two-week period of 96 hours.

^[4] Three plants, two of which were on a 40-hour week, paid double time after 44 hours per week.

a normal week of 54 hours but there were more workers in the five plants which reported the 47½ to 48-hour week.

Nine plants, of which six were in Ontario, reported 1,600 employees working five days per week. This was more than one-third of all

the workers covered. The six-day week was common, with some 2,400 workers in 22 plants reported to be working on this basis in 1946. Hours varied from 44 to 55 with only two plants reporting a full working day on Saturday of eight and nine hours respectively.

TABLE IV.—VACATIONS WITH PAY FOR PLANT EMPLOYEES IN THE BREAD AND CAKE BAKING INDUSTRY, BY ESTABLISHMENTS, 1946

[1] In 32 plants two weeks' vacation with pay was given after one year of service and another reported this same vacation after six months.

[2] One plant gave two weeks' pay to employees on a one-week vacation.

[3] One plant reported three weeks' vacation with pay after 30 years and four weeks after 40 years.

Overtime Rates, Table III.—Of the plants giving information on overtime, all but two reported a rate of time and one-half. The majority of plants reported paying this rate only after weekly hours had been worked.

About two-thirds of the establishments gave no information on Sunday and holiday rates, possibly because they did not have overtime work on those days. Seven plants reported time and one-half for Sunday and holiday overtime, two double time on Sunday and four reported this rate for holiday work.

Vacations with Pay, Table IV.—A paid vacation of one week was provided in most cases after one year of service which was in line with the legislation in most of the provinces. A number of plants reported this vacation period after less than one year of service. The vacation did not exceed one

week in about two-thirds of the plants but eleven reported that two weeks were provided after a service of from six months to ten years.

Sick Leave with Pay.—Thirteen plants reported plans in effect to cover payment for absence through illness. Five reported group insurance benefits, one of these stating the plan covered up to 90 days and another reported that it assured two-thirds pay after two days' absence. Other plants restricted sick leave benefits to weekly paid employees, to office workers, salesmen and foremen, or to key men. In some cases payment was according to length of service.

Shift Work.—Very little shift work was reported in this industry other than rotating shifts reported by a few plants to cover work done by the engineering department and

maintenance men. One plant reported four men in one production department on both a second and third shift, the workers on the third shift receiving a three-cent wage differential. Two other plants reported second-shift work, one employing 20 men and the other 12 men and 38 women.

The Confectionery Manufacturing Industry

Returns from 49 establishments in this industry in 1946 were used in compiling the statistics shown in the accompanying tables. Nearly one-half of these plants were situated in Ontario and employed 61 per cent of the total number of workers. Certain occupations in this industry are adapted to the employment of women who comprise 60 per cent of the workers, as indicated in Table I.

Thirty of the 49 establishments employed less than 100 workers each in the pay period covered by the survey, accounting for only 16 per cent of the total workers. Except one large plant with 1,100 workers, the remaining establishments employed between 100 and 600 workers each.

Collective Agreements.—Five establishments reported a total of some 1,200 men covered by collective agreement. Two of these plants had agreements with the Bakery and Confectionery Workers International Union of America, and three reported either employees' associations or plant committees.

Standard Hours of Work, Table II.—Eighty-six per cent of the employees covered in this analysis worked a normal week of between 44 and 48 hours.

The six-day week was predominant in the industry with 70 per cent of the workers on this basis. Saturday hours ranged between three and 5½ in all plants but two, which reported a full eight-hour day on Saturday. Nine plants, working 8½ hours per day with four to 5½ hours on Saturday, employed 43 per cent of the workers on the six-day week.

The sixteen establishments on a five-day week employed only 1,800 workers or 27 per cent of the total covered in the survey. Of the 1,800 workers, 44 per cent usually worked nine hours per day.

^[1] One establishment also reported double time paid in certain instances.

^[2] This rate paid only after eight hours in a normal four-hour Saturday.

In 13 establishments women worked from $1\frac{1}{2}$ to 11 hours less per week than the men. In five cases, the difference was $2\frac{1}{2}$ hours and in another four it was five hours.

There was no production work reported on Sunday. Ten plants reported a total of approximately 40 maintenance men on Sunday work.

Overtime Rates of Pay, Table III.—Nearly half the establishments reported paying time and one-half for overtime after standard daily or weekly hours had been worked; the more common practice was to pay this rate only after weekly hours. Very little information was given on overtime rates for Sunday and holiday work, 40 of the 49 reporting either regular pay or giving no information.

Vacations with Pay, Table IV.—Twenty-nine of the 49 plants reported a vacation of one week after one year of service and twelve additional plants reported a provision of one week after less than one year of service. One Ontario plant also reported three days after six months of service.

In about two-thirds of the plants the vacation did not exceed one week. In 13 instances, however, a maximum vacation of two weeks was provided after service of from one month to ten years.

Sick Leave with Pay.—Twenty-five plants reported some provision for sick leave with pay. Eleven provided it to salaried or office staff only, one reporting that two weeks per year were granted to salaried workers while

TABLE IV.—VACATIONS WITH PAY FOR PLANT EMPLOYEES IN THE BISCUIT MANUFACTURING INDUSTRY, BY ESTABLISHMENTS, 1946

NOTE.—Of the 31 establishments, one reported closing for one week during the summer and another granted one week in the summer and one week in the winter to those who were in the company's employ one month before the holiday period.

the remainder of the workers were allowed two weeks at half pay; another reported that factory workers were also paid in exceptional cases. One plant stated that although it had no definite plan, reasonable sick leave was given with pay. Another stated key men only were eligible for sick leave with pay while length of service determined payment in another instance.

Shift Work.—There is very little shift work on production in this industry. Four plants reported a total of 80 men and 40 women on the second shift of their two-shift operations, three paying wage differentials of four, five and ten cents per hour, respectively. Two plants, employing only 14 men on each shift of a three-shift operation, did not report a wage differential.

^[1] Four of these plants reported two weeks' vacation after one month, six months, or one year.

^[2] Two establishments on a six-day week gave eight and ten days' vacation, respectively.

^[3] Includes two establishments giving two weeks after five and ten years, respectively.

National Income and Expenditure in Canada

A REPORT on national income and expenditure in Canada has been issued by the Dominion Bureau of Statistics, entitled *National Accounts Income and Expenditure, 1938-1946*. The report is a revision of one issued earlier in 1947 and summarized in the March issue of the *LABOUR GAZETTE* (p. 311). It also contains considerable additional information.

The *LABOUR GAZETTE* prints herewith several of the tables from the report, together with an analysis of its findings, and definitions of the terms employed. The report itself may be obtained from the Bureau at a price of 50 cents.

Findings of Report

Gross national product (the value of all goods and services produced by the labour, capital and enterprise of Canadian residents) increased from \$5,141,000,000 in 1938 to \$11,417,000,000 in 1946, according to the revised estimates contained in the report. It is pointed out that changes from one year to another reflect changes in prices as well as in the physical volume of production of goods and services.

National income (see definition below) is now estimated at \$9,464 million in 1946 and \$3,972 million in 1938. Salaries, wages and supplementary labour income were \$5,113 million, or 54 per cent of total national income in 1946. In 1938 the figure was \$2,476

million, or 62 per cent of the total. The industrial distribution of salaries and wages indicates that the percentage of total labour income originating in manufacturing increased from 29 per cent in 1938 to 34 per cent in 1946. Military pay and allowances declined from \$1,132 million in 1945 to \$315 million in 1946. In 1938 the figure was \$9 million.

Investment income rose from \$687 million or 17 per cent of total national income in 1938 to \$1,885 million or 20 per cent of the total in 1946. Corporate profits before tax and before deduction of dividends to non-residents increased from \$467 million in 1938 to \$1,379 million in 1946, while corporate profits before tax but after deduction of dividends to non-residents advanced from \$292 million in 1938 to \$1,174 million in 1946. Other private investment income increased from \$448 million in 1938 to \$751 million in 1946.

Net income of agriculture and other unincorporated business was \$800 million in 1938 and \$2,151 million in 1946. The industrial distribution shows that the percentage of this total originating in agriculture increased from 46 per cent in 1938 to 58 per cent in 1946.

Turning to the components of gross national expenditure, in 1938 personal expenditure on consumer goods and services was \$3,714 million or 72 per cent of gross national expenditure. In 1946 the figure was \$7,495 million or 66

Item 1.—The tax figures are actual collections in the current year reduced in the case of income taxes by the estimated refundable portion which has been treated as savings. Miscellaneous direct taxes include the personal share of motor vehicle and other licences, permits, and fees.

per cent of gross national expenditure. Expenditure on food increased from \$917 million in 1938 to \$1,948 million in 1946, on clothing from \$419 million in 1938 to \$1,032 million in 1946, and on tobacco and alcoholic beverages from \$264 million in 1938 to \$803 million in 1946. Expenditure on household operation and utilities increased from \$717 million in 1938 to \$903 million in 1946.

Government expenditure was \$721 million in 1938 or 14 per cent of the gross national

expenditure; in 1946 the figure was \$1,833 million or 16 per cent of gross national expenditure. The 1946 figures reflect a substantial decline from 1944 when government expenditure was \$5,105 million or 43 per cent of gross national expenditure.

Exports of goods and services were maintained in 1946 at the high level of \$3,170 million, while imports of goods and services were \$2,850 million. In 1938 the figures were \$1,359 million and \$1,257 million, respectively.

Grand total.....	3,714	3,817	4,979	6,235	6,782	7,495

GENERAL NOTE.—It should be noted that the figures apply only to expenditures of persons (including private non-commercial institutions). Expenditures on consumer goods and services made by business in the course of production are excluded as are expenditures of governments on behalf of the community, such as, public education and health services. In addition to cash expenditures a valuation of income in kind has been included under the respective headings.

Item I. 1 (a) Includes meals purchased in restaurants.

Item II. 1. The main components of this item are paid rents and imputed rents of owner-occupied houses, electricity, gas, domestic service.

8. The main services included here are personal insurance, financial and legal services, hotel rooms, board and lodging, and services of charitable and religious institutions.

Item III. Includes the expenditures of Canadian tourists and servicemen abroad, gifts in kind abroad and personal remittances abroad less expenditures in Canada of tourists and foreign servicemen, and personal remittances to Canada. This adjustment is necessary in order to relate the expenditure figures to Canadian personal income.

Personal income increased from \$4,031 million in 1938 to \$9,383 million in 1946. A substantial rise occurred in government transfer payments to persons from \$263 million in 1938 to \$1,103 million in 1946. War service gratuities, re-establishment credits and rehabilitation benefits together accounted for 45 per cent of total government transfer payments in 1946, while family allowances accounted for 22 per cent.

In 1938, \$125 million of personal income or three per cent was paid in direct taxes, \$3,714 million or 92 per cent on consumer goods and services and \$192 million or five per cent was saved (including net changes in farm inventories). In 1946, \$781 million or eight per

cent was paid in direct taxes, \$7,495 million or 80 per cent was spent on consumer goods and services and \$1,107 million or 12 per cent was saved. The percentage of personal income saved in 1946 marks a decline from 19 per cent saved in the war years 1943 and 1944.

Definitions

Net National Income at Factor Cost—Table 1

Net national income at factor cost or, more briefly, national income, measures the aggregate earnings of Canadian residents from current production of goods and services. It is the sum of labour income, investment income including corporation profits, and net income of unincorporated business.

TABLE 6.—GOVERNMENT TRANSFERS TO PERSONS, 1938-1946

(Millions of Dollars)

TABLE 7.—ANALYSIS OF CORPORATION PROFITS

(Millions of Dollars)

Item No.		1938	1939	1941	1944	1945	Prelim. 1946
1	Corporate profits before tax.....	467	598	1,103	1,221	1,240	1,379
2	Deduct tax liabilities (excluding refundable E.P.T.).....	-92	-112	-515	-603	-603	-640
3	Corporate profits after tax.....	375	486	588	618	637	739
4	Deduct dividends paid to non-residents.....	-175	-177	-168	-153	-138	-205
5	Corporate profits retained in Canada after tax.....	200	309	420	465	499	534

Item 1—Includes corporate taxable income, depletion charges and charitable donations and is adjusted for corporate losses, renegotiation of war contracts and conversion to a calendar year basis.

2—The refundable portion of the excess profit tax is regarded as corporate saving in the year in which the liability is incurred rather than as a tax. For the years 1944 and 1945 the refundable E.P.T. averages about \$70 million. Adjustments have been made for renegotiation of war contracts and conversion to a calendar year basis.

4—Estimated before deduction of withholding taxes.

5—To arrive at undistributed profits from this item it is necessary to deduct charitable donations and dividends paid to resident persons. For 1944 and 1945 dividends paid to resident persons were \$120 million and \$100 million respectively but satisfactory data are not yet available for years prior to 1944.

Gross National Product at Market Prices—Table 1

Gross national product at market prices is defined as the value of all goods and services produced by the labour, capital, and enterprise of Canadian residents in a year, measured through a consolidated national accounting of all costs involved in their production. These costs include factor costs, that is, the aggregate of national income, as previously defined, and in addition, indirect taxes less subsidies and depreciation and similar business charges.

Gross National Expenditure at Market Prices—Table 2

Gross national expenditure is defined as the market value of all goods and services produced by the labour, capital, and enterprise of Canadian residents in a year, measured through a consolidated national accounting of the sales of these goods and services, including changes in inventories. Thus it measures the same total as gross national product but in a different way.

Residual Error of Estimate

Gross national product and gross national expenditure measure the same total independently. Incompleteness or inconsistency of available statistical sources is necessarily reflected in a difference between these aggregates. The difference between the totals obtained by measurement of gross national product and gross national expenditure is divided equally under the heading of "Residual error of estimate" in Tables 1 and 2.

Personal Income—Table 3

Personal income is defined as the sum of current receipts of income of persons, whether in cash or in kind. The term person includes individuals, private non-commercial institutions (charities, hospitals, etc), and private pension funds. Personal income differs from national income in that it excludes all current earnings not paid out to persons, such as, undistributed profits and government trading profits, and includes receipts which have not been earned in the course of current production, that is, transfer payments.

Disposable Income

Personal income less direct taxes is called disposable income.

Personal Saving

Personal saving is defined as the excess of disposable income over personal expenditure on consumer goods and services. If data were available, personal saving could be calculated directly by estimating changes in the various assets and liabilities of persons, taking care to exclude changes due to capital gains or losses. In Table 4, it has been necessary to obtain personal saving residually by subtracting direct taxes and personal expenditure on consumer goods and services from the total of personal income. Although the series of personal saving thus obtained appears reasonable, it should be accepted with considerable reservations pending the development of additional data to corroborate it. The savings figure in Table 4 includes the net change in farm inventories as well as the estimated refundable portion of income and personal excess profits taxes.

Item 16: Includes board and living allowances, employers' contributions to unemployment insurance and workmen's compensation, pensions and pension funds, and welfare expenditures in all industries.

Strikes and Lockouts in Canada During November, 1947

DURING November, 1947, the time loss due to strike activity in Canada was substantially below that recorded for the previous month but was much higher than in November, 1946. Preliminary figures for November, 1947, show 28 strikes and lockouts, involving 14,735 workers, with a time loss of 119,602 man-working days, as compared with 46 strikes in October, 1947, involving 27,560 workers and a time loss of 428,170 days. In November, 1946, there were 20 strikes, involving 7,915 workers, with a time loss of 33,278 days.

For the first eleven months of 1947 preliminary figures show 211 strikes and lockouts, involving 76,755 workers, with a time loss of 2,403,235 man-working days. For the same period last year there were 223 strikes, with 138,635 workers involved and a time loss of 4,492,589 days.

During the month under review the time loss per 1,000 available work days was 1.60 as compared with 5.74 in October, 1947, and 0.44 in November, 1946. For the first eleven

months of this year it was 2.92 as compared with 5.46 for the same period last year.

Of the 28 strikes recorded for November, five were settled in favour of the workers, six in favour of the employers, nine were compromise settlements and one was indefinite in result, work being resumed pending final settlement. At the end of the month seven strikes were recorded as unterminated.

The record does not include minor strikes such as are defined in another paragraph nor does it include strikes about which information has been received indicating that employment conditions are no longer affected but which the unions concerned have not declared terminated. Strikes of compositors, etc., at Winnipeg, Man., which began on November 8, 1945, and at Ottawa and Hamilton, Ont., Edmonton, Alta., and Vancouver, B.C., which commenced on May 30, 1946, are still continuing. A strike of metal factory workers at Ottawa, Ont., which commenced on February 24, 1947, has not been terminated.

Strikes and Lockouts in Great Britain and Other Countries

THE latest available information as to strikes and lockouts in various countries is given in the *LABOUR GAZETTE* from month to month, bringing up to date that given in the March, 1947, issue in the review "Strikes and Lockouts in Canada and Other Countries". The latter includes a table summarizing the principal statistics as to strikes and lockouts since 1919 in the countries for which such figures are available. Statistics given in the annual review and in this article are taken from the government publications of the countries concerned.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette* publishes statistics dealing with disputes involving stoppages of work and gives some details of the more important ones.

The number of work stoppages beginning in September, 1947, was 104 and 10 were still in progress from the previous month, making a total of 114 during the month. In

all stoppages of work in progress in the period there were 85,100 workers involved and a time loss of 354,000 working days was caused.

Of the 104 stoppages which began during September, 13 arose out of demands for advances in wages; 38 over other wage questions; three on questions as to working hours; 16 on questions respecting the employment of particular classes or persons; 31 on other questions respecting working arrangements; and three were on questions of trade union principle.

United States

Preliminary figures for October, 1947, show 175 strikes and lockouts beginning in the month, in which 60,000 workers were involved. The time loss for all strikes and lockouts in progress during the month was 1,850,000 man days. Corresponding figures for September, 1947, are 200 strikes and lockouts involving 75,000 workers with a time loss of 2,000,000 days.

*Preliminary figures.

‡ Strikes un-terminated at the end of the previous year are included in these totals.

† The record of the Department includes lockouts as well as strikes but a lockout, or an industrial condition which is undoubtedly a lockout, is not often encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout included as such in the records of the Department is a cessation of work involving six or more employees and lasting at least one working day. Strikes of less than one day's duration and strikes involving less than six employees are not included in the published record unless ten days or more time loss is caused but a separate record of such strikes is maintained in the Department and these figures are given in the annual review. The records include all strikes and lockouts which come to the knowledge of the Department and the methods taken to obtain information preclude the probability of omissions of strikes of importance. Information as to a strike involving a small number of employees or for a short period of time is frequently not received until some time after its commencement.

STRIKES AND LOCKOUTS IN CANADA DURING NOVEMBER, 1947 ⁽¹⁾

Industry, Occupation and Locality	Number	Involved	Time Loss in Man- Working Days	Particulars ⁽²⁾
	Establish- ments	Workers		
Strikes and Lockouts in Progress Prior to November, 1947				
MINING— Copper and zinc mine and mill workers, Sherridon, Man.	1	250	3,500	Commenced August 13; for a new agreement providing for increased wages and other changes, and against alleged discrimination, terminated November 18; return of workers pending certification of union as bargaining agency; indefinite.
MANUFACTURING— <i>Vegetable Products—</i> Vegetable products factory workers, Port Credit, Ont.	1	60	150	Commenced October 20; alleged discrimi- nation in dismissal of union officer; termi- nated November 4; return of workers; in favour of employer.
<i>Animal Foods—</i> Dairy and poultry plant workers, Melville, Sask.	1	25	25	Commenced July 16; for extension of existing agreement to October 30, 1947, with pro- vision for increased wages and reduced hours; terminated November 1; negoti- ations; compromise.
<i>Boots and Shoes (Leather)—</i> Shoe factory workers, Montreal, P.Q.	10	1,300	10,000	Commenced October 1; for union agreements providing for increased wages, reduced hours, union security, etc; unternminated; (partial return of workers).
<i>Pulp, Paper and Paper Products—</i> Paper products factory workers, Chambly, P.Q.	2	20	20	Commenced April 15; for implementation of award of arbitration board providing for increased wages, two weeks' vacation with pay, check-off, pay for seven statutory holidays, etc; employment conditions no longer affected by November 3; in favour of employer.
<i>Textiles, Clothing, etc.—</i> Textile factory workers, Montreal, P.Q.	1	282	3,500	Commenced October 6; inter-union dispute re bargaining agency; unternminated.
<i>Miscellaneous Wood Products—</i> Sawmill workers, Merriitt, B.C.	1	95	420	Commenced October 29; for a signed union agreement under negotiations since July 12, 1946; terminated November 6; negotiations; in favour of workers.
<i>Metal Products—</i> Structural steel factory workers, Burnaby, B.C.	2	180	2,500	Commenced August 21; for a new agreement providing for increased wages, additional union security and other changes; untermi- nated.
Metal factory workers, Sarnia, Ont.	1	327	1,600	Commenced October 3; for a new agreement providing for increased wages and payment for statutory holidays, and against time study of operations and methods; termi- nated November 7; negotiations; com- promise.
Metal factory workers, Belleville, Ont.	1	(3)221	3,000	Commenced October 6; alleged discrimi- nation in lay-off of 15 workers during transfer of machines to new building; unterminated.
Foundry workers, New Glasgow, N.S.	1	(4)73	1,100	Commenced October 8; for increased wages; terminated November 24; negotiations compromise.

Prices, Retail and Wholesale, in Canada, November, 1947

Cost of Living, Prices of Staple Articles, and Index Numbers, as Reported by the Dominion Bureau of Statistics

THE Dominion Bureau of Statistics cost-of-living index rose 1.4 points to 143.6 (1935-39=100) between October 1 and November 1, 1947. Higher food prices continued to dominate the advance. The index for the food group rose 2.3 points to 173.6, due mainly to higher prices for eggs, fluid milk, certain meats and canned vegetables. Butter, lemons and a few fresh vegetables, on the other hand, were slightly lower between October 1 and November 1. Increases which occurred later in November were, of course, not reflected in the November 1 index. The clothing group advanced 2.8 points to 157.0, with prices rising in all subsections, while home furnishings and services moved up 1.5 to 151.4 due to increases for furniture, floor coverings, furnishings, dishes and cleaning supplies. Slightly higher costs for medicinal supplies, personal care items, newspapers and gasoline were responsible for a gain of 0.6 to 118.2 in the miscellaneous items index. Fuel and lighting rose 0.7 to 122.6 due principally to higher prices for coal and coke. No change was recorded for rentals, the index remaining at 119.9.

When adjusted to the base August, 1939=100, the Dominion cost-of-living index moved up to 142.5 on November 1 from 141.1 on October 1.

Cost of Living in Eight Cities

Cost-of-living indexes for eight regional cities all registered increases between October and November. Foods continued to account for the major share of advances, but clothing, home furnishings and services also showed general increases. Fuel and lighting and miscellaneous items advanced in several cities. Increases recorded by composite cost-of-living indexes were as follows:—Vancouver 2.1 to 143.4; Saint John 1.9 to 141.4; Winnipeg 1.8 to 139.2; Halifax 1.7 to 140.6; Toronto 1.5 to 141.5; Saskatoon 1.3 to 145.3; Edmonton 1.0 to 138.7; and Montreal 0.8 to 146.3.

Retail Prices

The accompanying table on retail prices of staple foods, coal and rentals (Table IV) is prepared each month by the Dominion Bureau of Statistics. It shows the prices of these commodities in 64 cities across Canada, at the date under review.

The prices of the staple food items included in the table are all used in the calculation

of the index of the food group in the official cost-of-living index, and give a reasonably complete picture of prices throughout Canada as used in the calculation of the index of this particular group. They are the averages of prices of goods reported to the Bureau by independent stores. They do not include prices from chain stores. As the movement of chain store prices agrees closely with the movement of independent store prices it was considered that the extra work and cost involved in compiling and printing a separate table for chain store prices were not warranted, although chain store prices are used in the calculation of the index.

The coal and rental figures given are also used in the official cost-of-living index. Quotations are shown for anthracite coal in the provinces of Ontario and Quebec, and for bituminous coal in the rest of Canada, where this type of coal is more generally used.

Rental figures given in the table are typical of rents being paid by tenant households in each city. In some cities, flats and apartments are more numerous than single houses; in such cases rents for flats and apartments are shown while figures for other cities represent single-house rentals. In all cases figures represent rents being paid, not the rent asked for vacant dwellings. The basis of these figures is the record of rents for every tenth tenant-occupied dwelling collected in the 1941 census of housing. The movement of rents since that time has been determined from reports submitted by real estate agents. The 1941 census averages have been adjusted in accordance with the change indicated by these reports, and the printed figures show a \$4 spread centred around each city average.

Table III is designed to show the variation in the retail price of commodities since the beginning of the war. Taking the Dominion average retail price of each of the commodities at August, 1939, as 100, the table shows the percentage changes in prices since that date; also the actual price on the first of the current month.

The Dominion Bureau of Statistics issues an index number of retail prices of commodities included in the cost-of-living index excluding rents and services. This index is included in Table I.

(concluded on page 1886)

(a) Rent figures are obtained by multiplying increases since June, 1941 by the average rental determined by the census of that date. The increases are based upon reports from real estate agents and periodic sample surveys which are now being conducted by direct interview.

(b) Rents marked (b) are for apartments or flats. Other rent figures are for single houses. Apartment or flat rents have been shown where this type of dwelling is more common than single houses.

(c) Averages include prices for cuts with bone in.

(a) First of month. (b) Middle of month. (c) Last week of month. (d) Quarterly. (e) New wartime price series on base December 1942 = 1000 computed quarterly beginning March, 1943. (f) Yearly averages are for period from July of preceding year to June of year specified. (g) July. (h) June. (i) Revised. (j) From August, 1945. "Consumers Price Index for Moderate-Income Families in Large Cities". (k) Old series dropped, June 17, 1947 = 203; new series "Index of Retail Prices" base June 17, 1947 = 100.

Explanatory Note as to Cost-of-Living Index

The index number of the cost of living was constructed on the basis of a survey of expenditure by 1439 families of wage-earners and salaried workers with earnings between \$600 and \$2,800 in 1938. The average expenditure was \$1,413.90 divided as follows:—food (31.3 per cent), \$443; shelter (19.1 per cent), \$269.50; fuel and light (6.4 per cent), \$90.59; clothing (11.7 per cent), \$165.80; home furnishings (8.9 per cent), \$125.70; miscellaneous (22.6 per cent), \$319.40.

The last-named group includes health (4.3 per cent), \$60.80; personal care (1.7 per cent), \$23.90; transportation (5.6 per cent), \$79.30; recreation (5.8 per cent), \$82.10; life insurance (5.2 per cent), \$73.30. Other expenditure not directly represented in the index brought the total family living expenditure to \$1,453.80.

Wholesale Prices, October, 1947

There was a further sharp increase in wholesale price levels between September and October which advanced the composite index for 567 price series by 5.5 points to 139.3 (1926=100). Among group changes, iron and steel products rose 11.8 points to 148.6, reflecting substantially higher prices for pig iron, steel billets, rolling mill items, wire, car axles and iron and steel scrap. Sharp increases for pine, spruce, fir and cedar lumber

supported a gain of 9.4 points to 175.7 in the wood products group, while animal products advanced 4.8 points to 140.7 when higher prices for canned salmon, hides, leather, footwear and eggs outweighed a decline in butter and livestock. Vegetable products moved from 122.1 to 126.8 as upturns in oats, barley, bread, cocoa beans and corn overbalanced an easier price tone for potatoes, lemons and turpentine. Higher quotations for cotton underwear and woollen hosiery were responsible for an advance of 3.2 to 137.4 in the textile group, while non-metallic minerals rose 1.6 to 119.1 due to firmer prices for coke, sulphur and plaster. The non-ferrous metals group moved up 0.3 to 134.9 following an increase in silver. Chemicals and allied products recorded the only decline, dipping 0.7 to 111.9 due to weakness in quotations for tartaric acid and quinine sulphate which outweighed strength in putty, lithopone and fertilizers.

The index of Canadian farm product prices at wholesale rose 2.5 to 122.9 between September and October. Animal products advanced 3.0 points to 145.2 when higher prices for hides and skins and eggs overbalanced a decline in livestock. Substantial advances for oats and barley coupled with a small increase in hay outweighed a drop in potatoes to move the field products index up 2.1 to 109.5.

Farm Accidents in Canada and United States

AT the request of the Deputy Minister of Agriculture at Ottawa, the Sampling Unit of the Central Research and Development Division of the Dominion Bureau of Statistics conducted a sample survey, beginning in June, 1947, to determine the frequency of non-fatal accidents and fires on farms. Slightly more than 11,000, or rather less than two per cent of the farm households in Canada were included in the survey.

In order to conduct the survey as quickly and economically as possible, the Bureau carried it out in conjunction with the Seventh Labour Force Survey. The questionnaire sent out referred to all persons who either lived or worked on the sample farms between

June 1, 1946 and June 1, 1947. A "farm" according to the definition used in the Labour Force Surveys made by the Bureau must contain one or more acres and must have raised agricultural produce valued at \$50 or more in the preceding calendar year. The Bureau draws attention to the point that the estimates are subject to sampling errors and to possible errors in reporting and, consequently the figures given should be accepted with these reservations.

Not only do the greatest number of farm accidents occur in the Prairie Provinces, but the relative frequency of accidents is also greatest there. Quebec, on the other hand, is relatively the safest.

ESTIMATES OF THE REGIONAL DISTRIBUTION OF FARM ACCIDENTS IN CANADA FOR THE YEAR ENDING JUNE 1, 1947

	Number	Per cent Farm Accidents	Percentage of total Farm Population
Maritime Provinces.....	3,300	8.9	11.9
Quebec.....	3,300	8.9	28.7
Ontario.....	8,900	23.9	24.1
Prairie Provinces.....	20,800	55.9	32.9
British Columbia.....	900	2.4	2.4
Canada.....	37,200	100.0	100.0

ESTIMATES OF THE AGE DISTRIBUTION OF PERSONS INJURED IN FARM ACCIDENTS FOR THE YEAR ENDING JUNE 1, 1947

Age	Number	Percentage
Under 14 years	4,700	12.6
14-19	4,700	12.6
20-24	4,700	12.6
25-44	11,700	31.5
45-64	9,400	25.3
65 and over	2,000	5.4

From the point of view of agricultural production, the accidental injury of persons of working age is more serious than accidents which happen to either young people or old people.

In classifying the causes of farm accidents the "International List of Causes of Death" as used by the Bureau in the compilation of vital statistics, formed the base. This list, however, does not enumerate causes that frequently occur on farms. Hence the number of "other and unspecified" accidents is relatively large. The following were the causes as compiled from the sample survey for all Canada:—

Cause	Men	Women	Both
Burns.....	300	400	700
Cutting and piercing instruments.....	4,900	800	5,700
Falls.....	10,900	4,500	15,400
Crushing.....	5,000	400	5,400
Other and unspecified.....	8,900	1,100	10,000
Total.....	30,000	7,200	37,200

A more detailed analysis of the schedules showed that one of the common reasons for falls is the existence of open trap doors and inadequately protected stairways. The returns indicated too, that a great many injuries are caused by horses.

Of the total of 37,200 farm accidents reported upon, 3,900 occurred in houses; 6,300 in barns or outbuildings; 21,500 in fields, woodlots, etc.; and 5,500 off the farm. As to the nature of these injuries, 12,300 were fractures; 7,300 sprains and strains; 4,700 open wounds of upper limbs; 3,400 crushing with intact skin surface; 2,500 head injury, excluding skull fractures; 2,000 open wounds of lower limbs; 5,000 other injuries.

The category "fractures", it is explained, includes fractures of the upper and lower limbs, skull, spine and trunk. In view of the small size of a number of individual categories, they have been included in "other injuries."

It is pointed out that "the season of the year has a marked bearing on the occurrence of farm accidents". The estimated distribution of accidents covered by the sample survey by the month of occurrence follows: January, 2,000; February, 3,400; March, 3,200; April, 2,900; May, 5,100; June, 2,700; July, 3,300; August, 2,900; September, 3,200; October, 3,700; November, 2,600; December, 2,200.

One measure of the seriousness of farm accidents is the loss of time from the regular activity of the injured persons, especially heads of households. It was calculated from the returns obtained from the sample survey that about 600,000 man-days were lost by heads of households during the year ending June 1, 1947. Since other injured persons in the household are, in many cases, engaged in farm work, "it is clear," the report states, "that farm accidents caused a loss of time from productive agricultural work substantially in excess of 1,000,000 man-days."

Farm Fires in Canada

Despite the possibility of understatement in the reporting of farm fires, the report states that "the results of the survey indicate that farm fires occur with great frequency and cause enormous property damage." It was estimated on the basis of the sample survey that there were some 8,000 farm fires in Canada in the year ending June 1, 1947. These were classified by regions as follows: Maritime Provinces, 400; Quebec, 1,600; Ontario, 2,400; Prairie Provinces, 3,200; British Columbia, 400.

The estimate of farm fires by causes is included in the report as follows: defective chimneys and flues, 800; sparks on combustible roofs, 600; lightning, 700; inflammable liquids, 900; heating or cooking equipment, 1,900; electric wiring, 300; other and unknown causes, 2,800. It is noted that the causes, in many cases, indicate inadequate preventive methods and lack of carefulness. The total estimated value of property destroyed in farm fires in Canada, as stated in the report, for the period under review was \$10,254,000. The amount of loss covered by insurance is given as \$3,778,000, or 36.8 per cent.

Farm Accidents in United States

Designed to obtain a general picture of the farm accident situation in the United States, the Bureau of Agricultural Economics at Washington conducted a sample survey in January, 1947, of 15,000 farms in 814 counties. The method of selecting the farms was planned so as to obtain figures representative of the entire country. The Bureau's report states that "the figures thus obtained are the most complete yet available on farm accidents." The accidents reported upon included all injuries to persons living or working on the farms included in the survey, regardless of whether the injuries occurred on or off the farm. Moreover, the injuries reported "ranged in severity from a fatal burn to a mashed finger." (The Canadian survey covers only non-fatal farm accidents.)

It is asserted in the United States report that "if the farms included in the survey were typical of the entire country, the results would indicate that from October through December (1946) there were roughly 210,000 accidents that injured people living or working on farms; that the injuries cost a total of \$8,750,000 for medical, dental and hospital expenses; and that the time lost from usual activities totalled four and a half million days."

Grouping the accidents by regions, the report states that "the survey indicated that eight per cent of all injuries were in the Northeastern States; ten per cent in the Western States; 38 per cent in the North Central States; and nearly 44 per cent in the Southern States." Only 19 per cent of the injuries involving costs were covered by any insurance, and these were covered to an extent of only 15 per cent of the total costs to those insured.

In classifying the causes of farm accidents, the American report states that "falls injured

more farm people than any other type of accident, and falls on stairs and steps or from vehicles were the most common. Falls on ice and falls involving home furnishings also led to a number of serious injuries." It is asserted that "many of the common falls resulted from carelessness and the disorderly condition of stairways, shops, alleyways and barns. Machinery is designated as a factor in over 14 per cent of the accidents, and tractors in a third of the accidents caused by machinery. Corn pickers were the second most frequent cause of injuries by machinery. Of the other accidents caused by machinery, combines, circular saws, mowing machines, corn shellers and grain elevators were reported most frequently. "Farm animals caused 12 per cent of the accidents reported and horses and mules were responsible for 60 per cent of these."

Referring to the age groups of accident victims, the report states that "nearly 60 per cent of the people injured were adults between 25 and 64 years old." Between the ages of 14 and 64, "there were about four times as many boys and men injured as there were women and girls. Of the youngsters under 14, nearly 65 per cent were boys."

Other general classifications showed that only eight per cent occurred in connection

with housework, while about 56 per cent were suffered by people employed in farm work. Recreation and other activities accounted for the remainder. About half the accidents occurred outside the home, but on the farm. One-quarter were in the home and one-eighth were on the road or street. About 46 per cent of the accidents were met with by farm operators and in seven out of every ten accidents the operator was reported as doing farm work. In contrast to this, however, it is stated that, "although accidents to members of operators' families amounted to nearly 45 per cent of the total, only four out of ten were performing farm work."

General Conclusions

It is pointed out that in general the data listed in the American report "are not considered adequate for making national estimates of the number of accidents by types." It is admitted further that "the sample used was not large enough to answer certain fundamental questions," as, for example, "an adequately accurate estimate of fatal accidents out of all accidents on the Nation's farms. Nor was it large enough for reliable state accident estimates, or for more detailed study of the causes of accidents to farm people."

Position of Canadian Credit Unions in 1946

DURING the years 1939-1946 the number of credit unions in Canada increased from 844 to 2,422; the number of members increased from 151,554 to 687,722; and total assets rose from \$20,680,594 to \$187,340,422.

The Economics Division of the Federal Department of Agriculture in its annual survey of credit unions in Canada also points out that "there is little indication of any falling off in the rate of increase in members and assets, although in most provinces the number of new credit unions seems to be slowing down." However, it is noted that assets have been increasing rapidly. The average share investment per member increased from \$35 in 1945 to \$41 in 1946, and in the same year the average equity in assets per member rose from \$247 to \$272.

The first Canadian credit union was established in Quebec in 1900, and they were found only in that province until 1922, when they were set up in Ontario. In 1935, they were first organized in Nova Scotia, and by 1939 they had been set up in every other province as well. Quebec still leads the other provinces in the number of credit unions with

995 in 1946, followed by Ontario in second place with 304. They operate under provincial charters and are organized provincially into groups known as federations or leagues. It is stated that the objects of these leagues and federations are "to encourage and assist in educational and advisory work regarding credit unions, to assist in management, bookkeeping and accounting and to arrange for group bonding and the purchase of supplies." Their position is further strengthened by affiliation with the Credit Union National Association in the United States.

It was revealed that since their inception (only ten years ago in seven provinces, 12 years in Nova Scotia, 24 years in Ontario and 46 years in Quebec) Canada's credit unions have made loans to members amounting to \$330,654,751.

It is perhaps in the encouragement of savings by members that credit unions have performed one of their most useful functions. The total savings (shares plus deposits) by all members in Canada, 1940 to 1946, amounted to \$178,704,909, or an average of \$252.07 per member.

*Old Age Pensions and Pensions for Blind Persons in Canada as at September 30, 1947**

OLD age pensions and pensions for blind persons are non-contributory pensions subject to a means test and paid under a Dominion-Provincial plan. The provinces are responsible for the administration and the Dominion pays seventy-five per cent of the cost of the pensions paid in accordance with the terms of the agreements made under the authority of the Dominion Old Age Pensions Act. Before entering into an agreement with the Dominion the province must have legislation authorizing the provincial government to pay pensions and to make an agreement with the Dominion for reimbursement by the Dominion of its share of the cost of pensions. Before an agreement can come into force the plan for the administration of pensions proposed to be adopted by the province must be approved by the Governor in Council. An agreement continues in force so long as the provincial statute remains in operation or until after the expiration of ten years from the date the Dominion notifies the province of its intention to terminate the agreement.

Under the provisions of the Dominion Act a province is free to fix in its agreement with

the Dominion both the maximum pension payable and the maximum income allowed within the limits specified in the Act. The Dominion's contribution, however, cannot exceed seventy-five per cent of \$30 a month in any case and is payable only where the pensioner fulfils the requirements set forth in the Dominion Act and the Regulations made thereunder.

The principal requirements are age, residence and income. For an old age pensioner the age at which pension may be granted is seventy years and for a blind pensioner, twenty-one years. The Act requires that an applicant must have resided in Canada for the twenty years immediately preceding the date of the proposed commencement of the pension. Both the Act and the Regulations, however, make special provision for pensioners who have been absent during the twenty-year period. The maximum income, including pension, allowed in the case of an unmarried old

* This account incorporates the latest amendments to the Old Age Pensions Act as passed by Parliament in July 1947 and proclaimed effective retroactively to May 1, 1947.

†Percentages based on the estimated population as at June 1, 1946—Dominion Bureau of Statistics.

age pensioner is \$600 a year and in the case of a married old age pensioner, \$1,080 a year. Higher amounts are allowed for blind pensioners and for married old age pensioners with spouses who are blind.

The transfer of property by an applicant or his spouse may delay the granting of a pension. The provincial pension authority must decide whether or not an assignment or transfer of property was made for the purpose of qualifying the applicant for pension or for a higher pension than he would otherwise receive.

After pension is granted a provincial pension authority may, if authorized by provincial legislation, encumber any real property owned by the pensioner. No province requires an applicant to turn over his property to the provincial government either before or after granting pension.

In its agreement with the Dominion the province agrees to authorize the pension authority to recover, under certain conditions, out of the estate of any deceased pensioner the sum of the pension payments made to the pensioner.

In its agreement with the Dominion a province agrees to deal with an application in manner prescribed by regulation and to grant pension to any person residing in the province if satisfied that he is eligible to receive pen-

sion. Each province also agrees to pay the pension of any pensioner who transfers his permanent residence to such province and to reimburse any other province to the extent of 25 per cent of \$30 monthly or the amount of pension granted, whichever is the lesser, where the pensioner, during the last 1,095 days that he was present in Canada prior to reaching pensionable age or prior to making application, whichever is the later, was present in such province for a greater number of days than in any other province.

The details of administration are contained in the Dominion Old Age Pensions Regulations. The Act authorizes the Governor in Council to make a regulation setting up an interprovincial board to interpret and recommend alterations in the Dominion Regulations.

While the old age pensions regulations are regulations made by the Governor in Council under the authority of the Dominion Act they are made on the recommendation of the Dominion and provincial members of the interprovincial board and can become operative in a province only with the approval of the Lieutenant-Governor in Council of the province.

The accompanying tabular statistics show the scope of operations since the inception of the Old Age Pensions Act.

Increased Minimum Wages for Farm Workers in England and Wales

CHANGES recently made in the statutory conditions of farm workers in England and Wales include higher minimum weekly rates, increased overtime rates, a reduction in the standard work-week, and the right to six, instead of four, public holidays with pay.

The Agricultural Wages (Regulation) Act, 1947, made important changes with respect to the machinery for regulating farm wages. It transferred permanently to the Agricultural Wages Boards for England and Wales and for Scotland the wage-fixing powers which were conferred on district committees by the earlier Acts, but which were transferred temporarily to the Boards during the war. The Boards are to have regard to the representations of these committees which become advisers to the Boards on local conditions.

The Boards now have power to fix minimum rates "so as to secure that workers employed in agriculture receive remuneration calculated by reference to periods during the currency of their employment," power to define overtime and to evaluate the benefits which may be reckoned as payment of wages in lieu of cash. The Act also provides for assessing the value for minimum wage purposes of workers' dwellings. A restriction in the Holidays with Pay Act, 1938, is removed which prevented the granting of annual holidays for farm workers of more than one week in a year or more than three consecutive days.

The minimum rate has been increased by the Board for England and Wales from August 31 last by 10s. a week for men, 8s.

for women and by varying amounts, according to age, for younger workers. For male workers of 21 and over, this represents an increase for the 48-hour week prescribed in 1946 from 80s., the rate in force from July 14, 1946 (L.G., 1946, p. 1372) to 90s. and for women of 21 and over from 60s. to 68s., except in a few areas where the weekly hours are less than 48 and the increase was to 62s.

The overtime rate for adult men was raised from 2s. 1d. an hour on ordinary week days to 2s. 4d. and from 2s. 6d. an hour to 2s. 10d. on the weekly short day, on Sundays and on the six public holidays granted in 1946. For adult women, the overtime rate for ordinary week days was advanced from 1s. 7d. to 1s. 9d. and for the short day, Sundays or public holidays from 1s. 11d. to 2s. 2d. Proportionate increases were made for younger workers of both sexes according to age.

Part time or casual workers' rates for adult males were raised by 3d. an hour and for women by 2d., with proportionate increases for younger workers.

As regards holidays with pay, one day's holiday is given for every consecutive two months' employment. The Orders fix the rates of holiday remuneration which must be paid for holidays due where employment ends before the agreed time at which holidays were to be taken.

Under their new powers, the Board has fixed cottage rents and board and lodging allowances for a seven-day week for male and female workers.

Labour and Industry in New Brunswick

NEW labour legislation, active labour inspection, an extension of apprenticeship and a minimum of industrial unrest are reported by the New Brunswick Department of Labour for the fiscal year ending October 31, 1946.

The administrative jurisdiction of the Department is determined by the following Acts: the Minimum Wage Act, 1945; the Factories Act, 1946; the Stationary Engineers Act, 1946; the Industrial Standards Act, 1939; the Apprenticeship Act, 1944; the Forest Operations Commission Act, 1934; and until last spring, the Wartime Labour Relations Regulations (P.C. 1003), 1944.

New Factories Act

The Factories Act, 1946 (L.G., 1946, p. 1828) applies, in respect to certain provisions, to hotels, restaurants, shops, places of amusement and office buildings, as well as to factories.

The minimum age of 14, fixed for factories in 1943, was extended to all establishments covered by the 1946 Act, and in April of this year the age for such places of employment was raised to 16.

The maximum hours stipulated by the 1943 Act are the same. Women and young persons are not permitted to work more than nine hours a day or 54 in a week except with the written authority of the Minister.

In the matter of health and welfare, the 1946 Act made more detailed provision, and the factory inspector gave particular attention

to ensuring the observance of the new conditions. Of 743 recommendations made by the Inspectors during 1945-46, 414 dealt with machine-guarding and improved safety conditions.

It may be noted that a 1947 amendment to the Factories Act permits the Minister to require employees to undergo medical examinations for such industrial diseases as may be described by regulations. The latter are still to be made.

Silicosis is named in the amendment as an industrial disease. With the assistance of officers from the Industrial Hygiene Division of the Dominion Department of National Health and Welfare, a complete survey was made of all plants where it was considered that workers might be exposed to silicosis. Six hundred and ninety-nine persons were X-rayed by the Provincial Department of Health; 37 were found to have silicosis and 240 required further observation. Detailed reports were made on the results of this survey, and recommendations which would attack the conditions giving rise to the disease. At the end of the year arrangements were made with the Department of National Health and Welfare to reinspect the plants to see what action had been taken on the recommendations.

Labour Inspection

Under the Factories Act 1946, and Stationary Engineers Act, which was proclaimed July 1, 1946 (L.G., 1946, p. 1829), 912 plants, 33,414 male workers and 9,166 female employees were

inspected, and 194 were inspected more than once. Better conditions were reported generally but many recommendations for improvement were submitted to individual firms. Wherever employees were organized into unions, the Factory Inspector consulted the Union Committee as well as the employer.

Apprenticeship

The Department's apprenticeship plan was enlarged during the year. A full-time Director of Apprenticeship was appointed after two years of part-time service. Close connection is maintained with the Department of Veterans Affairs in order to give veterans the best facilities of both services. The need for an orderly training program is recognized, and many groups representing labour, employers and the general public have assisted in drawing up training schemes. In May, 1946, the following additional trades were declared appropriate for apprenticeship contracts: machinist, moulding, printing, blacksmith, sheet metal, boilermaker, cabinet maker, millwright, millworker, coppersmith, patternmaker, tinsmith, drafting, refrigeration, stone-cutting, and motor-vehicle body and fender repair. There are now 22 skilled trades under the Act. Minimum rates of pay have been revised for carpenters' apprentices in the last year of their training in Saint John. The Provincial Apprenticeship Committee recommended a shortening of the period of apprenticeship, where unusual progress is shown or the worker is a veteran or of mature age.

Minimum Wage Legislation

The Minimum Wage Act, 1945 (L.G., 1945, p. 1695) became effective on July 1, 1946. The Act applies to both men and women and provides machinery similar to that in the

other Provinces. It replaces the minimum wage provisions of the Labour and Industrial Relations Act, 1948 (L.G., 1938, p. 987). By the end of the year arrangements were being made for the appointment of a Minimum Wage Board of three or more persons representing equally employers and workers with an impartial chairman. Effective January 1, 1948, the first Minimum Wage Order of the Board will take effect. It sets out minimum wages for female employees of hotels, restaurants and other places of public accommodation.

Labour Relations

The New Brunswick Wartime Labour Relations Board carried on its duties in accordance with the Dominion-Provincial Agreement (L.G., 1944, pp. 610-616) concerning the application of the Dominion Regulations to industries within provincial jurisdiction until May 15, 1947. During 1945-46, 34 applications for certification of bargaining agents were granted; 3 applications were withdrawn, 4 were dismissed and one was still pending. Under the sections of the Regulations providing for the appointment of a conciliation officer or Board by the Dominion Minister of Labour when negotiations have continued for 30 days without prospect of agreement, eight applications for such intervention involving painters in Saint John were received by the Board. The Conciliation Officer was successful in bringing about an agreement.

Eight strikes occurred during the year involving 260 workers and 6,240 man-work days. Many threatened strikes were prevented as a result of the conciliation services of the Dominion and Provincial Departments of Labour. The Report emphasized the harmonious relations between employers and employees during the year.

WAGES, HOURS, AND WORKING CONDITIONS IN THE PRIMARY TEXTILES INDUSTRY IN CANADA, 1946

This is the fourth in the annual series of special reports on wages and hours in the Primary Textiles Industry issued as a supplement to the *LABOUR GAZETTE*. In addition to the type of statistical data on wages and hours which has been included in the three previous reports, information relating to certain other conditions of work is presented here for the first time.

The statistics were compiled from returns obtained by the Department of Labour from employers in the industry. Information was requested for the nearest complete pay period prior to October 1, 1946.

Of the 336 establishments on the mailing list used in the survey, reports were obtained from 316 having a total of more than 60,000 employees. The selected occupations for which data on wages are shown included about 11,500 male workers and 18,000 female workers.

The first section of this report gives a series of tables, the first of which shows the index of wage rates for the Primary Textiles Industry since 1939, as well as separate indexes for each of the four main divisions of the industry, Cotton Yarn and Cloth, Woollen Yarn and Cloth, Knitting, and Rayon. The next four tables show the average straight-time hourly wages or earnings within each of these divisions for Canada as a whole. These are followed by 13 additional tables showing certain data for each of the four divisions by province or region.

Index of Wages.—The index of wage rates for the Primary Textiles group of industries was 65.6 per cent higher in 1946 than in 1939 and 9.3 per cent higher than in 1945. The increase in 1946, the largest in any single year since 1943 followed the relaxation of wage controls during the year. The percentage increases in 1946 compared with 1939 and 1945, respectively, are as follows for each of the four divisions of the industry: Cotton Yarn and Cloth, 61.6 and 8.7; Woollen Yarn and Cloth, 83.1 and 12.0; Knitting, 62.5 and 6.8; and Rayon, 64.7 and 10.6. *

Wage Rates and Average Hours Worked.—Employers in the industry were asked to report their straight-time wage rates or the average straight-time earnings for workers on piecework. Most of the wage-earners in the textile industry are paid on a piece-rate basis; however, information on both time and piecework is included.

In the tables on wage rates the averages shown are for selected representative occupations in each industry. They do not include the value of allowances to employees, such as, group insurance, sick benefits or other welfare plans. The figures are arithmetic averages and do not include any overtime premium earnings.

In the regional tables the hours per week are the averages of the hours actually worked by the employees in the occupation during the pay period covered.

The average straight-time wages or earnings per hour are shown for all qualified employees 18 years of age and over in each of the selected occupations on day and rotating shifts only. Information is not included for foremen and supervisors, learners and beginners, aged or handicapped workers or for part-time workers. Those working 24 hours per week or less were classified as part-time workers.

Workers in the same occupation do not necessarily have the same work load and the work load tends to be heavier for males than for females.

Any of the selected occupations which did not have 30 or more male employees or female employees was not included in the wage tables for Canada as a whole. In the regional tables, the minimum was ten employees, male or female. The published average wages for Canada, however, include all workers in the occupation, if there is a total of 30 or more employees, regardless of the regional minimum.

In the column headed "Range of Wages per Hour" are shown the ranges of hourly rates which include the middle 80 per cent of the workers in any occupation, ten per cent of the workers receiving greater and ten per cent less than the limits of the ranges shown. As stated above, the wages for all workers, however, were included in the average wages shown.

WORKING CONDITIONS IN THE PRIMARY TEXTILES INDUSTRY

This section contains information on certain conditions of work¹ in each of the four main divisions of the industry. The tables on standard hours, overtime and vacations with pay show the statistics by establishments and the numbers of workers according to region. The tables on shift work show the numbers of plant workers on the second and third shifts and the wage differential, if any. Some notes on Sunday work, sick leave with pay and production or incentive bonus are included in the text which follows.

WORKING CONDITIONS IN THE COTTON YARN AND CLOTH INDUSTRY

Survey Coverage, Table 19.—In terms of numbers of workers, the Cotton Industry is the largest of the four divisions of the Primary Textile Industry. Returns were tabulated for 35 mills employing 20,166 plant workers in 1946. Of these, 13,326 were in Quebec; 5,258 in Ontario; and 1,582 in the Maritime Provinces. The average number of workers per mill in Quebec was considerably greater than in Ontario or the Maritime Provinces, the average employment per mill being 888 as compared with 328 and 395, respectively, in the other areas. In Quebec, the four largest of the 15 establishments from which reports were received included 56 per cent of the workers in that province. Of the 16 establishments in Ontario, the largest four employed 50 per cent of the mill employees in that province.

Forty-one per cent of the mill workers in the industry were women. This proportion did not vary significantly between regions. Of the 35 mills reporting, 27 employed more male than female workers.

Collective Agreements.—In this industry, collective agreements were reported to be in effect in 24 establishments. Of these mills, 13 were in Quebec, nine in Ontario and two in the Maritime Provinces. By region, mill workers under agreement comprised 96 per cent of the total number of workers in reporting plants in Quebec, 71 per cent of those in Ontario and 63 per cent of those in the Maritime Provinces.

Standard or Normal Hours, Tables 20 and 21.—The standard working week in 1946 ranged from 40 to 55 hours in those mills which made returns to the Department. In Ontario, the predominant normal working week was 48 hours for both male and female employees. In Quebec, the 48 and 50-hour week were most common for male and the 42½ and 48-hour week for female workers, the average standard number of hours being 48·1 for males and 45·9 for females in this province. In the Maritimes, all establishments reported 50 hours as the normal work week.

The standard five-day week was common in both Quebec and Ontario. In Quebec, nine of the 15 establishments covered, employing 53 per cent of the workers in that province, followed this practice, while in Ontario, 12 of the 16 mills, employing 85 per cent of the workers in that province were on this basis. The four establishments in the Maritimes operated six days per week.

The standard number of hours per day tended to be more in those mills from which the five-day week was reported than in those which reported six. In Ontario, the standard working day ranged from nine to 9·6 hours for employees working a five-day week and eight to nine hours for those working on six days. In Quebec,

¹ Information on provincial legislation pertaining to annual vacation with pay, maximum hours of work and minimum wages is contained in an annual publication, "Provincial Labour Standards Concerning Child Labour, Annual Holidays, Hours of Work, Minimum Wages, and Workmen's Compensation", by the Legislation Branch of the Department of Labour.

this tendency was more marked among female workers, their daily hours on the five-day week being eight or ten per day while for those working six days it was usually from seven to eight.

Although 26 of the 35 establishments from which data were collected reported employees working on Sunday, these were probably chiefly maintenance workers or watchmen, and comprised less than one per cent of the total number of workers.

Overtime Rates of Pay, Table 22.—The most common overtime rate in 1946 was time and one-half. Eleven establishments reported this rate after daily hours and 12 after weekly hours. Six establishments in Quebec reported straight-time rates plus ten per cent after daily hours and time and one-half after weekly hours. Of the workers covered, 30 per cent were employed in mills which reported the overtime rate of time and one-half after daily hours, 34 per cent in mills in which this was the rate only after weekly hours and 29 per cent where the rate was straight time plus ten per cent after daily as well as time and one-half after weekly hours. Other mills reported either regular overtime rates, time and one-quarter or did not report any overtime information. Of those mills reporting information for Sundays and holidays, it was the common practice to pay time and one-half, the only exception being one mill which paid double time for such work.

Vacation with Pay, Table 23.—Of the 35 establishments included in the survey, 24 reported a service requirement of one year to receive a vacation of one week with these mills employing more than two-thirds of the workers in the industry. Eight establishments which reported only three months' service requirements to receive one week vacation with pay employed 14 per cent of the mill employees. The remaining two plants which did not report any service requirements employed about 18 per cent of the mill workers.

The maximum vacation is one week in 26 establishments employing 88 per cent of the workers covered in the survey. The other nine mills, employing 12 per cent of the workers, received a maximum vacation of two weeks, with the service requirements extending from one to 25 years.

Shift Work, Table 24.—Over 25 per cent of the plant employees in this industry were working on the second and third shifts, most of them being production workers, but also including maintenance crews.

Thirty-one establishments reported shift work. Of these, 24 were operating only two shifts, four were working three shifts, and in the remaining three mills both two and three-shift departments existed. An establishment which had only a skeleton staff on the third shift was considered a two-shift operation. By region, 15 mills in Ontario reported shift work, 13 in Quebec and three in the Maritimes.

Thirteen establishments reported paying no differential to shift workers, one reported four cents per hour, ten paid five cents per hour, five paid ten per cent and two paid 14.3 per cent. These premiums refer to the amount paid to the workers on the third shift of a three-shift operation and to the second shift of a two-shift operation. Three of the seven mills which operate on a three-shift basis paid a premium to workers on the second shift as well as the third.

Sick Leave with Pay.—Of the 35 reports from which data were compiled, 13 indicated some provision for sick leave with pay. In only two instances did this apply to all the workers in the plant. In two cases, it represented a form of group insurance, in four mills it applied to salaried employees only and in five to foremen only.

Production or Incentive Bonus.—Ten establishments reported paying an incentive bonus. All four in the Maritimes reported such a plan as well as two in Quebec and four in Ontario.

WORKING CONDITIONS IN THE WOOLLEN YARN AND CLOTH INDUSTRY

Survey Coverage, Table 25.—Returns were tabulated for 87 mills in this industry in 1946, of which 74 were situated in Quebec and Ontario. Of the 12,280 workers covered, nearly 95 per cent were reported in these two provinces. The average number of plant employees per mill in Quebec was greater than in Ontario, namely 187 as compared with 143.

A larger proportion of the workers tend to be employed by fewer mills in Quebec than in Ontario. In the former province, the three largest of the 23 establishments included in the survey, employed 52 per cent of the workers, whereas, in the latter province, the 11 largest of the 51 establishments reporting, employed 52 per cent of the workers.

Forty-two per cent of the plant employees in this industry were women. By region, the percentage of female workers was 48 per cent in the Maritime Provinces, 36 in Quebec, 45 in Ontario and 50 in the Western Provinces. Fifty-three of the 87 establishments reporting listed more male than female workers. Of the 23 mills which employed more than 150 workers each, this proportion was even greater, namely 18 of the 23 mills of this size.

Collective Agreements.—Returns from 40 mills indicated that the workers were covered by agreements. Of these mills, one was in the Maritime Provinces, 12 in Quebec, 24 in Ontario and three in the Western Provinces. Seventy per cent of the mill employees covered in the survey were under agreement in 1946. The percentages within each region were as follows: 33 per cent in the Maritime Provinces, 76 in Quebec, 69 in Ontario and 60 in the Western Provinces.

Standard or Normal Hours, Tables 26 and 27.—The standard or normal working week ranged from 40 to 55 hours in 1946. The average length of the normal working week for male and for female employees was almost identical in every region except the Western Provinces where the male employees tended to work longer. The predominant normal working week in the Maritime Provinces was 48 to 50 hours; in Quebec, 55; in Ontario, 48; and in the Western Provinces, 40 and 48 hours. The average standard hours per employee was 49.4 in the Maritimes, 51.0 in Quebec, 47.4 in Ontario and 44.9 in Western Canada.

The five-day week was reported by 46 of the 87 establishments from which returns were received. The number of workers to whom it applied comprised 46 per cent of those covered in the survey. In Ontario, the proportion of employees working only five days per week was greater than in other regions, namely, 60 per cent as compared with 26 per cent in Quebec, 23 per cent in the Western Provinces and one per cent in the Maritimes.

Although 23 of the 87 establishments covered in this survey indicated some Sunday work, the number of workers was less than one per cent of the total reported, being confined almost exclusively to watchmen and other necessary non-production workers.

Overtime Rates of Pay, Table 28.—Forty-one mills reported payment of overtime rates after daily hours of work, while 27 paid a premium only after completion of the normal working week. Of those mills adopting the former plan, 27, employing about 4,700 workers, paid at the rate of time and one-half for any overtime work; seven, employing about 1,300 workers, paid time and one-quarter; and seven regular straight-time rates. Of those mills in which overtime rates were paid only after weekly hours, 24, employing about 5,000 workers, paid time and one-half, and four paid less than time and one-half. Of those firms which reported overtime on Sundays and holidays, the most common overtime rate was time and one-half, the only exceptions being five establishments which paid double their straight-time rate.

Vacations with Pay, Table 29.—Vacations with pay were reported by 84 plants in 1946, in which the total employment was more than 12,000. The most common practice, provided by legislation in a number of provinces, was to give one week after one year

of service. However, in 23 cases the vacation was one week even though the service was less than one year and in 13 others the length of service was not stated. In 69 cases the maximum vacation did not exceed one week regardless of length of service. Fifteen mills reported a maximum of two weeks but in six of these the service requirements exceeded five years.

Shift Work, Table 30.—Shift work was of considerable importance in this industry with 50 establishments reporting workers on second and third shifts. Of these firms, 27 operated only two shifts, 12 operated three shifts and in the remaining 11, certain departments were working two shifts and others three. Seventeen per cent of the employees in this industry were reported as working on evening or night shifts.

A large proportion, 32 in number, of those mills reporting shift work did not pay a wage differential. Eighteen plants reported paying this type of wage incentive. The most common shift premiums were ten per cent, paid by seven mills; five per cent, paid by four mills; and five cents per hour, paid by four mills. Ten mills in Quebec paid a differential, eight in Ontario and none in the Western Provinces. There was no shift work reported in the Maritimes.

Sick Leave with Pay.—Twenty-three establishments reported provisions for sick leave with pay. In six cases, the plans covered all employees; in seven cases they applied to salaried or office workers only; and in ten instances sick leave was provided under group insurance plans.

Production or Incentive Bonus.—Twenty-two firms reported production incentive plans. Of these mills, one was in the Maritimes; seven in Quebec; 11 in Ontario and three in the Western Provinces.

WORKING CONDITIONS IN THE KNITTING INDUSTRY

Survey Coverage, Table 31.—Returns were received from 161 mills in this industry. Of these, 150, employing 94 per cent of the workers covered in the survey were located in Quebec and Ontario. The average number of workers per mill was slightly greater in Quebec than in Ontario.

Sixty-five per cent of the mill workers which were reported in this industry were women. The proportion in Quebec was lower than in the three other regions, namely, 59 per cent as compared with 69 per cent in Ontario, 68 per cent in the Maritimes and 82 per cent in the Western Provinces. Of the 161 establishments covered, 146 reported more female than male employees.

Collective Agreements.—A total of 29 mills reported collective agreements with their employees. Of these, one was located in the Maritime Provinces, 11 in Quebec, 14 in Ontario and three in the Western Provinces. Twenty-seven per cent of the workers included in the survey were under agreement. The proportions within each region are as follows: 35 per cent in the Maritime Provinces, 36 in Quebec, 20 in Ontario and 62 per cent in the Western Provinces.

Standard or Normal Hours, Tables 32 and 33.—The standard hours of work per week ranged from 40 to 55 hours in this industry. In Quebec, the most common working periods were 48 and 55 hours; in Ontario, 44 to 48; and in the Western Provinces, 44 hours. The hours worked by male and female employees were almost identical within each region, as in all but a few small mills the standard working week was the same for both sexes. The average standard hours per employee were 46·5 in the Maritime Provinces, 49·4 in Quebec, 45·9 in Ontario, and 43·1 in the Western Provinces.

The importance of the five-day week in this industry is shown by the fact that 55 per cent of the employees worked on this basis, and that of the 161 mills reporting, 86 listed more of their employees working five days than six. The five-day week was much more common in Ontario than in either of the three other regions. In that province, 57 of the 93 establishments surveyed operated five days, whereas in Quebec

the proportion was 25 out of 57, and in the Western Provinces, four out of eight. In the Maritime Provinces none of the three mills reported a five-day week. The percentage of employees working five days per week were as follows within each region: Quebec, 37 per cent; Ontario, 72; and Western Provinces, 31 per cent.

The nine and ten-hour normal working day was reported most frequently in returns from Quebec mills operating five days per week, whereas a ten-hour day from Monday to Friday and a five-hour day on Saturday was the most common combination of daily hours in those establishments working on six days. In Ontario, the nine and nine and one-half hour day were the most common hours reported by mills on a five-day week and a nine-hour day with three hours on Saturday by those operating six days per week.

Thirty-five mills reported Sunday work, but only a very small number of plant employees were involved. These workers are probably watchmen or necessary maintenance employees.

Overtime Rates of Pay, Table 34.—Seventy-three establishments reported overtime rates after daily hours, while 41 indicated that payment for overtime began only after the completion of the working week. Of the mills on the former basis, 31 reported paying time and one-half, 12 paid time and one-quarter, one paid straight time plus ten cents per hour and 29 paid regular straight-time rates after daily hours Monday to Friday. Overtime rates for Saturday are similar. Of the mills following the latter practice, 33 paid time and one-half, and the eight remaining establishments paid either time and one-quarter or time and ten per cent.

Substantial differences in rates were indicated in Quebec as compared with Ontario. In Quebec, 17 of the 19 establishments which paid overtime after daily hours and 23 of the 26 reporting overtime only after weekly hours paid time and one-half. In Ontario, although nine of the 16 mills which reported paying overtime only after weekly hours paid time and one half, 25 of the 45 mills which paid after daily hours, reported regular straight-time rates for such work. Of the seven establishments in Western Canada which reported overtime rates, five paid time and one-quarter or time and one-half after daily hours and of the three in the Maritime Provinces, two indicated regular straight-time rates and one, time and one-quarter after daily hours.

Vacations with Pay, Table 35.—Employees in all 161 mills covered in this survey received vacations with pay. In 109, they received an initial vacation of one week after one year's service; 28, after less than one year's service; and in 24 cases after an unspecified period of service.

The maximum vacation was one week in 131 mills with the length of service required to qualify for such leave never more than one year. In 30 mills the maximum vacation was two weeks, of which 25 required a period of five years or less to qualify and the remaining five, from ten to 25 years. The establishments which eventually granted two weeks' vacation employed only 25 per cent of the workers included in the survey.

Shift Work, Table 36.—The amount of shift work reported in the Knitting industry is less than in any of the three other divisions of the Primary Textile group, with only six per cent of the total number of workers being reported on second or third shifts. These workers were largely male. Only thirteen per cent of the shift workers were receiving a wage incentive in the form of a shift differential or premium. Of the 53 mills reporting shift work, eight paid such a premium.

Sick Leave with Pay.—Forty-two mills reported provision for sick leave with pay. In 13 instances it applied to all employees, in three cases it was provided under group insurance plans, in 18 it applied to salaried or office employees exclusively, and in eight establishments to special groups of workers, such as foremen.

Production or Incentive Bonus.—Fifteen mills or nine per cent of the total surveyed, reported having production bonus plans, 11 of those establishments being located in Ontario and four in Quebec.

WORKING CONDITIONS IN THE RAYON INDUSTRY

Survey Coverage, Table 37.—Twenty-four mills, employing over 8,700 workers in 1946, are covered in this analysis, making this the smallest of the four allied textile industries in terms of both number of establishments and number of employees. All of the mills were located in Quebec and Ontario with 90 per cent of the workers being reported in the former province. In Quebec, the five largest of the 18 mills reporting, included 70 per cent of the plant employees in that province. The number of male mill workers greatly exceeded the number of females in this industry.

Collective Agreements.—Four mills in Quebec and two in Ontario reported collective agreements with their employees comprising 15 per cent of the total number of employees included in the survey of Quebec and 22 per cent of those in Ontario.

Standard or Normal Hours, Tables 38 and 39.—The range of standard hours was 44 to 55 per week. In Quebec, the most common hours reported were 50 per week and in Ontario 48 per week. The average standard hours were 51·6 in Quebec and 47·7 in Ontario. The average standard hours of male and of female employees are almost identical within each region for this industry, the Canada averages being 50·3 and 50·1 hours per week, respectively.

Ten establishments were operating on a five-day week basis, eight of these being located in Quebec and two in Ontario. In Quebec, the proportion of workers on the five-day week was 23 per cent of the total number in that province and in Ontario, 31 per cent. The most frequent daily working period reported was 10 hours per day for mills operating either five days or six days per week.

Thirteen mills reported employees working on Sunday. The number of workers involved, however, comprised only two per cent of those included in the survey as a whole, such workers probably consisting of necessary maintenance crews or watchmen.

Overtime Rates of Pay, Table 40.—Of the 18 establishments included in the survey in Quebec in 1946, eight reported paying overtime after daily hours and ten only after weekly hours. Of the former, three paid at the rate of straight time plus five per cent, one time and one-quarter and four, time and one-half. Of the mills adopting the latter system, two paid straight time plus five per cent, one time and one-quarter and seven, time and one-half. The three establishments in Ontario, which gave overtime information, reported the rate of time and one-half only after weekly hours.

Vacations with Pay, Table 41.—Of the 24 mills included in the survey, 12 required one year to qualify for an initial vacation of one week, 4 required less than one year and eight did not report the service requirement.

The maximum vacation reported was one week in 18 mills and two weeks in six others. The service requirement for two weeks was six months in one mill, one year in another, and in the other four was not less than five years.

Shift Work, Table 42.—Twenty-three per cent of the employees in this industry were reported as working on second and third shifts. Of these, 81 per cent were receiving a wage differential for such work. The shift premiums which were listed most frequently were five cents per hour, paid by five mills; five per cent paid by nine; and 10 per cent paid by three.

Sick Leave with Pay.—The employees of nine mills were provided with sick leave benefits, six of these mills being located in Quebec and three in Ontario. Of the nine establishments, one reported granting sick leave to all its employees, five provided for sick leave under group insurance plans, two paid it to salaried and office employees only, and one to foremen only.

Production or Incentive Bonus.—Three mills, all of which were located in Quebec, offered employees a production incentive bonus.

(a) This mill paid 10 cents per hour extra after daily hours.
 (b) These mills paid 10 per cent extra after weekly hours.
 (c) One mill paid time and one-half after two hours more than the normal working day.
 (d) One mill paid time and one-half after two hours more than the normal working week.
 (e) One mill paid double time for three statutory holidays.

WAGE RATES AND HOURS OF LABOUR IN CANADA, 1946

REPORT No. 29

SUMMARY

THE 1946 general index of wage rates on the base of average rates in 1939 as 100 was 155.2, thus indicating a continuing upward trend. Since 1939, therefore, the increase has been 55.2 per cent, and 9.4 per cent in 1946 over 1945. From 1939 to 1940 the increase was 3.9 per cent; from 1940 to 1941, 8.8 per cent; from 1941 to 1942, 8.3 per cent; from 1942 to 1943, 9.1 per cent; from 1943 to 1944, 3.1 per cent; and from 1944 to 1945, 2.8 per cent. The 1945 to 1946 increase is, therefore, the largest percentage increase in any year since 1939. A similar upward trend was apparent in each of the six main industrial groups, with the increase in 1946 over 1945 ranging from 3.0 per cent in Mining to 11.4 per cent in the Transportation and Communication group. The largest percentage rise in any group index between 1939 and 1946 was recorded in Logging, the 1946 index being 67.4 per cent higher than in the base year.

The year 1946 was marked by a gradual relaxation of the controls on wages and prices which had been imposed for some years under the anti-inflation policy of the government.*

The first step toward decontrol of wages was taken in January, 1946, when the Wartime Wages Control Order of 1943, P.C. 9384, was amended. War Labour Boards were authorized to increase wage rates under two conditions: first, if the rates were found to be low in comparison with rates generally prevailing in the locality, or second, on such other basis as the

* See Wage Report No. 26 issued as a supplement to the *Labour Gazette* for June 1945, where an account of the various control orders up to the end of 1943 may be found. For details of these Orders in Council, see appropriate issues of the *Labour Gazette*.

Board considered reasonable in the circumstances, consistent with the maintenance of existing prices of goods and services (*Labour Gazette*, February, 1946, p. 140). Previously, Boards had been authorized to increase rates only to the extent necessary to rectify "gross injustice or gross inequality".

Further relaxation within the framework of the anti-inflation program was effected by another amendment to the Order announced the following June under which a War Labour Board might authorize or direct an increase in wage rates if the Board found the proposed increase "just and reasonable" (*Labour Gazette*, July, 1946, p. 869).

Finally, effective at the end of November, 1946, wartime controls over wages and salaries were removed and their determination returned to the processes of collective bargaining (*Labour Gazette*, December, 1946, p. 1690).

The index numbers appearing in this report indicate changes in wage rates in the various industries and industrial groups, but they do not permit any comparison of actual rates or wage levels in the various industries or groups.

INTRODUCTORY NOTES

Average wage rates in this report represent payments for a unit of labour, usually one hour, on the basis of straight-time rates or average straight-time piecework earnings. For convenience they are referred to as average wage rates although average straight-time earnings is a more precise designation. In some cases they are average straight-time weekly or monthly earnings, but usually the information is given as hourly. These averages are shown for selected representative occupations in a large number of industries, for Canada, by province or region, and in some cases by city. The rates do not include the value of any allowances to employees, such as free transportation, uniforms, reporting times, group insurance, sick benefits, etc. All wage rates shown are for males unless otherwise designated.

The index numbers of wage rates shown in the first tables of this report reflect, therefore, the changes in average straight-time earnings.

The average wage rates shown are compiled from statistics collected by the Department of Labour from about 15,000 business establishments and supplemented in some cases by information from trade union returns and from collective agreements. Most of the establishments with 15 or more employees were included in the survey with a representative number of smaller firms in certain industries, such as garages, machine shops, sawmills, in wholesale and retail trade, and in the construction industry.

Employers were asked to report for the last pay period preceding October 1, their straight-time wage or salary rates as well as their average straight-time piecework earnings in each occupation, excluding executive personnel. Information was also obtained as to the number of workers on the payroll at each rate in each occupation. The average rates or straight-time earnings computed for each occupation in a given industry from year to year may be affected therefore by changes in the number of workers at each rate as well as by changes in actual rates or earnings. Changes in rates reflect not only general wage rate and piece rate changes, but also changes in rates for individuals and small groups of employees as well as those caused by up or down grading within an occupational rate range. The rates shown are for day work only; they are not affected by changes in shift differentials nor are they affected by changes in overtime or other premium payments.

In addition to average wage rates for 1946, predominant ranges of rates are shown for the same year. These ranges include the rates for

approximately the middle 80 per cent of the workers included in the average wage rate for each occupation. The purpose of this is to eliminate extremely high and extremely low rates, but at the same time to show the ranges which include the great majority of the workers in each occupation. The rates for all workers in each occupation are included, however, in the averages. The data apply to 1946 and for the Construction Industry to earlier years as well.

Statistics of wage rates by industry are shown in Tables III to XI inclusive, while Table XII contains information on straight time or standard hours of work by industry.

Index numbers calculated for the period 1939 to 1946 on the base of average rates in 1939 as 100 are shown for a fairly detailed industrial classification in Table I, a continuation of the series first published in Report No. 26. For the period 1901 to 1946, indices are shown in Table II for the main industrial groups and in Table IIA for these same groups on the base of average rates in 1935 to 1939 as 100.

The following cases, for which wage rates and hours of work are shown in this report, are not included in the index number calculations: agriculture, stevedoring, motor transport, grain elevators, dairies, canned fruits and vegetables, chemicals, trade, garages, and civic employees.

An appendix to the report gives data regarding wages paid to farm labour in 1945, 1946 and 1947, as published by the Dominion Bureau of Statistics.

Statistics of wage rates and hours of labour have been collected by the Department since it began to function in 1900 and were published from time to time in the *Labour Gazette*. A separate report on wages was issued in 1921 as a supplement to the *Labour Gazette*. This was the first report in the series and contained statistics for certain trades and industries in a number of Canadian cities from 1901 to 1920 with index numbers on a base of average rates in 1913 as 100. The information was obtained mainly from employers and trade unions, but data from collective agreements and information obtained by departmental officers in the field and from correspondents were also used. In subsequent reports the scope of the statistics has been gradually broadened to include a representative list of occupations in most industries. Additional groups of industries have been added from time to time in the table of index numbers.

To obtain an index number for an industry, weighted averages were calculated for each of a representative list of occupations in the industry. Each such average for any year was multiplied by the weight for that occupation which was the number of workers reported in the occupation in the base year. To obtain the index number for any year, the sum of these products is expressed as a percentage of the similar aggregate for the base year.

To obtain each main industrial group index, the indices for the various industries included were weighted by the number of workers in each industry based on Dominion Bureau of Statistics employment data. The general index was computed from the main industrial groups by similar weighting procedure.

For the period 1901 to 1938 the index numbers were calculated by the use of link relatives. For this period the percentage change from year to year for each occupation was calculated. The simple arithmetic average of these percentages was obtained and the average increase or decrease applied to the index for the industry for the preceding year. To obtain the general index the main group indices were weighted in proportion to the number of workers in each group based on data from the decennial census.

Coal mining.....	100	102.1	109.4	113.1	124.8	146.0	146.2	146.7
Metal mining.....	100	102.8	112.2	118.7	123.1	125.2	128.2	135.7
Metal mining, Quebec and Ontario.....	100	103.0	112.2	118.0	121.7	123.7	124.6	128.9
Metal mining, Manitoba.....	100	101.0	107.8	114.4	121.7	127.4	127.4	140.6
Metal mining, British Columbia	100	102.7	113.7	123.0	128.7	132.1	141.9	159.0
Manufacturing	100	104.3	115.2	125.5	136.8	141.4	146.5	161.5
Primary textile products.....	100	107.5	119.0	127.8	140.4	146.0	151.5	165.6
Cotton yarn and cloth.....	100	109.6	123.8	128.1	136.6	139.1	148.7	161.6
Woolen yarn and cloth.....	100	107.6	120.1	136.6	152.8	160.3	163.5	183.1
Knitting — hosiery, underwear and outerwear.....	100	105.8	112.5	123.6	138.5	146.2	150.3	162.5
Rayon yarn and fabric.....	100	106.8	122.9	129.0	141.3	147.0	148.9	164.7
Clothing.....	100	105.3	118.0	129.0	139.3	144.3	156.3	176.2
Men's and boys' suits and over- coats.....	100	107.2	117.9	129.8	146.6	151.9	164.1	182.1
Work clothing.....	100	106.0	118.2	133.3	140.8	141.0	148.0	160.3
Women's and Misses' suits and coats.....	100	101.7	126.9	131.8	134.5	137.5	152.7	176.2
Dresses.....	100	106.1	118.8	127.5	133.2	138.9	152.5	179.2
Men's Shirts.....	100	102.4	107.0	122.6	135.9	146.5	157.0	171.7
Rubber products.....	100	102.1	117.1	127.1	134.4	139.8	143.4	167.7
Pulp and its products.....	100	104.6	109.5	115.1	120.3	125.7	127.3	148.6
Pulp.....	100	108.1	114.4	124.0	128.6	135.3	136.3	162.8
Newsprint.....	100	103.7	107.7	109.6	115.4	119.6	120.9	137.3
Paper other than newsprint....	100	103.4	107.5	113.2	120.1	124.7	126.8	147.0
Paper boxes.....	100	102.9	115.5	123.9	128.9	133.1	138.5	151.6
Printing and publishing.....	100	101.7	105.8	110.0	113.7	116.3	118.5	127.3
Newspaper printing.....	100	101.3	105.5	108.3	112.5	116.5	119.1	125.7
Job printing and publishing...	100	101.4	105.9	110.6	113.8	114.9	117.7	129.8
Lumber and its products.....	100	104.4	117.7	131.0	142.9	148.2	156.1	178.3
Sawmill products.....	100	105.0	115.0	130.7	143.8	148.7	157.5	184.8
Planing mills, sash, doors, etc..	100	105.0	120.0	123.7	134.9	139.4	147.2	161.2
Furniture.....	100	101.7	125.0	139.0	147.6	154.8	159.5	171.7
Edible plant products.....	100	102.9	115.0	122.5	130.0	134.2	139.4	153.0
Flour.....	100	103.1	113.9	121.5	133.3	135.0	139.2	153.1
Bread and cake.....	100	102.9	115.5	123.9	128.9	134.3	139.0	152.6
Biscuits.....	100	103.5	114.4	121.8	131.9	135.8	142.0	159.2
Confectionery.....	100	101.9	114.5	118.2	130.0	131.8	139.0	148.7
Fur products.....	100	105.3	113.7	121.7	127.3	130.5	140.5	150.7
Leather and its products.....	100	105.9	122.5	134.8	142.9	145.4	153.5	167.5
Leather tanning.....	100	104.5	119.5	133.9	148.9	156.8	167.0	181.1
Boots and shoes.....	100	106.2	123.2	135.0	141.7	142.6	150.1	164.0

TABLE I—INDEX NUMBERS OF WAGE RATES IN CANADA, BY INDUSTRY,
1939-1946—Concluded
(Rates in 1939 = 100)

INDUSTRY	1939	1940	1941	1942	1943	1944	1945	1946
Manufacturing—Concluded								
Edible animal products (meat products).....	100	103.2	112.7	119.0	135.1	137.3	141.0	165.4
Iron and its products.....	100	102.7	112.9	125.6	138.8	142.6	148.2	159.6
Crude, rolled and forged products.....	100	101.5	108.1	122.2	135.5	143.5	149.1	170.6
Foundry and machine shop products.....	100	104.5	116.0	120.9	137.0	140.8	149.5	161.0
Machinery, engines, boilers, tanks, etc.....	100	105.0	116.2	129.7	141.7	147.9	147.3	155.8
Aircraft.....	100	99.0	109.5	122.7	134.0	138.7	148.7	154.6
Shipbuilding (steel ships).....	100	104.9	121.2	132.2	144.4	145.3	145.9	148.8
Motor vehicles, etc.....	100	100.6	108.6	115.8	122.7	126.3	130.3	140.4
Motor vehicle parts and accessories.....	100	103.4	110.2	127.0	145.7	147.1	148.2	162.3
Stoves, furnaces, etc.....	100	104.5	115.6	131.0	143.5	149.5	155.4	163.5
Agricultural machinery.....	100	105.1	117.6	136.7	151.9	155.8	157.5	178.5
Tobacco products.....	100	102.8	113.0	120.4	131.5	140.3	140.5	156.9
Beverages (brewery products).....	100	103.9	113.3	117.1	121.9	123.5	127.9	148.4
Electric current production and distribution.....	100	103.3	112.0	120.2	129.6	132.5	134.4	143.5
Electrical products.....	100	105.6	123.2	133.7	149.2	154.1	156.8	169.1
Construction.....	100	104.5	111.6	118.6	127.7	129.6	131.1	143.9
Transportation and Communication	100	101.3	109.7	116.4	127.0	128.0	128.8	143.5
Transportation.....	100	101.3	110.1	117.0	127.7	128.7	129.2	145.9
Water transportation (Inland and Coastal).....	100	105.2	113.3	125.8	138.8	142.2	144.6	162.3
Steam railways.....	100	100.0	109.4	114.8	125.5	125.5	125.5	142.3
Electric street railways.....	100	103.9	109.1	115.8	121.2	125.7	126.6	139.5
Communication—Telephone.....	100	101.3	106.4	112.0	121.9	122.4	125.6	125.2
Service—Laundries.....	100	105.4	110.5	116.5	127.3	128.9	135.4	147.5
GENERAL AVERAGE.....	100	103.9	113.1	122.5	133.7	137.9	141.8	155.2

Table II—INDEX NUMBERS OF WAGE RATES FOR CERTAIN MAIN GROUPS OF INDUSTRIES IN CANADA, 1901-1946

(Rates in 1939=100)

Year	Logging	Coal Mining	Metal Mining	Manufacturing	Construction	Water Transportation	Steam Railways	Electric Railways	Laundries	Telephones	General Average
1901..	51.4	47.4	61.2	35.3	43.9	33.7	32.8	38.1
1902..	52.6	48.0	61.6	37.7	44.1	35.2	34.9	40.0

* The wage rates are straight time hourly rates only and do not include the value of various allowances to employees such as free transportation, uniforms, reporting times, group insurance, sick benefits, etc. These vary from city to city.

† Maximum rates based on length of service.

‡ Including troublemen and, in some cases, groundmen; in some localities line maintenance work is performed by employees of light, heat and power distribution utilities, rates for which are included here.

†† Including shedmen, pitmen, cleaners, blacksmiths, carpenters, painters, etc.

(x) Including armature winders, wiremen, etc.

(a) Rate applies also to bus operators.

(b) Bus operators: 1943—68 cents, 1944 and 1945—73 cents, 1946—85 cents per hour.

- (a) Standard hours: most firefighters work under the two-platoon system with one day off in seven. The following cities in 1946 had the three-platoon system—three 8-hour shifts—Shawinigan Falls, Hamilton, Port Arthur, Fort William, Timmins, Regina, Calgary, Lethbridge and Medicine Hat.
- (b) Both police and firefighting duties performed by the same men.
- (c) Rent, fuel, light and clothing included and these employees are not subject to municipal taxes.
- (d) Plus 5 cents per day after three years, an additional 3 cents after five years.
- (e) Plus \$5 per month after ten years and \$10 after fifteen years.
- (f) Plus 10 cents per day after ten years and 20 cents after fifteen years.
- (g) Free uniforms plus \$2 per month for each five years.
- (h) Uniforms supplied, boot allowance of \$20 per year, free street car transportation to and from work, plus \$2 per month after each five years' service up to 35 years.
- (i) Rate for married men.
- (j) Drivers of apparatus only; others on call.
- (k) "Interim Remuneration" of \$160 per year in lieu of three-platoon system.
- (l) Plus \$7.50 per month after ten years.
- (m) Plus \$5 per month after five years.
- (n) Work on certain eight listed statutory holidays to be paid for at regular rate.
- (o) Plus \$5 per month after ten years, \$10 per month after 20 years. Those with ten years' service are entitled to three weeks' vacation with pay and be paid also for any work on statutory holidays.
- (p) Plus \$5 per month after 19 years.

APPENDIX—WAGES IN AGRICULTURE, 1946—Continued

The information given below has been reproduced from the latest Quarterly Bulletin issued by the Agricultural Branch of the Dominion Bureau of Statistics. The figures were compiled from reports made by farm correspondents in all provinces.

Farm Wage Rates — 1945, 1946 and 1947

Average wage rates paid to farm help in Canada are higher than at any time since comparable statistics became available in 1940. Scarcity of labour and the maintenance of a high level of farm income have been important factors contributing towards the continuing rise in farm wage rates. Except in the case of monthly wages with board, Saskatchewan wage rates were the highest among the provinces. On the other hand wage rates in Prince Edward Island were the lowest. The average rates for Canada as reported at August 15, 1947, were \$4.13 per day and \$82.75 per month where the employer provided the board as compared with rates of \$4.04 and \$75.28, respectively, at the same date a year ago. Where the employee provided his own board, the average rates were \$5.17 per day and \$109.03 per month as against \$4.95 and \$100.62, respectively, as reported at August 15, 1946.

Table 1 gives a summary of wage rates for Canada as at August 15 from 1940 to date and Tables 2 and 3 give comparative data on a provincial basis for the last three years.

Report of the Canadian Government Delegates to the Thirtieth Session of the International Labour Conference, Geneva, June 19 to July 11, 1947.

TO THE HONOURABLE HUMPHREY MITCHELL,
MINISTER OF LABOUR,
OTTAWA.

SIR,—We, the undersigned delegates appointed to represent the Government of Canada at the Thirtieth Session of the International Labour Conference, have the honour to submit the following report.

The Conference was held in the Palace of Nations at Geneva, Switzerland, from June 19 to July 11, 1947.

Forty-eight member States of the International Labour Organization were represented at the Conference, namely: Afghanistan, Argentina, Australia, Austria, Belgium, Bolivia, Brazil, Bulgaria, Canada, Chile, China, Columbia, Cuba, Czechoslovakia, Denmark, the Dominican Republic, Ecuador, Egypt, Finland, France, Greece, Haiti, Hungary, Iceland, India, Iran, Iraq, Ireland, Italy, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Panama, Peru, Poland, Portugal, Siam, Sweden, Switzerland, Turkey, the Union of South Africa, the United Kingdom of Great Britain and Northern Ireland, the United States of America, Uruguay, Venezuela, and Yugoslavia.

The delegates and advisers of States Members in attendance numbered 482, including 90 Government delegates, 41 Employers' delegates and 42 Workers' delegates.

In addition to representatives of States Members, seven representatives of the United Nations, three representatives of the United Nations Educational, Scientific and Cultural Organization, one representative each of the International Monetary Fund and the World Health Organization, and one representative of a non-member state (El Salvador) were present, making a total of 495 persons taking part in the Conference.

If account be taken of all those who accompanied the delegations, and of representatives of the press and of the secretariat, the total number of persons associated with the Conference was well over 1,000. This is evidence not only of interest in the International Labour Organization, but of the conviction that international effort and action is of particular importance for the world at this time.

Composition of the Canadian Delegation

The Canadian delegation named to attend the Conference was as follows:—

Government Delegates:

Mr. PAUL-EMILE RENAUD, Chargé d'Affaires *ad interim*, Berne; Substitute Government representative on the Governing Body of the International Labour Office.

Mr. HARRY HEREFORD, Special Assistant to the Deputy Minister of Labour.

Government Advisers:

Mr. V. C. PHELAN, Director of Information, Department of Labour.

Mr. J. A. McCLELLAND, National War Labour Board, Department of Labour.

Mr. A. A. HEAPS, Registrar, Unemployment Insurance Commission.

Mr. W. L. BEST, National Labour Relations Board, Department of Labour.

Provincial Government Representative Accompanying Government Delegates:

Hon. C. C. WILLIAMS, Minister of Labour, Saskatchewan.

Employers' Delegate:

Mr. HARRY TAYLOR, Canadian National Carbon Co. Ltd.

Employers' Advisers:

Mr. H. W. MACDONNELL, Manager, Industrial Relations Department, Canadian Manufacturers' Association.

Mr. G. V. V. NICHOLLS, Manager, Research Department, Canadian Chamber of Commerce.

Mr. ALLAN C. ROSS, Vice-President, The Canadian Construction Association; President, Ross Meagher Ltd.

Workers' Delegate:

Mr. CARL E. BERG, Vice-President, Trades and Labour Congress of Canada.

Workers' Advisers:

Mr. WILLIAM PAGE, General Representative for Western Canada, United Brotherhood of Carpenters and Joiners of America.

Mr. C. H. MILLARD, National Director, United Steelworkers of America.

Mr. ALPHONSE ROBERGE, Third Vice-President, Canadian and Catholic Confederation of Labour.

The Honourable C. C. Williams, Mr. Heaps and Mr. Best were, unfortunately, unable to attend the Conference.

Agenda of the Conference

The agenda of the Conference comprised the following items:—

1. Report of the Director-General.
2. Financial and Budgetary Questions.
3. Minimum Standards of Social Policy in Dependent Territories (Provisions Suitable for a Convention) (Second Discussion).
4. Organization of Labour Inspection in Industrial and Commercial Undertakings (Single Discussion).
5. Employment Service Organization (First Discussion).
6. Reports on the Application of Conventions (Article 22 of the Constitution).
7. Freedom of Association and Industrial Relations.
8. Standing Orders of the Conference.
9. Resolutions Presented for Consideration by the Conference in Accordance with the Standing Orders.

For each of the first seven items a report had been prepared by the International Labour Office, of which copies had been circulated to Governments for advance distribution to delegates.

The texts of the Resolutions presented for consideration by the Conference in accordance with the Standing Orders were distributed to the delegates after the opening of the Conference. The text of the proposals made by the Governing Body of the International Labour Office for the amendment of the Standing Orders was also distributed to the delegates after the Conference was opened.

Opening of the Conference

In opening the Conference, the Chairman of the Governing Body, Sir Guildhaume Myrddin-Evans (United Kingdom), recalled that eight years had passed since the Conference had met in Geneva and seven years since the Organization had moved to Montreal. He was proud to say that, throughout those years, despite immense difficulties, the Organization had remained a live and vital institution, with hope never extinguished and faith kept bright. Last year the Conference had approved a relationship Agreement with the United Nations. This Agreement had come into effect. Since then closer collaboration had developed rapidly, not only with the United Nations and its constituent bodies, but with other specialized

agencies and other international organizations. It was one of the earliest results of those closer relationships that the United Nations Economic and Social Council had referred to the International Labour Organization the question of freedom of association which appeared on the agenda of the Conference. Sir Guildhaume Myrddin-Evans welcomed all these developments and hoped that the Conference at this session would make a distinct contribution to the achievement of freedom.

The Conference unanimously elected as its President Mr. Carl Hambro, second Norwegian delegate.

In his presidential address, Mr. Hambro, referring to the relationship established between the Organization and the specialized agencies provided for under Article 75 of the Charter of the United Nations, said that the I.L.O. was the only one which brought into the new international machinery a living and already venerable experience and an unbroken tradition and continuity. In many ways the new agencies set up in international life would look to the International Labour Organization as an example from which they might hope to get guidance. In striving to avoid duplication and waste of effort, Governments would look to the one organization which had already found itself. In Geneva, the delegates were feeling the spirit of Albert Thomas. Mr. Hambro hoped that they would in that spirit lift the weight from the shoulders of all men.

As Vice-Presidents the Conference elected Mr. Carlos Raul Desmaras (Argentina), on the proposal of the Government Group; Sir John Forbes Watson (United Kingdom), on the proposal of the Employers' Group; and Mr. Robert J. Watt (United States of America), on the proposal of the Workers' Group.

The Director-General of the International Labour Office, Mr. E. J. Phelan, acted as Secretary-General of the Conference.

The Chairmen of the three Groups in the Conference were: Mr. Serra Rojas (Mexico) for the Government Group; Mr. H. C. Oersted (Denmark) for the Employers' Group; and Sir Joseph Hallsworth (United Kingdom) for the Workers' Group.

Appointment of Committees

The debate on the Director's Report took place in plenary meeting during the first weeks of the Conference. Meanwhile the other items were being considered by as many committees, whose reports were subsequently considered by the Conference in plenary session.

In addition to the committees thus established, the Conference appointed a Selection and a Credentials Committee.

The Canadian delegation was represented on the various committees as follows:—

Selection Committee:

Mr. Renaud; substitute: Mr. Hereford.
Mr. Taylor (substitute).
Mr. Berg.

Finance Committee:

Mr. Renaud; substitute: Mr. Phelan.

Standing Orders Committee:

Mr. Renaud; substitute: Mr. Hereford.
Mr. Taylor.
Mr. Roberge (substitute).

Committee on Employment Service Organization:

Mr. Hereford.
Mr. Taylor; substitutes: Mr. Ross, Mr. Nicholls.
Mr. Page (substitute).

Committee on Freedom of Association:

Mr. Phelan; substitute: Mr. Renaud.
Mr. Taylor; substitute: Mr. Macdonnell.
Mr. Berg.

Committee on Labour Inspection:

Mr. McClelland.
Mr. Taylor; substitutes: Mr. Nicholls, Mr. Ross.
Mr. Millard.

Non-Metropolitan Territories Committee:

Mr. Roberge (substitute).

The Canadian Delegation took an active part in the discussions both in plenary session and in meetings of the committees on which it served. In the Standing Orders Committee the Canadian Government member sponsored an amendment which raised considerable attention because it involved an interpretation of the Constitution of the Organization as revised in Paris in 1945.

Debate on the Director-General's Report

The discussion of the Director-General's Report customarily affords delegates an opportunity for a general exchange of views on social progress.

The regularity of the pre-war meetings of the Conference led to the Director's Report being regarded as an annual survey. This

year the Report covered a period of only a little more than seven months, that is the time elapsed since the closing of the twenty-ninth session in October, 1946.

The Report opened with a survey of the political background of events. This survey was confined to noting a few developments of major importance which should be borne in mind in considering the subsequent chapters of the Report. It ended with two conclusions: "First, that consideration of regional problems and needs has acquired a new importance, and secondly, that the effort to perfect and strengthen international institutions must be pursued with increased vigour and boldness. Only if international institutions are imbued with a deep sense of their responsibility and opportunity, only if they are conscious of the full import of all that is happening in our changing world, can they hope to keep pace with its evolution and fulfil their indispensable role."

This introduction was followed by three chapters reviewing respectively the economic background, trends in social policy, and the activities of the International Labour Organization. In Chapter I it was noted that:

"In Canada, unemployment has receded from its postwar peak of 213,000 in February 1946 to 117,000 in August 1946—2·4 per cent. of the working population—and is still falling. About a million and a quarter servicemen and war workers have been absorbed into civilian production. Employment in manufacturing industries is about 60 per cent. higher than in 1939. Gross national product of \$11,000 million in 1946 is double the pre-war figure and is only 3 per cent. less than the peak year, 1945. With the removal of many controls, there have been some moderate rises in prices and wages. Sufficient controls are being maintained to ensure reasonable stability and the maintenance of high levels of employment and income."

In Chapter II, economic trends in Canada were summarized as follows:—

"In Canada a measure of uniformity in the regulation of industrial conditions was secured by the exercise of the wartime powers of the federal authority, but when these powers come to an end, the federal authority will be restricted by the constitutional limitations imposed by the peacetime division of powers between the Dominion and the provinces. If, however, legislation prepared by the federal Government is passed by the federal Parliament and subsequently adopted by the provinces, it will provide a national system of regulation.

"There has been a notable increase in the number of labour-management production committees. They were initiated during the war years to increase wartime production through a closer partnership of management and workers, but they operated

so successfully that it was decided that they could also fill a very useful place during the period of reconversion and afterwards. They are independent of collective bargaining, but fill an important role in day-to-day labour management relations."

Of Chapter 3 it should suffice to note that after a brief indication of the collaboration established between the International Labour Organization and the United Nations, it stated that this collaboration should of necessity require greater financial resources in the future. It pointed out that difficulties and dangers are encountered in the application of the present system of payments by Governments out of credits voted in their annual budgets, and suggested that the time had come to devise another system whereby international organizations should enjoy revenues of their own.

A total of 93 speakers, 45 representing Governments and including six Ministers, 21 representing employers, 25 representing workers, and two representatives of the United Nations, participated in the debate. Among the speakers were three members of the Canadian delegation, Mr. Renaud, Mr. Macdonnell and Mr. Berg.

Speaking for the Canadian Government, Mr. Renaud first recalled the achievements of the Organization since it had transferred its working centre to Montreal in 1940 and urged that this American experience be remembered when the time came to decide upon the future seat or centre of the Organization. Mr. Renaud then reviewed the means and methods of the Organization and noted that it was better equipped than ever but cautioned against undue optimism and dispersion of efforts and resources. In concluding he gave an account of today's economic and social conditions in Canada. The text in full of Mr. Renaud's statement is annexed to this Report.

(Appendix 1).

Speaking on behalf of the employers of Canada, Mr. Macdonnell confined his remarks to the imperative need for increased production. It was not only because of its bearing on the immediate problems of anti-inflation and reconstruction that the I.L.O. should be vitally concerned about increased production. There was a long-term continuing problem of vital importance to the I.L.O., namely, social security, with which the maintenance of maximum production had everything to do. Social insurance measures were, so to speak, a function of national income, a dividend paid out of national profits. If the profits were not earned the dividend could not be paid.

(Appendix 2).

Mr. Berg, the Canadian Workers' Delegate expressed satisfaction that the International Labour Organization had withstood the test of time. Canadian labour was continually seeking to improve its free-

dom and standard of living, and in order to succeed it realized that it had to collaborate with the rest of the world. Canada was ready to do everything in her power to assist international bodies such as the International Labour Organization in their work to alleviate the suffering so many people are enduring. There were many great issues before the Conference, but there were none greater than that of freedom of association and industrial relations. (Appendix 3).

Mr. Oersted, the leader of the Employers' Group, asked how long the staff of the I.L.O. would continue to be cut into two parts, with one part in one hemisphere and the rest in another? Having the staff partly in Montreal and partly in Geneva was not the best way for the Organization to carry out its activities. It was practically impossible for the whole staff to find the necessary accommodation in Montreal. It would take years before it could be housed in New York. Until the Conference had taken a definite decision about where the seat of the Office should be, Geneva was the place where the I.L.O. work should be carried out.

Sir Joseph Hallsworth, the leader of the Workers' Group, expressed the wish that the Industrial Committees of the I.L.O. would be widened and encouraged to extend their work. Consideration could be usefully given to the establishment in the different countries of parallel machinery, namely, of tripartite working parties, representative of employers, the trade unions and the general public, to examine and report on industries with a view to strengthening and establishing them on a basis of greater efficiency. Member States must find a way of guaranteeing to the I.L.O. much greater financial remuneration than it had yet been able to command. They should regard their financial obligations to the I.L.O. as an investment which would reap handsome dividends. There was a great yearning in the world for equal opportunity at the highest cultural, moral and spiritual levels.

The other speakers made suggestions covering such subjects as intellectual workers, agriculture, industrial hygiene, migration, the new constitutional provisions relating to conventions, regional activities, recruitment of staff, industrial committees, the position of communities which are attaining ever a greater measure of self-government, and of course many phases of the economic problem.

Replying to the various speakers, the Director-General said that the record of the speeches delivered would serve to guide and inspire the Office and the Governing Body. He agreed entirely with those who, like Senator Thomas (U.S.A.), urged that the Organization must deal more effectively with the problems of agricultural labour, and he welcomed the relationship between the I.L.O. and the F.A.O. The suggestion that the I.L.O. should set up the equivalent of an

international employment service merited careful examination. If adequate revenue was forthcoming to the Organization under the present system, the Director-General would be the last to suggest that a new one should be experimented. If, however, it should prove that the necessary income was difficult to secure, then some other system should be desirable and it would be wise to explore alternative possibilities.

The Director-General agreed with almost all that had been said in favour of concentrating the staff of the Office at one single centre. But it seemed essential for the future success of the I.L.O. that it should work in the closest possible contact with the Economic and Social Council. It was not yet clear where the main activities of the Economic and Social Council would be concentrated. Meanwhile, the staff of the I.L.O. should be located wherever it could best contribute to the effective attainment of the I.L.O.'s objective. Where that was it was premature to decide at this moment.

A speaker had challenged the statement of the Chairman of the Governing Body in his opening address that as regards the relations of the I.L.O. with the United Nations "there is no question of subordination nor of ascendancy." The Director-General thought it was necessary to say that this seemed to him to be beyond dispute. In the operation of the I.L.O. workers and employers were assured an equal status with that of Governments. To make the I.L.O. subordinate to any purely Governmental organization which would be given the power to fix its agenda and to review its decisions, would be to take away from the workers the rights which they were given in 1919. On the other hand, it was the desire and intention of the I.L.O. to co-operate with the United Nations and to submit freely to that co-ordination of international activities from which it has everything to gain and nothing to lose.

A few weeks ago, the World Federation of Trade Unions had asked its Executive Committee "to study the conditions under which official relations may be established between the W.F.T.U. and the International Labour Organization."

Characterizing this as "a most welcome development," Mr. Phelan described the functions of the two organizations as follows: "The I.L.O. and the W.F.T.U. are organizations which differ in character. The I.L.O. is an organization of States. It makes no claim to be the spokesman of the labour movements of the world. It is for the trade unions themselves to organize the machinery through which they can make such collective representations to governments as they may deem desirable. The I.L.O. is an official international instrument in which they have representation and

through which they can pursue the active realization of many of their aims.

"Thus, each has its own sphere of action; there can be neither rivalry nor conflict between them; but in many respects they have common aims and can strengthen one another. I am confident therefore that the discussions which are to take place will lead to a close and fruitful collaboration between them."

The Director-General was glad to be able to inform the Conference that Austria, the Philippine Republic and El Salvador had indicated their intention to enter the Organization. He was sorry, on the other hand, to announce that Yugoslavia had given the statutory two years' notice of her intention to withdraw from the Organization on the ground that "the constitutional provisions and the structure of the International Labour Organization have become incompatible with the economic and social conditions in the Federal People's Republic and Yugoslavia and do not reflect the general trends of development in those fields in the post-war world."

Financial and Budgetary Questions

The Director-General, in submitting the budget estimates, reported that the financial situation of the Organization was now more satisfactory than it had ever been. A very considerable improvement had taken place in the payment of arrears and the Staff Pensions Fund, the Working Capital Fund (3,375,000 Swiss francs) and also a share of the Renovation Fund of the late League of Nations had been handed over to the I.L.O.

In 1946 the budget amounted to 11,621,510 Swiss francs. Income was 13,341,550 Swiss francs or 115 per cent of the budget, this high rate of collection being due to the large amount of arrears collected by the Liquidation Board of the League. Expenditure was 11,603,991 Swiss francs or 99 per cent of the budget. The year, therefore, ended with a cash balance of 1,737,559 Swiss francs which, under the Financial Regulations fell to be taken in reduction of the contributions of States for the 1948 budget.

In 1947 the budget amounted to 16,052,980 Swiss francs. Since that budget was adopted last year a number of heavy new charges had to be carried on the budget, and the Governing Body had approved a supplementary credit of 400,000 Swiss francs to be found by a draft on the Reserve Fund.

Passing to the 1948 budget estimates, the Director-General said that the Governing Body proposed a net expenditure budget of 18,942,983 Swiss francs, an increase of 15·13 per cent on the budget of 1947.

The largest single increase referred to staff. The 1947 budget provided for salaries 5,512,920 francs; the Governing Body proposed in the 1948 budget to increase the figure to 8,001,459 francs to bring about equivalence with the scales paid by the United Nations. In 1938 the proportion of the budget spent on salaries was 67 per cent; in 1948, in spite of the new scale, the percentage would be only 45 per cent.

Turning to the income budget, the Director-General drew attention to the fact that, thanks to the work of the Allocations Committee and the generous co-operation of the States concerned (the United States had agreed to pay 42 additional units), the total number of units of contribution had risen from 690 in 1947 to 784 for 1948. The consequence was that, although the proposed 1948 budget showed an increase in the net value of each unit of contribution, account being taken of the 1946 cash balance available for reduction of contributions in 1948, this increase amounted to only 3·8 per cent.

The Chairman of the Governing Body said that the Governing Body's proposals had been the subject of prolonged and careful examination, and though at the beginning there had been some divergence of opinion on various items, the report itself and every detail in it were put before the Committee with the unanimous recommendation of the Governing Body.

A general discussion then took place in the Conference Committee. All speakers agreed that the Organization should be given the financial resources necessary for it to carry out its work, every care being taken by means of wise management to ensure that the greatest possible benefit would be derived from the expenditure incurred. The question was, however, raised as to whether it was possible to improve the machinery to enable the performance of existing work to be spread over a longer period of time and whether a closer control could be effected of the acceptance by the Organization of new work.

Some speakers drew attention to the inconvenience and expense to the Organization of having its staff divided between Montreal and Geneva, and urged that a decision should be reached at an early date on the permanent seat of the I.L.O. It was agreed that the seat question was "Where can the I.L.O. best serve the purposes for which it was established?" The Director-General pointed out that the I.L.O. could not work in isolation.

The Committee then adopted the proposed budget estimates, chapter by chapter. The budget as adopted is shown below (Appendix 22).

The sessions of the annual Conference and other Conferences roughly account for 7 per cent of the budget. The Governing Body accounts for a little under 2 per cent. The Office staff, including their representation allowances, special staff charges, Staff Pensions Fund, staff retirement and provident fund, travelling expenses for home leave account for a little over 53 per cent of the total budget. The Committees, including the eight Industrial Committees, which have been recently started, now account for about 9 per cent of the total expenditure. The branch offices and public information account for roughly 7 per cent of the expenditure and the printing charges about 4 per cent.

The Reporter of the Committee drew attention to the fact that the scale of contributions recommended by the Allocations Committee was for the 1947 budget only. The question of the scale of contributions to be adopted for 1949 would be examined later, account being taken of the decisions on scales of contributions to be reached by the General Assembly of the United Nations in September 1947. The Committee then adopted the scale of contributions for 1948 shown in the tabular statement below of contributions from States Members for 1948 (Appendix 23).

The contributions from Member States are based on the number of units which each State Member undertakes to contribute. The greater the total number of units the less has to be paid by each Government for each unit. Before the war the total number of units was 1,129·2, which in 1945 dwindled to 623 units. In 1947 the number of units was raised to 690, and in 1948 the total will be 784. The contribution payable per unit was 16,353·11 gold francs in 1947 and this has risen for 1948 to 17,089·92 gold francs.

The Committee then adopted the following proposed Resolution for submission to the Conference:—

“In virtue of the Financial Regulations the Conference passes for the 30th Financial Period ending 31 December, 1948, the budget of expenditure of the International Labour Organization amounting to Sw. francs 19,042,983 or \$4,449,295 (gold francs 13,469,226) and the budget of income amounting to gold francs 13,469,226 (Sw. frs. 19,042,983 or \$4,449,295) and resolves that the budget of income from States Members shall be allocated among them in accordance with the scale of contributions recommended by the Finance Committee of Government Representatives.”

On July 10, this draft resolution was adopted by the Conference by a record vote of 115 against 0.

Standing Orders of the Conference

The Governing Body of the International Labour Office had referred the following questions to the Conference:—

1. Terms of reference of the Committee on the Application of Conventions.

2. Standing orders governing the disqualification from voting of States which are in arrears in the payment of their contributions to the Organization (Article 13 (4) of the Constitution).

3. Conditions under which substitute members of Conference Committees may participate in voting.

4. Procedure for voting on reports of the Credentials Committee at plenary sessions of the Conference.

5. Possibility of devising a procedure whereby formal note could be taken of the fact that the situation disclosed by reports on an unratified Convention was not less satisfactory than the requirements of the Convention (First Report of the Conference Delegation on Constitutional Questions, paragraph 58 and 125 (XIV)).

6. Proposed Convention concerning immunities.

7. Intervals for the consultation of Governments by questionnaires concerning proposed Conventions and Recommendations.

8. Possibility of the election of members of the Governing Body by the single transferable vote.

These questions were referred by the Conference, for consideration and report, to the Standing Orders Committee.

As regards item 1, the Standing Orders Committee unanimously recommended the Conference to approve a revised text of Article 7 of the Standing Orders of the Conference so as to enable the Committee on the Application of Conventions to scrutinize the information Governments are to submit under the revised Constitution on the difficulties encountered in obtaining ratifications, the state of the national legislation in relation to the subject matter of unratified Conventions, and on the extent to which effect has been given or is proposed to be given to Recommendations.

As regards item 2, it will be recalled that Article 13, paragraph 4, of the Constitution of the International Labour Organization as revised at Paris in 1945 provides as follows:—

“A Member of the Organization which is in arrears in payment of its financial contribution to the Organization shall have no vote in the Conference, in the Governing Body, in any committee or in the elections of members of the Governing Body, if the amount of its arrears equals or exceeds the amount of the contribution due from it for the preceding two full years. The Conference may, nevertheless, permit such a Member to vote

if it is satisfied that the failure to pay is due to conditions beyond the control of the Member."

The coming into force of this provision has made it necessary to adopt Standing Orders governing the disqualification from voting of members which are in arrears in the payment of their contributions to the Organization.

The Standing Orders Committee unanimously recommended the adoption by the Conference of the draft Standing Orders on this subject as submitted to the Conference by the Governing Body, with the exception of one. The Committee was unable to reach agreement in the question whether under the Constitution the voting disqualification provided for in paragraph 4 of Article 13 is applicable in the case of the Governing Body to the Employers and Workers members as well as to the Government members. The Canadian Government delegate, Mr. Renaud, contended that the word "Member" in the Constitution must be understood in its widest meaning. The Constitution made no distinction between Government, Employers' and Workers' Members, there was therefore no reason to make one in the Standing Orders. If the procedure recommended by the Governing Body were adopted the balance of voting power in this body would be destroyed. Mr. Renaud stressed the importance of not neglecting the desire of the Paris and Montreal Conference against any infringement of the Constitution on this principle of balance. He appealed for an unanimous decision based on justice and law.

The view put forward by the Canadian Government delegate was supported by Sir Guildhaume Myrddin-Evans (United Kingdom), Chairman of the Governing Body. This clause 13 (4) was introduced into the Constitution at the Paris Conference in 1945. He himself had attended that Conference and could state his view of its intentions. In the original text of this Article of the Constitution, as it was put forward at the Paris Conference by the Office, the disqualification applied only to voting in the Conference. An amendment was presented, for which he himself and the Canadian Government representative were responsible, which was intended to have the effect of extending this disqualification to other bodies of the I.L.O.—the Governing Body, Committees, and the Electoral Colleges. It was common ground that so far as the Conference was concerned the disqualification applied to all representatives—Government, Employer, and Worker—from the defaulting States. It was also common ground that exactly the same disqualification applied in the case of two of the three bodies which were added as the result of the Amendment to which he had referred. Why should it now be

argued that a different measure of disqualification should be applied to the third of the bodies which had been added, namely, the Governing Body? It might be said that this point was never discussed at Paris, but if there had been any question of applying a different kind of disqualification to the Governing Body than to other organs of the I.L.O. the matter would have been challenged at the Conference. There was not the slightest doubt in his mind that what the Conference intended was to apply the sanction of disqualification completely to all the bodies named in the new Constitution. The Governing Body, the Standing Orders Committee of the Conference, and the Conference itself, had no right to place on the Constitution an interpretation which did not belong to it.

After a discussion in which members of the three groups and the Director-General participated, the Committee decided to refer back to the Governing Body the question raised by the Canadian delegate in the hope of achieving unanimity, and to study several aspects of the matter at issue which were not adequately explored.

With regard to item 3, the Standing Orders Committee decided to recommend the Conference to insert in its Standing Orders a new clause indicating the circumstances in which Government deputy members may vote.

As regards item 4, it will be recalled that in the course of the Montreal Session of the Conference (1946) a difficulty was encountered in connection with the taking of a vote by the Conference on the fifth report of the Credentials Committee concerning the credentials of the Greek Workers' delegate. The Standing Orders Committee recommended that with a view to avoiding the recurrence of any difficulty in regard to the matter at future sessions of the Conference, provisions defining the exact manner in which votes on the reports of the Credentials Committee should be taken should be included in the Standing Orders of the Conference.

Under item 5, on the proposal of the Governing Body, the Standing Orders Committee decided to recommend the adoption by the Conference of an appropriate procedure enabling States Members of the Organization to receive credit internationally for social legislation which approximates to, or is superior to, but differs in detail from the standards embodied in a given labour Convention.

With regard to item 6, the Standing Orders Committee decided to recommend the Conference to suspend for the present taking any further action on the proposed special Convention concerning the privileges and immunities of the International Labour Organization and to approve the proposals of the Governing Body concerning the

special conference which will be called upon to adopt a single Convention applicable to all United Nations organizations. It also recommended the Conference to take note that a Convention on the privileges and immunities of the specialized agencies based on the text before the Committee would be satisfactory to the International Labour Organization subject to a number of reservations.

Under item 7, it was noted that the intervals for the consultation of Governments by questionnaires concerning proposed conventions and Recommendations, as laid down in Articles 31 and 32 of the Conference Standing Orders, were not regarded by Governments as sufficient to study the reports and to reply to the questionnaire, and complaints were frequently made that the final reports were arriving too late for adequate study before delegates left their countries to attend the Conference. The Standing Orders Committee recommended therefore that the Conference approve amended texts of Articles 31 and 32 of the Standing Orders of the Conference, which are designed to allow of longer intervals for the preparation of replies to questionnaires.

The Standing Orders Committee devoted a sitting to the discussion of an Indian proposal that the members of the Governing Body should be elected by the single transferable vote. The Committee did not consider that the proposal had received a measure of support which would justify recommending it to the Conference for approval. It, therefore, made no recommendation in the matter, it being understood that the question could be considered again in the future if circumstances should so require.

In recognition of the reasons which had inspired the Indian proposal, the Committee suggested that the following passage from the First Report of the Conference Delegation on Constitutional Questions set up in 1945 should be drawn to the attention of the Conference on the occasion of future Governing Body elections:—

“In order that the International Labour Organization may continue to operate efficiently it requires a strong Governing Body which continues to enjoy the full confidence of the Members of the Organization. Two important conditions must be fulfilled if this confidence is to be fully maintained under present-day conditions. No important region of the world must be left without appropriate representation on the Governing Body, but on the other hand regional undertakings in regard to the distribution of seats must not operate in such a manner as to deprive of the chance of representation on the Governing Body from time to time States which collaborate effectively with the International Labour Organization and give it consistent financial support but which do not fall conveniently into any regional group Since the expenditure of the Organization is

governed primarily by Governing Body decisions it is only reasonable to regard the fact of being in arrears in the payment of contributions as a disqualification for membership of the Governing Body."

In submitting to the Conference the conclusions of the Standing Orders Committee, the Rapporteur said, in part, with particular reference to the Canadian delegate's proposal:—

"The questions which we had to examine were of a very delicate nature and dealt with the application of the Constitution. In view of that fact the Committee proceeded with great prudence and with scrupulous care. We continued our discussions until we could reach unanimous conclusions. In one particularly delicate case dealing with the interpretation of a very important Article of our Constitution, the Committee realized that it would be impossible to achieve complete unanimity, and it decided not to put forward a text in the name of the majority only, as it might have been considered an incorrect interpretation of the Constitution. This question was therefore referred to the Governing Body for re-examination. Interesting and new suggestions were made in the Committee which should be of use to the Governing Body when they undertake this examination."

The Report of the Committee was unanimously adopted by the Conference.

Employment Service Organization

The Conference had discussed this matter on several previous occasions, in 1919, in 1933 and in 1944. In 1919, the Conference adopted a Convention concerning unemployment, Article 2 of which provides for the establishment of a system of free public employment agencies, under the control of a central authority; for the appointment of advisory committees, including representatives of employers and workers; for the co-ordination of public and private free employment agencies on a national scale; and for the co-ordination of the various national systems by the International Labour Office in agreement with the countries concerned. This Convention has been ratified by 31 countries.

In 1933, the Conference considered the question of free-charging employment agencies and adopted a Convention and a Recommendation on this subject. The Convention provides for the abolition of such agencies conducted with a view to profit, and for the supervision of those not conducted with a view to profit.

In 1944, the Conference considered this matter as a part of employment organization in the transition from war to peace, and it adopted the Employment Service Recommendation, 1944, which contains provisions applicable not only in the transition period but also as a part of long-term policy.

In placing this question on the agenda of the 30th Session of the Conference, the Governing Body had in mind the adoption of a Convention. The Office note, which was the basis of the Governing Body's decision, clearly expressed the view of the Office that "it would seem useful to bring together these decisions of the Conference in the form of a Convention, revising them in the light of present conditions, and to add to them as may be desirable other provisions concerning the employment service and the organization of employment. The Convention would replace Article 2 of the Unemployment Convention, 1919."

The Committee to which the matter was referred decided that its conclusions would have the greatest practical value if they were presented in a form which would enable full account to be taken of the differences in economic and employment conditions obtaining in the various countries. It therefore sought to achieve a clear statement of general principles, with suggested methods for their application. The Committee considered it desirable to incorporate the principles in a Convention and the methods for applying them in a Recommendation.

The Committee then dealt, paragraph by paragraph, with the proposed provisions. In the course of this discussion, the Employers' members proposed the substitution of the phrase: "high levels of employment" for the expression "full employment", fearing that the emphasis on full employment might lead to undesirable initiatives on the part of the employment service to achieve full employment at any price. The amendment was rejected by 22 votes to 52.

Paragraph 3 of the Office text provided that regional employment offices, where established, should be directly responsible to the control headquarters of the service. It appeared that this paragraph would create difficulties for several federal countries and might make their ratification of the Convention impossible. On the proposal of the United States Government member the paragraph was deleted.

On the proposal of the Employers' members, clauses (b) and (c) of paragraph 7 of the Office text were reworded in order to avoid any possible implication that occupational and geographical transfers might be carried out without consideration of the human factors involved.

A discussion developed on the voluntary or compulsory character of the use of employment service facilities. The Office text stressed the encouragement of full use of employment service facilities on a voluntary basis; this did not preclude the imposition of a requirement to use these facilities in exceptional circumstances. The Cuban Government member proposed the deletion of the words "on a voluntary basis". This amendment was rejected by 10 votes to 59.

The United Kingdom Government member proposed to omit the last part of paragraph 9 of the Office text, deleting the words following the phrase "by bilateral agreements." While no objection of principle was raised to this part of the paragraph, he considered that international co-operation in this field should be based on agreements between States rather than between employment services. The amendment was adopted unanimously.

Paragraph 1 of the Office draft Recommendation was as follows:—

"The employment service to be composed of three main inter-related operating units—the central headquarters, regional employment officers, and local employment offices."

The New Zealand Government member proposed, in order to take due account of the position in countries in which it was unnecessary or impracticable to establish regional offices at the present time, to delete the words "three main inter-related operating units" and to modify the end of the paragraph to read "the central headquarters, local offices and, where necessary, regional offices of the employment service." The amendment was adopted unanimously.

The Employers' members proposed deleting from paragraph 7(1) of the draft Recommendation the last phrase "on grounds unrelated to working capacity or by other commonly accepted factors tending to make the employment unsuitable in the view of the competent authority", and substituting for it the phrase "on grounds of race, religion or sex, or by other commonly accepted factors tending to make the employment unsuitable." It was explained that the amendment was designed to specify more clearly the factors unrelated to working capacity. On the suggestion of the United Kingdom Government member, the Employers' members agreed to add to their amendment the words "in the view of the competent national authority". With this modification the amendment was adopted by 50 votes to 16.

The Employers' members proposed to make it clear in paragraph 8 of the Draft Recommendation that financial assistance should be granted only in respect of transfers carried out when absolutely necessary as a means of alleviating unemployment. The Australian Government member and the Workers' members opposed the amendment on the grounds that the employment service should not be regarded solely as an organization for alleviating unemployment but as an agent in the development of national employment and economic policy. The amendment was rejected by 20 votes to 49.

The Committee then adopted the following draft Resolution:—

The Conference,

Having approved the report of the Committee appointed to examine item V on its agenda,

Having in particular approved as general conclusions, with a view to the consultation of Governments, proposals for a Convention and a Recommendation relating to employment service organization,

Having also considered proposals for the revision of the Fee-Charging Employment Agencies Convention, 1933 (No. 34),

Decides to place on the agenda of its next general session;

(1) the question of employment service organization with a view to final decision on the Convention and Recommendation on the subject, and

(2) the question of the revision of the Fee-Charging Employment Agencies Convention, 1933 (No. 34).

This Resolution was adopted by the Conference on July 8, by 121 votes against 0, and 1 abstention.

Freedom of Association and Industrial Relations

The placing of "Freedom of Association and Industrial Relations" on the agenda as the Seventh Item for the Thirtieth Session arose in an unusual fashion.

Recently the Economic and Social Council of the United Nations gave consideration to two memoranda submitted to it, the one from the World Federation of Trade Unions, the other from the American Federation of Labour. Both documents dealt with the need of positive action by appropriate international authorities to again assert the right of workers to form and join occupational associations of their own free choice, as well as the right of employees' organizations to bargain collectively on behalf of their members.

The American Federation of Labour memorandum suggested that the International Labour Organization might be asked by the Economic and Social Council to take action, but the World Federation of Trade Unions, on the other hand, appeared to indicate direct action by the Economic and Social Council itself as the appropriate answer to the need stated to exist.

After consideration of procedure, the Council had decided by majority vote to refer the memoranda to the International Labour Organization for consideration at its Thirtieth Session in so far as the subject matter might come within the purview of that Organization. At the same time the Council asked the I.L.O. for a report on the matter, to be available for consideration by the next meeting of the Council.

As the Council felt that the matters involved in the submissions of the trade union organizations went beyond mere trade union rights, it decided also to refer the documents to the United Nations Commission on Human Rights for consideration of any phases of the case which might be dealt with in a general declaration on human rights.

As transmission of the decisions of the Economic and Social Council of United Nations to the International Labour Organization occurred only on April 18, 1947, telegraphic communication with the members of the Governing Body was necessary to establish authority for inclusion of this item on the 1947 agenda. Upon receipt of the necessary authority the Office, in a very brief period, prepared an excellent report on the world background of the whole problem of the right of workers and employers to organize and also drafted comprehensive and detailed texts for consideration by the Conference.

Shortly after the assembling of the Thirtieth Session, the Conference adopted a recommendation of the Selection Committee to refer the Seventh Item to a special committee for consideration and report. It was the general opinion that Freedom of Association was perhaps the most important of this year's agenda items, for not only does the right of workers and employers to freely organize, and to be represented in industrial matters by unfettered associations, underlie the very principles of the International Labour Organization, but this was the first occasion upon which the United Nations had referred a question to the I.L.O. as provided for in the agreement entered into by the two organizations less than one year previously.

In view of the consequence of the matter to be studied, and bearing in mind the universal interest in the right of association, the Conference decided to set up an unusually large committee, to be composed of 44 Government members, 22 Workers' and 22 Employers' members—a total membership of 88.

Mr. Taylor, the Canadian Employers' member on the Committee was selected as chairman of the Employers' Group on the Committee, so that he acted as chief spokesman for the Employers' Group during the proceedings.

The first half dozen sittings of the Committee were given over to general discussion—not inconsiderable part of which revolved around the question of the procedure to be recommended to the Conference in regard to action to be taken there and then, and action to be initiated then, but consummated at the next or subsequent International Labour Conference.

To clearly understand the Committee's proceedings, it will be helpful to describe briefly the texts prepared by the Office and submitted to the Conference.

The first text was a "Proposed Resolution concerning Freedom of Association and Industrial Relations." This consisted of a Preamble, reciting previous action of the International Labour Office in the same field since its inception in 1919. Then there followed five parts, dealing in detail with:—

Part I—Freedom of Association;

Part II—Protection of the Right to Organize and Bargain Collectively;

Part III—Collective Agreements;

Part IV—Voluntary Conciliation and Arbitration;

Part V—Co-operation between the Public Authorities and Employers' and Workers' Organizations.

The second text consisted of a list of 30 points, covering the same ground as the draft Resolution. The intention here was that agreement on a list of points in 1947 would provide a base necessary under I.L.O. double discussion procedure, should the Conference of 1948 wish to adopt a Convention or Conventions concerning the entire ground, or any area of it.

Each section of the Draft Resolution not only recited the general principle involved, but spelled out most of the significant implications.

The general discussion participated in by a long list of speakers from each of the three groups, helped very definitely to clarify the views of the Committee, and to reduce to a working basis the task ahead. It developed that there was unanimity on the more essential points, while differences on other points would not suggest that divergent views could not be harmonized.

There was no evident dissent from the view that freedom of association amongst workers and amongst employers as well, is an essential of progress toward industrial peace, and along the road of social progress also. It was emphasized several times over that the International Labour Organization regarded this freedom as the cornerstone of its structure, and that this fact had been proclaimed by successive I.L.O. declarations ever since the formation of the organization in 1919.

There was a general feeling that full reference of the matter in its present form to the I.L.O. by the Economic and Social Council was at the same time an opportunity and a challenge—it gave the I.L.O. a chance to prove itself, while failure to act would be virtual abdication of its functions by the Organization. The question before the Committee therefore was not whether the present Conference should take action, but rather how far that action should extend at

the moment, given the brevity of the notice with which this topic had been added to the agenda in concrete form. In any case, reference of the matter to the I.L.O. by the Economic and Social Council was strongly endorsed.

The workers, arguing that even though notice was short the subject matter was old familiar ground, urged the Committee to go a considerable length by way of resolution at the present Conference, while at the same time preparing the way for the second discussion on a Convention or Conventions to follow next year.

The employers, having early suggested preparation of a report for the Economic Council but without the Conference adopting a detailed resolution, later waived their objection to a resolution: they agreed to proceed as far as they thought could be done at the present Conference, although holding certain reservations in regard to some phases of the case—notably in the case of the “closed shop” or its variants.

Members of the Government group, strongly supporting freedom of association and further action by the I.L.O., felt that a resolution covering, perhaps, the first two Parts of the draft submitted by the Office, might be attempted this year while laying the groundwork for future consideration in 1948, and later. The Canadian Government member, speaking in the general discussion, supported this view.

Detailed consideration of the Office text in its Parts I and II followed the general discussion.

On procedure, as developed from time to time, there was general approval of this plan:—

(a) that the Committee should recommend to the Conference that it adopt a resolution covering the substance of Parts I (Freedom of Association) and Part II (Right to Organize and Bargain Collectively) of the Office text;

(b) that a list of points be prepared correlative to these two Parts, which would then be in line for discussion for Convention purposes in 1948;

(c) that other Parts of the draft Resolution should be placed on the agenda for first discussion in 1948, looking to the development of International Labour Conventions in later years;

(d) that a report be sent to the Economic Council, indicating the action taken by the International Labour Organization in 1947, and that planned for subsequent Conferences.

When finally the Committee reported to the Plenary Session, it did so in the sense just indicated. The Resolution based upon

Parts I and II of the Office text, though it made material changes in wording from the original, was the same in essentials as the Draft.

The main points developed during the discussions in detail, may be set forth briefly as follows:—

(a) Although all agreed upon the essential principle of freedom of association and more specifically, the rights of trade unions, there were many sharp differences as to the detailed significance of that principle, on its practical application, and on the wording to be used to express the views of the International Labour Organization. These differences invariably were between workers and employers with Government members taking somewhat of a middle course.

(b) It was pointed out by more than one Government member (including Canada's) that "freedom of association" was to be understood as being subject always to ordinary domestic laws in relation to public order. Government members, while admitting the desirability of not including this point at all appropriate locations in the text, insisted that this was the understood background—a view accepted by the Committee.

(c) As in the general discussion, it was again stated before the Committee that in some countries today, legislative and administrative action hampers and interferes with the free right to organize. (The memorandum from the World Federation of Trade Unions speaks in the same vein.) No country or countries were specified however.

(d) The question of whether the "closed shop" agreement between employers and employees (or any modified form of union security) is in violation of the principle of freedom of association, arose more than once in the discussions. Employers took the position emphatically that the "closed shop" is a species of coercion, and hence denies the right of a free choice to the individual. The workers strongly opposed this view, submitting that union security is a necessity to promote stability in industrial relations, and as well to protect the workers' organization from dissident minorities. In the outcome the majority of the Government members supported the view that some degree of union membership security, when arrived at by free collective bargaining between representatives of workers and employers, is not in violation of the spirit of freedom of association, and this view finally prevailed.

(e) One further point pressed by the workers related to the setting up of some form of international machinery to supervise the establishment and maintenance of freedom of association in the various countries. In this connection a compromise pro-

posal, advanced by the British Government member, was finally adopted. Specifically the British proposal was for a Resolution to be adopted by the Conference, requesting the Governing Body to study in all its aspects the question of international machinery to supervise freedom of association, any such machinery to be under the International Labour Organization. Adopted by the Committee, the appropriate Resolution was embodied in the Report made later to the Plenary Session.

The Canadian Government member took an active part in all the proceedings, and gave full support in Committee to all main features of the Report as already outlined. An amendment presented by the Canadian Government member during the earlier part of the proceedings would have stated Part II of the main Resolution (on Collective Bargaining) as a simple, general principle without detail. Although this proposal gained some support, it was withdrawn upon it becoming evident that the majority of the Committee preferred the general pattern in the Office text, with amendments.

The Report of the Committee was presented to the Plenary Session on the final day of the Conference, July 11. The several speakers who took the rostrum to discuss the Report expressed general approval, even if some who participated from Employers and Workers felt the Report went too far or did not go far enough, as the case might be. It was agreed, however, that considering the time at the disposal of the Committee, and the divergence of opinion on important detail, the Report represented a reasonable synthesis of opinion, a noteworthy advance toward the clarification and spread of the fundamental principle of the International Labour Organization as the light-bearer in the field of labour relations in their international aspects.

The full text of the statements made on this matter in plenary session of the Conference by Mr. Phelan and Mr. Taylor will be found below. (Appendices 4 and 5).

Labour Inspection

The question of the organization of labour inspection in industrial and commercial undertakings was placed on the agenda of the 30th Session of the Conference, for single discussion, by a decision taken by the Governing Body at its 98th Session (May 1946).

The effect of this decision was that the Conference undertook consideration of a question concerning which the Organization had, before the war, made considerable progress towards the adoption of new international regulations. The Governing Body at its 86th Session (February 1939) placed the question of labour inspection, for single discussion, on the agenda of the Conference which was to

have been held in 1940, and at the same time decided that the question should receive prior consideration by a Preparatory Technical Conference. That Conference met in Geneva in May-June 1939 and approved a list of points to be taken as a basis for framing a questionnaire for submission to the Governments in preparation for the International Labour Conference in 1940.

In accordance with the Standing Orders of the Conference the Office prepared and circulated to the Governments a report which contained: (1) a comparative analysis of national laws and regulations concerning the organization of labour inspection, (2) the report adopted by the 1939 Preparatory Technical Conference, and (3) a questionnaire drawn up in the light of the conclusions reached by that Conference.

In consequence of the decision to place the question on the agenda of the 30th Session of the Conference, the Office re-examined the situation of the law and practice in the various countries and came to the conclusion that the basis for international regulation of the question of labour inspection had not changed sufficiently to require extensive modification of the questionnaire prepared in 1939.

The Office considered that the original questionnaire submitted to the Governments in 1939 could be reissued in 1946 with only two changes.

On the basis of the replies to the questionnaire the Office proposed three texts for consideration by the Conference. The first was the text of a general Convention which contained international regulations for the organization of labour inspection. The second text was a general Recommendation designed to supplement and complete the 1923 Recommendation and the Convention now proposed. The third text was also a Recommendation having reference to inspection in mining and transport undertakings.

The Conference Committee to which these texts were referred considered more than 100 amendments, some of which required several meetings before decisions could be reached.

Considerable disagreement arose, at the very outset, on proposals to delete paragraph 2 of Article 2 of the draft Convention, or to substitute a substantially different text. These proposals were moved from fear that an unconditional permission to exempt mining and transport undertakings from this Convention would be taken to imply that the establishment of properly organized inspection services for mining and transport is not considered essential. The proposal to delete paragraph 2 was rejected by 34 votes to 47. A proposal to adopt a new text to the effect that national laws or regulations may provide for special systems of inspection in mining and transport undertakings was rejected in a record vote by 42 to 49.

The Committee had also a lengthy discussion of Article 3, which included an illustrative list of subjects on which legal provisions might be enforceable by labour inspectors. It became evident that many of the countries represented were endeavouring to fit the article into the conditions about which they were most familiar. The Employers' members proposed that the list be deleted, on the grounds that it would not in any case involve precise obligations for ratifying Governments and would probably give rise to misunderstandings. These amendments were rejected, with the exception of one proposed by the United States Government member. The Committee adopted by 38 votes to 35 an addition submitted by the Indian Government member to the effect that the function of the system of labour inspection should also be to bring to the notice of the competent authorities defects or abuses not specifically covered by existing legislation.

Article 6 points out the type of officials who shall be comprised in the inspection staff. Some of the representatives were anxious to add something to the text that would have, in the majority opinion, destroyed the efficiency of the inspection staff.

The Indian Workers' member proposed the addition of a new clause to the proposed Article 8 to lay down that an adequate number of women inspectors must be appointed, taking into consideration the number of women workers employed in the industrial establishments subject to inspection. After it had been suggested that the point was substantially covered by other provisions in the Convention, the Committee rejected the proposal by 6 votes to 29.

Article 9 gave rise to four amendments, three of which dealt with the question of the list of technical experts and specialists submitted in the Office text, and some of which called for the deletion of the reference. The Canadian Government member, along with others, opposed the deletion and the proposal was withdrawn.

A number of amendments to Article 11 sought to increase offices and transport facilities for inspectors but the proposals were either withdrawn or defeated.

The deletion of paragraph 2 of Article 12 was proposed by the Argentine Government and Workers' members who considered that inspectors should be left entirely free to decide whether to notify employers of their presence on the occasion of an inspection visit. The Canadian Workers' member considered that the paragraph should be retained, because it covered a necessary procedure which should be followed in making visits of inspection. The Committee rejected the proposal by 25 votes to 42. Another amendment to paragraph 2, moved by the Canadian Employers' member, proposed to add a provision to the effect that inspectors should give notice of their visit

upon arrival. The Committee rejected this amendment by 32 votes to 34.

The United Kingdom member proposed a revised text for paragraph 1 of Article 13, the purpose of which was to make it clear that inspectors should be empowered to initiate action with a view to the remedying of defects and not themselves to remedy the defects. This revised text was adopted by 51 votes to 26.

Article 16, as proposed by the Office, provided that inspection visits were to be made at least once a year in dangerous and unhealthy workplaces and as often as necessary to ensure enforcement of the law in other workplaces. The United Kingdom Government member proposed to replace these provisions by a text laying down the general principle that all establishments and workplaces are to be inspected as often and as thoroughly as is necessary to ensure the effective enforcement of the relevant legal provisions. Other members of the Committee, including the Canadian Workers' member, while approving the general lines on which the amended proposal was drawn up, wished to add words to indicate that visits should, as a general rule, be made once a year. The Committee rejected this latter proposal by 32 votes to 36, and adopted the text of Article 16 proposed by the United Kingdom Government member by 50 votes to 17.

An amendment to Article 17 was moved to substitute for the Office text one providing that persons who violate or neglect to observe legal provisions enforceable by labour inspectors should be liable to prompt legal proceedings. This amendment was adopted by 42 votes to 2.

As regards Article 19, there was some discussion as to whether the maximum time interval to be prescribed for the submission of inspectors' reports should be one year or less. The French Workers' member considered that the reports should be required to be submitted at least every three months, and the Canadian Workers' member proposed, as a compromise, to call for reports at least twice a year. The Committee took a vote on the latter proposal, which it rejected by 14 votes to 35.

The deletion of Article 21 was proposed by the South African member, who considered it desirable to avoid the inclusion in the Convention of detailed requirements as to statistics which might give rise to difficulties in some countries. A number of members, including the Canadian, United Kingdom, United States and Swiss Government members, supported the proposal, and argued that the contents of the annual reports were sufficiently covered in paragraph 8 of the proposed general Recommendation. Several Workers' members, on

the other hand, argued that it was necessary to include in the Convention provisions concerning the basic subjects which should be dealt with in the reports. The proposal to delete the Article was rejected by 13 votes to 50.

The Committee considered a new text for paragraph 1 of the proposed Recommendation concerning labour inspection, submitted by the United Kingdom Government member, to the effect that arrangements should be made under which plans for new establishments, plants and processes of production may be submitted to the labour inspectorate for an opinion whether such plans would render difficult or impossible compliance with the laws concerning industrial health and safety. To this principle was attached a proviso that the inspectorate should not be obliged to express an opinion, and that in any case employers and others would not be relieved of their legal obligations. The Canadian, Australian, Belgian and Netherlands Government members expressed opposition to the proviso. The Committee decided, by 67 votes to 2, to delete the proviso, and, by 71 votes to 0, to adopt the first part of the proposal.

In plenary meeting held on July 11, the Conference adopted the Convention and the two Recommendations proposed by the Committee by a record vote of 135 votes to 0.

Social Policy in Non-Metropolitan Territories

Under this heading the Conference was called upon to discuss five draft Conventions prepared by the Office on the basis of a first discussion by the 29th Session of the Conference, as follows:—

- A Convention concerning social policy;
- A Convention concerning the right of association and the settlement of labour disputes;
- A Convention concerning labour inspectorates;
- A Convention concerning the application of international labour standards; and
- A Convention concerning the maximum length of contracts of employment of indigenous workers.

It is a well known fact that social conditions of the people of the various non-independent territories have been extremely backward, compared with those of self-governing countries. These Conventions were intended to narrow the gap in social conditions which may exist between the two sets of territories.

After a close discussion, provision by provision, the five draft Conventions were adopted by the Committee to which they were referred.

During the discussion of the reports of the Committee in plenary meeting of the Conference, Mr. Gavin (United Kingdom) outlined the general attitude of employers towards the proposed Conventions. The Employers of those countries with responsibilities in respect of non-metropolitan territories were no less imbued with the desire to see social advancement among the peoples of these territories than any other group in the Conference. They welcomed, and would actively support, any practical measures which it was possible to take on a national or international basis, through the International Labour Organization or otherwise, to secure the application to non-metropolitan territories of minimum standards in the field of social policy. So far as the matters now before the Conference were concerned, the Employers had subjected them to examination from these standpoints: Firstly, were they within the competence of the International Labour Organization? Secondly, were they fair and reasonable and capable, if adopted, of being generally applied, now or within a reasonable period, over widely different areas in the world, where conditions vary from the primitive tribal organization of Central Africa to something approaching Western civilization? Thirdly, were they, as proposals for Conventions, in such a form, that, upon ratification, they would mean the same thing, as international legal obligations, for and to every country? Employers had come to the conclusion that the first of the proposed Conventions did not satisfy these three basic requirements. In these circumstances, Mr. Gavin had been asked to say that, in general, Employers were unable to vote for the proposed Convention governing social policy in non-metropolitan territories, and would with a single exception, abstain. As regards the proposed Convention concerning labour inspectorates, Employers would support it, but they would vote against the proposed Convention concerning the application of international labour standards to non-metropolitan territories. As to the proposed Convention concerning the maximum length of contracts of employment of indigenous workers, they would move an amendment.

On July 11, the five proposed Conventions were adopted by the Conference by a two-thirds majority, as follows:—

The Convention concerning policy, by 103 votes against 1, with 25 absentions;

The Convention concerning the right of association and the settlement of labour disputes, by 121 votes against 0, with 3 abstentions;

The Convention concerning labour inspectorates, by 120 votes against 0, with 3 abstentions;

The Convention concerning the application of labour standards, by 95 votes against 20, with 12 abstentions;

The Convention concerning the maximum length of contracts of employment of indigenous workers, by 99 against 0, with 24 abstentions.

Application of Conventions

In fixing the agenda of the 30th Session of the Conference, the Governing Body decided to treat Article 22 reports as a separate question on the agenda. The Committee welcomed this decision of the Governing Body with much satisfaction, as it ensured the presence at the Conference of qualified experts to deal with the intricate legal and administrative questions which arise in connection with the ratification and application of international labour conventions.

The Committee had submitted to it the following documents to serve as the basis of its deliberations:—

1. Summary of Annual Reports made under Article 22 of the Constitution;
2. Report of the Committee of Experts on the Application of Conventions;
3. Annual reports from certain Governments which were received too late for examination by the Committee of Experts;
4. Information supplied by certain Governments, supplementary to that contained in their annual reports, in response to a request by the Committee of Experts;
5. Tables showing the position of ratification and votes cast by Government delegates.

The Conference, when it met for its 30th Session, had adopted a total of 80 Conventions. As, however, 9 of the Conventions were adopted by the Maritime Session of the Conference at Seattle in June 1947 and 4 at the 29th Session of the Conference at Montreal in September-October 1946, those latter Conventions may be left out of account in view of their recent adoption. Out of the remaining 67 Conventions adopted during the period 1919-1939, 53 having received the necessary ratification were in force.

The total number of reports on the application of these Conventions which had been received from Governments was 578, out of 731 due. Nine reports, covering Conventions 1, 7, 8, 14, 15, 16, 22, 26 and 27 had been received from the Canadian Government, and none was still outstanding. No reports were at hand from the Governments of Afghanistan, Colombia, Liberia, Luxembourg, Peru, Uruguay and Yugoslavia. To these countries may be added those

States which had not a single ratification to their credit: the U.S.S.R., Bolivia, Costa Rica, Ecuador, Ethiopia, Guatemala, Haiti, Honduras, Iceland, Iran, Panama, Paraguay, Salvador and Siam.

The Committee considered that the fundamental problem as regards Conventions was not only their ratification and the adoption of implementing legislation, but above all their effective application by means of an adequate system of labour inspection. To this effect the Committee stressed the importance of resuming immediately the practice of holding regional meetings of labour inspectorates which, before the war, yielded valuable results at The Hague and at Vienna.

It was the unanimous opinion of the members of the Committee that this Committee is a nerve-centre towards which all the activities of the Organization converge and that therefore it is one of the most essential organs of the Conference.

There was full agreement that the present mechanism of supervision does not as yet possess all the effectiveness required. This system is based solely on written documents which do not always bring out the facts in their full reality. The Committee was unanimous in its desire to see a more realistic procedure adopted.

In the existing system of supervision the Committee of Experts on the Application of Conventions plays a fundamental part. The preliminary work carried out by the Experts is indispensable to the Conference if it is to accomplish in a satisfactory manner its own task in this respect. The Conference Committee was in agreement that the conditions under which the Committee of Experts works were not satisfactory and that they should be improved without delay.

The Committee also decided to recommend that the Conference should ask the Governing Body to consider the reinforcement of the services of the Office which are responsible for dealing with questions connected with the ratification and application of Conventions. Such reinforcement had become all the more necessary since the services will henceforth be entrusted not only with the examination of the application of ratified Conventions but also with the study of national legislation in relation to unratified Conventions as well as of the action taken on Recommendations.

The Committee was of the opinion that Article 23 of the amended Constitution which provides for communication, to the representative organizations, of the information and reports submitted to the International Labour Office by the Governments, puts at the disposal of the employers and workers an effective weapon for exercising supervision at the very outset of the procedure. It

expressed the hope that the organizations of employers and workers will take the fullest possible advantage of the new provision.

The French Government member moved that the International Labour Office should have at its disposal in its various States or groups of States representatives who could keep permanent touch with the national Labour inspectorates and could keep the relevant Section of the International Labour Office periodically informed of their observations on the application of Conventions. This proposal was rejected by the Committee by 8 votes to 29, with 4 abstentions.

The Report of the Committee on the Application of Conventions was unanimously adopted by the Conference at a plenary meeting held on July 10.

Resolutions

Four resolutions were submitted in accordance with Article 17 of the Standing Orders of the Conference, namely:—

A Resolution concerning welfare facilities for workers, submitted by the Belgian Government delegation;

A Resolution concerning maintenance of rights of migrant workers under social insurance schemes, submitted by the Polish Government delegation;

A Resolution concerning women's work, submitted by the United States Government delegation;

A Resolution concerning European and world reconstruction, submitted by Mr. Jouhaux, Workers' delegate, France.

These four resolutions, on favourable report of the Resolutions Committee, were unanimously adopted by the Conference.

Re-Admission of Austria as Member State

The Conference had before it an application from Austria for re-admission to the Organization. The application was first considered by the Selection Committee, which, on report of a Committee of Three, including Mr. Berg, Canadian Workers' delegate, adopted the following resolution:—

The General Conference of the International Labour Organization,

Having been seized of an application from the Government of Austria for the re-admission of Austria to the International Labour Organization; and

Recalling that it has been the firm conviction of the Organization that its ends could be more effectively advanced if the membership of the Organization could be made universal,

Decides to re-admit Austria to the International Labour Organization with the same rights and obligations as the other Members of the Organization.

The Conference takes note that Austria recognizes the principle that the obligations resulting from Conventions ratified by her prior to 13 March, 1938, continue to be binding and that the Austrian Federal Government will eliminate as soon as possible changes in its laws and regulations bearing upon the application of these Conventions which were made by the German authorities during the occupation of Austria.

The Conference authorizes the Governing Body to make the necessary arrangements with the Government of Austria in regard to its financial contribution.

The re-admission of Austria will take effect as soon as the Government of Austria has communicated to the Director-General of the International Labour Office its formal acceptance of the provisions of the Constitution of the International Labour Organization, of the Constitution of the International Labour Organization Instrument of Amendment, 1946, and of the present Resolution.

This resolution was unanimously adopted by the Conference on June 24. The same day the Austrian Government signified the formal acceptance stipulated in the Resolution, and on June 27, the President announced to the Conference that the re-admission of Austria to the Organization had taken effect in accordance with the terms of the Resolution.

Closing of the Conference

When the work of the Conference was completed, the Chairman of the Government Group as well as the Employers' and Workers' Vice-Presidents of the Conference came in turn to the rostrum and said with a common voice that the achievements of this session would rank among the best accomplished by any session of the International Labour Conference, that they were returning to their countries strengthened by the contact they had had with each other, as members of the three groups, that they had one common faith, the dignity of the human individual, and were pilgrims to one common shrine. The Conference had not only adopted Conventions; it had discussed fundamental principles that would influence the lives of the nations. There had been free speech, but over and above it there had been an ardent feeling of fellowship and joint responsibility.

The Conference was declared closed by the President at 6.15 p.m. on July 11.

We have the honour to be, Sir,

Your obedient servants,

P. E. RENAUD.

HARRY HEREFORD.

Appendix 1—Statement on the Director-General's Report by Mr. P. E. Renaud, Senior Government Delegate

Other speakers have referred to the Director-General's Report and the qualities for which it deserves not only reading but meditation. I shall not repeat their praise. Let me simply stress the self-restraint of the Director-General and his skill in writing selectively and concisely despite the wide field he has covered. One of his predecessors replied to the criticism of being prolix by saying that not everyone could have put the eternal verities into a single verse. This reply was witty, but conciseness, next to wealth of substance, still remains the supreme quality in a Report which has to give a panoramic view of events in a short space.

May I now refer to the "local colour" of this Report—I mean the place in which we are meeting today. Even a temporary return to this part of the world marks a new phase in the history of the institution. It means that, returning with all its sails set to its pre-war harbour, the Organization is now once more fully equipped.

Having taken across to Canada the faith of the old conquistadors and the treasure of the Organization, the Director-General, leaning over the bows of his galleon, has seen in the American sky new stars arise; the Declaration of Philadelphia, the Charter of the United Nations, the International Labour Code, the Resolutions of the Mexico Conference, the Conventions of Seattle, the Montreal Constitution and the New York Agreement with the United Nations. We must hope that those who preside over the destinies of the Organization will remember, when the time comes for great decisions, this marvellous American experience.

The Organization has done more than become fully equipped again. It has forged new weapons. The use of this building for its Sessions is one proof of this; another more important proof is to be found in the Industrial Committees. These committees fill a gap which previously existed between the General Conference and the working classes in the different industries. Everybody now agrees that they have a fine future, but we must not indulge in undue optimism and must not allow the efforts and resources of the Organization to be too much dispersed. We must not attempt to do too much all at once.

The Regional Conferences are another method of work to which the Organization is having increasing recourse. These Conferences in their turn fill a gap between the General Conference and the working classes seen as regional populations. They have given fine results on the American Continent, and there is no reason to doubt that the Asian Conference and that of the Middle East, for which preparations are now being made, will be equally fruitful.

One of the matters which is not yet fully settled but to which the Director-General is giving his attention is the Office staff. A committee established with the support of Canada has just submitted recommendations for improving the conditions of the staff. Canada attaches importance to these recommendations and is also interested in the appointments already announced of new high officials. The Organization owes a great part of its striking success to its officials.

A last weapon which will permit the Organization to resume its due place in the world of ideas is the whole body of its publications. These publications have just been thoroughly examined by the Governing Body. The Canadian Government representative was particularly glad to hear the Director-General pay a tribute during this debate to the Canadian official whose energy has enabled the whole range of publications to be reconstituted and the work of the Organization thus to be made known throughout the world.

Whatever the value of the Organization's own equipment there is no contribution greater than that which can be made through the economic prosperity of each country and the adoption in each of measures of social progress. Never, perhaps, have economic and social conditions been better in Canada than they are today. Not only are national production and national income as high as ever, they have remained at the highest point they have ever reached. Personal income has also increased, thanks to the increase in State subsidies to individuals, either in the form of family allowances or in the form of bonuses to ex-soldiers and sailors. Hitherto, we have not had to have recourse to large-scale public works to provide employment for all. This happy situation is likely to last for some time yet, for private establishments are proposing this year to increase their capital expenditure by 70 per cent as compared with 1946, and the execution of their plans on such an enormous scale indicates the confidence which the business world has in the future of our country.

Employment has reached such a level that the Minister of Labour recently said that hardly anyone was unemployed in Canada except the unemployable and persons in process of changing jobs. Therefore there is nothing astonishing in the fact that the Employment Service, which found jobs for about 255,000 persons a year before the war, now deals with something like 2,000,000.

As it considers that the country needs to increase its manpower, the Government, whose principle it is to relate the number of immigrants to the absorption power of the country, has decided to remove certain restrictions limiting the entry of new settlers. Thousands of European refugees and persons displaced by the war will be able to take advantage of this action. At the same time the Government is carrying out a comprehensive program of rehabilitation for ex-members of the Forces and a ten-year vocational training program which, with the support of the provinces, it launched two years ago. A considerable increase in skilled labour is expected from the execution of this scheme.

In the legislative field, our Central Government has decided to revise its Labour Code. It has just submitted to Parliament a comprehensive Bill on this subject. This Bill declares certain practices limiting trade unionism to be illegal and defines the procedure to be followed for the recognition of unions as bargaining agents, and agents for the application not only of collective agreements but also of certain legal provisions. The Bill prohibits strikes and lockouts which are undertaken before any conciliation procedure has been initiated, and during the currency of a collective agreement. It provides also for the maintenance of the Labour Relations Board, which deals with demands concerning the right of trade unions to represent employees in collective bargaining, and also the maintenance of committees of enquiry to examine industrial disputes.

Finally, the Government has submitted to Parliament a resolution for the ratification of the revised Constitution of the International Labour Organization.

By these measures, following many others, the Canadian Government has given concrete proof of its intention, as proclaimed by Prime Minister Mackenzie King when President Truman recently visited Ottawa, to collaborate actively with all those who are trying to build a better world, based on friendship and mutual aid, in which human beings will be able to live in peace, prosperity and happiness.

Appendix 2—Statement on the Director-General's Report by Mr. H. W. Macdonnell, Employers' Adviser

I propose to confine my remarks to one of the many important questions dealt with in the Director-General's Report, which, let me say, seems to be well up to the standard of excellence we have come to expect from him. The question I wish to refer to, on behalf of the employers of Canada, is the urgent need for increased production.

The Director-General points out that though economic progress has been on the whole greater than might have been anticipated, "statesmen are still haunted by the gravest anxieties, one of the chief of which is the grave threat of continued inflation in the leading industrial economies arising from the upward spiral of wages and prices, which brings to the parties concerned, at most only temporary advantages; and to the community as a whole, a steady reduction in the real value of their savings".

The Report goes on to point out that wage increases arising from increases in production are sound and proper, but that nothing could be more unsound than wage increases arising from inflationary pressures, which are, in effect, agreements between employers and workers to increase their money incomes, regardless of the effect on the economy as a whole.

The Director-General expresses the opinion that these fundamental issues are being more widely understood and the fundamental truth recognized that "we cannot share what has not yet been produced". He calls for, and rightly calls for, "courageous leadership, the collaboration of all who can educate, or stimulate an understanding of what is at stake, and finally a voluntary discipline whereby collective wisdom triumphs over selfish interest"; and he finds evidence that this voluntary discipline and collective wisdom are beginning to manifest themselves.

It will be agreed that there is a considerable amount of evidence to support the Director-General's hopeful view. In recent years both political and labour leaders in the United States, the United Kingdom and Canada, and no doubt in certain other countries, have emphasized the imperative need for increased production. One thinks of the "work or want" campaign which is in progress in the United Kingdom at the present moment.

What is somewhat disturbing, however, is that so little attention seems to have been paid to this subject by those who have so far participated in the discussion, notwithstanding the very great importance attached to it by the Director-General. With the exception of the British Minister of Labour and a very few others, the speakers have "passed by on the other side", so far as the imperative need for increased production is concerned.

We are meeting at a time when the United States, recognizing that Europe is in desperate need of assistance to recover from the ravages of war, has come forward with an offer of peace-time lend-lease. Can it be doubted that there is no less urgent need for the recipients of peace-time lend-lease to increase production to the maximum than there was for the recipients of war-time lend-lease? The battle of anti-inflation and reconstruction requires fully as much effort on the production front as the battle against Nazism, and where should leadership be looked for if not from the International Labour Organization, where the two partners in production sit in conference with Governments?

But it is not only because of its bearing on the immediate problems of anti-inflation and reconstruction that this Organization should be vitally concerned about increased production. Anti-inflation and reconstruction, are, we hope, short-term problems; but there is a long-term continuing problem of vital importance to the International Labour Organization,

namely, social security, with which the maintenance of maximum production has everything to do. It is right and proper that the Organization should assume leadership in the field of social insurance, but its Members should not lose sight of the fact that, as the Director-General has pointed out, "we cannot share what has not yet been produced"; that social insurance measures are, so to speak, a function of national income, a dividend paid out of national profits, and if the profits are not earned the dividend cannot be paid.

The total amount of wages and salaries paid in Canada doubled during the war. No one will suppose this was unrelated to the fact that during the same period the total value of production also doubled. As it is with wages, so it is with social insurance benefits. This has been pointed out nowhere more clearly or convincingly than in Lord Beveridge's famous Report on his "cradle to grave" insurance scheme.

I have ventured to underline this one passage in the Report before us for a further reason. This Organization, I think it might fairly be said, confined itself in its early years almost entirely to social and industrial questions. As time went on, however, it found itself inevitably drawn more and more into the consideration of economic questions, or, at any rate, the economic aspect of social and industrial questions. The need for increased production at the present time is a striking case in point.

It is for the Conference, I respectfully suggest, to take up what the Director-General has said and by a special Resolution, or otherwise, to show that it appreciates its special urgency under present world conditions. It is by such action, even more than by pious declarations of belief in social justice and international co-operation, that we shall demonstrate to the world, and in particular to the Economic and Social Council of the United Nations, who appear to have some doubt in the point, that we are competent in this Organization to deal with all questions involving the relations between employers and workers, including the economic aspects of such questions. Let the Conference put the full weight of its moral authority behind the Director-General's call for increased production.

Appendix 3—Statement on the Director-General's Report by Mr. Carl E. Berg, Workers' Delegate

Mr. President, as the workers' delegate from Canada, it is indeed a pleasure to congratulate the Director-General upon the splendid Report submitted. I feel, however, that I would be remiss in my duties did I not also include in my congratulations the entire staff of the I.L.O. which has co-operated in the preparation of that Report, and who have always stood ready to supply us with valuable and needed information from time to time, thereby greatly assisting us with our work.

The Canadian worker appreciates that the I.L.O. is the only official international body where representatives of the three partners, labour, employers and governments, sit together and work out their joint problems. We are also appreciative of the fact that this organization has withstood the test of time, and that even after the most destructive war the world has ever known, here are the three partners again, in Geneva, meeting in a most friendly and democratic atmosphere, seeking to find a common solution to the many complex problems confronting us, some old and some new, with a common determination on the part of all to co-operate with each other to make this a better world for all mankind. Canadian labour, for whom I speak, very early, yes, since the very inception of the I.L.O., set forth its support of the principles of international co-operation; in this respect we have never faltered. Perhaps being one of the youngest nations in the world, which has drawn its people from all nations and races,

inheriting from them that which was best in all of them, assimilating them into one mighty nation, almost a United Nation of its own, it would only be natural that Canada should stand foremost among the nations of the world in respect to Freedom and Liberty, as well as in social legislation, with a standard of living for its workers and farmers of which we are very proud, but which we are continually seeking to improve.

In order to do this we realize that we must turn our eyes to the rest of the world if we are to retain and further improve our standard of living, social laws, and maintain our guarantees of freedom. Security of nations is now generally recognized as indivisible. That we believe is just as true of economic security, and hence we have always been found ready to support the principles of the I.L.O. as the most effective weapon both for peace and social security.

Democracy with us begins at home; we do not claim that our Government or its institutions are perfect by any means. It is, however, the Government that we as a people have ourselves elected by an open and free ballot, with no limitations upon political parties which may participate, and which the people themselves would change, should ever any tendencies develop that would endanger the democracy we have and hold dear.

As a democratic nation, and of its own free will, Canada entered the war on the side of other democratic nations almost at the beginning. The part that our country played in that war need not be emphasized at this time; it speaks for itself. But what I do wish to bring out is that only a really free and democratic nation, completely free of race hatred and national prejudices among the many nationalities that go to make up our nation, could have played the part we did.

I am not seeking to export our particular brand of freedom or democratic ideals; I realize that all nations have their own interpretation of such matters, and are entitled to have their opinions respected. But I firmly believe in the philosophy enunciated by the American Federation of Labour, of which I am proud to be a member, wherein it states; "Without freedom from fear of tyranny by absolutist bureaucrats or dictators, and without freedom from want, there can be no political or industrial democracy within nations, or just relations and enduring peace between nations. Only by removing the political, economic and social ills and maladjustments afflicting humanity will mankind be able to reach that long-hoped-for stage of civilization in which peace and plenty shall truly prevail".

I wish to say that just as we stood ready to defend democracy when it was in danger, so will our nation be ready and willing to do everything within our power to assist international bodies such as the I.L.O. in their work, in any plans that will tend to alleviate the suffering which we know that so many people of various races and nationalities are enduring as a result of the after-effects of war.

We are one of the largest nations in the world so far as territory goes, but with only a population of little better than 12 millions; we cannot overlook the fact that 12 millions of people are not sufficient to hold such a large country as Canada, and that there is a general recognition that our country can and should maintain a far larger population than we have at present. Organized labour's policy in Canada is not in favour of closing the door to immigration; we realize that there are many unfortunate workers, in Europe in particular, and especially among the displaced persons, who must be provided for, many of whom would become good Canadian citizens, if they were allowed to enter our country and were found the means to do so. But we say that any immigration policy must be based upon what number Canada can absorb without displacing our own people in employment or reducing their wage standards. This we believe is not

only fair to our own people but to the immigrant as well. We base our opinions in this respect on experience gained over a long period of time, and what we think is in the national interest of Canada—ever mindful that we owe much to those who are less fortunate than we and who gave of their sons and daughters to Canada that we might become the great nation that we are today.

There are many great issues before this 30th Conference of the International Labour Conference, but in my opinion, and I dare say in the opinion of those whom I represent, there are none greater than that of freedom of association and industrial relations. To the workers the world over this is of the utmost importance; it constitutes a Charter of Freedom, not to the workers alone, but to all sections of the world's people. It is in line with what we promised our people during the dark days when democracy was in danger. Therefore, I sincerely hope and trust that unanimity may be found among all the parties here to a Resolution that will expedite an early Convention to guarantee these rights to those of us who already enjoy them, and to others who are not so fortunate, for all time to come.

I feel sure that if it were possible for the spirits of the great Samuel Gompers, of the American Federation of Labour, and Tom Moore, the late President of the Trades and Labour Congress of Canada, and the many others who helped to form this great organization, to be with us today, they would endorse the statements contained in the Article on Human Rights submitted by the American Federation of Labour to the Economic and Social Council, on the Guarantees for the Exercise and Development of Trade Union Rights, wherein it states: "Freedom of expression and association is vital to the preservation of the basic liberties and the enhancement of the spiritual and material progress of the human race. These rights must be inviolate for those who oppose, no less than for those who support, a ruling party or a régime at any specific moment." Genuine freedom means the right of association into various, differing, educational, religious, economic, political and trade union organizations, without fear of direct or indirect control and compulsion by Governmental or any other agencies.

We must not fail, as the eyes of the world are upon us. Millions of men and women throughout the world are hoping and praying that their sacrifices shall not have been in vain, and that the men and women whom they send to these conferences shall not fail to reach an agreement on matters of vital importance to them and to generations to come.

It is your and my God-given duty to leave this world just a little better than we found it. I hope and pray that we may find a way to reconcile any differences that may exist between us, and be able to come to decisions at this Conference that will live long after we have joined those who pioneered in the great work of betterment for humanity and the principles for which the I.L.O. stands.

Appendix 4—Statement on Freedom of Association by Mr. V. C. Phelan, Government Adviser

The Canadian Government delegation proposes to vote in support of the Report, but feels that its vote should not only be recorded but should be vocal in the sense that a brief statement of our position in regard to the matter should be made.

The proposal made by our delegation is not only that we should vote for the Report, but that in voting for it we should feel that the Committee and the Conference have really accomplished something by the Report and should feel that they are voting for a Report which they agree with and strongly support in all particulars.

In Canada we have been fortunate in being one of those countries where freedom of all sorts is traditional, and has been for generations. Our battles for freedom were won by our forefathers—perhaps abroad rather than at home—many years ago. One of the benefits to-day handed down by those earlier peoples is the feeling on the part of Government and on the part of the public that the workers and the employers of Canada, as elsewhere, have every right to organize within the law. And when I add the qualification “within the law” that is subject only to very general limitations as to public order. The Chairman of the Committee has already been complimented by many speakers on his handling of the work of the Committee, and I wish to associate myself with the words already spoken in regard to Mr. Morse, as also indeed in connection with the kindly and well deserved references to Sir Guildhaume Myrddin-Evans, whose wisdom and sagacity saved the Committee a great deal of effort and certainly assisted the Chairman of the Committee in producing the Report now before us.

We feel that the present Report and the work of the Committee represents a very timely and very sound summing up of the attitude of the I.L.O. as previously expressed on the whole matter of freedom of association. At the same time we feel that the groundwork this year has been laid, and well-laid, for a Convention next year, and for deliberations and further instruments in later years to modify and clarify the views held by I.L.O. members in regard to this fundamental subject.

I would like to point out that many speakers have made reference to compromises effected during the course of the deliberations of the Committee. I think those representing Governments on the Committee were perhaps in a position to fairly well gauge the sentiment in all quarters, and certainly it was my view that the compromises were not as to principle but rather as to the wording or the expression to be given to those principles. It was heartening to see that there was no fundamental difference within the Committee on the general and overall question of freedom of association. That, I submit, is as it should be in an I.L.O. gathering. The arguments centred mainly around details and the wording to be used in giving expression to the principles, and more particularly to the details. I do suggest that with the follow-up work which will have to be carried out by the Governing Body and the Office, with the subsequent consideration to be given to this subject, the I.L.O. should in 1948 and in 1949 be able to effect in a manner not previously attempted, a setting forth of its views on this fundamental subject, securing the agreement and concurrence of Governments for subsequent domestic legislation which has hitherto not been so easily possible.

The Committee was disturbed, as one of the resolutions recites, by reports that in several countries at the present time freedom of association may not be receiving the recognition in practice that they feel it should. In some cases it was felt by many of us that laws may pay lip-service to the right to organize, though in practice that right is restricted by administrative prescription. Therefore the I.L.O. should, and does, I am sure, welcome the opportunity it has had this year to accomplish something substantial in opening the way to those nations which do not yet give full and practical recognition to the freedom of association, in the hope that its precept may result in benefit for all citizens.

In Canada, as in many other countries, we have found it necessary in late years to embody in law the right to organize, although previously that right was fairly generally recognized in practice. We have found that embodying this principle in laws, rules and regulations has had a beneficial influence, and certainly gives verbal effect to the widely held—I might say the unanimously held—view of our Governments and our people.

Appendix 5—Statement on Freedom of Association by Mr. Harry Taylor, Employers' Delegate

The employers, in approaching this very important subject of freedom of association and industrial relations, announced at the very outset that they accepted the principle of freedom of association. At the time we made the announcement, it was quite clear that there were, and perhaps would continue to be, differences of opinion with regard to the application or the definition of freedom of association. That was inevitable but, as we understand the principle of freedom of association, we accepted it then and we accept it now. It was with that thought that we approached debate in committee, determined to do our full share in seeing to it that something would emerge from the committee that would point the way for things to come.

The employers have, I think, exercised considerable restraint in debate. They have co-operated. They have not at any time tried to be obstructionists, and they have—and I think it is worth repeating—done their very best to present their point of view. A subject of this character is bound to create differences of opinion. Those differences were evident in committee. The employers—and I am speaking on behalf of the group—felt that we should not undertake too much at one time, that it would be far better to take a portion of the problem and do a good job than to take a larger portion and do a poor job.

It was for those reasons that we felt we ought not to go beyond certain parts in the text which was before us. However in the course of debate we agreed to go further than we first thought was possible. Out of this has developed a Resolution—or to be more precise, perhaps—two Resolutions. In some respects these Resolutions go farther than the employers would have liked, and in others they do not go far enough. We are aware of that fact. It is precisely because of that that we had made our position clear, that we should not at this point discuss or present for immediate consideration the details which were involved in Article 8 (2) of the Office text and related sections.

The employers take the position—and feel they are justified in taking the position—that the acceptance of the principle of freedom of association should surely not be at the price of individual liberty. Individual freedom is of equal importance to freedom of association as such. That is the position which we have taken throughout and which we re-affirm here. To be more precise, the question which has been introduced here in this debate by our colleagues from the Workers' group is that of the right not to belong to a trade union. The principle of the "closed shop" and compulsory unionism as such cannot be accepted by the employers, as we understand their application. Yet we have in committee accepted the Resolution in order that a discussion may be brought about at the appropriate time as outlined on those important matters. But we have repeatedly reminded the Committee—and we again remind the Conference—that our acceptance in those circumstances has clearly been without prejudice to the position which we may feel desirable at the appropriate time when the Convention itself is discussed.

We recognize the importance of having a unanimous decision from this Conference, and we do not feel that we wish to reintroduce debate here on those subjects, and so I am urging the Employers' group to accept the Resolution and the report, as you have them before you. However, I did feel it important, as was done in the case of my colleagues in the Workers' group, to make certain statements in order that the records may be quite clear as to how we stand and how we stood in committee; but in spite of that we are going to support the Resolution, with that clear understanding.

Appendix 6—Convention (No. 81) Concerning Labour Inspection in Industry and Commerce

The General Conference of the International Labour Organization,
Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Thirtieth Session on 19th June, 1947, and

Having decided upon the adoption of certain proposals with regard to the organization of labour inspection in industry and commerce, which is the fourth item on the agenda of the session, and

Having determined that these proposals shall take the form of an international Convention,

adopts this eleventh day of July of the year one thousand nine hundred and forty-seven the following Convention, which may be cited as the Labour Inspection Convention, 1947:—

PART I. LABOUR INSPECTION IN INDUSTRY

Article 1

Each Member of the International Labour Organization for which this Convention is in force shall maintain a system of labour inspection in industrial workplaces.

Article 2

1. The system of labour inspection in industrial workplaces shall apply to all workplaces in respect of which legal provisions relating to conditions of work and the protection of workers while engaged in their work are enforceable by labour inspectors.

2. National laws or regulations may exempt mining and transport undertakings or parts of such undertakings from the application of this Convention.

Article 3

1. The functions of the system of labour inspection shall be:—

- (a) to secure the enforcement of the legal provisions relating to conditions of work and the protection of workers while engaged in their work, such as provisions relating to hours, wages, safety, health and welfare, the employment of children and young persons, and other connected matters, in so far as such provisions are enforceable by labour inspectors;
- (b) to supply technical information and advice to employers and workers concerning the most effective means of complying with the legal provisions;
- (c) to bring to the notice of the competent authority defects or abuses not specifically covered by existing legal provisions.

2. Any further duties which may be entrusted to labour inspectors shall not be such as to interfere with the effective discharge of their primary duties or to prejudice in any way the authority and impartiality which are necessary to inspectors in their relations with employers and workers.

Article 4

1. So far as is compatible with the administrative practice of the Member, labour inspection shall be placed under the supervision and control of a central authority.

2. In the case of a federal State, the term "central authority" may mean either a federal authority or a central authority of a federated unit.

Article 5

The competent authority shall make appropriate arrangements to promote:—

- (a) effective co-operation between the inspection services and other Government services and public or private institutions engaged in similar activities; and
- (b) collaboration between officials of the labour inspectorate and employers and workers or their organizations.

Article 6

The inspection staff shall be composed of public officials whose status and conditions of service are such that they are assured of stability of employment and are independent of changes of government and of improper external influences.

Article 7

1. Subject to any conditions for recruitment to the public service which may be prescribed by national laws or regulations, labour inspectors shall be recruited with sole regard to their qualifications for the performance of their duties.

2. The means of ascertaining such qualifications shall be determined by the competent authority.

3. Labour inspectors shall be adequately trained for the performance of their duties.

Article 8

Both men and women shall be eligible for appointment to the inspection staff; where necessary, special duties may be assigned to men and women inspectors.

Article 9

Each Member shall take the necessary measures to ensure that duly qualified technical experts and specialists, including specialists in medicine, engineering, electricity and chemistry, are associated in the work of inspection, in such manner as may be deemed most appropriate under national conditions for the purpose of securing the enforcement of the legal provisions relating to the protection of the health and safety of workers while engaged in their work and of investigating the effects of processes, materials and methods of work on the health and safety of workers.

Article 10

The number of labour inspectors shall be sufficient to secure the effective discharge of the duties of the inspectorate and shall be determined with due regard for:—

- (a) the importance of the duties which inspectors have to perform, in particular—
 - (i) the number, nature, size and situation of the workplaces liable to inspection;
 - (ii) the number and classes of workers employed in such workplaces; and
 - (iii) the number and complexity of the legal provisions to be enforced;
- (b) the material means placed at the disposal of the inspectors; and
- (c) the practical conditions under which visits of inspection must be carried out in order to be effective.

Article 11

1. The competent authority shall make the necessary arrangements to furnish labour inspectors with—

- (a) local offices, suitably equipped in accordance with the requirements of the service, and accessible to all persons concerned;
- (b) the transport facilities necessary for the performance of their duties in cases where suitable public facilities do not exist.

2. The competent authority shall make the necessary arrangements to reimburse to labour inspectors any travelling and incidental expenses which may be necessary for the performance of their duties.

Article 12

1. Labour inspectors provided with proper credentials shall be empowered:—

- (a) to enter freely and without previous notice at any hour of the day or night any workplace liable to inspection;
- (b) to enter by day any premises which they may have reasonable cause to believe to be liable to inspection; and
- (c) to carry out any examination, test or enquiry which they may consider necessary in order to satisfy themselves that the legal provisions are being strictly observed, and in particular—
 - (i) to interrogate, alone or in the presence of witnesses, the employer or the staff of the undertaking on any matters concerning the application of the legal provisions;
 - (ii) to require the production of any books, registers or other documents the keeping of which is prescribed by national laws or regulations relating to conditions of work, in order to see that they are in conformity with the legal provisions, and to copy such documents or make extracts from them;
 - (iii) to enforce the posting of notices required by the legal provisions;
 - (iv) to take or remove for purposes of analysis samples of materials and substances used or handled, subject to the employer or his representative being notified of any samples or substances taken or removed for such purpose.

2. On the occasion of an inspection visit, inspectors shall notify the employer or his representative of their presence, unless they consider that such a notification may be prejudicial to the performance of their duties.

Article 13

1. Labour inspectors shall be empowered to take steps with a view to remedying defects observed in plant, layout or working methods which they may have reasonable cause to believe constitute a threat to the health or safety of the workers.

2. In order to enable inspectors to take such steps they shall be empowered, subject to any right of appeal to a judicial or administrative authority which may be provided by law, to make or to have made orders requiring—

- (a) such alterations to the installation or plant, to be carried out within a specified time limit, as may be necessary to secure compliance with the legal provisions relating to the health or safety of the workers; or

- (b) measures with immediate executory force in the event of imminent danger to the health or safety of the workers.

3. Where the procedure prescribed in paragraph 2 is not compatible with the administrative or judicial practice of the Member, inspectors shall have the right to apply to the competent authority for the issue of orders or for the initiation of measures with immediate executory force.

Article 14

The labour inspectorate shall be notified of industrial accidents and cases of occupational disease in such cases and in such manner as may be prescribed by national laws or regulations.

Article 15

Subject to such exceptions as may be made by national laws or regulations, labour inspectors—

- (a) shall be prohibited from having any direct or indirect interest in the undertakings under their supervision;
- (b) shall be bound on pain of appropriate penalties or disciplinary measures not to reveal, even after leaving the service, any manufacturing or commercial secrets or working processes which may come to their knowledge in the course of their duties; and
- (c) shall treat as absolutely confidential the source of any complaint bringing to their notice a defect or breach of legal provisions and shall give no intimation to the employer or his representative that a visit of inspection was made in consequence of the receipt of such a complaint.

Article 16

Workplaces shall be inspected as often and as thoroughly as is necessary to ensure the effective application of the relevant legal provisions.

Article 17

1. Persons who violate or neglect to observe legal provisions enforceable by labour inspectors shall be liable to prompt legal proceedings without previous warning: Provided that exceptions may be made by national laws or regulations in respect of cases in which previous notice to carry out remedial or preventive measures is to be given.

2. It shall be left to the discretion of labour inspectors to give warning and advice instead of instituting or recommending proceedings.

Article 18

Adequate penalties for violations of the legal provisions enforceable by labour inspectors and for obstructing labour inspectors in the performance of their duties shall be provided for by national laws or regulations and effectively enforced.

Article 19

1. Labour inspectors or local inspection offices, as the case may be, shall be required to submit to the central inspection authority periodical reports on the results of their inspection activities.

2. These reports shall be drawn up in such manner and deal with such subjects as may from time to time be prescribed by the central authority; they shall be submitted at least as frequently as may be prescribed by that authority and in any case not less frequently than once a year.

Article 20

1. The central inspection authority shall publish an annual general report on the work of the inspection services under its control.

2. Such annual reports shall be published within a reasonable time after the end of the year to which they relate and in any case within twelve months.

3. Copies of the annual reports shall be transmitted to the Director-General of the International Labour Office within a reasonable period after their publication and in any case within three months.

Article 21

The annual report published by the central inspection authority shall deal with the following and other relevant subjects in so far as they are under the control of the said authority:

- (a) laws and regulations relevant to the work of the inspection service;
- (b) staff of the labour inspection service;
- (c) statistics of workplaces liable to inspection and the number of workers employed therein;
- (d) statistics of inspection visits;
- (e) statistics of violations and penalties imposed;
- (f) statistics of industrial accidents;
- (g) statistics of occupational diseases.

PART II. LABOUR INSPECTION IN COMMERCE

Article 22

Each Member of the International Labour Organization for which this Part of this Convention is in force shall maintain a system of labour inspection in commercial workplaces.

Article 23

The system of labour inspection in commercial workplaces shall apply to workplaces in respect of which legal provisions relating to conditions of work and the protection of workers while engaged in their work are enforceable by labour inspectors.

Article 24

The system of labour inspection in commercial workplaces shall comply with the requirements of Articles 3 to 21 of this Convention in so far as they are applicable.

PART III. MISCELLANEOUS PROVISIONS

Article 25

1. Any Member of the International Labour Organization which ratifies this Convention may, by a declaration appended to its ratification, exclude Part II from its acceptance of the Convention.

2. Any Member which has made such a declaration may at any time cancel that declaration by a subsequent declaration.

3. Every Member for which a declaration made under paragraph 1 of this Article is in force shall indicate each year in its annual report upon the application of this Convention the position of its law and practice in regard to the provisions of Part II of this Convention and the extent to which effect has been given, or is proposed to be given, to the said provisions.

Article 26

In any case in which it is doubtful whether any undertaking, part or service of an undertaking or workplace is an undertaking, part, service or workplace to which this Convention applies, the question shall be settled by the competent authority.

Article 27

In this Convention the term "legal provisions" includes, in addition to laws and regulations, arbitration awards and collective agreements upon which the force of law is conferred and which are enforceable by labour inspectors.

Article 28

There shall be included in the annual reports to be submitted under Article 22 of the Constitution of the International Labour Organization full information concerning all laws and regulations by which effect is given to the provisions of this Convention.

Article 29

1. In the case of a Member the territory of which includes large areas where, by reason of the sparseness of the population or the stage of development of the area, the competent authority considers it impracticable to enforce the provisions of this Convention, the authority may exempt such areas from the application of this Convention either generally or with such exceptions in respect of particular undertakings or occupations as it thinks fit.

2. Each Member shall indicate in its first annual report upon the application of this Convention submitted under Article 22 of the Constitution of the International Labour Organization any areas in respect of which it proposes to have recourse to the provisions of the present Article and shall give the reasons for which it proposes to have recourse thereto; no Member shall, after the date of its first annual report, have recourse to the provisions of the present Article except in respect of areas so indicated.

3. Each Member having recourse to the provisions of the present Article shall indicate in subsequent annual reports any areas in respect of which it renounces the right to have recourse to the provisions of the present Article.

Article 30

1. In respect of the territories referred to in Article 35 of the Constitution of the International Labour Organization as amended by the Constitution of the International Labour Organization Instrument of Amendment, 1946, other than the territories referred to in paragraphs 4 and 5 of the said Article as so amended, each Member of the Organization which ratifies

this Convention shall communicate to the Director-General of the International Labour Office as soon as possible after ratification a declaration stating—

- (a) the territories in respect of which it undertakes that the provisions of the Convention shall be applied without modification;
- (b) the territories in respect of which it undertakes that the provisions of the Convention shall be applied subject to modifications, together with details of the said modifications;
- (c) the territories in respect of which the Convention is inapplicable and in such cases the grounds on which it is inapplicable;
- (d) the territories in respect of which it reserves its decision.

2. The undertakings referred to in subparagraphs (a) and (b) of paragraph 1 of this Article shall be deemed to be an integral part of the ratification and shall have the force of ratification.

3. Any Member may at any time by a subsequent declaration cancel in whole or in part any reservations made in its original declaration in virtue of subparagraphs (b), (c) or (d) of paragraph 1 of this Article.

4. Any Member may, at any time at which the Convention is subject to denunciation in accordance with the provisions of Article 34, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of such territories as it may specify.

Article 31

1. Where the subject matter of this Convention is within the self-governing powers of any non-metropolitan territory, the Member responsible for the international relations of that territory may, in agreement with the Government of the territory, communicate to the Director-General of the International Labour Office a declaration accepting on behalf of the territory the obligations of this Convention.

2. A declaration accepting the obligations of this Convention may be communicated to the Director-General of the International Labour Office—

- (a) by two or more Members of the Organization in respect of any territory which is under their joint authority; or
- (b) by any international authority responsible for the administration of any territory, in virtue of the Charter of the United Nations or otherwise, in respect of any such territory.

3. Declarations communicated to the Director-General of the International Labour Office in accordance with the preceding paragraphs of this Article shall indicate whether the provisions of the Convention will be applied in the territory concerned without modification or subject to modifications; when the declaration indicates that the provisions of the Convention will be applied subject to modifications it shall give details of the said modifications.

4. The Member, Members or international authority concerned may at any time by a subsequent declaration renounce in whole or in part the right to have recourse to any modification indicated in any former declaration.

5. The Member, Members or international authority concerned may, at any time at which this Convention is subject to denunciation in accordance with the provisions of Article 34, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of the application of the Convention.

PART IV. FINAL PROVISIONS

Article 32

The formal ratifications of this Convention shall be communicated to the Director-General of the International Labour Office for registration.

Article 33

1. This Convention shall be binding only upon those Members of the International Labour Organization whose ratifications have been registered with the Director-General.

2. It shall come into force twelve months after the date on which the ratifications of two Members have been registered with the Director-General.

3. Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

Article 34

1. A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Director-General of the International Labour Office for registration. Such denunciation shall not take effect until one year after the date on which it is registered.

2. Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of ten years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of ten years and, thereafter, may denounce this Convention at the expiration of each period of ten years under the terms provided for in this Article.

Article 35

1. The Director-General of the International Labour Office shall notify all Members of the International Labour Organization of the registration of all ratifications, declarations and denunciations communicated to him by the Members of the Organization.

2. When notifying the Members of the Organization of the registration of the second ratification communicated to him, the Director-General shall draw the attention of the Members of the Organization to the date upon which the Convention will come into force.

Article 36

The Director-General of the International Labour Office shall communicate to the Secretary-General of the United Nations for registration in accordance with Article 102 of the Charter of the United Nations full particulars of all ratifications, declarations and acts of denunciation registered by him in accordance with the provisions of the preceding Articles.

Article 37

At the expiration of each period of ten years after the coming into force of this Convention, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the agenda of the Conference the question of its revision in whole or in part.

Article 38

1. Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides,

- (a) the ratification by a Member of the new revising Convention shall *ipso jure* involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 34 above, if and when the new revising Convention shall have come into force;
- (b) as from the date when the new revising Convention comes into force this Convention shall cease to be open to ratification by the Members.

2. This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

Article 39

The English and French versions of the text of this Convention are equally authoritative.

Appendix 7—Recommendation (No. 81) Concerning Labour Inspection

The General Conference of the International Labour Organization, Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Thirtieth Session on 19 June 1947, and

Having decided upon the adoption of certain proposals with regard to the organization of labour inspection in industry and commerce, which is the fourth item on the agenda of the session, and

Having determined that these proposals shall take the form of a Recommendation supplementing the Labour Inspection Recommendation, 1923, and the Labour Inspection Convention, 1947.

adopts this eleventh day of July of the year one thousand nine hundred and forty-seven the following Recommendation, which may be cited as the Labour Inspection Recommendation, 1947:

Whereas the Labour Inspection Recommendation, 1923, and the Labour Inspection Convention, 1947, provide for organization of systems of labour inspection and it is desirable to supplement the provisions thereof by further recommendations;

The Conference recommends that each Member should apply the following provisions as rapidly as national conditions allow and report to the International Labour Office as requested by the Governing Body concerning the measures taken to give effect thereto.

I. PREVENTIVE DUTIES OF LABOUR INSPECTORATES

1. Any person who proposes to open an industrial or commercial establishment, or to take over such an establishment, or to commence in such an establishment the carrying on of a class of activity specified

by a competent authority as materially affecting the application of legal provisions enforceable by labour inspectors, should be required to give notice in advance to the competent labour inspectorate either directly or through another designated authority.

2. Members should make arrangements under which plans for new establishments, plant, or processes of production may be submitted to the appropriate labour inspection service for an opinion as to whether the said plans would render difficult or impossible compliance with the laws and regulations concerning industrial health and safety or would be likely to constitute a threat to the health or safety of the workers.

3. Subject to any right of appeal which may be provided by law, the execution of plans for new establishments, plant and processes of production deemed under national laws or regulations to be dangerous or unhealthy should be conditional upon the carrying out of any alterations ordered by the inspectorate for the purpose of securing the health and safety of the workers.

II. COLLABORATION OF EMPLOYERS AND WORKERS IN REGARD TO HEALTH AND SAFETY

4. (1) Arrangements for collaboration between employers and workers for the purpose of improving conditions affecting the health and safety of the workers should be encouraged.

(2) Such arrangements might take the form of safety committees or similar bodies set up within each undertaking or establishment and including representatives of the employers and the workers.

5. Representatives of the workers and the management, and more particularly members of works safety committees or similar bodies where such exist, should be authorized to collaborate directly with officials of the labour inspectorate, in a manner and within limits fixed by the competent authority, when investigations and, in particular, enquiries into industrial accidents or occupational diseases are carried out.

6. The promotion of collaboration between officials of the labour inspectorate and organizations of employers and workers should be facilitated by the organization of conferences or joint committees, or similar bodies, in which representatives of the labour inspectorate discuss with representatives of organizations of employers and workers questions concerning the enforcement of labour legislation and the health and safety of the workers.

7. Appropriate steps should be taken to ensure that employers and workers are given advice and instruction in labour legislation and questions of industrial hygiene and safety by such measures as:

- (a) lectures, radio talks, posters, pamphlets and films explaining the provisions of labour legislation and suggesting methods for their application and measures for preventing industrial accidents and occupational diseases;
- (b) health and safety exhibitions; and
- (c) instruction in industrial hygiene and safety in technical schools.

III. LABOUR DISPUTES

8. The functions of labour inspectors should not include that of acting as conciliator or arbitrator in proceedings concerning labour disputes.

IV. ANNUAL REPORTS ON INSPECTION

9. The published annual reports on the work of inspection services should, in so far as possible, supply the following detailed information:

- (a) a list of the laws and regulations bearing on the work of the inspection system not mentioned in previous reports;
- (b) particulars of the staff of the labour inspection system, including:
 - (i) the aggregate number of inspectors;
 - (ii) the numbers of inspectors of different categories;
 - (iii) the number of women inspectors; and
 - (iv) particulars of the geographical distribution of inspection services;
- (c) statistics of workplaces liable to inspection and of the number of persons therein employed, including:
 - (i) the number of workplaces liable to inspection;
 - (ii) the average number of persons employed in such workplaces during the year;
 - (iii) particulars of the classification of persons employed under the following headings: men, women, young persons, and children;
- (d) statistics of inspection visits, including:
 - (i) the number of workplaces visited;
 - (ii) the number of inspection visits made, classified according to whether they were made by day or by night;
 - (iii) the number of persons employed in the workplaces visited;
 - (iv) the number of workplaces visited more than once during the year;
- (e) statistics of violations and penalties, including:
 - (i) the number of infringements reported to the competent authorities;
 - (ii) particulars of the classification of such infringements according to the legal provisions to which they relate;
 - (iii) the number of convictions;
 - (iv) particulars of the nature of the penalties imposed by the competent authorities in the various cases (fines, imprisonment, etc.);
- (f) statistics of industrial accidents, including the number of industrial accidents notified and particulars of the classification of such accidents:
 - (i) by industry and occupation;
 - (ii) according to cause;
 - (iii) according to whether fatal or non-fatal;
- (g) statistics of occupational diseases, including:
 - (i) the number of cases of occupational disease notified;
 - (ii) particulars of the classification of such cases according to industry and occupation;
 - (iii) particulars of the classification of such cases according to their cause or character such as the nature of the disease, poisonous substance or unhealthy process to which the disease is due.

Appendix 8—Recommendation (No. 82) Concerning Labour Inspection in Mining and Transport Undertakings

The General Conference of the International Labour Organization,
Having been convened at Geneva by the Governing Body of the
International Labour Office, and having met in its Thirtieth
Session on 19 June 1947, and

Having decided upon the adoption of certain proposals with regard
to the organization of labour inspection in mining and transport
undertakings, which is included in the fourth item on the agenda
of the session, and

Having determined that certain of these proposals shall take the
form of a Recommendation supplementing the Labour Inspection
Recommendation, 1923, the Labour Inspection Convention, 1947,
and the Labour Inspection Recommendation, 1947,

adopts this eleventh day of July of the year one thousand nine hundred
and forty-seven the following Recommendation, which may be cited as
the Labour Inspection (Mining and Transport) Recommendation, 1947:

Whereas the Labour Inspection Convention, 1947, provides for the
organization of systems of labour inspection and permits the exemption
of mining and transport undertakings from the application thereof by
national laws or regulations; and

Whereas it is nevertheless essential to make adequate provision in
respect of mining and transport undertakings for the effective enforcement
of legal provisions relating to conditions of work and the protection
of workers while engaged in their work;

The Conference recommends that each Member should apply the
following provisions as rapidly as national conditions allow and report
to the International Labour Office as requested by the Governing Body
concerning the measures taken to give effect thereto:

Each Member of the International Labour Organization should apply
to mining and transport undertakings as defined by the competent
authority appropriate systems of labour inspection to ensure the enforce-
ment of legal provisions relating to conditions of work and the protection
of workers while engaged in their work.

Appendix 9—Convention (No. 82) Concerning Social Policy in Non-Metropolitan Territories

The General Conference of the International Labour Organization,
Having been convened at Geneva by the Governing Body of the
International Labour Office, and having met in its Thirtieth Session
on the 19th June, 1947, and

Having decided upon the adoption of certain proposals concerning
social policy in non-metropolitan territories, which is included in
the third item on the agenda of the Session, and

Having determined that these proposals shall take the form of an
international Convention,

adopts this eleventh day of July of the year one thousand nine hundred and
forty-seven the following Convention, which may be cited as the Social
Policy (Non-Metropolitan Territories) Convention, 1947:

PART I—OBLIGATIONS OF PARTIES

Article 1

1. Each Member of the International Labour Organization which ratifies this Convention undertakes that the policies and measures set forth in the Convention shall be applied in the non-metropolitan territories for which it has or assumes responsibilities, including any trust territories for which it is the administering authority, other than the territories referred to in paragraphs 2 and 3 of this Article, subject to the concurrence of the Governments of the territories concerned in respect of any matters which are within the self-governing powers of the territories.

2. Where the subject matter of this Convention is wholly or primarily within the self-governing powers of any non-metropolitan territory, the Member responsible for the international relations of that territory may, in agreement with the Government of the territory, communicate to the Director-General of the International Labour Office a declaration accepting on behalf of the territory the obligations of this Convention.

3. A declaration accepting the obligations of this Convention may be communicated to the Director-General of the International Labour Office—

- (a) by two or more Members of the Organization in respect of any territory which is under their joint authority; or
- (b) by any international authority responsible for the administration of any territory, in virtue of the Charter of the United Nations or otherwise, in respect of any such territory.

PART II—GENERAL PRINCIPLES

Article 2

1. All policies designed to apply to non-metropolitan territories shall be primarily directed to the well-being and development of the peoples of such territories and to the promotion of the desire on their part for social progress.

2. Policies of more general application shall be formulated with due regard to their effect upon the well-being of the peoples of non-metropolitan territories.

Article 3

1. In order to promote economic advancement and thus to lay the foundations of social progress, every effort shall be made to secure, on an international, regional, national or territorial basis, financial and technical assistance to the local administrations in order to further the economic development of non-metropolitan territories.

2. The terms under which such assistance is granted shall provide for such control by or co-operation with the local administrations in determining the nature of the economic development and the conditions under which the resulting work is undertaken as may be necessary to safeguard the interests of the peoples of such territories.

3. It shall be an aim of policy for the responsible Government authorities to arrange that adequate funds are made available to provide public or private capital or both for development purposes on terms which secure to the peoples of non-metropolitan territories the fullest possible benefits from such development.

4. In appropriate cases, international, regional, or national action shall be taken with a view to establishing conditions of trade which will encourage production at a high level of efficiency and make possible the maintenance of a reasonable standard of living in non-metropolitan territories.

Article 4

All possible steps shall be taken by appropriate international, regional, national and territorial measures to promote improvement in such fields as public health, housing, nutrition, education, the welfare of children, the status of women, conditions of employment, the remuneration of wage earners and independent producers, the protection of migrant workers, social security, standards of public services and general production.

Article 5

All possible steps shall be taken effectively to interest and associate the peoples of non-metropolitan territories in the framing and execution of measures of social progress, preferably through their own elected representatives where appropriate and possible.

PART III—IMPROVEMENT OF STANDARDS OF LIVING

Article 6

The improvement of standards of living shall be regarded as the principal objective in the planning of economic development.

Article 7

1. All practicable measures shall be taken in the planning of economic development to harmonize such development with the healthy evolution of the communities concerned.

2. In particular, efforts shall be made to avoid the disruption of family life and of traditional social units, especially by:—

- (a) close study of the causes and effects of migratory movements and appropriate action where necessary;
- (b) the promotion of town and village planning in areas where economic needs result in the concentration of population;
- (c) the prevention and elimination of congestion in urban areas;
- (d) the improvement of living conditions in rural areas and the establishment of suitable industries in rural areas where adequate manpower is available.

Article 8

The measures to be considered by the competent authorities for the promotion of productive capacity and the improvement of standards of living of agricultural producers shall include:—

- (a) the elimination to the fullest practicable extent of the causes of chronic indebtedness;
- (b) the control of the alienation of agricultural land to non-agriculturalists so as to ensure that such alienation takes place only when it is in the best interests of the territory;

- (c) the control, by the enforcement of adequate laws or regulations, of the ownership and use of land and resources to ensure that they are used, with due regard to customary rights, in the best interests of the inhabitants of the territory;
- (d) the supervision of tenancy arrangements and of working conditions with a view to securing for tenants and labourers the highest practicable standards of living and an equitable share in any advantages which may result from improvements in productivity or in price levels;
- (e) the reduction of production and distribution costs by all practicable means and in particular by forming, encouraging and assisting producers' and consumers' co-operatives.

Article 9

1. Measures shall be taken to secure for independent producers and wage earners conditions which will give them scope to improve living standards by their own efforts and will ensure the maintenance of minimum standards of living as ascertained by means of official enquiries into living conditions, conducted after consultation with the representative organizations of employers and workers.

2. In ascertaining the minimum standards of living, account shall be taken of such essential family needs of the workers as food and its nutritive value, housing, clothing, medical care and education.

PART IV—PROVISIONS CONCERNING MIGRANT WORKERS

Article 10

Where the circumstances under which workers are employed involve their living away from their homes, the terms and conditions of their employment shall take account of their normal family needs.

Article 11

Where the labour resources of one area of a non-metropolitan territory are used on a temporary basis for the benefit of another area, measures shall be taken to encourage the transfer of part of the workers' wages and savings from the area of labour utilization to the area of labour supply.

Article 12

1. Where the labour resources of a territory are used in an area under a different administration the competent authorities of the territories concerned shall, whenever necessary or desirable, enter into agreements for the purpose of regulating matters of common concern arising in connection with the application of the provisions of this Convention.

2. Such agreements shall provide that the worker shall enjoy protection and advantages not less than those enjoyed by workers resident in the area of labour utilization.

3. Such agreements shall provide for facilities for enabling the worker to transfer part of his wages and savings to his home.

Article 13

Where workers and their families move from low-cost to higher-cost areas, account shall be taken of the increased cost of living resulting from the change.

PART V—REMUNERATION OF WORKERS AND RELATED QUESTIONS

Article 14

1. The fixing of minimum wages by collective agreements freely negotiated between trade unions which are representative of the workers concerned and employers or employers' organizations shall be encouraged.

2. Where no adequate arrangements exist for the fixing of minimum wages by collective agreement, the necessary arrangements shall be made whereby minimum rates of wages can be fixed in consultation with representatives of the employers and workers, including representatives of their respective organizations, where such exist.

3. The necessary measures shall be taken to ensure that the employers and workers concerned are informed of the minimum wage rates in force and that wages are not paid at less than these rates in cases where they are applicable.

4. A worker to whom minimum rates are applicable and who, since they became applicable, has been paid wages at less than these rates shall be entitled to recover, by judicial or other means authorized by law, the amount by which he has been underpaid, subject to such limitation of time as may be determined by law or regulation.

Article 15

1. The necessary measures shall be taken to ensure the proper payment of all wages earned and employers shall be required to keep registers of wage payments, to issue to workers statements of wage payments and to take other appropriate steps to facilitate the necessary supervision.

2. Wages shall normally be paid in legal tender only.

3. Wages shall normally be paid direct to the individual worker.

4. The substitution of alcohol or other spirituous beverages for all or any part of wages for services performed by the worker shall be prohibited.

5. Payments of wages shall not be made in taverns or stores, except in the case of workers employed therein.

6. Unless there is an established local custom to the contrary, and the competent authority is satisfied that the continuance of this custom is desired by the workers, wages shall be paid regularly at such intervals as will lessen the likelihood of indebtedness among the wage earners.

7. Where food, housing, clothing and other essential supplies and services form part of remuneration, all practicable steps shall be taken by the competent authority to ensure that they are adequate and their cash value properly assessed.

8. All practicable measures shall be taken:—

- (a) to inform the workers of their wage rights;
- (b) to prevent any unauthorized deductions from wages; and
- (c) to restrict the amounts deductible from wages in respect of supplies and services forming part of remuneration to the proper cash value thereof.

Article 16

1. The maximum amounts and manner of repayment of advances on wages shall be regulated by the competent authority.

2. The competent authority shall limit the amount of advances which may be made to a worker in consideration of his taking up employment; the amount of advances permitted shall be clearly explained to the worker.

3. Any advance in excess of the amount laid down by the competent authority shall be legally irrecoverable and may not be recovered by the withholding of amounts of pay due to the work at a later date.

Article 17

1. Voluntary forms of thrift shall be encouraged among wage earners and independent producers.

2. All practicable measures shall be taken for the protection of wage earners and independent producers against usury, in particular by action aiming at the reduction of rates of interest on loans, by the control of the operations of money lenders, and by the encouragement of facilities for borrowing money for appropriate purposes through co-operative credit organizations or through institutions which are under the control of the competent authority.

PART VI—NON-DISCRIMINATION ON GROUNDS OF RACE, COLOUR, SEX,
BELIEF, TRIBAL ASSOCIATION OR TRADE UNION AFFILIATION

Article 18

1. It shall be an aim of policy to abolish all discrimination among workers on grounds of race, colour, sex, belief, tribal association or trade union affiliation in respect of:—

- (a) labour legislation and agreements which shall afford equitable economic treatment to all those lawfully resident or working in the territory;
- (b) admission to public or private employment;
- (c) conditions of engagement and promotion;
- (d) opportunities for vocational training;
- (e) conditions of work;
- (f) health, safety and welfare measures;
- (g) discipline;
- (h) participation in the negotiation of collective agreements;
- (i) wage rates, which shall be fixed according to the principle of equal pay for work of equal value in the same operation and undertaking to the extent to which recognition of this principle is accorded in the metropolitan territory.

2. Subject to the provisions of subparagraph (i) of the preceding paragraph, all practicable measures shall be taken to lessen, by raising the rates applicable to the lower-paid workers, any existing differences in wage rates due to discrimination by reason of race, colour, sex, belief, tribal association, or trade union affiliation.

3. Workers from one territory engaged for employment in another territory may be granted in addition to their wages benefits in cash or in kind to meet any reasonable personal or family expenses resulting from employment away from their homes.

4. The foregoing provisions of this Article shall be without prejudice to such measures as the competent authority may think it necessary or desirable to take for the safeguarding of motherhood and for ensuring the health, safety and welfare of woman workers.

PART VII—EDUCATION AND TRAINING

Article 19

1. Adequate provision shall be made in non-metropolitan territories, to the maximum extent possible under local conditions, for the progressive development of broad systems of education, vocational training and apprenticeship, with a view to the effective preparation of children and young persons of both sexes for a useful occupation.

2. Territorial laws or regulations shall prescribe the school-leaving age and the minimum age for and conditions of employment.

3. In order that the child population may be able to profit by existing facilities for education and in order that the extension of such facilities may not be hindered by a demand for child labour, the employment of persons below the school-leaving age during the hours when the schools are in session shall be prohibited in areas where educational facilities are provided on a scale adequate for the majority of the children of school age.

Article 20

1. In order to secure high productivity through the development of skilled labour in non-metropolitan territories, training in new techniques of production shall be provided in suitable cases in local, regional or metropolitan centres.

2. Such training shall be organized by or under the supervision of the competent authorities, in consultation with the employers' and workers' organizations of the territory from which the trainees come and of the country of training.

PART VIII—MISCELLANEOUS PROVISIONS

Article 21

1. In respect of the territories covered by paragraph 1 of Article 1 of this Convention, each Member of the Organization which ratifies this Convention shall append to its ratification, or communicate to the Director-General of the International Labour Office as soon as possible after ratification, a declaration stating—

- (a) the territories in respect of which it undertakes that the provisions of the Convention shall be applied without modification;
- (b) the territories in respect of which it undertakes that the provisions of the Convention shall be applied subject to modifications, together with details of the said modifications;
- (c) the territories in respect of which the Convention is inapplicable and in such cases the grounds on which it is inapplicable;
- (d) the territories in respect of which it reserves its decision.

2. The undertakings referred to in subparagraphs (a) and (b) of paragraph 1 of this Article shall be deemed to be an integral part of the ratification and shall have the force of ratification.

adopts this eleventh day of July of the year one thousand nine hundred and forty-seven the following Convention, which may be cited as the Labour Inspectorates (Non-Metropolitan Territories) Convention, 1947:

Article 1

Labour inspection services complying with the requirements of Articles 2 to 5 of this Convention shall be maintained in non-metropolitan territories.

Article 2

Labour inspection services shall consist of suitably trained inspectors.

Article 3

Workers and their representatives shall be afforded every facility for communicating freely with the inspectors.

Article 4

1. Inspectors appointed by the competent authority and provided with credentials shall be required to inspect conditions of employment at frequent intervals.

2. Inspectors shall be authorized by law to exercise the following powers for the purpose of carrying out their duties—

- (a) to enter freely and without previous notice at any hour of the day or night any workplace liable to inspection where they may have reasonable cause to believe that persons enjoying legal protection are employed, and to inspect such workplaces;
- (b) to enter by day any premises which they may have reasonable cause to believe to be liable to inspection; and
- (c) to carry out any examination, test or enquiry which they may consider necessary in order to satisfy themselves that the legal provisions are being strictly observed and, in particular—

- (i) to interrogate, alone or in the presence of witnesses, the employer or the staff of the undertaking on any matters concerning the application of the legal provisions, or to apply for information to any other person whose evidence they may consider necessary;
- (ii) to require the production of any books, registers or other documents the keeping of which is prescribed by laws or regulations relating to conditions of work, in order to see that they are in conformity with the legal provisions, and to copy such documents or make extracts from them;
- (iii) to enforce the posting of notices required by the legal provisions;
- (iv) to take or remove for purposes of analysis samples of materials and substances used or handled, subject to the employer or his representative being notified of any samples or substances taken or removed for this purpose.

3. On the occasion of an inspection visit, inspectors shall notify the employer or his representative of their presence, unless they consider that such a notification may be prejudicial to the performance of their duties.

3. Declarations communicated to the Director-General of the International Labour Office in accordance with the preceding paragraphs of this Article shall indicate whether the provisions of the Convention will be applied in the territory concerned without modification or subject to modifications; when the declaration indicates that the provisions of the Convention will be applied subject to modifications it shall give details of the said modifications.

4. The Member, Members or international authority concerned may at any time by a subsequent declaration renounce in whole or in part the right to have recourse to any modification indicated in any former declaration.

5. The Member, Members or international authority concerned may, at any time at which this Convention is subject to denunciation in accordance with the provisions of Article 14, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of the application of the Convention.

Article 10

In respect of each territory for which there is in force a declaration specifying modifications of the provisions of this Convention, the annual reports on the application of the Convention shall indicate the extent to which any progress has been made with a view to making it possible to renounce the right to have recourse to the said modifications.

Article 11

If any Convention which may subsequently be adopted by the Conference concerning any subject or subjects dealt with in this Convention so provides, such provisions of this Convention as may be specified in the said Convention shall cease to apply to any territory in respect of which there has been communication to the Director-General of the International Labour Office a declaration—

(a) undertaking that the provisions of the said Convention shall be applied in pursuance of paragraph 2 of Article 35 of the Constitution of the International Labour Organization as amended by the said Convention, or

(b) accepting the obligations of the said Convention in pursuance of Amendment, 1946, or

of paragraph 5 of the said Article 35.

Articles 12-19

(Final Provisions)

Appendix 12—Convention (No. 85) Concerning Labour Inspectorates in Non-Metropolitan Territories

The General Conference of the International Labour Organization, Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Thirtieth Session on 19 June 1947, and

Having decided upon the adoption of certain proposals concerning labour inspectorates in non-metropolitan territories, which is included in the third item on the agenda of the Session, and

Having determined that these proposals shall take the form of an international Convention,

Article 7

1. Machinery shall be created as possible for the settlement of disputes between employers and workers.

2. Representatives of the employers and workers concerned, including representatives of their respective organizations, where such exist, shall be associated where practicable in the operation of the machinery, in such manner and to such extent, but in any case in equal numbers and on equal terms, as may be determined by the competent authority.

Article 8

1. In respect of the territories referred to in Article 35 of the Constitution of the International Labour Organization as amended by the Amendment, 1946, other than the territories referred to in paragraphs 4 and 5 of the said Article as so amended, each Member of the Organization which ratifies this Convention shall append to its ratification, or communicate to the Director-General of the International Labour Office as soon as possible after ratification, a declaration stating—

(a) the territories in respect of which it undertakes that the provisions of the Convention shall be applied without modification;

(b) the territories in respect of which it undertakes that the provisions of the Convention shall be applied subject to modifications;

(c) the territories in respect of which the Convention is inapplicable and in such cases the grounds on which it is inapplicable;

(d) the territories in respect of which it reserves its decision.

2. The undertakings referred to in subparagraphs (a) and (b) of paragraph 1 of this Article shall be deemed to be an integral part of the ratification and shall have the force of ratification.

3. Any Member may at any time by a subsequent declaration cancel in whole or in part any reservations made in its original declaration in virtue of subparagraphs (b), (c) or (d) of paragraph 1 of this Article.

4. Any Member may, at any time at which the Convention is subject to denunciation in accordance with the provisions of Article 14, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of such territories as it may specify.

Article 9

1. Where the subject matter of this Convention is within the self-governing powers of any non-metropolitan territory, the Member responsible for the international relations of that territory may, in agreement with the International Labour Office a declaration accepting on behalf of the territory the obligations of this Convention.

2. A declaration accepting the obligations of this Convention may be communicated to the Director-General of the International Labour Office—

(a) by two or more Members of the Organization in respect of any territory which is under their joint authority; or

(b) by an international authority responsible for the administration of any territory, in virtue of the Charter of the United Nations or otherwise, in respect of any such territory.

Appendix II—Convention (No. 84) Concerning the Right of Association and the Settlement of Labour Disputes in Non-Metropolitan Territories

The General Conference of the International Labour Organization, Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Thirtieth Session on 19 June, 1947, and Having decided upon the adoption of certain proposals concerning the right of association and the settlement of labour disputes in non-metropolitan territories, which is included in the third item on the agenda of the Session, and Having determined that these proposals shall take the form of an international Convention, adopts this eleventh day of July of the year one thousand nine hundred and forty-seven the following Convention, which may be cited as the Right of Association (Non-Metropolitan Territories) Convention, 1947:

Article 1

This Convention applies to non-metropolitan territories.

Article 2

The rights of employers and employed alike to associate for all lawful purposes shall be guaranteed by appropriate measures.

Article 3

All practicable measures shall be taken to assure to trade unions which are representative of the workers concerned the right to conclude collective agreements with employers or employers' organizations.

Article 4

All practicable measures shall be taken to consult and associate the representatives of organizations of employers and workers in the establishment and working of arrangements for the protection of workers and the application of labour legislation.

Article 5

All procedures for the investigation of disputes between employers and workers shall be as simple and expeditious as possible.

Article 6

1. Employers and workers shall be encouraged to avoid disputes, and if they arise to reach fair settlements by means of conciliation.
2. For this purpose all practicable measures shall be taken to consult and associate the representatives of organizations of employers and workers in the establishment and working of conciliation machinery.
3. Subject to the operation of such machinery, public officers shall be responsible for the investigation of disputes and shall endeavour to promote conciliation and to assist the parties in arriving at a fair settlement.
4. Where practicable, these officers shall be officers specially assigned to such duties.

Article 5

1. The International Labour Conference may, at any session at which the matter is included in its agenda, adopt by a two-thirds majority amendments to the Schedule to this Convention including the provisions of further Conventions in the Schedule or substituting for the provisions of any Convention set forth in the Schedule the provisions of any Convention revising that Convention which may have been adopted by the Conference.

2. Each Member for which this Convention is in force and each territory for which a declaration accepting the obligations of this Convention in pursuance of Article 2 is in force shall, within the period of one year, or, in exceptional circumstances, of eighteen months, from the closing of the session of the Conference, submit any such amendment to the authority or authorities within whose competence the matters lies, for the enactment of legislation or other action.

3. Any such amendment shall become effective for each Member for which this Convention is in force on acceptance by the said Member and for each territory in respect of which a declaration accepting the obligations of the Convention in pursuance of Article 2 is in force on acceptance in respect of the said territory.

4. When any such amendment becomes effective for any Member or for any territory in respect of which the obligations of this Convention have been accepted in pursuance of Article 2, the Member, Members or international authority concerned shall communicate to the Director-General of the International Labour Office a declaration giving, in respect of the Convention or Conventions the provisions of which have been included in the Schedule by the amendment, the particulars required by paragraph 2 of Article 1 or paragraph 3 of Article 2 as the case may be.

5. Any Member which ratifies this Convention after the date of the adoption of any such amendment by the Conference shall be deemed to have ratified the Convention as amended and any territory in respect of which the obligations of the Convention are accepted after that date in pursuance of Article 2 shall be deemed to have accepted the obligations of the Convention as amended.

Articles 6—13

(Final Provisions)

SCHEDULE

(The Schedule to this Convention contains the texts of the following Conventions: Minimum Age (Industry) (Revised), 1937; Minimum Age (Sea) (Revised), 1936; Minimum Age (Trimmers and Stokers), 1921; Medical Examination of Young Persons (Industry), 1946; Medical Examination of Young Persons (Sea), 1921; Night Work of Young Persons (Industry), 1919; Maternity Protection, 1919; Night Work (Women) (Revised), 1934; Underground Work (Women), 1935; Equality of Treatment (Accident Compensation), 1925; Workmen's Compensation (Accidents), 1925; Marking of Weight (Packages Transported by Vessels), 1929; and Weekly Rest (Industry), 1921.

Article 2

1. A declaration accepting the obligations of this Convention in respect of any non-metropolitan territory where the subject matter of the Conventions set forth in the Schedule to this Convention is within the self-governing powers of the territory may be communicated to the Director-General of the International Labour Office by the Member responsible for the international relations of the territory in agreement with the Government of the territory.

2. A declaration accepting the obligation of this Convention may be communicated to the Director-General of the International Labour Office—
 (a) by two or more Members of the Organization in respect of any territory which is under their joint authority; or
 (b) by any international authority responsible for the administration of any territory, in virtue of the Charter of the United Nations or otherwise, in respect of any such territory.

3. Declarations communicated to the Director-General of the International Labour Office in accordance with the preceding paragraph of this Article shall include an undertaking that the provisions of the Conventions set forth in the Schedule to this Convention shall be applied in the territory concerned either without modification or subject to modifications; when the declaration indicates that the provisions of one or more of the said Conventions will be applied subject to modifications it shall give in respect of each such Convention details of the said modifications.

4. The Member, Members or International authority concerned may at any time by a subsequent declaration renounce in whole or in part the right to have recourse to any modification indicated in any former declaration.

5. The Member, Members or international authority concerned may, at any time at which this Convention is subject to denunciation in accordance with the provisions of Article 8, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of any one or more of the Conventions set forth in the Schedule.

Article 3

The competent authority may, by regulations published beforehand, exclude from the application of any provisions giving effect to any of the Conventions set forth in the Schedule undertakings or vessels in respect of which, from their nature and size, adequate supervision may be impracticable.

Article 4

In respect of each territory for which there is in force a declaration specifying modifications of the provisions of one or more of the Conventions set forth in the Schedule, the annual reports on the application of this Convention shall indicate the extent to which any progress has been made with a view to making it possible to renounce the right to have recourse to the said modifications.

Appendix 10—Convention (No. 83) Concerning the Application of International Labour Standards to Non-Metropolitan Territories

The General Conference of the International Labour Organization, Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Thirtieth Session on 19 June, 1947, and Having decided upon the adoption of certain proposals concerning the application of international labour standards in non-metropolitan territories, which is included in the third item on the agenda of the Session, and Having determined that these proposals shall take the form of an international Convention,

adopts this eleventh day of July of the year one thousand nine hundred and forty-seven the following Convention, which may be cited as the Labour Standards (Non-Metropolitan Territories) Convention, 1947:

Article 1

1. Each Member of the International Labour Organization which ratifies this Convention shall communicate to the Director-General of the International Labour Office with its ratification a declaration stating, in respect of the territories referred to in Article 35 of the Constitution of the International Labour Organization as amended by the Constitution of the International Labour Organization Instrument of Amendment, 1946, other than the territories referred to in paragraphs 4 and 5 of the said Article as so amended, the extent to which it undertakes that the provisions of the Convention set forth in the Schedule to this Convention shall be applied in respect of the said territories.

2. The aforesaid declaration shall state in respect of each of the Conventions set forth in the Schedule to this Convention—

(a) the territories in respect of which the Member undertakes that the provisions of the Convention shall be applied without modification;

(b) the territories in respect of which the Member undertakes that the provisions of the Convention shall be applied subject to modifications, together with details of the said modifications;

(c) the territories in respect of which the Convention is inapplicable and in such cases the grounds on which it is inapplicable;

(d) the territories in respect of which the Member reserves its decision.

3. The undertakings referred to in subparagraphs (a) and (b) of paragraph 2 of this Article shall be deemed to be an integral part of the ratification and shall have the force of ratification.

4. Any Member may at any time by a subsequent declaration cancel in whole or in part any reservations made in its original declaration in virtue of subparagraphs (b), (c) or (d) of paragraph 2 of this Article.

5. Any Member may, at any time at which this Convention is subject to denunciation in accordance with the provisions of Article 8, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of such territories as it may specify.

3. Any Member may at any time by a subsequent declaration cancel in whole or in part any reservations made in its original declaration in virtue of subparagraphs (b), (c) or (d) of paragraph 1 of this Article.

4. Any Member may, at any time at which the Convention is subject to denunciation in accordance with the provisions of Article 27, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of such territories as it may specify.

Article 22

1. Declarations communicated to the Director-General of the International Labour Office in accordance with paragraphs 2 and 3 of Article 1 of this Convention shall indicate whether the provisions of the Convention will be applied in the territory concerned without modification or subject to modifications; when the declaration indicates that the provisions of the Convention will be applied subject to modifications it shall give details of the said modifications.

2. The Member, Members or international authority concerned may at any time by a subsequent declaration renounce in whole or in part the right to have recourse to any modification indicated in any former declaration.

3. The Member, Members or international authority concerned may at any time at which this Convention is subject to denunciation in accordance with the provisions of Article 27, communicate to the Director-General a declaration and stating the present position in respect of the application of the Convention.

Article 23

In respect of each territory for which there is in force a declaration specifying modifications of the provisions of this Convention, the annual reports on the application of the Convention shall indicate the extent to which any progress has been made with a view to making it possible to renounce the right to have recourse to the said modifications.

Article 24

If any Convention which may subsequently be adopted by the Conference concerning any subject or subjects dealt with in this Convention so provides, such provisions of this Convention as may be specified in the said Convention shall cease to apply to any territory in respect of which there has been communicated to the Director-General of the International Labour Office a declaration—

(a) undertaking that the provisions of the said Convention shall be applied in pursuance of paragraph 2 of Article 35 of the Constitution of the International Labour Organization as amended by the Amendment, 1946, or

(b) accepting the obligations of the said Convention in pursuance of paragraph 5 of the said Article 35.

Article 25-22

(Final Provisions)

Article 5

Subject to such exceptions as may be made by law or regulation, labour inspectors—

- (a) shall be prohibited from having any direct or indirect interest in the undertakings under their supervision;
- (b) shall be bound on pain of appropriate penalties or disciplinary measures not to reveal, even after leaving the service, any manufacturing or commercial secrets or working processes which may come to their knowledge in the course of their duties; and
- (c) shall treat as absolutely confidential the source of any complaint bringing to their notice a defect or breach of legal provisions and shall give no intimation to the employer or his representative that a visit of inspection was made in consequence of the receipt of such a complaint.

Article 6

1. In respect of the territories referred to in Article 35 of the Constitution of the International Labour Organization as amended by the Constitution of the International Labour Organization Instrument of Amendment, 1946, other than the territories referred to in paragraphs 4 and 5 of the said Article as so amended, each Member of the Organization which ratifies this Convention shall append to its ratification, or communicate to the Director-General of the International Labour Office as soon as possible after ratification, a declaration stating—

- (a) the territories in respect of which it undertakes that the provisions of the Convention shall be applied without modification;
- (b) the territories in respect of which it undertakes that the provisions of the Convention shall be applied subject to modifications, together with details of the said modifications;
- (c) the territories in respect of which the Convention is inapplicable and in such cases the grounds on which it is inapplicable;
- (d) the territories in respect of which it reserves its decision.

2. The undertakings referred to in subparagraphs (a) and (b) of paragraph 1 of this Article shall be deemed to be an integral part of the ratification and shall have the force of ratification.

3. Any Member may at any time by a subsequent declaration cancel in whole or in part any reservations made in its original declaration in virtue of subparagraphs (b), (c) or (d) of paragraph 1 of this Article.

4. Any Member may, at any time at which the Convention is subject to denunciation in accordance with the provisions of Article 12, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of such territories as it may specify.

Article 7

1. Where the subject matter of this Convention is within the self-governing powers of any non-metropolitan territory, the Member responsible for the international relations of that territory may, in agreement with the Government of the territory, communicate to the Director-General of the International Labour Office a declaration accepting on behalf of the territory the obligations of this Convention.

2. A declaration accepting the obligations of this Convention may be communicated to the Director-General of the International Labour Office—

- (a) by two or more Members of the Organization in respect of any territory which is under their joint authority; or
- (b) by any international authority responsible for the administration of any territory, in virtue of the Charter of the United Nations or otherwise, in respect of any such territory.

3. Declarations communicated to the Director-General of the International Labour Office in accordance with the preceding paragraphs of this Article shall indicate whether the provisions of the Convention will be applied in the territory concerned without modification or subject to modifications; when the declaration indicates that the provisions of the Convention will be applied subject to modifications it shall give details of the said modifications.

4. The Member, Members or international authority concerned may at any time by a subsequent declaration renounce in whole or in part the right to have recourse to any modification indicated in any former declaration.

5. The Member, Members or international authority concerned may, at any time at which this Convention is subject to denunciation in accordance with the provisions of Article 12, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of the application of the Convention.

Article 8

In respect of each territory for which there is in force a declaration specifying modifications of the provisions of this Convention, the annual reports on the application of the Convention shall indicate the extent to which any progress has been made with a view to making it possible to renounce the right to have recourse to the said modifications.

Article 9

When a declaration undertaking that the provisions of the Labour Inspection Convention, 1947, shall be applied in respect of any territory has been communicated to the Director-General of the International Labour Office in pursuance of Article 30 of that Convention, or a declaration accepting the obligations of that Convention in respect of any territory has been so communicated in pursuance of Article 31 thereof, the provisions of this Convention shall cease to apply in respect of such territory.

Articles 10-17

(Final Provisions)

Appendix 13—Convention (No. 86) Concerning the Maximum Length of Contracts of Employment of Indigenous Workers

The General Conference of the International Labour Organization, Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Thirtieth Session on 19 June 1947, and

Having decided upon the adoption of certain proposals concerning the maximum length of contracts of employment of indigenous workers, which is included in the third item on the agenda of the Session, and

Having determined that these proposals shall take the form of an international Convention,

adopts this eleventh day of July of the year one thousand nine hundred and forty-seven the following Convention, which may be cited as the Contracts of Employment (Indigenous Workers) Convention, 1947:

Article 1

For the purposes of this Convention—

- (a) the term “worker” means an indigenous worker, that is to say a worker belonging to or assimilated to the indigenous population of a non-metropolitan territory;
- (b) the term “employer” includes, unless the contrary intention appears, any public authority, individual, company or association, whether non-indigenous or indigenous;
- (c) the term “regulations” means the law and/or regulations in force in the territory concerned; and
- (d) the term “contract” means, unless the contrary intention appears, a contract of employment by which a worker enters the service of an employer as a worker for remuneration in cash or in any other form whatsoever, but does not include contracts of apprenticeship made in accordance with special provisions relating to apprenticeship contained in the regulations.

Article 2

1. The competent authority may exclude from the application of this Convention—

- (a) contracts by which a worker enters the service of an indigenous employer who does not employ more than a limited number of workers prescribed by the regulations or satisfy some other criterion prescribed thereby;
- (b) any contract under which the only or principal remuneration granted to the worker is the occupancy or use of land belonging to his employer.

2. The competent authority may, after consultation with the employers' and workers' organizations representative of the interests concerned, exclude from the application of this Convention contracts entered into between employers and literate workers whose freedom of choice in employment is satisfactorily safeguarded; such exclusion may apply to the whole of the workers in a territory, to the workers in any specified industry, to the workers in any specified undertaking, or to special groups of workers.

Article 3

1. The regulations shall prescribe the maximum period of service which may be stipulated or implied in any contract, whether written or oral.

2. The maximum period of service which may be stipulated or implied in any contract for employment not involving a long and expensive journey

shall in no case exceed twelve months if the workers are not accompanied by their families or two years if the workers are accompanied by their families.

3. The maximum period of service which may be stipulated or implied in any contract for employment involving a long and expensive journey shall in no case exceed two years if the workers are not accompanied by their families or three years if the workers are accompanied by their families.

Article 4

1. When a contract made in one territory (hereinafter called the territory of origin) relates to employment in a territory under a different administration (hereinafter called the territory of employment), the maximum period of service which may be stipulated or implied therein shall not exceed either the maximum period prescribed by the regulations of the territory of origin or the maximum period prescribed by the regulations of the territory of employment.

2. The competent authorities of the territories of origin and of employment shall, whenever necessary or desirable, enter into agreements for the purpose of regulating matters of common concern arising in connection with the application of the provisions of this Convention.

Article 5

This Convention does not apply to contracts entered into before the coming into force of the Convention for the territory where the question of its applicability arises.

Article 6

1. In respect of the territories referred to in Article 35 of the Constitution of the International Labour Organization as amended by the Constitution of the International Labour Organization Instrument of Amendment, 1946, other than the territories referred to in paragraphs 4 and 5 of the said Article as so amended, each Member of the Organization which ratifies this Convention shall append to its ratification, or communicate to the Director-General of the International Labour Office as soon as possible after ratification, a declaration stating—

- (a) the territories in respect of which it undertakes that the provisions of the Convention shall be applied without modification;
- (b) the territories in respect of which it undertakes that the provisions of the Convention shall be applied subject to modifications, together with details of the said modifications;
- (c) the territories in respect of which the Convention is inapplicable and in such cases the grounds on which it is inapplicable;
- (d) the territories in respect of which it reserves its decision.

2. The undertakings referred to in subparagraphs (a) and (b) of paragraph 1 of this Article shall be deemed to be an integral part of the ratification and shall have the force of ratification.

3. Any Member may at any time by a subsequent declaration cancel in whole or in part any reservations made in its original declaration in virtue of sub-paragraphs (b), (c) or (d) of paragraph 1 of this Article.

4. Any Member may, at any time at which the Convention is subject to denunciation in accordance with the provisions of Article 11, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of such territories as it may specify.

Article 7

1. Where the subject matter of this Convention is within the self-governing powers of any non-metropolitan territory, the Member responsible for the international relations of that territory may, in agreement with the Government of the territory, communicate to the Director-General of the International Labour Office a declaration accepting on behalf of the territory the obligations of this Convention.

2. A declaration accepting the obligations of this Convention may be communicated to the Director-General of the International Labour Office—

- (a) by two or more Members of the Organization in respect of any territory which is under their joint authority; or
- (b) by any international authority responsible for the administration of any territory, in virtue of the Charter of the United Nations or otherwise, in respect of any such territory.

3. Declarations communicated to the Director-General of the International Labour Office in accordance with the preceding paragraphs of this Article shall indicate whether the provisions of the Convention will be applied in the territory concerned without modification or subject to modifications; when the declaration indicates that the provisions of the Convention will be applied subject to modifications it shall give details of the said modifications.

4. The Member, Members or international authority concerned may at any time by a subsequent declaration renounce in whole or in part the right to have recourse to any modification indicated in any former declaration.

5. The Member, Members or international authority concerned may, at any time at which this Convention is subject to denunciation in accordance with the provisions of Article 11, communicate to the Director-General a declaration modifying in any other respect the terms of any former declaration and stating the present position in respect of the application of the Convention.

Article 8

In respect of each territory for which there is in force a declaration specifying modifications of the provisions of this Convention, the annual reports on the application of the Convention shall indicate the extent to which any progress has been made with a view to making it possible to renounce the right to have recourse to the said modifications.

Articles 9-16

(Final Provisions)

Appendix 14—Resolution Concerning Freedom of Association and Protection of the Right to Organize and to Bargain Collectively

Whereas the Preamble to the Constitution of the International Labour Organization expressly declares "recognition of the principle of freedom of association" to be a means of improving conditions of labour and of establishing peace; and

Whereas the Declaration of Philadelphia reaffirms that "freedom of expression and of association are essential to sustained progress" and recognizes the solemn obligation of the International Labour Organization to further among the nations of the world programs which will achieve, among other things: "the effective recognition of the right of collective bargaining, the co-operation of management and labour in the continuous improvement of productive efficiency, and the collaboration of workers and employers in the preparation and application of social and economic measures"; and

Whereas it also affirms that the principles set forth in this Declaration are fully applicable to all peoples everywhere and that, while the manner of their application must be determined with due regard to the stage of social and economic development reached by each people, their progressive application to peoples who are still dependent, as well as to those who have already achieved self-government, is a matter of concern to the whole civilized world; and

Whereas standards of living, normal functioning of national economy and social and economic stability depend to a considerable degree on a properly organized system of industrial relations founded on the recognition of freedom of association; and

Whereas, moreover, in many countries, employers' and workers' organizations have been associated with the preparation and application of economic and social measures; and

Whereas the International Labour Conference, the Regional Conferences of the American States Members of the International Labour Organization and the various Industrial Committees have, in numerous Resolutions, called the attention of the States Members of the International Labour Organization to the need for establishing an appropriate system of industrial relations founded on the guarantee of the principle of freedom of association.

The General Conference of the International Labour Organization:

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Thirtieth Session on 19 June 1947,

adopts this eleventh day of July of the year one thousand nine hundred and forty-seven, the following Resolution:

I. FREEDOM OF ASSOCIATION

1. Employers and workers, without distinction whatsoever, should have the inviolable right to establish or join organizations of their own choosing without previous authorization.

2. Employers' and workers' organizations should have the right to draw up their constitutions and rules, to organize their administration and activities and to formulate their programs; there should be no interference on the part of the public authorities which would restrict this right or impede the organizations in the lawful exercise of this right.

3. Employers' and workers' organizations should not be liable to be dissolved or have their activities suspended by administrative authority.

4. Employers' and workers' organizations should have the right to establish federations and confederations as well as the right of affiliation with international organizations of employers and workers.

5. The guarantees defined in paragraphs 1, 2 and 3 herein with regard to the establishment, functioning, dissolution and suspension of employers' and workers' organizations should apply to federations and confederations of such organizations.

6. The acquisition of legal personality by employers' and workers' organizations should not be made subject to conditions of such a character as to restrict freedom of association as hereinbefore defined.

7. The acquisition and exercise of the rights as outlined in this part should not exempt the employers' and workers' organizations from their full share of responsibilities and obligations.

II. PROTECTION OF THE RIGHT TO ORGANIZE AND TO BARGAIN COLLECTIVELY

8. There should be agreement between organized employers and workers mutually to respect the exercise of the right of association.

9. (1) Where full and effective protection is not already afforded appropriate measures should be taken to enable guarantees to be provided for:

- (a) the exercise of the right of freedom of association without fear of intimidation, coercion or restraint from any source with the object of:
 - (i) making the employment of the worker conditional on his not joining a trade union or on his withdrawing from a trade union of which he is a member;
 - (ii) prejudicing a worker because he is a member or agent or official of a trade union;
 - (iii) dismissing a worker because he is a member or agent or official of a trade union.
- (b) the exercise of the right of association by workers' organizations in such a way as to prevent any acts on the part of the employer or employers' organizations or their agents with the object of:
 - (i) furthering the establishment of trade unions under the domination of employers;
 - (ii) interfering with the formation or administration of a trade union or contributing financial or other support to it;
 - (iii) refusing to give practical effect to the principles of trade union recognition and collective bargaining.

(2) It should be understood, however, that a provision in a freely concluded collective agreement making membership of a certain trade union a condition precedent to employment or a condition of continued employment does not fall within the terms of this Resolution.

10. Appropriate agencies should be established, if necessary, for the purpose of ensuring the protection of the right of association as defined in paragraph 9 herein.

Appendix 15—List of Points which might form a Basis of Discussion by the Conference

I. FREEDOM OF ASSOCIATION

1. Desirability of drawing up a proposed international Convention concerning freedom of association.

2. Need to provide that employers and workers, without distinction whatsoever, should have the inviolable right to establish or join organizations of their own choosing without previous authorization.

3. (1) Need to provide that employers' and workers' organizations should have the right to draw up their constitutions and rules, to organize their administration and activities and to formulate their programs.

(2) Need to provide further that the public authorities should refrain from any interference which would restrict this right or impede the organizations in the lawful exercise of this right.

4. Need to provide that employers' and workers' organizations may not be dissolved or suspended by administrative authority.

5. Need to recognize the right of employers' and workers' organizations to establish federations and confederations of such organizations and to affiliate with international organizations of employers and workers.

6. Need to provide that the guarantees defined in paragraphs 2, 3 and 4 with regard to the establishment, functioning, dissolution and suspension of employers' and workers' organizations should apply to federations and confederations of such organizations.

7. Need to provide that the acquisition of legal personality by employers' and workers' organizations should not be made subject to conditions of such a character as to restrict freedom of association as hereinbefore defined.

8. Desirability of providing that the acquisition and exercise of the rights as outlined in this Part should not exempt employers' and workers' organizations from their full share of responsibilities and obligations.

II. PROTECTION OF THE RIGHT TO ORGANIZE

1. Desirability of drawing up a proposed Convention concerning the protection of the right to organize.

2. Need to provide that where full and effective protection is not already afforded appropriate measures should be taken to enable guarantees to be provided for the exercise of the right of freedom of association without fear of intimidation, coercion or restraint from any source.

3. Desirability of making such provision as may be necessary for the establishment of appropriate agencies for the purpose of ensuring the protection of the right of association.

Appendix 16—Resolution Concerning the Agenda of the Next Session of the Conference

The Conference,

Having approved the report of the Committee appointed to consider the seventh item on its Agenda,

Decides:

(1) to place on the Agenda of its next General Session, the question of freedom of association and of the protection of the right to organize with a view to the adoption of one or several Conventions at that Session, and

(2) to place on the Agenda of its next General Session, as one item for first discussion: the application of the principles of the right to organize and to bargain collectively, collective agreements, conciliation and arbitration and co-operation between the public authorities and employers' and workers' organizations.

Appendix 17—Resolution Concerning International Machinery for Safeguarding Freedom of Association

The Conference,

(1) Recalling the references to freedom of association in the Declaration of Philadelphia and the Constitution of the International Labour Organization, reaffirms belief in and attachment to the principle of freedom of association in all countries as an essential element in those wider personal freedoms which are the foundation of peace, prosperity and happiness;

(2) Is concerned at the widespread reports that conditions may exist prejudicial to freedom of association in many countries;

(3) Feels that steps should be taken to encourage, expand and universally establish freedom of association both by reminding Governments of all States, whether Members of the I.L.O. or not, of their obligations in this respect under the Constitution of the I.L.O. and/or the Charter of the United Nations, and by other practicable means;

(4) In this connection has noted with interest the proposals made by the W.F.T.U. and the A.F. of L. for the establishment of international machinery for safeguarding freedom of association and feels that these proposals deserve close and careful examination.

(5) Recognizes that the proposals raise issues of great complexity and difficulty including for example,

- (i) questions involving the sovereignty of States;
- (ii) the relationship of any such machinery to the proposals under examination by the United Nations for giving effect to a Bill of Rights and establishing machinery for supervising the exercise of other fundamental freedoms, including freedom of speech, of information and of lawful assembly;
- (iii) the composition, scope, powers (including powers of enquiry and investigation) and procedure of the proposed machinery;
- (iv) the authority under which the proposed machinery would act.

(6) Considers it essential to give to such questions, which may involve changes in the inter-relationship of States, the detailed examination and careful preparation which they merit and without which any international action would be bound to fall and likely to leave the situation worse than it is at present.

(7) Recognizes however that the establishment in consultation with the United Nations of permanent international machinery may be an indispensable condition for the full observance of freedom of association throughout the world and that any such machinery should, if established, operate under the guarantees provided by the tripartite Constitution of the International Labour Organization.

(8) Accordingly requests the Governing Body to examine this question in all its aspects and to report back to the Conference at the 31st Session in 1948.

Appendix 18—Resolution concerning European and World Reconstruction

The International Labour Conference, assembled in its 30th Session at Geneva while the Ministers of Foreign Affairs of the United Kingdom, the Union of Soviet Socialist Republics and France are meeting in Paris to examine, as suggested by United States Secretary of State Marshall, means for speedy reconstruction of a devastated Europe, which is a first condition of world reconstruction, welcomes with great satisfaction this event of decisive importance for the future of the world.

Aware of the growing poverty imposed on the peoples by the economic disorganization caused by the war and prolonged by their divisions, the Conference, in accordance with the unbroken tradition of the International Labour Organization, declares that only close and confident co-operation among the nations can ensure the termination of these hardships, a return to prosperity and the establishment of a stable and lasting peace.

In this spirit, in the spirit of the Agreement between the International Labour Organization and the United Nations, and in the conviction that questions relating to labour will be of primordial importance in connection with the action to be undertaken, the Conference affirms its readiness, within the scope of its functions, to make its full contribution, and that of the forces which it presents to the great work of world reconstruction of which this date should be the starting point.

Appendix 19—Resolution concerning Welfare Facilities for Workers

Whereas the Declaration of Philadelphia reaffirms the fundamental principle that labour is not a commodity and recognizes the solemn obligation of the International Labour Organization to further among the nations of the world programs which will achieve adequate protection for the life and health of workers in all occupations and the provision of adequate nutrition, housing and facilities for recreation and culture;

Whereas it is desirable to encourage the establishment in undertakings of services, amenities and facilities designed to meet the needs of the workers in these respects; and

Whereas such policies result in increased efficiency and higher productivity,

The International Labour Conference, meeting in its 30th Session—

1. Draws attention to the importance of establishing in undertakings, wherever appropriate, in co-operation with representatives of the workers concerned and under properly qualified management, such services, facilities and amenities as adequate canteens, rest and recreation facilities, sanitary and medical facilities, arrangements for travel to and from work and for the accommodation of workers employed at a distance from their homes, and such other services, amenities and facilities as contribute to improve the conditions under which workers are employed; and

2. Requests the Governing Body—

- (a) to instruct the International Labour Office to expand its studies of the administration and working of such services, facilities and amenities;
- (b) to consider the desirability of placing the question or such aspects of it as may be appropriate, on the agenda of an early session of the Conference; and
- (c) to refer to future Regional Conferences and to the Industrial Committees for consideration such aspects of the question as may present special problems in particular regions or industries.

Appendix 20—Resolution concerning Maintenance of Rights of Migrant Workers under Social Insurance Schemes

Whereas the General Conference of the International Labour Organization adopted at its 19th Session a Convention (No. 48), concerning the establishment of an international scheme for the maintenance of rights under invalidity, old-age, widows' and orphans' insurance;

Whereas by the adoption of this Convention the General Conference of the International Labour Organization thereby recognized as useful and equitable the establishment by the Members of the Organization of standards guaranteeing to migrants and their dependants the maintenance of rights acquired with insurance institutions, either in a single country or in two or more countries successively or alternately;

Whereas the adoption of this Convention represented a measure of social progress intended to protect migrants and their dependants against occupational and social risks and against poverty;

Whereas social protection of migrants in the spirit of the said Convention is of quite special importance at present, since the recent war has caused a considerable increase in the migration of wage-earners from one country to another and the effects of this increase are still being felt,

The Conference,

Requests the Governing Body to have prepared as soon as possible a periodical report on the application of the above-mentioned Convention with a view to re-examining the situation and ascertaining the difficulties which have impeded ratification of the Convention.

Appendix 21—Resolution concerning Women's Work

Whereas in the Declaration of Philadelphia the International Labour Organization affirmed that "all human beings, irrespective of race, creed or sex, have the right to pursue both their material wellbeing and their spiritual development in conditions of freedom and dignity, of economic security and equal opportunity";

Whereas the International Labour Organization has since its inception endeavoured to afford to women workers an opportunity for full participation in the economic life of their countries;

Whereas the principles and procedures advocated by the International Labour Organization relate to educational and vocational opportunities, employment opportunities, the recognition of the principle of equal remuneration for work of equal value, conditions of work, and safeguards for motherhood and the health, safety and welfare of women workers; and

Whereas it is important that these principles and procedures should be known and applied as widely as practicable,

The International Labour Conference,

Having been convened at Geneva by the Governing Body of the International Labour Office and having met in its 30th Session on 19 June 1947,

Desires to bring to the attention of States Members of the Organization the following statement of principles and procedures contained in Conventions and Recommendations adopted by the International Labour Conference:

I

1. The Employment (Transition from War to Peace) Recommendation, 1944, enunciates the principles that

'The redistribution of women workers in the economy should be organized on the principle of complete equality of opportunity for men and women on the basis of their individual merit, skill and experience, without prejudice to the provisions of the International Labour Conventions and Recommendations concerning the employment of women.

In order to place women on a basis of equality with men in the employment market, and thus to prevent competition among the available workers prejudicial to the interests of both men and women workers, steps should be taken to encourage the establishment of wage rates based on job content, without regard to sex.

The employment of women in industries and occupations in which large numbers of women have traditionally been employed should be facilitated by action to raise the relative status of these industries and occupations and to improve conditions of work and methods of placement therein.'

2. The Minimum Wage-Fixing Machinery Convention, 1928, provides that 'minimum rates of wages can be fixed for workers employed in certain of the trades or parts of trades (and in particular in home working trades) in which no arrangements exist for the effective regulation of wages by collective agreement or otherwise and wages are exceptionally low', and the Minimum Wage-Fixing Machinery Recommendation, 1928, provides that 'special regard might usefully be had to trades or parts of trades in which women are ordinarily employed.'

3. The Vocational Training Recommendation, 1939, provides that 'Workers of both sexes should have equal rights of admission to all technical and vocational schools'; that 'Appropriate facilities for technical and vocational training should be provided for occupations in which women and girls are mainly employed, including domestic employments and activities'; and that 'Persons of both sexes should have equal rights to obtain the same certificates and diplomas on completion of the same studies.'

4. The Childbirth Convention, 1919, the Childbirth (Agriculture) Recommendation, 1921, the Income Security Recommendation, 1944, and the Medical Care Recommendation, 1944, make provision for maternity protection of women workers, and various other Conventions, including the Night Work (Women) Conventions, 1919 and 1934, the White Lead (Painting) Convention, 1921, and the Underground Work (Women) Convention, 1935, safeguard the health of women workers with regulations as to night work, underground work in mines or occupations involving risks such as those of industrial poisoning, if and when such work threatens the vitality and welfare of women workers.

II

Recognizing that the employment of women and particularly of mothers has physical and psychological consequences for the women themselves and economic and social consequences for society and that the status of women workers is closely related to the social and economic structure and to the technical and industrial development of the different countries,

And considering the desirability of eliminating the inequitable treatment of women workers with full understanding of the specific problems which arise from actual but changing social, economic and industrial conditions in the various parts of the world,

The Conference,

1. Notes with satisfaction the work already done by the Regional Conferences of States Members of the International Labour Organization to further the foregoing principles and procedures as well as to promote the provision of social aids to working mothers, assurance of wages to women adequate to a decent standard of life, and the principle of 'the right to work of every individual irrespective of sex or marital condition', with due regard for occupational qualifications and physical capacity and for the economic and social conditions of every country,

2. Recommends that other Regional Conferences should consider these matters, and

3. Expresses the hope that the Governing Body

(i) will instruct the International Labour Office to continue the detailed study of the employment of women and its effect on the labour market, and to undertake the study of the problems of the employment of mothers of families, industrial home work, the status of domestic workers and the steps to be taken to protect women workers, bearing in mind their role as mothers and home-makers, and

(ii) will consider the desirability of placing these questions on the agenda of future sessions of the Conference.

Appendix 22—Budget for 1948

Part I: Ordinary Budget:

Section I:	Swiss Francs
Ordinary expenses	16,641,171
Section II:	
Capital expenses	1,000
Section III:	
Unforeseen expenses	250,000
Section IV:	
Reserve fund	750,000

Part II: Staff Pensions Fund 469,542

Part III: Staff Retirement and Provident Fund 931,270

Part IV: Restoration to Working Capital Fund

Total 19,042,983

	Gold Francs	Swiss Francs
Contributions from States Members	12,171,576	17,208,347
Supplementary receipts	70,731	100,000
Balance at close of 27th and 28th Financial Periods (1945 and 1946); proportion to be taken in deduction of contributions of States which contributed to the balances...	1,226,919	1,734,636
Total	13,469,226	19,042,983

Appendix 23—Statement of Contributions from States Members for
1948

	Units	Gold Francs
1. Afghanistan	1	17,089.92
